FOREWORD

The Federal Power Act was originally enacted as the Federal Water Power Act, approved June 10, 1920 (41 Stat. 1063, 16 U.S.C. 791–823). The Federal Power Commission was reorganized January 1, 1931, as an independent Commission under the act approved June 23, 1930 (46 Stat. 797). By title II of the Public Utility Act of 1935, approved August 26, 1935 (49 Stat. 838), the original Federal Water Power Act was made part I of the "Federal Power Act" and parts II and III were added. The Federal Power Act was amended May 28, 1948 (62 Stat. 275), August 7, 1953 (67 Stat. 461), August 15, 1953 (67 Stat. 587), June 4, 1956 (70 Stat. 226), and August 28, 1958 (72 Stat. 941 at 947). The Commission also administers the Natural Gas Act, approved June 21, 1938 (52 Stat. 821, 15 U.S.C. 717–717w), as amended February 7, 1942 (56 Stat. 83, 15 U.S.C. 717f), July 25, 1947 (61 Stat. 459, 15 U.S.C. 717f), March 27, 1954 (68 Stat. 36, 15 U.S.C. 717(c)), and August 28, 1958 (72 Stat. 941 at 947; 15 U.S.C. 717r), and has certain duties under the Tennessee Valley Authority Act, approved May 18, 1933 (48 Stat. 1075), and amendments thereto; the Bonneville Act, approved August 20, 1937 (50 Stat. 731), the Fort Peck Act approved May 18, 1938 (52 Stat. 403); and under various Flood Control and River and Harbor Acts (notably the Flood Control Act of 1944, approved December 22, 1944 (58 Stat. 887)), and other statutes, as well as Executive Orders.

This volume, the twenty-seventh of a series, contains all the formal opinions and accompanying orders of the Federal Power Commission rendered, January 1, 1962 to June 30, 1962, inclusive. In addition to the formal opinions, there have been included intermediate decisions which have become final and selected orders of the Commission issued during such period.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

SHELL OIL COMPANY, DOCKET NO. G–9446, ET AL.

ORDER RESERVING DETERMINATION OF CERTIFIED QUESTIONS PENDING COMPLETION OF HEARING AND EXAMINER'S DECISION

(Issued January 3, 1962)

This matter was brought before the Commission by the presiding examiner's certifying three questions arising in the above-entitled proceedings. The questions involve (1) the propriety of terminating the Section 4(e) and Section 5(a) proceedings under the Natural Gas Act involving Shell Oil Company (Shell) herein; (2) the matter of consolidating the Section 5(a) aspects of this proceeding with the area-rate proceedings; and (3) whether El Paso Natural Gas Co., as a purchaser of Shell's gas is " * * * entitled to a lower rate by reason of the fact that the sole source of the gas received in California originates in an area where the producer's unit production costs are less than its company-wide unit production costs".

The basis upon which the presiding examiner certified these questions is that the direct evidentiary presentations of both the staff and Interveners (the Eastern Seaboard companies and the Southern California companies) indicate that Shell, during the test year 1959, had jurisdictional costs in excess of its jurisdictional revenues. Pending our disposition, the presiding examiner has continued to go forward with the hearing.

Formal responses to the certified questions were timely filed by Shell, Interveners, the California Commission and the staff. Shell expressed a position calling for the termination of these consolidated proceedings; whereas the Interveners, the California Commission and the staff severally expressed opposition to the termination of either the Section 4(e) or Section 5(a) proceedings consolidated herein. Interveners challenged, among other things, the propriety of employing 1959 as the test-year period. The California Commission contended, primarily, that individual rates should be compared with costs on an area basis as well as on a company-wide basis. The staff contended that, because Shell had put into effect substantial increased rates during the latter part of the test year, Shell's test-year costs should be compared not only with its actual revenues but also with its annualized revenues.

A brief review of the procedural and evidentiary background of these proceedings indicate that hearings commenced on July 7, 1960, extended through the direct testimony and cross-examination thereof of all parties' and the staff's witnesses, and encompass sixty-one exhibits and approximately 6,000 transcript pages. All that remains to be completed in the hearing phase of these proceedings is the presentation of Shell's rebuttal case, which is scheduled to be introduced into the record on January 18, 1962, and the subsequent cross-examination thereof.

Pending the completion of the hearings and the presiding examiner's decision, it would appear that our ruling on the merits of the contentions of the various parties and the staff to the certified questions would be premature.

The Commission orders:

Our determination on the certified questions filed herein on November 24, 1961, is hereby reserved pending the completion of the hearing and the presiding examiner's decision; and the hearings herein shall continue as scheduled by the presiding examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

INDEPENDENT PRODUCERS OF NATURAL GAS—FORM OF FILING FOR RATE INCREASES DOCKET NO. R-204

ORDER NO. 240

AMENDING § 154.94 OF REGULATIONS UNDER THE NATURAL GAS ACT

(Issued January 4, 1962)*

The Commission has under consideration in this proceeding the adoption of a single-page form for use by small independent producers (and in certain cases large producers) in submitting for filing proposed changes in rates pursuant to Section 4(d) of the Natural Gas Act. The use of the form will obviate, in most cases, the submission of the full supporting statement now required, thereby lessening the burdens incident to rate filings.

In essence, the amendments to the regulations herein adopted provide that:

(1) Small producers, who sold 5,000,000 Mcf, or less, of gas in interstate commerce annually, in each year of their operations during the preceding five years will use the form without a further supporting statement for any proposed contractual rate change.

(2) Producers who sold more than 5,000,000 Mcf of gas in interstate commerce annually in any year during the preceding five years and are proposing a contractual rate level equal to, or less than, the applicable area price level for increased rates shall submit the information required by the form but need not submit any additional supporting statement.

(3) Producers who sold more than 5,000,000 Mcf of gas in interstate commerce annually in any year during the preceding five years and are proposing a contractual rate change to a level exceeding the announced applicable area rate level and all producers proposing an ex parte or unilateral rate change shall submit the information required by the form and a full supporting statement.

The Commission finds:

(1) Amendment of the regulations as herein ordered is appropriate and necessary for carrying out the provisions of the Natural Gas Act.

(2) The amendments herein ordered represent matters of practice and procedure which do not require notice or hearing under section 4(a) of the Administrative Procedure Act.

The Commission acting pursuant to authority granted by sections 4 and 16 of the Natural Gas Act (15 U.S.C. 717c, 717o), *orders:*

(A) Part 154 of Subchapter E, Regulations Under the Natural Gas Act, Chapter I of Title 18 of the Code of Federal Regulations, is amended as follows:

In § 154.94, subsections (e), (f), and (g) are amended to read as follows—

(e) With each change in rate schedule not constituting a change in rate level by any means there shall be submitted reasons, nature and basis for the proposed change and the date upon which the change is proposed to be made effective. Changes in service such as compression, dehydration, etc., by either seller or buyer shall be considered as a change in the existing rate level.

(f) *Notice of change in rate level.* (1) an independent producer who has sold in interstate commerce 5,000,000 Mcf of gas or less annually in each year

*Published in Federal Register on January 10, 1961 (27 F.R. 252).

of his operations during the preceding five years and who is proposing a contractual change in rates, charges, etc., shall file the information called for in the following form:

Notice of Independent Producer Rate Change Filing

1. Producer: _____ (Name)
   _____ (Address)
2. Buyer: _____ (Name)
3. Location of sale: _____ (Field) (County) (State)
4. (a) FPC Gas Rate Schedule No. __; (b) Basis contract date _____
5. (a) Type of increase: _____ (Periodic, favored-nation, renegotiated, etc.)
   (b) Contract basis: _____ (Specify contract provision)
   (c) _____ _____ (Proposed effective date)
6. Rates in cents per Mcf at _____ (Specify) psia:

	Base rate	Tax reimbursement	Other* (specify separately)	Total rate

*Dehydration, compression, Btu adjustment, etc.

(2) An independent producer who has sold in interstate commerce more than 5,000,000 Mcf of gas annually in any year during the preceding five years and who is proposing a contractual change in rate level to a price below or equal to the applicable area price level for increased rates as set out in the Statement of General Policy No. 61–1, as amended (§ 2.56 of this chapter), shall file the information required in subsection (f) (1) hereof and may, at his option, submit a statement in support of the proposed change but shall, in any event, submit additional information in explanation of any pertinent circumstance not specifically required by the form.

(3) An independent producer who has sold in interstate commerce more than 5,000,000 Mcf of gas annually in any year during the preceding five years and is proposing a contractual change in rate level to a price higher than the applicable area price level for increased rates set out in the Statement of General Policy No. 61–1, as amended (§ 2.56 of this chapter), and any independent producer (regardless of the quantity of annual sales) proposing an ex parte or unilateral rate

change shall file, in addition to the information required by subsection (f)(1) hereof, a full statement in support of the proposed change in rate.

(g) A complete copy of all material filed pursuant to this section shall be furnished to each party to the rate schedule. With each such filing there shall be submitted to the Commission a list of the parties to whom such material has been furnished.

(B) The amendments herein adopted shall become effective February 12, 1962.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. G–18313, G–18314, G–18315; MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. G–18316

ORDER EXTENDING TIME

(Issued January 5, 1962)

Our order of October 31, 1959, directed Michigan Wisconsin Pipe Line Company (Mich. Wis.) to deliver and sell natural gas to Michigan Gas and Electric Company (MG & E) at Menominee, Michigan. By ordering paragraphs (Q) and (R) we subjected the direction to Mich. Wis. to certain conditions requiring affirmative actions by MG & E, as to construction of its project, contracting with its principal customer, and securing necessary State authorizations. By order of April 7, 1960, we granted MG & E's motion to stay the deadline for complying with the conditions of paragraphs (Q) and (R). Under our April 7 order, the stay expires 60 days after the Supreme Court's denial of a petition for a writ of certiorari in *Michigan Gas & Electric Co.* v. *F.P.C.*, No. 368 October Term 1961. The Supreme Court denied certiorari on November 6, 1961.

On December 29, 1961, MG & E filed a lengthy motion for reconsideration of the requirements of our order of October 31, 1959, and for extension of time for compliance. It is reasonable that we further extend the time for compliance with the conditions of paragraphs (Q) and (R) in order that we may consider the merits of MG & E's latest motion.

The Commission orders:

The time for compliance by Michigan Gas and Electric Company with ordering paragraphs (Q) and (R) of our order of October 31, 1959, is hereby extended pending further order of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TENNECO CORPORATION, DOCKET NOS. CI61–1272, CI61–1273 AND CI61–1475; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP61–264

ORDER DENYING MOTION TO DISMISS AND ORDER REQUIRING THE FILING OF SECTION 7(b) ABANDONMENT APPLICATIONS

(Issued January 5, 1962)

On December 8, 1961, the Commission staff counsel filed a motion to dismiss all of the above applications. The following grounds were advanced as warranting dismissal:

(1) Tennessee Gas Transmission Company (Tennessee) and Tenneco Corporation (Tenneco) failed to present evidence concerning the effect of the transfer of certain gas leases, if permitted, on tax benefits [1] and thus on Tennessee's rates.

(2) Tennessee failed to file applications pursuant to Section 7(b) of the Natural Gas Act to abandon reserves now dedicated to public service.

The motion arises within the framework of proceedings upon applications filed by Tenneco for certificates of public convenience and necessity under Section 7(c) of the Act. The applications were filed in Docket Nos. CI61–1272 and CI61–1273 to assume sales and deliveries of natural gas being made in interstate commerce by its corporate parent Tennessee.[2] The sales to be assumed in the former docket involve Tennessee's gas production delivered into its own pipeline system. In Docket No. CI61–1273, the subject sales are made by Tennessee to non-affiliated pipeline companies under rate schedules filed with the Commission. In the remaining Tenneco application, Docket No. CI61–1475, a certificate is sought to initiate sales to Tennessee. All of the above sales Tenneco seeks to have certificated involve gas production from leases purportedly transferred to it by Tennessee pursuant to an Instrument of Conveyance dated February 28, 1961.

The application filed by Tennessee in Docket No. CP61–264 is for a certificate authorizing the construction and operation of facilities necessary to take gas produced from the leases involved in Docket No. CI61–1475.

We are of the opinion that the first ground is insufficient to support a dismissal. We recognize, of course, that our order of October 9, 1961,[3] directed the applicants to submit information concerning the possible loss of tax benefits and the impact of that loss on Tennessee's rates. Tennessee responded stating that the question of tax benefits is being adjudicated in its recent rate proceeding now pending the presiding examiner's decision.[4] Their counsel has advised that evidence has not been submitted because Tennessee is awaiting decision of this question.

We believe that dismissal is unwarranted at this time because of the necessity of weighing the circumstances of the tax questions along with other factors relevant to a determination whether the transfer would be in the public interest. We stress however, applicant runs the risk of failing to make a record sufficient to enable us to pass upon all relevant considerations.

With respect to the other ground raised by staff counsel concerning Tennessee's failure to file applications for abandonment authorization of the sales and leases involved in Docket Nos. CI61–1272, CI61–1273, and CI61–1475, we are satisfied that the mere absence of filing such applications should not constitute a ground for dismissal. Dismissal without affording further opportunity to correct the deficiency would seem to elevate pleading above substance. However, we believe that such applications are required by the Act.

Accordingly, we shall extend an opportunity to Tennessee to file abandonment applications pursuant to Section 7(b). If such are filed, they will be consolidated for hearing and decision along with the above-entitled Section 7(c) proceedings. This procedure would avoid delay in processing the Section 7(b) applications and provide for simultaneous disposition thereof.

---

[1] Tax benefits available to Tennessee by operation of *Internal Revenue Code of 1954*, Sections 611–613 pertaining to percentage depletion deductions, and Section 263(c) which permits deductions with respect to intangible well-drilling and development costs of oil and gas wells.

[2] Tennessee owns all of Tenneco's common stock which carries 75 percent of the voting rights.

[3] "Order Denying Applications for Rehearing, Denying Requests for Temporary Certificates, Requiring the Filing of Information, Consolidated Proceedings, and Fixing Date of Hearing."

[4] Tennessee Gas Transmission Company, Docket No. G–19983.

The Commission finds:

(1) The reasons presented in the motion do not warrant, without consideration of other factors in the proceeding affecting the public interest, dismissal of the applications at this time. Accordingly, the motion to dismiss filed by staff counsel December 8, 1961, should be denied.

(2) The Natural Gas Act, Section 7(b) requires that Tennessee file appropriate applications, pursuant thereto, for permission to abandon the leases from which Tenneco proposes sales and deliveries of gas to Tennessee in Docket No. CI61–1272.

The Commission orders:

(A) The reasons presented in the motion do not warrant, without consideration of other factors in the proceeding affecting the public interest, dismissal of the applications at this time. Accordingly, the motion to dismiss, filed by staff counsel December 8, 1961, is hereby denied.

(B) The Natural Gas Act, Section 7(b) requires that Tennessee file appropriate applications, pursuant thereto, for permission to abandon the leases from which Tenneco proposes sales and deliveries of gas to Tennessee in Docket No. CI61–1272.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

UNITED CARBON COMPANY, DOCKET NO. RI61–269

ORDER DENYING PETITION FOR REHEARING AND RECONSIDERATION

(Issued January 5, 1962)

On December 8, 1961, United Carbon Company (United Carbon) tendered for filing a petition requesting rehearing and reconsideration of the Commission's order issued November 7, 1961, denying United Carbon's petition to terminate the above-entitled proceeding.

In its petition, United Carbon states that other suspension proceedings involving a similar increased rate for the sale of gas to the same buyer from lands in the same area have been terminated, and that United Carbon should be accorded the same treatment. It states that this proceeding is unnecessary in view of the extensive record made in the hearings in Docket Nos. G–9572, *et al.*[1]

United Carbon refers to cost data previously submitted in which it states it applied the same cost-of-service principles as those used in Opinion No. 340, resulting in a unit cost substantially in excess of the proposed increased rate. Further, United Carbon states that production is declining in the area in question, necessitating increased drilling and drilling at greater depths.

The Commission finds:

The petition for rehearing and reconsideration sets forth no new facts and no principles of law which either were not fully considered by the Commission when it adopted the order issued November 7, 1961, or which having been now considered warrant any change in, vacation, or modification of such order.

The Commission orders:

The petition for rehearing and reconsideration filed herein by United Carbon be and it is hereby denied.

---

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP62-35

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 8, 1962)

On August 14, 1961, as supplemented on September 29, 1961, Michigan Gas Storage Company (Applicant) filed in Docket No. CP62-35 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in order to establish two new delivery points and to enlarge an existing delivery point to enable Applicant to deliver natural gas to Consumers Power Company (Consumers), its affiliate and sole customer. Consumers proposes to utilize said gas to initiate retail natural gas service in the Township of Bath, the Village of Stockbridge and the City of Lake City, located, respectively, in Clinton, Ingham and Missaukee Counties, Michigan.

Applicant proposes to construct and operate the following facilities:

(1) For service to Bath, meter and regulator facilities on Applicant's Lansing pipeline lateral in Victor Township, Clinton County, Michigan, at an estimated cost of $19,000;

(2) For service to Stockbridge, meter and regulator facilities on Applicant's Freedom-Laingsburg pipeline in Unadilla Township, Livingston County, Michigan, at an estimated cost of $18,000; and

(3) For service to Lake City, enlargement of Applicant's existing McBain meter station in Riverside Township, Missaukee County, Michigan, at an estimated cost of $3,000.

The application shows the following estimated natural gas requirements for the three communities:

	Bath	Stockbridge	Lake City
Peak day (Mcf):			
1st year	162	322	452
2d year	177	350	477
3d year	188	384	502
Annual (Mcf):			
1st year	24,890	47,633	69,419
2d year	26,920	51,730	73,299
3d year	28,538	55,827	77,121

The total estimated cost of $40,000 for construction of the proposed facilities will be financed by Applicant from funds on hand.

Consumers will build the distribution facilities necessary to render natural gas service to the three communities.

The proposed sale of natural gas to Consumers will be made pursuant to Applicant's FPC Gas Tariff, Original Volume No. 1, Rate Schedule X-1.

Applicant was granted temporary authorization by letter, dated November 2, 1961.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 28, 1961, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 3, 1946, in Docket No. G–731 (5 FPC 965).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas to Consumers for resale, by Applicant, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the general terms and conditions set forth in paragraphs (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.20 should attach to the issuance of the certificate hereinafter granted to Applicant and to the exercise of the rights granted thereunder, and that the construction of the facilities authorized by this order shall be completed and said facilities placed in actual operation within 12 months from the date on which this order issues.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record, and not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Gas Storage Company, to construct and operate the proposed facilities and to sell and deliver natural gas to Consumers Power Company, as hereinafter described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The general terms and conditions set forth in paragraphs (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificate granted in paragraph (A) hereof and to the exercise of the rights granted thereunder.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP61-132

ORDER REFERRING COMPLAINT TO PRESIDING EXAMINER

(Issued January 8, 1962)

On November 13, 1961, the Commission received a letter dated November 9, 1961, in the nature of a complaint from Mid-America Pipeline Company (Mid-America) charging that Northern Natural Gas Company (Northern), the applicant herein, has, in violation of Section 7(c) of the Natural Gas Act, without a certificate of public convenience and necessity, installed a material part of the facilities for which it seeks authorization in this proceeding.

Mid-America says, among other things, that Northern in this proceeding "specifically sought certificate authorization to install and operate the following facilities (Tr. 87, Exh. 5):

(a) Compressor facilities—$2,804,600 (6,000 hp (3-2000 hp units) at Bushton station).

(b) Connecting facilities—$317,800 (over one mile of connecting 30" and 20" lines).

(c) Measurement facilities—$69,900.

(d) Mainline pipeline improvements—$435,300.

These facilities, with the exception of the mainline improvements are all shown in diagram on page 6 of Northern's Exhibit 7." (D)

Mid-America also says that it has been reliably informed that the above facilities and modifications, or a material part of them, have already been installed without authorization. Specifically:

(a) The connecting lines shown on Exh. 7 are installed and connected to the extraction plant;

(b) The controls and calorimetric equipment has been installed and connected to the system;

(c) One 2,000 hp compressor has apparently been installed, and may be connected to the system, as shown in Exh. 7;

(d) Northern is, or has been, delivering natural gas from its mainline to Northern Gas Products who in turn has been using it to fire the extraction plant boilers, and also to fuel a gas engine driven generator.

(e) The various mainline improvements apparently have been completed; See Tr. 92.

Mid-America says it does not know whether the natural gas liquids extraction plant to be located adjacent to Northern's Bushton Compressor Station has actually been "placed on line" and extraction operations conducted on a test basis, but that it appears that the plant could be operated on a few hours notice.

Mid-America urges the Commission, if it confirms that Northern has violated Section 7(c) of the Act, to direct Northern to show cause why Northern's application herein should not be summarily denied.

The Commission on November 17, 1961, by letter addressed to the president of Northern directed Northern to reply to said complaint of Mid-America.

Northern did by letter dated November 20, 1961, addressed to the Secretary of the Commission, answer said complaint, which answer was filed with the Commission on November 21, 1961.

On November 29, 1961, a letter dated November 27, 1961, was filed by Mid-America responding to Northern's answer of November 20, 1961.

The Commission finds:

It is appropriate to carry out the provisions of the Natural Gas Act, and in the public interest, that the issue raised by the above-described pleadings should be considered by the Presiding Examiner in connection with his disposition of the issues presented by the record made at the hearing on the application herein.

The Commission orders:

The above-described complaint of Mid-America Pipeline Company together with the answer of Northern Natural Gas Company and the response of Mid-America to Northern's answer be and the same are hereby referred to the Presiding Examiner to be considered by him in connection with his disposition of this proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP62-68

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 8, 1962)

On September 18, 1961, The Ohio Fuel Gas Company (Applicant) filed an application in Docket No. CP62-68, pursuant to Section 7(c) of the Natural Gas Act, for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities necessary to render retail natural gas service in the incorporated Village of Cheshire, Gallia County, Ohio, and environs.

Applicant proposes to tap its Line F-258 and to construct and operate 75 feet of 2-inch pipeline at an estimated cost of $450. Applicant states that it will also construct and operate a distribution system within and adjacent to Cheshire at an estimated cost of $40,892.

The estimated requirements for the proposed service to Cheshire are:

	Year		
	1st	2d	3d
Annual, Mcf	17,566	24,142	25,344
Peak day, Mcf	182	230	249

The volumes involved are too small to have any appreciable impact on Applicant's overall gas supply.

The cost of constructing the proposed facilities will be financed from cash on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 21, 1961, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within

the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof by Applicant are subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.20) should attach to the certificate hereinafter issued to Applicant and to the exercise of the rights granted thereunder, and that the construction of the facilities authorized by this order shall be completed and said facilities placed in actual operation within 6 months from the date on which this order issues.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Ohio Fuel Gas Company, to construct and operate the proposed facilities and to transport natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificate granted in paragraph (A) hereof and to the exercise of the rights granted thereunder.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

RIO GRANDE VALLEY GAS COMPANY, DOCKET NOS. G–1368 AND G–1369

ORDER RESCINDING ORDER AND PERMIT

(Issued January 8, 1962)

Rio Grande Valley Gas Company (Rio), a Texas corporation with principal place of business in Brownsville, Texas, was authorized by order of the Commission issued on March 8, 1951, in *Rio Grande Valley Gas Company*, Docket No. G–1368, 10 FPC 807, pursuant to Section 3 of the Natural Gas Act, to export

natural gas from the United States to Mexico under a contract, dated April 1, 1950, with Gas de Matamoros, S.A. (Matamoros) for resale and distribution to domestic, commercial and industrial consumers in the City of Matamoros, Tamaulipas, Mexico and its environs. The City of Matamoros is located on the opposite side of the Rio Grande River across from Brownsville. Rio is also the holder of a Presidential Permit, dated December 20, 1950, for which it made application in Docket No. G–1369 and which was released to it by the aforesaid order in Docket No. G–1368, pursuant to Executive Order No. 8202 of July 13, 1939, to be effective as of February 5, 1951. This Permit granted Rio permission to construct, operate and maintain certain specified natural gas facilities extending from an existing 8-inch pipe line in Brownsville to a point of connection in the Rio Grande River with proposed pipeline facilities of Matamoros at the border of the United States and Mexico and to connect the same to the proposed facilities of Matamoros for the exportation of natural gas to Mexico in accordance with the aforesaid Section 3 authorization.

Executive Order No. 8202 of July 13, 1939 was revoked and superseded by Executive Order No. 10485 of September 3, 1953. Section 4 of the latter Order provides: "All Presidential Permits heretofore issued pursuant to Executive Order No. 8202 of July 13, 1939, and in force at the time of the issuance of this order, and all permits issued hereunder, shall remain in full force and effect until modified or revoked by the President or by the Federal Power Commission". The aforesaid Permit and Section 3 authorization are presently outstanding and in full force and effect.

Rio, by letter in response to communications from the Commission, states that the projected line to Matamoros, Mexico was never installed because of the failure of Gas de Matamoros, S.A. to complete its arrangements, and that the proposal has been abandoned.

The Commission finds:

(1) It is necessary and appropriate to carry out the provisions of the Natural Gas Act that the order of the Commission issued on March 8, 1951, in *Rio Grande Valley Gas Company*, Docket No. G–1368, 10 FPC 807, be rescinded.

(2) The Presidential Permit of December 20, 1950, applied for by Rio Grande Valley Gas Company in Docket No. G–1369 and released by order of the Commission issued in Docket No. G–1368 on March 8, 1951 and which granted executive permission to said company to construct, operate, maintain and connect certain natural gas facilities at the international boundary of the United States and Mexico at or near Brownsville, Texas for the exportation of natural gas from the United States to Mexico, as hereinbefore described, should be rescinded.

The Commission orders:

(A) The order of the Commission heretofore issued on March 8, 1951 in *Rio Grande Valley Gas Company*, Docket No. G–1368, 10 FPC 807, be and the same hereby is rescinded.

(B) The Presidential Permit of December 20, 1950, heretofore released, issued and granted to Rio Grande Valley Gas Company as set forth in Finding (2) hereof, be and the same hereby is rescinded.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. G–17485, ET AL., G–20570, ET AL., CP61–1

ORDER GRANTING PETITION TO AMEND

(Issued January 9, 1962)

On October 27, 1961, Northern Natural Gas Company (Northern), a Delaware corporation with principal place of business at 2223 Dodge Street, Omaha 1, Nebraska, filed in the above-entitled proceedings a "Petition to Amend Orders Granting Certificates of Public Convenience and Necessity". In the order accompanying Opinion No. 324, issued July 31, 1959, in Docket Nos. G–17485, *et al.*, 22 FPC 164, as amended August 26, 1960, 24 FPC 341, and November 1, 1961, 26 FPC 672, Northern was authorized to construct and operate certain facilities so as to sell and deliver gas to distributors desiring to initiate natural-gas service in about 342 communities. In Docket No. CP61–1, by an order issued March 17, 1961, 25 FPC 540, the Commission affirmed with minor modifications the examiner's decision issued February 21, 1961, 25 FPC 542, authorizing Northern to construct and operate the facilities required to sell and deliver gas to a new large industrial customer and to make sales for resale to one privately-owned distributor and one municipally-owned distributor desiring to serve Silver Bay and Two Harbors, Minnesota, respectively. By the order accompanying Opinion No. 345, issued June 28, 1961, in Docket Nos. G–20570, *et al.*, 25 FPC 1234, Northern was authorized to construct and operate facilities to provide for the increased requirements of its existing utility customers and to commence the sale of 75,000 Mcf of gas per day to a new pipeline customer, Michigan Wisconsin Pipe Line Company.

Northern's petition states that when the Commission, by order issued October 5, 1961, in Docket Nos. CP61–190, *et al.*, 26 FPC 557, authorized Northern to supply up to 89,005 Mcf per day of contract demand from the Mt. Simon reservoir of Northern's Redfield, Iowa, underground storage field, certain main-line facilities heretofore authorized, but not yet constructed pursuant to the orders issued in the aforementioned proceedings in Docket Nos. G–17485, *et al.*, Docket Nos. G–20570, *et al.*, and Docket No. CP61–1, were obviated by the certificated increase in storage facilities.

Additionally, it should be noted that in the order issued November 1, 1961, 26 FPC 672, amending the order accompanying Opinion No. 324, Western Power and Gas Company (formerly Central Electric and Gas Company), instead of Central Natural Gas Company, was shown as the distributor to whom Northern is now authorized to sell gas for distribution in the communities of Lonsdale, Morristown, Veseli and Waterville, Minnesota. This order will also correct the order issued November 1, 1961, so as to authorize Northern to sell gas to Central Natural Gas Company for resale in these four Minnesota communities, in lieu of Western Power and Gas Company.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Northern's petition filed October 27, 1961, requesting amendment of three different Commission orders, be granted so as to modify the orders in the following respects:

(1) The order accompanying Opinion No. 324, issued July 31, 1959, 22 FPC 164, 179, as amended August 26, 1960, 24 FPC 341, and November 1, 1961, 26

FPC 672, should be amended to delete therefrom Northern's authorization to construct compressor facilities in the amount of 2000 horsepower at the Ogden Station and 3400 horsepower at the Oakland Station.

(2) The order accompanying Opinion No. 345, issued June 28, 1961, 25 FPC 1234, should be amended to delete therefrom Northern's authorization to construct compressor facilities in the amount of 2000 horsepower at the Palmyra Station, 4000 horsepower at the Beatrice Station, 2000 horsepower at the Bushton Station, and 2000 horsepower at the Mullinville Station, as well as the following 30-inch main-line loops: 17.9 miles north of Oakland, Iowa, 15.4 miles northeast of Palmyra, Nebraska, 10.8 miles north of Clifton, Kansas, 11.7 miles north of Tescott, Kansas, 9.8 miles north of Bushton, Kansas, and 8.6 miles north of Macksville, Kansas.

(3) The order issued March 17, 1961, 25 FPC 542, affirming with minor modifications the examiner's decision in Docket No. CP61–1 should be amended to delete therefrom Northern's authorization to construct 6.4 miles of 30-inch main-line loop north of Bushton, Kansas.[1]

The Commission orders:

(A) Paragraph (A) of the Commission's order accompanying Opinion No. 324, issued July 31, 1959, 22 FPC 164, 179, as amended August 26, 1960, 24 FPC 341, and November 1, 1961, 26 FPC 672, is hereby further amended so as to delete therefrom Northern's authorization to construct the facilities hereinbefore described in paragraph (1) and the footnote pertaining to paragraph (3) as requested by Northern in its petition to amend filed October 27, 1961.

(B) Paragraph (A) of the Commission's order accompanying Opinion No. 345, issued June 28, 1961, 25 FPC 1234, is hereby amended so as to delete therefrom Northern's authorization to construct the facilities hereinbefore described in paragraph (2), as requested by Northern in its petition to amend filed October 27, 1961.

(C) Paragraph (B) of the Commission's order issued March 17, 1961, 25 FPC 541, affirming with minor modifications the examiner's decision issued February 21, 1961, in Docket No. CP61–1, is hereby amended so as to delete therefrom Northern's authorization to construct the facilities hereinbefore described in paragraph (3), as requested by Northern in its petition to amend filed October 27, 1961.[2]

(D) The Commission's order issued November 1, 1961, 26 FPC 672, amending the order accompanying Opinion No. 324, is hereby corrected so as to indicate on page 4 thereof that Central Natural Gas Company, rather than Western Power and Gas Company, is the present distributor to whom Northern is authorized to sell and deliver gas for resale in the four Minnesota communities of Lonsdale, Morristown, Veseli, and Waterville.

(E) All other provisions of the order accompanying Opinion No. 324, 22 FPC 179, as amended August 26, 1960, 24 FPC 341 and November 1, 1961, 26 FPC 672, of the order issued June 28, 1961, accompanying Opinion No. 345, 25 FPC 1234, and of the order issued March 17, 1961, 25 FPC 540, affirming with minor modifications the examiner's decision in Docket No. CP61–1, shall remain unchanged.

[1] The order issued August 26, 1960, 24 FPC 341, amending the order accompanying Opinion No. 324, had conditioned Northern's authorization to construct this same loop upon the final disposition of Northern's application in Docket No. CP61–1 which was then pending before the Commission. The amendment herein should be construed as deletion of Northern's authorization to construct this particular segment of main-line loop regardless of whether the authorization may be considered to have been established by the order accompanying Opinion No. 324 or by the order affirming the examiner's decision in Docket No. CP61–1.

[2] Northern estimates the cost of all the facilities, for which construction authorization is herein deleted, to be $13,174,400, including interest and overheads.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

ORDER DENYING MOTIONS DISMISSING PETITION AND ISSUING NOTICE OF REFUND OBLIGATIONS

(Issued January 10, 1962)*

In each of the above-captioned dockets we have heretofore issued unconditional permanent certificates of public convenience and necessity under Section 7(c) of the Natural Gas Act. These certificates are still outstanding, but the proceedings are before us again as a result either of judicial remand or our own grant of rehearing, for the purpose of reconsideration, upon applications therefor duly filed under Section 19(a) of the Act. Each of these proceedings is consolidated for hearing with Docket No. AR61-2.

These dockets fall into three groups:

I. Sales to Transcontinental Gas Pipe Line Corporation (Transco); certificates issued by order accompanying Opinion 315, 20 FPC 264. This order was affirmed by the United States Court of Appeals, for the Third Circuit, *United Gas Improvement Co.* v. *F.P.C.*, 269 F. 2d 865, but remanded by the Supreme Court, *Public Service Commission of New York* v. *F.P.C.*, 361 U.S. 195, with instructions to reconsider and redetermine in the light of *Catco* (*Atlantic Refining Co.* v. *Public Service Commission of New York*, 360 U.S. 378).

II. Sales to Hope Natural Gas Company; certificates issued by order accompanying Opinion 327, 22 FPC 378. This order was "reversed" on appeal "insofar as it grants unconditional certification to the initial price proposals". *Public Service Commission of New York* v. *F.P.C.*, 287 F. 2d 146 (CADC), cert. denied *sub nom.*, *Hope Natural Gas Co.* v. *Public Service Commission of New York*, 365 U.S. 880.

III. Sales to Transco; certificates issued by order of November 17, 1959, 22 FPC 836. We granted rehearing (as to dockets listed in Appendix II only) by order of January 15, 1960, in Docket Nos. G-16603 *et al.* (unreported).

When we first consolidated these various proceedings for hearing with Docket No. AR61-2, we contemplated an early decision on the initial rates proposed in these and other dockets. We have since concluded that such a "two-phase" area proceeding is not feasible at this time and have eliminated the separate "certificate" phase of that proceeding by our order of November 9, 1961. Accordingly, we deem it incumbent upon us once more to consider these proceedings and to determine what further remedies, if any, the public interest necessitates.

It is fundamental in a producer certificate proceeding that the applicant show his proposed price "to be in the public interest." *Catco*, 360 U.S. at 390. Certain minimal standards as to price must be met at the outset. The development of these minimal standards has been a continuing process. We reviewed this development in *Socony Mobil Oil Company, Inc.*, Docket No. G-13780, order issued September 25, 1961 (26 FPC 532):

> * * * Traditionally, we have regarded the test as one that relates the proposed price to the previous price structure in the area. See *Cities Serv-*

[1] See Appendices I, II, and III for complete listing of docket numbers and proceedings.
*Order denying rehearing issued March 7, 1962, 27 FPC 482.

ice Gas Co., 14 FPC 134, affirmed sub nom. *Signal Oil and Gas Co.* v. *F.P.C.*, 238 F. 2d 711 (CA3), cert. den., 353 U.S. 923. Immediately after the Supreme Court's *Catco* decision we announced a test of comparison with the highest price in the area previously certificated by us; but that standard was judicially upset for failure to show "a real administrative effort to hold back prices." *Texas Gas Transmission Corp.*, 22 FPC, 378, 388, order set aside sub nom. *P.S.C.* of N.Y. v. *F.P.C.*, 287 F. 2d 146, 150 (CADC) cert. den., 365 U.S. 880, 882. * * * .

More recently, on October 31, 1961, we issued our Fourth Amendment to our Statement of General Policy No. 61–1 in which, guided by recent court decisions therein cited, and after careful re-examination of the factors set forth in our original Policy Statement 61–1, we lowered the ceiling for initial prices in Southern Louisiana to 21.25¢ per Mcf inclusive of State taxes and 19.5¢ per Mcf for off-shore sales not subject to the taxing jurisdiction of the State. By this statement we confirm for the future what the courts have held in the past: that initial prices at the levels proposed herein are out of line and cannot be approved unless justified by compelling evidence after full hearing; such evidence has not been adduced to date.

While we have power to redetermine these proceedings on the basis of the respective records as originally made and in the light of additional facts of which we may take official notice, we adhere to the view that it would be fairer and wiser in the present circumstances to offer the applicants a further opportunity to adduce evidence in Docket Nos. AR61–2 *et al.* in support of their proposed prices. But the necessary deferral of final resolution of these proceedings requires us to make it explicit that the public will not be without interim protection.

We have concluded, as to all rates collected by the applicants for the sales involved in these proceedings, that we should explicity impose upon each applicant, to the extent that we are empowered to do so, an obligation to refund any amounts collected in excess of the amounts which would have been collected under the rate or rates finally determined in these proceedings to accord with the requirements of the public convenience and necessity.

We find ample authority under Sections 7, 16, and 19 of the Act so to protect the public interest, pending final disposition of the initial price questions herein. The producer-applicants have no vested rights to receive the benefits of an order issued by the Commission once such order has been remanded to the Commission because its findings could not be supported under existing law. *Securities and Exchange Commission* v. *Chenery Corporation*, et al., 332 U.S. 194; *Federal Communications Commission* v. *Pottsville Broadcasting Company*, 309 U.S. 134, 145. Similarly, applicants have no vested rights under an order as to which we have granted the statutory rehearing.

Recently, in *Socony Mobil Oil Company, Inc.*, Docket No. G–13780, when confronted with the same problem as is presented here, we set aside the permanent certificate and issued temporary authority properly conditioned. But upon further study of this problem, and particularly of the mandate of the District of Columbia Circuit covering Group II of these proceedings, we are now convinced that we can adequately protect the public by redetermining the price issue in the light of governing legal standards. This makes it unnecessary to set aside the certificates.

On June 13, 1960, Transco, the purchaser in the Group I proceedings filed as to those dockets a motion requesting that we reaffirm our order issuing unconditional certificates. However, in view of our findings as to the insufficiency of the evidence heretofore adduced, this motion must be denied insofar

as it requests that we reaffirm our former approval of the proposed initial prices.

The Public Service Commission of New York (P.S.C.), on June 22, 1961, filed a motion addressed to all the instant proceedings [2] requesting, "* * * orders complying with judicial mandates or requiring the posting of bond or filing of undertakings to assure refunds of any amounts of initial rates herein found unlawful." A similar motion, requesting the Commission to provide interim consumer protection in compliance with judicial mandates was filed by the Long Island Lighting Company, Philadelphia Electric Company, Public Service Electric and Gas Company and The United Gas Improvement Company (Joint Movants), on July 10, 1961.[3] The order issued herein will clarify the Commission's position in regard to refund obligations, but deny the relief sought by these motions, insofar as they request the posting of bond to assure refunds. We note that the cost of bonding, if the bonds were to provide adequate coverage, would be excessive and we do not believe that bonds are required to protect the public interest.

Hope Natural Gas Company, purchaser in the Group II proceedings, filed a petition for declaratory order under Section 1.7(c) of the Commission's Rules of Practice and Procedure on August 16, 1961, requesting that the Commission either affirm the propriety of Hope's continuing to pay the contract prices which are the subject of those proceedings or take such further action as the Commission may deem appropriate under the circumstances. Neither P.S.C. nor Joint Movants have challenged the propriety of Hope's continuing to make payments in accordance with the contract rates filed by the producers. Neither P.S.C. nor Joint Movants answered Hope's petition; but several producers have done so and pointed out that they agreed with Hope's position that it should pay the filed rates until such time as those rates are adjusted. These answers correctly observe that Hope fails to demonstrate the existence of any controversy or uncertainty which calls for issuance of a declaratory order under our Rules. Accordingly, Hope's petition should be dismissed.

The Commission orders:

(A) The amounts collected by the applicants listed in Appendices I, II and III (or by their predecessors or successors in interest) under the rate schedules covering the sales involved in the listed proceedings shall be subject to such refund provisions as the Commission may lawfully perscribe by its final order in these proceedings (all of which have been consolidated with Docket No. AR61-2) to the extent, if any, that the rate which has been collected exceeds the rate ultimately found to accord with the requirements of the public convenience and necessity.

(B) Except as hereinabove granted, the motions of Transcontinental Gas Pipe Line Corporation, filed June 13, 1960, of the Public Service Commission of New York, filed June 22, 1961, and of Long Island Lighting Company, Philadelphia Electric Company, Public Service Electric and Gas Company and The United Gas Improvement Company, filed July 10, 1961, are denied insofar as they relate to the dockets listed in Appendices I, II and III.

(C) The petition of the Hope Natural Gas Company, filed on August 16, 1961, is dismissed.

(D) The Secretary of the Commission is hereby directed to file a copy of this order as a part of each of the rate schedules listed in Appendices I, II and III, as

[2] Except Docket No. G-17447. P.S.C.'s motion also speaks to several proceedings not covered by this order.

[3] Joint Movants address their motion to the Group I and III dockets (except Docket Nos. G-13293, G-13746, G-14244 and G-17447) as well as other proceedings not covered by this order.

well as any rate schedules which may hereafter be filed in connection with the sales proposed in Docket Nos. G–14355 and G–17341.

AREA RATE PROCEEDING, DOCKET NO. AR61-1; CLAUDE E. AIKMAN, ET AL., DOCKET NO. G-18466, ET AL.; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL, DOCKET NO. CI60-435, ET AL.

ORDER REQUIRING THAT CERTAIN DATA BE FILED

(Issued January 11, 1962)

By order of August 2, 1961, we required the filing of certain cost data, in accordance with Appendix B to that order,[1] by those respondents whose company-wide jurisdictional sales in 1960 exceeded 2,000,000 Mcf. At that time we announced that we would subsequently issue a further order requiring the furnishing of cost data by the smaller respondents whose company-wide jurisdictional sales during 1960 amounted to 2,000,000 Mcf or less. By order issued herein on December 21, 1961, we revised the volumetric cut-off from 2,000,000 Mcf to 10,000,000 Mcf.

On October 6, 1961, our staff circulated for comment by interested parties a proposed draft "Appendix C" designed to obtain cost data from the smaller respondents. A number of interested parties cooperated in presenting constructive suggestions regarding the draft "Appendix C" and such suggestions were discussed by the parties and our staff at an informal conference on December 5, 1961. We are now prescribing a "small producer" cost data form which we shall denominate Appendix C to this order.* In general, this Appendix requires the reporting of data basically as they are recorded in the respondent's accounts. For those respondents who have expensed the Intangible Development Cost (IDC) of their producing properties, Appendix C offers a simplified method for reporting such costs as part of the investment in the completed well.

We are also convinced that we may reasonably reduce the requirements for reporting of cost data by non-operators; accordingly we shall require reporting of cost data on Appendix B or C as follows:

(1) We shall continue to require the reporting of cost data on Appendix B by all producers whose company-wide jurisdictional sales in 1960 exceeded 10,000,000 Mcf.

(2) We shall generally require those respondents whose company-wide jurisdictional sales in 1960 amounted to 10,000,000 Mcf or less to file either Appendix B or Appendix C, as they select. However, such respondents need not file either Appendix B or Appendix C, provided:

(a) They do not *operate* any property, *in the Permian Basin area*,[2] from which gas is produced and sold subject to the jurisdiction of the Commission; and

(b) The *operator* of any such properties in which they own interest is filing his own (i.e., the operator's) cost data for such properties on either Appendix B or C.

By this action we expect to secure the minimal cost data from the smaller respondents without imposing undue burden. At the same time we will not deny any producer the option of reporting his cost data in full.

(3) Copies of such cost data filings need not be served on any party to these proceeding.

[1] Appendix B was revised by order of September 18, 1961, herein.

[2] Texas Railroad Commission Districts No. 7-C and 8, and Lea, Chaves and Eddy Counties, New Mexico.

*Omitted in printing.

The Commission finds:

It is necessary and appropriate in the public interest and to aid in the enforcement of the Natural Gas Act that respondents herein be required to furnish certain cost data to the Commission as hereinafter ordered.

The Commission orders:

(A) All respondents to these consolidated proceedings, who made company-wide jurisdictional sales of 10,000,000 Mcf or less of natural gas during the year 1960, shall complete and on or before March 26, 1962, shall file with the Secretary of the Commission, three copies of either:

(1) The data required by Appendix B to our order of August 2, 1961 (as revised by our order of September 18, 1961) entitled "Costs and Statistics Pertaining to Oil and Gas Production, Exploration, Gas Gathering and Products Extraction Operations, Year 1960"; or

(2) The data required by Appendix C, prescribed by this order and entitled "Costs and Statistics Pertaining to Oil and Gas Production and Exploration—Small Producers, Year 1960";

Provided, however, That any respondent who made company-wide jurisdictional sales of 10,000,000 Mcf or less of natural gas during the year 1960 need not file either Appendix B or Appendix C if:

(1) Such respondent was not, during 1960, the operator of any leasehold, in the Permian Basin area, from which gas was produced and sold subject to the jurisdiction of the Commission; *and*

(2) The operator of any such leasehold in which such respondent owns an interest is filing his own (i.e., the operator's) cost data for such properties under either Appendix B or Appendix C.

Any respondent excused by the above *proviso* may nonetheless file his cost data in accordance with either Appendix B or C if he elects to do so.

(B) Except as hereinabove, modified the Commission's orders in these proceedings shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP62-99

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 11, 1962)

On October 19, 1961, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP62-99 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the calendar year 1962 at a total cost not to exceed $800,000, with no single project to exceed a cost of $250,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

Applicant proposes to finance the subject facilities from current working funds.

Pursuant to due notice a public hearing was held in Washington, D.C., on December 27, 1961, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of June 9, 1945, in Docket No. G–294 (4 FPC 936).

(2) The facilities hereinbefore decribed, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to take natural gas purchased from producers thereof during the calendar year 1962 as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached (c) a description of the project or projects that have been constructed pursuant to the authorization granted hereunder, (d) the location of said project or projects, (e) the cost of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(6) The authorization granted herein should be limited to construction during the calendar year 1962, and the total cost for facilities to be constructed hereunder be limited to $800,000, with no single project to exceed a cost of $250,000.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Colorado Interstate Gas Company to construct during the calendar year 1962 the proposed facilities hereinbefore described (more fully described in the application filed in this proceeding) and to operate such facilities only to take natural

gas supplies from producers who have received authorization from the Commission to sell natural gas to Colorado Interstate Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the cost of the facilities so constructed, and (f) the names of the independent producers involved together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed hereunder are hereby limited to $800,000, with no single project to exceed a cost of $250,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP62-109

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 11, 1962)

On October 30, 1961, Columbia Gulf Transmission Company (Applicant) filed in Docket No. CP62-109 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the calendar year 1962 at a total cost not to exceed $500,000 with no single project to exceed a cost of $250,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The subject facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 27, 1961, respecting the matters involved in and the issues presented by the application in this proceeding. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 5, 1958, in Docket No. G-15524 (20 FPC 681).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to take natural gas purchased from producers thereof during the calendar year 1962 as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(6) The authorization granted herein should be limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed hereunder should be limited to $500,000, with no single project to exceed a cost of $250,000.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Columbia Gulf Transmission Company to construct during the calendar year 1962 the proposed facilities hereinbefore described (more fully described in the application filed in this proceeding) and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Columbia Gulf Transmission Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) Applicant shall submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the costs of the facilities so

constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed hereunder are hereby limited to $500,000, with no single project to exceed a cost of $250,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

JAKE L. HAMON, DOCKET NO. G-19257

ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDING

(Issued January 11, 1962)

On August 3, 1959, Jake L. Hamon (Hamon) tendered for filing a proposed increase in rate from 12.12268¢ to 15.0952¢ per Mcf for the jurisdictional sale of natural gas to Tennessee Gas Transmission Company (Tennessee Gas), from Starr County, Texas. By order issued August 26, 1959, the proposed increased rate, designated Supplement No. 1 to Hamon's FPC Gas Rate Schedule No. 12, was suspended until April 1, 1960, when upon proper motion, it became effective subject to a corporate surety bond to assure refund of excess charges found not to be justified.

Hamon, on October 6, 1959, filed a motion requesting the Commission to reconsider its order suspending the proposed increased rate and in support of such motion Hamon submitted cost data. Thereafter, the Commission by letter denied Hamon's motion for reconsideration because the cost data furnished by him were not considered adequate for substantiating the reasonableness of the proposed rate.

On December 14, 1961, Hamon submitted in this proceeding an Offer of Settlement pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure and consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1.

In its Offer of Settlement, Hamon proposes that the rate of 14.6¢ per Mcf at 14.65 psia be filed in substitution for the increased rate of 15.0952¢ per Mcf rate to be effective from April 1, 1960 to November 1, 1964.

Under the terms of the Offer of Settlement, the favored-nations and price redetermination clauses would be eliminated from Hamon's contract and a revised schedule providing for a 1.0¢ per Mcf escalation on November 1, 1964 and November 1, 1969, would be substituted therefor.

Tennessee Gas has joined in the Offer of Settlement and approves the proposed contract amendment. No objections to the proposed settlement have been received in this proceeding.

Since the proposed rate of 14.6 cents per Mcf at 14.65 psia is acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1 [18 CFR, Chapter I, Part 2, Section 2.56] issued December 20, 1960, for jurisdictional sales of natural gas for Texas Railroad Commission District No. 4, it appears that the public interest will best be served by accepting Hamon's proposed settlement as herein provided.

However, we desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Hamon under the periodic escalation provisions or otherwise.

The Commission finds:

The proposed settlement of this rate proceeding on the basis described herein, as more fully set forth in the Offer of Settlement filed by Hamon with the Commission on December 14, 1961, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved by the Commission and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Hamon with the Commission on December 14, 1961, in Docket No. G–19257, is hereby approved in accordance with the provisions of this order.

(B) Within 30 days from the date of issuance of this order, Hamon shall file, subject to approval of the Commission, a supplement to the subject rate schedule reflecting the provisions of the settlement offer herein approved, and shall refund to Tennessee Gas, with interest at the rate of 7 percent per annum to date of refund, all amounts collected for gas sold on and after April 1, 1960, in excess of the settlement rate of 14.6¢ per Mcf. Within 45 days from the date of issuance of this order Hamon shall report to the Commission, in writing and under oath, the amount of refunds paid to Tennessee Gas, showing the calculation thereof including the separate amounts of principal and interest; and Hamon shall file an acknowledgement signed by a responsible officer of Tennessee Gas that said amounts satisfy the obligations under the settlement offer.

(C) Upon full compliance by Hamon with all the terms and conditions of this order this proceeding shall be terminated.

(D) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending or hereafter instituted by or against Hamon.

LETTER-ORDER DENYING REHEARING

JANUARY 11, 1962.

PAN AMERICAN PETROLEUM CORPORATION,
P.O. Box 591,
Tulsa 2, Oklahoma.

(Attention: Mr. William H. Emerson.)

GENTLEMEN: Your petition for rehearing of the Commission's letter order of November 16, 1961, accepting Supplement No. 3 to your FPC Gas Rate Schedule No. 166 for filing is hereby denied.

Your petition specifically requests removal of the following proviso at the bottom of such letter:

"Further, in the event that any of the documents comprising listed rate schedules and supplements was executed on or after April 3, 1961 and contains provisions, either therein or by adoption of the terms and provisions of other agreements, for a change in rate other than those permitted by Section 154.93 of the Commission's Regulations, such rate provisions shall be inoperative and of no effect at law and any tendered rate change under such provisions will be rejected."

Upon review of the facts of this case, the Commission adheres to its letter order of November 16, 1961. We note, additionally, that Pan American is not injured inasmuch as it has not tendered a rate change proposing to make effective the flexible pricing provisions contained in Article V(2) of its contract of July 27, 1956 with Mountain Fuel Supply Company, as amended.

By direction of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP62-92

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 11, 1962)

On October 12, 1961, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP62-92 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the calendar year 1962 at a total cost not to exceed $5,000,000, with no single project to exceed a cost of $500,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The proposed facilities will be financed from general funds or from revolving credit.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 27, 1961, respecting the matters involved in and the issues presented by the application in this proceeding. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G-910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application herein, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof during the calendar year 1962 as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects

that have been constructed pursuant to the authorization granted hereunder, (d) the location of said project or projects, (e) the costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(6) The authorization granted herein should be limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed hereunder should be limited to $5,000,000, with no single project to exceed a cost of $500,000.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Tennessee Gas Transmission Company to construct during the calendar year 1962 the proposed facilities hereinbefore described (more fully described in the application filed in this proceeding) and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Tennessee Gas Transmission Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed hereunder are hereby limited to $5,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. G–18419; MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NOS. G–12292, G–17512, AND RP60–9.

ORDER REJECTING PROPOSED SETTLEMENT AGREEMENT, REMANDING PROCEEDINGS AND GRANTING SUBPOENA DUCES TECUM

(Issued January 12, 1962)

These proceedings relate to proposed increased rates filed by American Louisiana Pipe Line Company (American Louisiana) and Michigan Wisconsin Pipe Line Company (Michigan Wisconsin). The hearings, which commenced on September 21, 1961, were recessed for the purpose of holding conferences, looking towards limitation and settlement of issues. On September 29, 1961, the Presiding Examiner certified to the Commission the stipulation which resulted from said conferences, and on October 20, 1961, we issued an order stating that the stipulation appeared to be reasonable and setting forth our findings and conclusions regarding certain reservations of the parties with respect to said stipulation.

Subsequent hearings and further conferences resulted in two additional stipulations. On December 11 and 12, 1961, the Presiding Examiner certified, respectively, the aforementioned two supplemental stipulations and the record in these consolidated proceedings for our consideration and resolution. At the same time, the Presiding Examiner transmitted to us the briefs and memoranda of the parties. The record reveals that the parties are not in full agreement on the issues (primarily rate design) sought to be covered by the supplemental stipulations. In view of the lack of agreement by all parties concerned, we conclude that we must reject the supplemental stipulations and that the issues involved must be determined in ordinary course.

To this end, we shall remand these matters to the Presiding Examiner, who may reconvene the hearings for the taking of additional evidence, if he deems such to be necessary, on the issues of rate form and rate level and such other issues as to which the parties have not already concluded their presentations. All parties who have reserved the right of cross-examination pending our action on the two supplemental stipulations shall be extended an opportunity to exercise such rights.

Pursuant to Section 14(c) of the Natural Gas Act and Section 1.23 of the Rules of Practice and Procedure, Michigan Gas and Electric Company (Michigan Gas), on November 28, 1961, filed an application for a *subpoena duces tecum* which would require that Michigan Wisconsin produce certain data and material. The basis of the application is that Michigan Gas desires to show that Michigan Wisconsin should be required to set forth in its tariff the terms and conditions under which Michigan Wisconsin will provide new or additional service from branch or lateral lines. The Commission believes that Michigan Gas should be afforded this opportunity, and that the requested data, which is peculiarly within the knowledge of Michigan Wisconsin, is relevant to that issue. The subpoena is accordingly granted as hereinafter set out.

It is our view that the testimony and evidence with respect to the terms and conditions of providing service from branch or lateral lines is separable from the other issues covered by the supplemental stipulations, and that these matters may be heard and decided in two phases: (1) Issues relating to rate level and rate form of American Louisiana and Michigan Wisconsin; (2) Michigan

Wisconsin's branch or lateral line formula. It would appear appropriate, in order to expedite the case, that the former issues be resolved without awaiting development of the testimony and evidence with respect to the branch line formula.

The Commission finds:

(1) That all parties to these proceedings have not agreed to the First and Second Supplemental Stipulations, and it is necessary, therefore, that the settlement proposed thereby be rejected and these matters be remanded to the Presiding Examiner for further proceedings as hereinbefore set out.

(2) That *subpoena duces tecum* sought by Michigan Gas should be granted as hereinafter ordered.

The Commission orders:

(A) The Settlement proposed by the aforementioned First and Second Stipulations is hereby rejected.

(B) These matters are hereby remanded to the Presiding Examiner for further proceedings not inconsistent with this order.

(C) The application for a *subpoena duces tecum* filed herein by Michigan Gas on November 28, 1961, is hereby granted insofar as it requests that Michigan Wisconsin produce:

(1) A map of Michigan Wisconsin's natural gas pipeline system, indicating thereon the length and pipe size of all lines.

(2) For each separate line other than the main transmission line, a statement setting out the (a) pre-construction estimated cost of construction; (b) the actual cost of construction; (c) the pre-construction estimated third-year sales; and (d) the actual third-year sales, or in those instances where such separate line has not been in operation for a period of three years, the actual sales for the most recent twelve-month period that coincides with the twelve months of the first- or second-year pre-construction estimates.

(D) Within thirty days from the date of issuance of this order, Michigan Wisconsin shall supply to Michigan Gas the material and data set out in paragraph (C) above, and at the same time, shall file five copies thereof with the Secretary of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-97

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 12, 1962)

On October 16, 1961, El Paso Natural Gas Company (Applicant) filed in Docket No. CP62-97 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain facilities and pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to Intermountain Gas Company (Intermountain) for resale to J. R. Simplot Company (Simplot) and Food Machinery and Chemical Corporation (Food Machinery) near Pocatello, Idaho, and to Idaho Portland Cement Company (Idaho Portland) in

Inkom, Idaho, and the operation of certain facilities presently constructed but not in operation, all as more fully set forth in the application.

Applicant is currently selling and delivering natural gas directly to Simplot, Food Machinery, and Idaho Portland for use in their respective plants. Applicant has agreed to sell natural gas to Intermountain for resale to Simplot, Food Machinery, and Idaho Portland in lieu of the direct sales now being made by Applicant. Applicant's existing facilities now utilized in providing direct gas service to Idaho Portland are adequate for the proposed sale to Intermountain for resale to Idaho Portland, but the facilities now utilized in providing direct gas service to Simplot and Food Machinery will not be adequate to accommodate expanded service to Simplot, as contemplated, through Intermountain, and therefore must be enlarged and modified.

Under the mistaken belief that construction of the additional facilities required could be undertaken pursuant to an outstanding authorization, Applicant has commenced and completed construction of approximately 4,839 feet of 6⅝-inch O.D. loop pipeline, paralleling a segment of Applicant's existing lateral line presently serving the Simplot and Food Machinery plants, and a master metering and regulating station situated at the point of commencement of said loop pipeline, which facilities, will be required primarily to meet increased requirements for the Simplot plant after expansion now in progress. Applicant states that these facilities will not be placed in operation until receipt of the necessary authorization in this docket and that it will continue to deliver gas through the previously authorized facilities until such authorization is received.

The facilities proposed for abandonment consist of approximately 2,118 feet of 3½-inch O.D. pipeline and two metering and regulating stations. The pipeline and one of the metering and regulating stations are now being used to effect deliveries to Simplot, and the other metering and regulating station is being used to effect deliveries to Food Machinery. Applicant proposes to continue these facilities in operation in conjunction with the new facilities for a period of time after placing the new facilities in operation. Thereafter, Applicant proposes to retire and remove the metering and regulating stations and to abandon the pipeline in place. Intermountain will construct individual meter stations downstream from Applicant's master meter for measurement of gas delivered to the Food Machinery and Simplot plants.

The estimated gas requirements under the subject application for the first three years of operation are as follows:

Date	Annual (Mcf)	Peak Day (Mcf)
1962	2,116,337	9,343
1963	2,687,380	12,060
1964	2,687,380	12,060

The estimated cost of construction of the proposed facilities is $40,100, and cost of removal and repair of existing facilities is $3,800, to be financed from current working funds supplemented by short-term bank loans as necessary.

The proposed sales and deliveries of natural gas to Intermountain will be made in accordance with firm Rate Schedule DI–1 and interruptible Rate Schedule I–1, Original Volume No. 3 of Applicant's FPC Gas Tariff.

The small volumes of gas involved should not appreciably affect Applicant's overall system gas reserves.

Temporary authority was issued to Applicant on November 24, 1961.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 3, 1962, respecting the matters involved in and the issues presented

by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket No. G–242 and G–257 (3 FPC 851).

(2) The sales of natural gas and the transmission facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The new facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The abandonments heretofore referred to are permitted by the public convenience and necessity and should be permitted and approved as hereinafter ordered.

(6) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant to Intermountain are required by the public convenience and necessity and a certificate therefor shall be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, El Paso Natural Gas Company, of the sale of natural gas and the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same is hereby granted.

(B) Applicant shall advise the Commission of the date of the abandonments permitted in paragraph (A) above within ten days from the date thereof.

(C) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas to Intermountain, as hereinbefore described and as more fully described in the application herein, upon the terms and conditions of this order.

(D) The certificate issued by paragraph (C) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(E) The facilities authorized in paragraph (C) above shall be placed in actual operation and the sales of natural gas authorized through said facilities shall commence within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NATURAL GAS COMPANIES—EXEMPT FACILITIES, DOCKET NO. R-205

ORDER NO. 241 AMENDING SECTION 2.55 OF THE COMMISSION'S GENERAL RULES AND REGULATIONS

(Issued January 12, 1962)**

The Commission has before it for consideration an amendment to § 2.55 of Part 2, Subchapter A, General Rules, Chapter I of Title 18, Code of Federal Regulations.

Section 7(c) of the Natural Gas Act (15 U.S.C. 717f(c)) requires, *inter alia*, a certificate of public convenience and necessity issued by the Commission for any proposed construction or extension of natural gas facilities subject to the jurisdiction of the Commission. Section 2.55 of the Commission's rules (18 CFR 2.55) interprets the word "facilities" as used in section 7(c) of the Act to exclude from the requirement for certification certain types of facilities therein described. The pertinent portions of that section here under consideration are set forth in the margin.*

• • • • • • •

Questions have arisen in the past concerning the meaning of the word "unserviceable" and the clause "*Provided, further,* That such replacement does not appreciably change the daily delivery capacity of the existing transmission pipeline system" in § 2.55(b) and the words "local community presently served" in § 2.55(c). Accordingly, we are adopting amendments to those subsections for purposes of clarification.

The Commission finds:

(1) The amendments herein adopted represent matters of interpretation which do not require notice or hearing under section 4(a) of the Administrative Procedure Act.

---

*Section 2.55 *Definition of Term Used in Section 7(c).* For the purposes of section 7(c) of the Natural Gas Act, as amended, the word "facilities" as used therein shall be interpreted to exclude:

(b) *Replacement of facilities.* Facilities which constitute the replacement of existing facilities which have or will soon become unserviceable: *Provided,* That such replacement will not result in a reduction or abandonment of service rendered by means of such facilities: and, *Provided, further,* That such replacement does not appreciably change the daily delivery capacity of the existing transmission pipeline system.

(c) *New delivery points.* Metering and regulating installations and branch lines necessary to the establishment of new delivery points required for the delivery of gas to an existing customer for resale in a local community presently served from the same pipeline system by such customer.

**Published in Federal Register January 18, 1962, DC 41 (27 F.R. 510).

(2) Adoption and promulgation of the proposed amendments are necessary and appropriate for the purposes of administration of the Natural Gas Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 7 and 16 thereof (52 Stat. 824, 830; 56 Stat. 83; 15 U.S.C. 717f, 717o), *orders*:

(A) In § 2.55 of Part 2, Subchapter A, General Rules, Chapter I of Title 18 of the Code of Federal Regulations, subsections (b) and (c) are amended to read as follows:

"(b) *Replacement of facilities.* Facilities which constitute the replacement of existing facilities which have or will soon become physically deteriorated or obsolete to the extent that replacement is deemed advisable: *Provided*, That such replacement will not result in a reduction or abandonment of service rendered by means of such facilities: *Provided further*, That such replacement shall have substantially equivalent designed delivery capacity as the particular facilities being replaced.

(c) *New delivery points.* Metering and regulating installations and branch lines necessary to the establishment of new delivery points required for the delivery of gas to an existing customer for resale in a local community presently served from the same pipeline system by such customer: *Provided*, That the "local community presently served" shall include only the area in which distribution facilities are being operated by the distributor company, but shall not include any area outside the distribution system or beyond the confines of the community, whether incorporated or not, presently being served by the natural gas company's pipeline system."

(B) The statement and amendments herein prescribed shall become effective February 12, 1962.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

SOUTHWEST GAS CORPORATION, DOCKET NO. CP62-110

ORDER DEFINING ISSUES

(Issued January 12, 1962)

By notice issued on December 29, 1961, the application of Southwest Gas Corporation (Southwest), for a certificate of public convenience and necessity, authorizing the acquisition and operation of the facilities of Nevada Natural Gas Pipe Line Co. (Nevada Natural), by the Applicant, was set for an abridged hearing commencing on January 25, 1962, concerning the matters involved in and the issues presented by such application.

In addition to the questions generally considered in connection with an application for a certificate of public convenience and necessity, it appears to be in the public interest that the Commission also consider, more specifically, whether the application, which involves a proposed merger of the Applicant with an interstate pipeline, should be granted in light of the policies and provisions of the antitrust laws of the United States. For this reason the Commission is of the opinion that a formal, rather than an abridged, hearing should be held in this proceeding.

The Commission finds:

(1) Southwest has filed an application under Section 7 of the Natural Gas Act for permission, *inter alia*, to acquire the jurisdictional facilities of Nevada Natural, which acquisition will result from the merger of Nevada Natural with Southwest through the exchange of stock between the two companies.

(2) Southwest proposes to continue all the sales and services presently rendered by Nevada Natural and the latter company will cease to exist, if the Commission approves the proposed merger.

(3) It is necessary and appropriate in the public interest that the Commission, in considering whether to approve the acquisition of the facilities of Nevada Natural by Southwest take into account the policies and provisions of the antitrust laws.

The Commission orders:

(A) The Applicant, Southwest, shall submit evidence *inter alia* indicating whether its proposed acquisition of the facilities of Nevada Natural would be consistent with the policies of the antitrust laws.

(B) The hearing on the application of Southwest, filed in Docket No. CP62–110, shall convene for formal hearing at the same time and date provided for in the original notice of application, issued December 29, 1961.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP60–103; SHELL OIL COMPANY, DOCKET NO. CI60–660; PIONEER PRODUCTION CORPORATION, DOCKET NO. CI60–689; CALVERT PETROLEUM COMPANY, DOCKET NO. CI60–691; ASHLAND OIL & REFINING COMPANY, DOCKET NO. CI60–738; UNION OIL COMPANY OF CALIFORNIA, DOCKET NO. CI60–802; KING-STEVENSON OIL COMPANY, INC., DOCKET NO. CI60–813.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 15, 1962)*

Syllabus

1. While Policy Statement contemplates changes in area boundaries and price levels as facts coming before Commission compel such adjustments, it should not be construed as suggesting that changes will readily be made in individual proceedings; only a very compelling showing would warrant any change on case by case basis. P. 42.
2. Conceding possibility, as Producers contend, that present division of Oklahoma counties into Panhandle and "Other" areas is inequitable and should be changed, present record does not permit such a finding and evidence is insufficient to show that any boundary other than present one is proper. P. 43.
3. Should current review of area boundaries result in increase in initial wellhead price level for new gas in area of sales here proposed, producer applicants may substitute new rates reflecting the increase and thereafter collect such rates prospectively in lieu of initial rates herein required. P. 42.

---

* Designated Commission Opinion No. 350; Initial decision appears on p. 53. Clarifying order printed at p. 52. Rehearing denied by order issued March 9, 1962, 27 FPC 491.

4. Finding no *compelling* evidence to justify an initial wellhead price in excess of area ceiling, Commission *conditions* certificates for proposed sales in "Other" Oklahoma at initial wellhead price of 15 cents per Mcf. P. 44.
5. Since 15 cents area ceiling price in Elk City field is based on wellhead sales, Shell is permitted to recover as part of initial price so much of cost of gathering, dehydration and compression as is properly allocable to Elk City sale. P. 45.
6. Absent cost of service evidence Commission allows Shell 2.5 cents per Mcf for services beyond wellhead in sale of Elk City gas to Panhandle and conditions certificate at total initial price of 17.5 cents per Mcf. P. 45.
7. Size of reserves and high initial availability of gas are not factors to be considered in fixing Shell's price for Elk City gas; apart from some specific service or forbearance or special circumstances, value of gas to pipeline purchaser is not a consideration in certification of initial prices under area pricing policy. P. 45.
8. Rate-of-take provisions in producer contracts *allowed* (15 years Elk City; 20 years en route); there being no suggestion of a resulting overall deliverability life of Panhandle reserves less than that which is usually required. P. 46.
9. Commission *allows* take-or-pay and Btu adjustments in producer contracts subject to final determination in rule-making proceedings (R–199; R–200). P. 46.
10. Producer applicants who cancelled contracts allowed to resubmit applications on terms and conditions originally applied for; in such event applications shall be reinstated and certificates issued *Nunc pro tunc* on same terms and conditions as other producers. P. 49.
11. Commission *issues* certificates of public convenience and necessity to applicants under Section 7 of the Natural Gas Act. P. 50.

Raymond N. Shibley for Panhandle Eastern Pipe Line Company.

Oliver L. Stone and *Joseph C. Spalding* for Shell Oil Company.

W. N. Lampe, Charles E. McGee, R. E. Christiansen, and *James D. McKinney, Jr.* for Pioneer Production Corporation.

Bruce R. Merrill and *Tom Burton* for Calvert Petroleum Company.

G. F. Charles for Ashland Oil and Refining Company.

George D. Horning, Jr. and *J. Colin Lizotte* for Union Oil Company of California.

Lewis G. Mosburg, Jr. for King-Stevenson Oil Company, Inc.

George C. Williams, Robert C. Weber, C. William Cooper, Lawrence L. Gray, and *Norman A. Flaningam* for The East Ohio Gas Company.

George P. Lewnes for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

O'CONNOR, *Commissioner:*

This consolidated proceeding involves applications for certificates of public convenience and necessity under sections 7(c) and 7(e) of the Natural Gas Act.

Panhandle Eastern Pipe Line Company (Panhandle) seeks authority to build a 200-mile lateral from its Haven compressor station in central Kansas to Shell Oil Company's Elk City gas field in western Oklahoma. Shell and the other producer applicants seek authority to sell gas to Panhandle, Shell's gas to be delivered to Panhandle at Elk City, and the gas from the other producers to be picked up by Panhandle en route along the new lateral from other fields located in western and northern Oklahoma.

The main issue in this proceeding is the proper initial price to be charged by the producers, with ancillary questions with respect to Btu adjustment, rate of take, and take-or-pay provisions in the producers' contracts with Panhandle. Panhandle has agreed to pay Shell a base initial price of 20.5 cents per Mcf for gas from the Elk City field, which lies mostly in Beckham County and partially in Washita County. Panhandle has contracted with the other producers to pay a base initial price of 17 cents per Mcf for gas from fields in Woodward, Woods, Dewey, Major and Alfalfa Counties.[1]

The Commission's Statement of General Policy No. 61–1, issued September 28, 1960, sets up three pricing areas in Oklahoma with initial price ceilings as follows: The Panhandle area, embracing six counties in northwest Oklahoma, with an initial price level of 17 cents per Mcf. The Carter-Knox area, embracing those portions of Grady and Stephens Counties in south-central Oklahoma known as the Knox field, with an initial price level of 16.8 cents per Mcf. And an area designated as "Other", embracing the rest of the State of Oklahoma, with an initial price level of 15 cents per Mcf.

In this proceeding, Pioneer Production Corporation and Ashland Oil & Refining Company propose sales in Woodward County in the Panhandle area. All of the other sales fall within the "Other" Oklahoma area. Panhandle and the producers contend that there is no sound basis for differentiating between the Woodward sales at 17 cents and the other en route sales; that all of the 17-cent sales are comparable to existing certificated sales in the Panhandle area; and that the evidence of record compels the conclusion that the public convenience and necessity require certification of these sales as contracted.

With respect to the Elk City sale, Panhandle and Shell contend that presently certificated sales in the Panhandle area constitute the proper basis for making a comparison, and that the unique features of the Elk City sale, as more fully discussed below, more than justify the proposed price of 20.5 cents.

The Commission's staff contends that all of the proposed prices, except for Woodward County sales, should be conditioned at 15 cents, the initial price level for the "Other" Oklahoma area; that the proper comparison to be made in evaluating the proposed "Other" Oklahoma sales is with presently certificated sales in that area, and not with sales in the Panhandle area; that there is no compelling evidence of record in this proceeding to justify initial prices in excess of the ceilings established in the Policy Statement; and that neither the ceiling levels nor the area boundaries may properly be altered in individual certificate proceedings. Staff also urges the imposition of conditions eliminating any upward Btu price adjustment, reducing rate of take to one Mcf per day for each 8,000 Mcf of recoverable reserves and reducing take-or-pay to 80 percent of annual contract quantities.

On July 11, 1961, the examiner who presided at the hearing in this proceeding issued his initial, or recommended, decision. The examiner's decision would grant certificates of public convenience and necessity to each of the applicants without conditions as to price, Btu adjustment, rate of take, or take-or-pay. The examiner found that Panhandle and its customers have a need for the gas supply here proposed, and that the facilities to be installed are soundly engineered and financed, and are economically feasible. A description of Panhandle's operations and a more detailed discussion of its need for this gas are to found in the examiner's comprehensive decision, and are not repeated here.

With respect to the producer applications, the examiner's conclusion that certificates should be issued without condition as to price is based on his construc-

[1] All prices referred to herein are at 14.65 psia.

tion of the Policy Statement, and a consideration of geological, geographical and marketing factors, as well as factors measuring the value of the proposed gas supply to Panhandle.

As construed by the examiner, the Policy Statement gives scope to a consideration of the basic facts of geology, market area history, and oil and gas economics in the pricing of new gas supplies. It is his belief that the Commission can and should make changes in the area ceilings and in the area boundaries in accordance with such facts and the public interest as found in specific proceedings. And upon consideration of such factors in the present proceeding, the examiner concludes that 17 cents per Mcf should be established as the area price for new gas sold from the Oklahoma counties of Woods, Alfalfa, Woodward, Major and Dewey. These include the counties presently in the "Other" Oklahoma area from which the proposed en route sales are to be made. The examiner would also extend this 17-cent area to include gas (except Elk City gas) sold from Beckham and Washita Counties. With respect to Elk City, the examiner would incorporate that field into the general area pricing patterns established by the Policy Statement at an initial price level of 20.5 cents per Mcf, in the same way as the Knox field was incorporated as a separate pricing area.

The examiner finds that the entire upper Oklahoma gas producing region lies in the Anadarko Basin, and constitutes a single geological province; that the producing horizons trend downward to greater depths from the Colorado-Oklahoma border southeasterly through the counties here involved; and that the productive formations in this proceeding are common to the entire area known generally as the Texas-Oklahoma Panhandle. He finds that with respect to marketing, geography, and well-drilling and operating attributes, the Elk City and en route conditions are similar to those of the Laverne field in the 17-cent Panhandle area designated in the Policy Statement, except that Laverne is shallower and less expensive to drill and operate. Apart from the suggestion that any distinction between the Panhandle area and the area of the presently proposed sales should reflect higher prices for the latter if the Commission wishes to provide an incentive to encourage the exploration and development of deeper formations, the examiner concludes that there is no basis for differentiating between these areas, or the adjoining area in Texas Railroad District No. 10, which like the Oklahoma Panhandle area has an initial price ceiling of 17 cents per Mcf.

The examiner gives controlling weight to a consideration of the value to Panhandle of the Elk City gas in finding that the 20.5-cent initial contract price is required by the public convenience and necessity. Unlike the en route gas, the Elk City gas is gathered, dehydrated and compressed, and it represents a unique supply in terms of the size of the recoverable reserves and its deliverability. The examiner concludes that the contract price reflects the value of the gas to Panhandle, and on this basis is not out of line on a comparison with other sales; and that the consumer is not prejudiced by this price even though the return to the producer might be excessive or inordinate according to traditional utility cost concepts.

The evidence of value which the examiner relies on is found in a hypothetical study by Panhandle of a possible alternative supply of gas from sources located as near as possible to its main line through Kansas and Oklahoma. This study shows what it would cost Panhandle to gather, process and compress a comparable supply of gas. On the basis of this study, as well as evidence of Panhandle's actual costs for gathering recently acquired supplies and for current field compression, the examiner finds that Panhandle is advantaged to the extent of five to six cents per Mcf by Shell's gathering, dehydrating and compressing services at Elk City.

With respect to the enroute supply, the examiner finds that the value of this gas is at least the equivalent of those values which have been translated into existing prices elsewhere in the Anadarko Basin, particularly in the Texas-Oklahoma Panhandle region.

Turning to the ancillary issues, the examiner finds that a condition eliminating the upward Btu adjustment provisions in the producer contracts is not necessary to protect the consumer, and would discriminate unfairly against these producers by eliminating a contract provision not unusual in this area and one heretofore approved by the Commission in other certificate proceedings. Noting that the question of eliminating upward Btu adjustments is presently before the Commission in Docket No. R–200, a rule-making proceeding, the examiner concludes that the proper procedure for effecting a general policy as to such adjustments is through that proceeding, and not through piecemeal determinations in individual certificate proceedings such as the present case.

The examiner finds that the rate of take provisions in both the Elk City and en route contracts are in the public interest. The Elk City contract provides for depletion of recoverable reserves over a 15-year period. The en route contracts provide for depletion over a 20-year period. Panhandle, the examiner finds, needs the gas for existing customers and will be able to use it to correct the present overproduction of existing supplies, so that both Panhandle and its customers will benefit by the high takes. The examiner also finds the contract take-or-pay provisions to be advantageous to Panhandle and consonant with the public interest, noting that Panhandle has never had to pay for gas not taken, and that there is no likelihood of it having to do so now. As in the case of the Btu adjustment, the question of fixing standards for rate of take and take-or-pay provisions in producer contracts is before the Commission in a rule-making proceeding in Docket No. R–199, and the examiner here again suggests that such matters of general policy should properly be determined in that proceeding rather than in the instant case.

Exceptions to the examiner's decision were filed only by the Commission's staff. Staff's principal exceptions are directed to (1) the examiner's interpretation of the Policy Statement, (2) his reliance on value of service in determining the proper initial prices, and (3) his approval of the Btu adjustment, rate of take, and take-or-pay provisions as being in the public interest. It is staff's position that the certificates, if issued, should be conditioned to require initial prices not in excess of those set forth in the Policy Statement, and that the Btu adjustment, rate of take, and take-or-pay provisions should be revised to conform to the standards proposed by the Commission in Docket Nos. R–199 and R–200.

Staff contends that the examiner erred in construing the Policy Statement to allow or to require the change of area ceilings or boundaries in individual certificate proceedings. The only issue in the present proceeding as to price, in staff's view, is whether the applicants have adduced evidence of such a compelling nature as to justify a price for sales in the "Other" Oklahoma area over the 15-cent ceiling set in the Policy Statement. This, says staff, the applicants have failed to do. Such evidence should not merely consist of comparative evidence peculiar to any given area, but evidence specifically related to the operations of each applicant; and the present record is devoid of such evidence. There is no evidence, says staff, to show that the 15-cent area ceiling price will not afford the producers a fair return, or that a higher price is necessary to assure further exploration and development in the area.

With respect to the Btu adjustment, staff questions the benefit of higher Btu gas to either the pipeline or the consumer. It objects to allowing an upward price adjustment for gas over 1,000 Btu's because the effect is to require

the consumer to pay a premium for Btu's which are of no benefit to him. Staff further contends that there has been no showing of the necessity for such an adjustment, and that it should therefore be eliminated.

Staff's exceptions to the examiner's approval of the rate of take and take-or-pay provisions reflect a concern for the general problem of maintaining adequate deliverability life for pipeline reserves. Staff does not contend that these contract provisions will here result in an overall deliverability life of Panhandle's reserves less than that usually required by the Commission. Rather, it objects to these provisions on the ground that they provide for depletion of the dedicated reserves at a rate in excess of that usually found in the industry, and in excess of that which the Commission has proposed as a matter of general policy in Docket No. R–199. Staff also notes that early depletion is of value to the producers, and takes the position that if these provisions are allowed, the initial prices should be fixed at correspondingly lower levels than those appearing in the Policy Statement.

Upon request of the applicants, oral argument before the Commission of the issues raised by staff's exceptions to the examiner's decision was granted, and was held on November 2, 1961.

We are of the opinion that certificates of public convenience and necessity should be issued to Panhandle and to the producer applicants. We shall, however, condition the certificates issued to the producers to require the filing of initial prices of 15 cents per Mcf for gas sold to Panhandle from fields, other than Elk City, in the "Other" Oklahoma area. In recognition of Shell's services to Panhandle beyond the wellhead at Elk City, which distinguish it from the other sales to Panhandle in the "Other" Oklahoma area, we shall allow Shell to file an initial price of 17.5 cents per Mcf for the Elk City gas. We shall allow the Btu adjustment, rate of take, and take-or-pay provisions in the producers' contracts; subject, however, to our determination in Docket Nos. R–199 and R–200 with respect to take-or-pay and Btu adjustment, and to such further conditions as are hereinafter set forth.

The record shows that Panhandle has a need for the gas which the producers here propose to sell to it, and that its proposed lateral facilities are economically and financially feasible and well designed. Rather than repeat the examiner's discussion and findings with respect to Panhandle's project, we here adopt the treatment and disposition of Panhandle's application as made in the examiner's decision.

Before considering the important issues which have been raised with respect to the producer applications, it will be helpful to set forth the basic features of the producer contracts and certain facts of record which reveal the character and nature of the proposed sales.

The 17-cent en route contracts generally reflect the pattern of wellhead sales heretofore certificated by the Commission in the Panhandle area of Oklahoma, and typified by sales from the Laverne field in Harper County, adjoining Woodward County on the northwest. The contracts for the en route sales contemplate a term based on a 20-year deliverability life for the dedicated reserves, and provide for periodic escalations of 2.5 cents per Mcf every five years. They contain both upward and downward Btu price adjustments for Btu content above and below 1,000 Btu's per cu. ft., with a maximum upward adjustment based on 1,200 Btu's. The adjustment is directly proportional to the actual Btu content of the gas. The average daily contract quantities which Panhandle is required to take are equivalent to a ratio of one Mcf for each 7,300 Mcf of recoverable reserves, providing a 20-year life. Panhandle is required to take or pay for these contract quantities on an annual basis, although it may vary its daily takes above and below these amounts. Any

annual deficiency paid for but not taken may be made up over a two-year period. Any annual excess may be applied as a credit against deficiencies in subsequent years. The contracts involve a dedication of some 60,432 acres, of which 7,114 are proven with total proven reserves of 57,360,000 Mcf.

The Shell Elk City contract provides for an initial price of 20.5 cents per Mcf with escalations of 2.5 cents per Mcf every five years during its term. The term of the contract is 20 years, although it is the expressed intent of the contract that the recoverable reserves at Elk City be depleted in the first fifteen years. Unlike the en route contracts, this contract requires Panhandle to reimburse Shell for a share of current taxes. This payment, amounting to 50 percent of Shell's taxes, is in addition to the base initial price of 20.5 cents per Mcf. The contract also provides for both an upward and downward adjustment of price for Btu content above and below 1,000 Btu's per cu. ft. The adjustment is similar to that in the en route contracts and is limited to a maximum upward adjustment based on 1,200 Btu's. Annual contract quantities are based on average daily deliveries of 125,000 Mcf in the first, fourth and fifth years, 135,000 Mcf in the second and third years, and daily deliveries of one Mcf for each 3,650 Mcf of recoverable reserves in the sixth and subsequent years. Panhandle has an option to increase the annual contract quantities during the first five years to the equivalent of 180,000 Mcf per day. Panhandle is required to take or pay for the annual contract quantities, although it may vary its daily takes 25 percent above and below the average daily contract quantity. Any annual deficit must be paid for, but may be made up during the following three years. Exess takes in any year may be carried forward as a credit toward the required takes in the following three years.

Certain other facts of record with respect to the Elk City field and Shell's contract with Panhandle may be summarized briefly as follows:

(1) The Elk City field is a developed field of some 11,800 acres, containing nine producing reservoirs between 8,950 and 10,900 feet deep, and tapped by 295 producing wells.

(2) The field was discovered in 1947 and unitized in 1950. Shell is 75 percent owner and the operator of the field. To date the field has been operated for the recovery of liquids by cycling and reinjection of the gas; but the production of liquids has now diminished to the point that the field should be operated as a gas field. Recycling is scheduled to stop at the end of 1963, or sooner should Panhandle's takes so require.

(3) Reserves in place total 807,893,000 Mcf, of which 746,316,000 Mcf are recoverable. Allowing for shrinkage and fuel, 701,536,000 Mcf will be available to Panhandle. This is to be compared with the aggregate reserves acquired by Panhandle under 162 separate purchase contracts from January 1, 1955, to January 1, 1960, and totaling 607,125,000 Mcf.

(4) The field has a proven ability to deliver at a rate in excess of 240,000 Mcf per day, and under the contract Panhandle has the option during the first five years to take as much as 225,000 Mcf per day. With the right to vary its takes as much as 25 percent above and below the average daily contract quantities, and considering the size of the contract quantities provided, Panhandle is permitted great flexibility in its takes.

(5) Unlike other sales in this area, which are usually wellhead sales, the Elk City gas is to be gathered, dehydrated and compressed by Shell, and delivered to Panhandle at a central point at a pressure of 825 psig. The quality and pressure of the gas as delivered to Panhandle will be such as to permit Panhandle to transmit it through its lateral without additional processing or compression.

(6) Shell's wells and surface facilities at Elk City represent a direct investment of $75 million. Shell will spend $200,000 to $300,000 immediately for dehydration equipment, and over the life of the contract expects to spend some $6 million more for additional compression and changes in its gathering system.

(7) The Elk City gas insures the basic supply necessary to support the feasibility of Panhandle's proposed lateral.

(8) The contract provides for depletion of the Elk City reserves over a 15-year period instead of the usual 20- or 22-year period. It was Panhandle's willingness to take the reserves over a shorter period of time that led Shell to sell the gas to Panhandle at an initial contract price lower than that offered by other pipeline purchasers.

With respect to both the 17-cent contracts and the Elk City contract, the record shows: (1) no affiliation between the producers and Panhandle, (2) arms' length bargaining of the contracts, (3) a need for the gas by Panhandle, (4) no triggering of prices, and (5) no favored nations, spiral escalation, or other indefinite pricing provisions.

Turning now to a consideration of the issues presented by the producers' applications, we shall first dispose of the questions as to area and initial price, and then take up the ancillary questions as to Btu adjustment, rate of take, and take-or-pay.

In an effort to find appropriate means for bringing about effective regulation of independent producers of natural gas, and to thus carry out the mandate of the United States Supreme Court in the *Phillips*[2] and *CATCO*[3] cases, the Commission has adopted a policy of area pricing. In the Statement of General Policy No. 61–1, issued September 28, 1960, and subsequently amended, the Commission established area price standards to be applied in determining the acceptability of initial price proposals as well as increased rate filings by producers. It was our opinion then, and is our opinion now, that these standards are an effective aid in applying the provisions of the Natural Gas Act to independent producers on "a simple, clear and administratively feasible basis," and in a manner "fair to all whose interests are affected by Commission regulation."

The area price levels, as set forth in the Policy Statement and its amendments, are "for the purpose of guidance and initial action by the Commission," and do not constitute determinations of just and reasonable prices. The Policy Statement contemplates changes in both area boundaries and area price levels from time to time as such facts as come before us compel such adjustments.[4] The Policy Statement, however, should not be construed as suggesting that changes in either area boundaries or prices will readily be made in individual proceedings. It would defeat our purpose of simplifying and clarifying producer regulation, if every individual proceeding were to become a forum for attacking the area standards and we were to begin varying those standards from case to case. Adjustments in the area price structure can best be made upon a general review of all relevant factors. At the least, it would take a very compelling showing to warrant any change on an *ad hoc* basis.

In the present proceeding, the producers have adduced evidence attempting to show that from the point of view of geology, geography, marketing, and operating, the gas producing fields in the "Other" Oklahoma counties here involved are similar to fields in the Panhandle area where we have fixed an initial wellhead price of 17 cents per Mcf. The evidence, however, does not

[2] *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 674.

[3] *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378.

[4] Area rate hearings are presently being conducted with respect to the Permian Basin, Docket Nos. AR61–1, *et al.*, and Southern Louisiana, Docket Nos. AR61–2, *et al.*

show that there is not a like similarity with other fields in the "Other" Oklahoma area which lie to the east and which are also in the Anadarko Basin. It is possible, as producers contend, that the present division of Oklahoma counties into the Panhandle and "Other" areas is inequitable and should be changed; but the present record does not permit us to so find, and there is insufficient evidence to show that any boundary other than the present one is proper.

As we stated in the Policy Statement, the geographical areas "are not necessarily in complete accord with geographical and economic factors which may be relevant to the establishment of pricing areas." And we there noted that "as experience and changing factors may indicate, we will change or alter these areas from time to time in order to eliminate such inequities as may appear to exist because of our use of geographical boundaries." The Commission recognizes that there is a present need for a general review of the boundaries of the areas established by the Policy Statement to determine the existence of any inequities. To this end, the Commission is currently making such a review of area boundaries in light of information acquired since the areas were first delineated, and giving consideration to relevant geological, geographical, marketing and operating data available to it. We expect to complete this study within the next few months, at which time any necessary changes in the present area boundaries will be made by issuance of an amendment to the Policy Statement.[5] Should this study result in an increase in the initial wellhead price level for new gas in the area of the sales here proposed, because of an adjustment in the area boundary between the Panhandle and "Other" Oklahoma areas, the producer applicants accepting the certificates herein issued may thereupon substitute new rates reflecting the amount of such increase, and thereafter collect these new rate prospectively in lieu of the initial rates herein required.

The initial price level for new service established by Policy Statement No. 61–1 is 17 cents per Mcf in the Panhandle area and 15 cents in "Other" Oklahoma. The ceiling for increased rates in the same areas is 11 cents. In explaining our use of the Policy Statement price levels, we therein stated that:

> For the present, and in the absence of compelling evidence calling for other action by us, proposed initial sales of natural gas by independent producers which include rates higher than those indicated in * * * this statement shall be denied a certificate or certificated only upon the condition that lower rates be filed, and all rate changes filed under existing contracts which call for a rate exceeding the indicated price level * * * shall be suspended.

The Policy Statement further shows that it is the Commission's intention to determine the justification of proposed prices in excess of the indicated levels in area proceedings, wherein all elements relevant to the industry generally in the area concerned will be considered, and the price determined will be an area price and not necessarily a price applicable solely to the party proposing the higher price.

There is no evidence in the record now before us which compels the conclusion that a wellhead price of 17 cents per Mcf for the proposed sales in the "Other" Oklahoma area is required in the public interest. The applicants rely on comparative evidence to show that the conditions of developing, produc-

[5] In accordance with our announced intention to make changes in the Policy Statement from time to time, we have heretofore issued amendments changing price levels in certain Texas Districts and in Southern Louisana. See Third Amendment, March 29, 1961, and Fourth Amendment, October 31, 1961, 25 FPC 595 and 26 FPC 661, respectively.

ing and marketing gas in the fields here involved are similar to conditions in the Laverne and other fields in the Panhandle area where the Commission has certificated wellhead sales at 17 cents. This evidence is not sufficient to justify a wellhead price for the proposed sales in excess of the "Other" Oklahoma ceiling level. The record shows that the highest certificated price for gas now being sold in that part of the "Other" Oklahoma area which is located within the Anadarko Basin is 15 cents per Mcf.[6] Eight sales at this price level are being made for gas from the West Cement field in Caddo County and the South Rainey field in Washita County just to the east of Elk City.[7] In Beckham County, where Elk City is located, and in Woods and Alfalfa Counties, where some of the en route gas is located, the record shows initial prices certificated at 12 cents per Mcf. Elsewhere in "Other" Oklahoma, and within the Anadarko Basin, the record shows sales certificated at 11 and 12 cents per Mcf in Grant and Garfield Counties. This pattern of presently certificated sales in the area establishes the line for the proposed sales and shows a reasonable relationship between the Policy Statement area ceiling and existing sales. There is no compelling evidence in this proceeding to justify an initial wellhead price in excess of the area ceiling. We shall, therefore, condition the certificates for sales in "Other" Oklahoma at an initial wellhead price of 15 cents per Mcf.[8]

As noted above, the proposed sale by Shell at Elk City does not fit the usual pattern of wellhead sales in this area. Shell contends that the unique features of this sale more than justify the initial contract price of 20.5 cents. We cannot agree that the full amount of the proposed price is justified; but in view of the fact that the ceiling in this area is based on wellhead sales, and that Shell proposes to render services beyond the wellhead in making this sale, we shall allow Shell an increment of 2.5 cents per Mcf above the area wellhead ceiling of 15 cents.[9]

Clearly, the Elk City field represents an unusually desirable supply of gas, and it is understandable that a number of pipelines have sought to acquire this gas from Shell. However, the fact that Panhandle and the other pipelines operating in the area are willing to pay 20.5 cents or more per Mcf to acquire it does not convince us that the proposed price is required in the public interest. Nor does Panhandle's evidence of gathering, dehydration and compression costs persuade us that five to six cents per Mcf should be attributed to these services at Elk City and incorporated as an allowance in the initial price, as found by the examiner.

Panhandle's studies show a current unit cost for gathering, dehydration and compression services on its system of 3.98 cents per Mcf. They also show an estimated cost of 5.03 cents per Mcf to gather, dehydrate and compress a hypothetical alternative supply to the Elk City field, plus an additional one cent per Mcf for future compression to be added to maintain the delivery pressure specified in the Shell contract. Panhandle further estimates its initial cost of rendering these services with respect to the en route gas at 4.03 cents per Mcf. These studies are no doubt indicative of Panhandle's costs, but they do not

[6] The highest price heretofore certificated in all of "Other" Oklahoma is 15.5 cents per Mcf for three sales from the West Enville and Southwest Enville fields in Love County along the southern Oklahoma-Texas border.

[7] *Natural Gas Pipeline Co., et al.*, 24 FPC 222.

[8] With respect to those sales of en route gas to be made in the Panhandle area, *i.e.*, from Woodward County, we shall allow the proposed initial price of 17 cents per Mcf, which is in line with the Policy Statement ceiling for new service in that area.

[9] The total initial price, so allowed, shall be inclusive of any reimbursement to Shell for current taxes, thus conforming to other sales, and to the area wellhead price ceiling which is inclusive of such taxes.

necessarily reflect Shell's costs or show how much Shell should be allowed for these services in its initial price for the gas. To properly determine a price for these services which is in the public interest, consideration must be given to Shell's costs in light of the special history of the Elk City field and its development and use by Shell for the production of liquids as well as of natural gas.

Although the record shows that Shell intends to invest $200,000 to $300,000 initially for dehydration facilities, and thereafter to spend some $6 million more for additional compression and for changes in its gathering system, it also appears that the major portion of the gathering and processing facilities which Shell will utilize in delivering the Elk City gas to Panhandle are already installed, and in fact have been in use during the past ten years for the production and sale of liquids—a non-jurisdictional use. The record, however, does not show the cost of these facilities, or the extent to which their cost has been recovered by Shell through revenues from the sale of such liquids; nor does the record show to what extent the facilities are to be used in the future for the removal and non-jurisdictional sale of liquids as well as for the proposed deliveries of gas to Panhandle.

There is no question but that the gathering, dehydration and compression services which Shell proposes to render at Elk City are beneficial and required in the public interest; and that if Shell were to sell this gas to Panhandle at the wellhead without these services, it would be necessary for Panhandle to install its own facilities to gather, dehydrate and compress the gas, with a resulting increase in cost to Panhandle's jurisdictional customers. Under these circumstances, and where, as here, the 15-cent area ceiling price is based on a prevailing practice of making sales at the wellhead, Shell should be permitted to recover as part of its initial price so much of its cost of gathering, dehydration and compression as may be properly allocable to the sale of gas to Panhandle. However, in the absence of cost-of-service evidence, and evidence as to what portion of Shell's cost may be justifiably allocated to its jurisdictional sale of gas, we cannot determine with precision the amount to be allowed for Shell's services. In the circumstances we shall allow Shell an amount which in our judgment is reasonable, both for Shell and for the gas consumer who must ultimately pay for the services. The amount allowed is one which, we are satisfied, could be readily justified were we to remand the proceeding for the taking of additional evidence. Shell is certainly entitled to no more in light of its presentation. Thus, we shall allow Shell 2.5 cents per Mcf for recovery of the cost of its services beyond the wellhead in connection with the sale of the Elk City gas to Panhandle. We shall accordingly condition the certificate herein issued to Shell upon the filing of a total initial price of 17.5 cents per Mcf, including tax reimbursement, based upon a price of 15 cents for gas at the wellhead, the "Other" Oklahoma ceiling level for wellhead gas, plus 2.5 cents for gathering, dehydration and compression.

Shell and Panhandle urge that other features of the Elk City sale, besides the gathering, dehydration and compression services, should be considered in determining Shell's initial price. Such features as the size of the reserves and the high initial availability of the gas may enhance the desirability of the Elk City gas to Panhandle; however, they are not factors which, in our judgment, should be considered in fixing Shell's price. The area price standards set forth in the Policy Statement not only contemplate the sale of gas of pipeline quality, but also the dedication with respect thereto of substantial gas reserves. Apart from some specific service or forbearance in connection with a sale of gas, or some circumstance with respect to the conditions of its sale which affects its character as pipeline quality gas, the value of the gas to the pipeline purchaser

is not a consideration in the certification of initial prices under our area pricing policy.[10]

There remain to be considered the ancillary questions as to the Btu adjustment, rate of take, and take-or-pay provisions in the producer contracts. The Btu adjustment provisions have a direct bearing on the price of the gas to be sold to Panhandle, and we shall give these provisions a closer look in the discussion below. The rate of take and take-or-pay provisions, however, are of a different nature, in that they relate primarily to the more general question of the deliverability life of Panhandle's supply. With respect to these latter provisions, Panhandle seems certain to take all of the gas required under its contracts without any necessity of paying for gas not taken, and no suggestion has been made that the contract rate of take provisions will result in an overall deliverability life of Panhandle's reserves which is less than that usually required by the Commission. However, there is a possibility that the 100 percent take-or-pay provisions in these contracts may at some future time put Panhandle in the position of having to purchase this high cost Oklahoma gas, and to cut back on its own production or low cost supplies purchased under contracts with no take-or-pay provisions, should it find that its customers' demands or its pipeline capacity are less than its production allowables and its contract purchase quantities. This is one of the problems with respect to take-or-pay provisions now being considered by the Commission in connection with the proposal in Docket No. R–199 to standardize take-or-pay provisions in producer contracts at 80 percent. Inasmuch as the minimum take-or-pay provisions to be allowed in producer contracts filed as rate schedules will be determined as a matter of general policy in Docket No. R–199, we shall condition our allowance of the proposed take-or-pay provisions in the instant proceeding so as to make them subject to our determination in the rule-making proceeding, with the proviso, that in no event shall we require these producers to accept provisions for less than 80 percent.

With respect to the upward Btu adjustment provisions, staff would have us condition the certificates to the producers to require their elimination. As stated above, staff questions the benefit of the higher Btu gas to either the pipeline or the consumer, and takes the position that the effect of the upward Btu adjustment is to increase Panhandle's cost of service, thus requiring its resale gas customers to pay for additional Btu's which are in fact no benefit to them.

In passing upon the Btu question in this proceeding, we are not only faced with the substantive objections to the adjustments raised by staff, but with the fact that the question of whether, as a matter of general policy, such adjustments should be allowed in producer contracts, is presently before the Commission in the Docket No. R–200 rule-making proceeding. Because of the importance of these adjustments to the producers in terms of additional revenues,[11] and because we do not wish to deprive the producers of such revenues pending our determination in Docket No. R–200 if they can be reasonably justified in the public interest on the record in this proceeding, we shall undertake to dispose of this issue on its merits. However, our treatment of Btu adjustments in this case should not be construed as in any way prejudging this issue in

[10] If consideration were to be given to the other features of the Elk City contract, we should be obliged to note that Panhandle's agreement to take or pay for Shell's gas over a 15-year period is of unique value to Shell. Indeed, it was Panhandle's willingness to purchase the gas over a shorter period of time that led Shell to sell the gas to Panhandle at a price less than that offered by other pipeline purchasers.

[11] The Elk City gas has an estimated Btu content of 1,050 Btu's per cu. ft. Estimates for the en route gas range from 1,000 to 1,100 Btu's per cu. ft. An adjustment based on 1,050 Btu's would raise a base price of 15 cents per Mcf to 15.75. For 1 100-Btu gas the price would be 16.5 cents per Mcf.

Docket No. R–200, or in any way prejudicing the position or views presented by any producer or other interested person in that proceeding.

The basic question to be answered in deciding whether to allow the proposed upward Btu adjustments to the producer applicants in this proceeding is this: Will the proposed adjustments have any adverse impact upon Panhandle's jurisdictional gas service? If Panhandle's jurisdictional customers will not be required to pay more for their gas requirements as a result of the operation of the price adjustment provisions, as compared to what they would pay if no upward Btu price adjustment were allowed, or if any increase in the cost of jurisdictional gas service is offset by benefits to jurisdictional customers in the form of increased heating value or otherwise, then, in our opinion, the producers should not be deprived of their bargain with Panhandle for the additional Btu's in their gas.

Panhandle is involved in the operation of three processing plants.[12] Two of these, one located at Sneed, Texas, and one in Liberal, Kansas, are for the extraction of gasoline and other liquid hydrocarbons prior to transporting gas through its system. We have held these extraction operations to be part of Panhandle's pipeline business, and have required the revenues therefrom to be offset against Panhandle's jurisdictional cost of service. The third plant is a petro-chemical plant at Tuscola, Illinois. We have held the operation at Tuscola to be non-jurisdictional, with the result that neither the costs nor the revenues associated therewith figure in Panhandle's cost of service. In the case of such a non-jurisdictional operation, gas supply and transportation costs must be allocated between the non-jurisdictional plant use of gas (fuel and shrinkage) and the jurisdictional resale of gas in interstate commerce. At Tuscola we have determined that the gas supply cost should be allocated on the basis of the heat units, or Btu's, removed from the gas stream, and that the transportation costs should be allocated on a volumetric basis.[13]

Gas leaves the Sneed plant at 1018 Btu's. A part of this gas is mixed with 976-Btu gas leaving Panhandle's Liberal plant to form a stream of 987-Btu gas which is transported through Panhandle's low pressure Line 100. This line, which is used to serve customers upstream from Tuscola, by-passes the Tuscola plant. The balance of the 1,018-Btu gas from Sneed is transported through Panhandle's high pressure Lines 200 and 300, and all of this gas passes through the Tuscola plant. This gas leaves the Tuscola plant at 933 Btu's, and is thereafter mixed with the 987-Btu Line 100 gas and 1,038-Btu gas received from its subsidiary Trunkline Pipeline Company and delivered to customers downstream from Tuscola at a uniform 983 Btu's.

It is not clear from the record in this case whether the high Btu Elk City and en route gas is to be delivered through the new Elk City lateral into Panhandle's low pressure Line 100 or into its high pressure lines. To the extent that it is delivered into the low pressure system and mixed with lower Btu gas, it may well result in higher Btu gas to Panhandle's customers upstream from Tuscola.[14] Or, should future gas supplies along the new lateral prove to

[12] The facts herein set forth with respect to Panhandle's plant operations and the Btu content of gas presently being delivered through its system are of record in *Panhandle Eastern Pipe Line Company*, Docket No. G–2506; and the determinations, referred to, as to the treatment of costs and revenues and the allocation of costs at Panhandle's plants, are to be found in our Opinion No. 344 in that proceeding, 25 FPC 787.

[13] The Sneed plant is owned and operated by Phillips Petroleum Co. and the Tuscola plant is owned and operated by National Petrochemical Corp.

[14] Panhandle's tariff, like those of a number of other pipelines, provides for an upward adjustment of resale rates for gas of high Btu content. An increase in Btu content would result in a decrease in the volume of gas sold if the customers serve loads which can utilize the additional Btu's. Where such loads are substantial, there will be a reduction in the volumes of gas sold and the effect on the customers would be negligible.

be of lower Btu quality, the present supply could benefit such customers by helping to maintain the heating value of the gas stream. To the extent that the present supply is delivered into Panhandle's high pressure lines, all of the gas will be transported to Tuscola and there processed in the petro-chemical plant for the removal of the heavier hydrocarbons. The additional Btu's in the gas will thus be removed for Panhandle's benefit, and Panhandle's downstream customers will not benefit thereby through the receipt of higher Btu gas. Whether these customers will bear the burden of the additional cost of the high Btu gas in the field, or whether such cost will be borne by Panhandle as part of the operation of the non-jurisdictional plant depends on the method of allocation employed by the Commission in fixing Panhandle's rates. Under the method of allocation heretofore adopted for Panhandle's Tuscola operation,[15] there should be no net increase in Panhandle's jurisdictional costs by reason of the Btu adjustments.

Staff's argument that the higher Btu gas may cause pipeline operating difficulties in the form of "slugs" of condensed liquids in the line which may damage compressor equipment, or of "icing" which would cause constriction, and perhaps complete stoppage, of the flow of gas, is based on evidence which is general in nature. There is no indication that such will occur in the instant case. The record shows that Panhandle has tested and analyzed the proposed gas supplies, and its experts have testified that it can maintain efficient operations without the necessity of removing any liquids, other than water, from the gas stream prior to transporting it through its mainline system.

Thus, it does not appear that the operation of the Btu adjustment provisions in the producers' contracts will have any material adverse effect on Panhandle's jurisdictional gas service. We shall, therefore, allow the Btu adjustments subject to our determination in Docket No. R–200. Upon the establishment of a general policy with respect to such adjustments in the rule-making proceeding, the producers accepting the certificates herein issued will be required to file amended rate schedules in conformity therewith. In addition to the foregoing, we shall require, as a condition of the issuance of a certificate to Shell, that the upward Btu adjustment in its rate schedule be limited to a maximum of 1,050 Btu's rather than 1,200 Btu's as now provided in its contract. Shell's counsel stated in the oral argument before the Commission that Shell will deliver the Elk City gas to Panhandle at 1,050 Btu's per cu. ft., and it is most unlikely that this condition will have any restrictive effect on Shell's revenues. However, since the Shell gas will constitute the major portion of Panhandle's Oklahoma supply, and since our finding of no adverse impact on Panhandle's jurisdictional service is based on the delivery of 1,050-Btu gas at Elk City, this condition on the extent of Shell's upward Btu adjustment is a safeguard reasonably required in the public interest. We shall also condition Shell's certificate to require that the Btu adjustment be computed, not on the basis of the total 17.5-cent price which includes gathering, dehydration and compression, but on the basis of the equivalent wellhead price of 15 cents per Mcf.[16]

---

[15] See note 12, and discussion above.

[16] As noted by the examiner, upward Btu price adjustment provisions are not unusual in contracts for the sale of gas in the western part of Oklahoma; and, prior to the issuance of Policy Statement No. 61–1, we approved such adjustments in contracts for gas sold from the Laverne field in Harper and Beaver Counties, the Enville, West Enville, and Southwest Enville fields in Love County, and the West Cement and South Rainey fields in Caddo and Washita Counties.

In the Policy Statement, at page 2, we said: "The relevance of such adjustments to the basic contract price and the appropriate established price standard must be considered as each filing is made. As it becomes apparent that certain adjustments have general

On May 2, 1961, the Commission permitted Union Oil Company of California to withdraw its application in Docket No. CI60–802. Union's withdrawal was based on the cancellation of its contract with Panhandle. On May 26, 1961, Ashland Oil & Refining Company, the applicant in Docket No. CI60–738, gave notice cancelling its contract with Panhandle. Similar action was taken by Pioneer Production Corporation, the applicant in Docket No. CI60–689, by notice dated May 29, 1961. On June 30, 1961 and July 26, 1961 the Commission permitted the withdrawal of Ashland's and Pioneer's applications.

The examiner found that the withdrawals would not significantly affect the feasibility or financing of Panhandle's proposed project; and because the new lateral will undoubtedly connect additional en route supplies to more than replace the gas lost through such withdrawals, the examiner used the volumes, estimates, and other material facts as originally presented. In his initial decision, the examiner would permit the producers who have cancelled their contracts and sought withdrawals herein to rescind their cancellations and reinstate their applications, *nunc pro tunc;* and, upon reinstatement, he would issue certificates to them on the same terms and conditions as to the other en route producers.

We agree with the examiner's approach to the treatment of the producer applicants who have cancelled their contracts with Panhandle, and shall follow his recommendation in the issuance of certificates to these producers.

The Commission further finds:

(1) Panhandle is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) Panhandle's proposed facilities hereinabove referred to, and more fully described in its application, will be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such facilities, together with the construction and operation thereof, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the independent producers named above as parties to this proceeding is or upon initiation of the proposed sales to Panhandle will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is or will be a "natural gas company" within the meaning of the Natural Gas Act.

(4) The sales of natural gas proposed by each of the producer applicants, as more fully described in their applications, are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Subject to the requirements of our order herein and the conditions of the certificates herein issued, Panhandle, and each of the producer applicants who has not withdrawn, are able and willing to properly do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder. Those producer applicants who have cancelled their contracts and sought with-

---

applicability in a specific area, the area price standard will be revised and set forth in greater detail with regard to the exact sale conditions to which the rate applies."

Proposed additions to the Policy Statement which would set forth standards for pipeline quality gas, and the allowable adjustments, including Btu adjustments, for deviations from such standards, are, as hereinabove indicated, before the Commission in the R–200 rule-making proceeding.

drawals herein should be permitted to reinstate their applications, *nunc pro tunc*, within 30 days from the date of the issuance of this order, thereby indicating their ability and willingness to properly do the acts and to perform the services proposed in their original applications, and to conform to the provisions of the Act and the requirements, rules and regulations of the Commission.

(6) The construction and operation of the facilities proposed by Panhandle, and the sales proposed by each of the producer applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates should be issued to each of them as hereinafter ordered and conditioned.

(7) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued upon the conditions hereinafter set forth: to Panhandle Eastern Pipe Line Company for the construction and operation of the facilities proposed, as more fully described above and in its application; and to Shell Oil Company, Calvert Petroleum Company, and King-Stevenson Oil Company, Inc. for the sale of natural gas in interstate commerce for resale as proposed, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described above and in their applications.

(B) Within 30 days from the date of the issuance of this order, Pioneer Production Corporation, Ashland Oil & Refining Company and Union Oil Company of California shall have the option to rescind the cancellation of their contracts with Panhandle and the notices of withdrawal from this proceeding, and to notify the Commission of the resubmittal of their applications on the same terms and conditions as originally applied for by them in this proceeding. In the event such resubmission is made, the applications shall be reinstated and certificates shall thereupon be issued, *nunc pro tunc*, to the producer applicants making such resubmission, authorizing the sale of natural gas in interstate commerce as proposed; subject, however, to the same conditions as hereinafter set forth with respect to the other independent producers.

(C) The certificate herein issued to Panhandle and the rights granted thereunder are conditioned upon Panhandle's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) and (e) of Section 157.20 of such Regulations. The time within which Panhandle's facilities shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20, is hereby fixed at six months from the date of the issuance of this order.

(D) The certificate herein issued to Shell Oil Company is granted upon the express condition that Shell shall file a rate schedule with the Commission within 30 days from the date of the issuance of this order providing for a base initial price, replacing the initial contract price as proposed, not in excess of 17.5 cents per Mcf (14.65 psia), including tax reimbursement, for gas sold and delivered to Panhandle at a central point in the Elk City field, and further providing that adjustments in price for variations in Btu content above and below 1,000 Btu's per cu. ft. be computed on the basis of the equivalent wellhead price of the gas, herein found to be 15 cents per Mcf, and be limited to a maximum upward adjustment based on 1,050 Btu's per cu. ft. In all other respects said rate schedule shall conform to Shell's application.

(E) The certificates herein issued to the other producer applicants named above are granted upon the express condition that each of the applicants proposing en route sales to Panhandle in Woods, Dewey, Major and Alfalfa Counties, shall file a rate schedule with the Commission within 30 days from the date of the issuance of this order providing for a base initial wellhead price, replacing the initial contract price as proposed, not in excess of 15 cents per Mcf (14.65 psia), plus Btu adjustment, for gas sold in said counties. Said rate schedules shall in all other respects conform to the producers' applications.

(F) In the event the Commission, by amendment of Policy Statement No. 61–1, adjusts the boundary between the Panhandle area and the "Other" Oklahoma area so as to increase the initial wellhead price level for new gas in the area of the sales herein certificated, the producer applicants accepting the certificates herein issued may thereupon substitute new rates reflecting the amount of such increase, and thereafter collect these new rates prospectively in lieu of the initial rates herein required.

(G) The certificates herein issued to the producer applicants are granted upon the express condition that the allowance of the take-or-pay provisions and the upward Btu price adjustment provisions in their contracts with Panhandle is subject to our ultimate disposition with respect to such provisions in the rulemaking proceedings in Docket Nos. R–199 and R–200, respectively. Upon the establishment, by amendment to the Statement of General Policy No. 61–1, or by regulation, of general policies governing such provisions in producer contracts, the producers accepting the certificates herein issued shall file within 30 days amended rate schedules in conformity therewith, acceptable to the Commission; provided, however, that the producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities.

(H) The certificates herein issued to the producer applicants shall be accepted in writing and under oath within 30 days from the date of the issuance of this order; and the facilities authorized by said certificates shall be constructed and placed in actual operation within six months from the date of the issuance of this order.

(I) The certificates issued to the producer applicants are not transferable and shall be effective only so long as each of said applicants continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objection relating to the operation of any price or related provision in the gas purchase contracts herein involved.

(K) The certificate herein issued to Panhandle shall not become effective until acceptance by Shell of its certificate for the Elk City sale to Panhandle.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

ORDER CLARIFYING OPINION NO. 350 ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND GRANTING MOTION FOR EXTENSION OF TIME

(Issued February 5, 1962)*

On January 15, 1962, we issued Opinion No. 350 granting certificates of public convenience and necessity in the above-designated consolidated proceeding. On January 29, 1962, Shell Oil Company (Shell) filed a motion, as supplemented by a telegram of the same date, requesting clarification of certain ordering paragraphs in our Opinion as well as an extension of certain times designated therein.

Specifically, Shell requests clarification of our Opinion in respect to its applicability to the non-operator co-owners of working interests in the Elk City Field. Additionally, Shell requests an extension of the 30 days required for the filing of acceptances of the certificates granted and for the filing of a rate schedule.

Panhandle Eastern Pipe Line Company and East Ohio Gas Company by letters dated January 30, 1962 and February 1, 1962, respectively, have stated that they have no objection to the granting of the requested extension of time.

There being no opposition to Shell's motion for an extension of time, the motion is granted as hereinafter ordered. As further requested, we shall make a substitution of specified paragraphs appearing in our Opinion No. 350, as hereinafter ordered, to more fully express the intent thereof.

The Commission orders:

(A) Ordering paragraph (A) in our Opinion No. 350 is hereby deleted and the following paragraph is inserted in substitution thereof:

(A) Certificates of public convenience and necessity are hereby issued upon the conditions hereinafter set forth: to Panhandle Eastern Pipe Line Company for the construction and operation of the facilities proposed, as more fully described above and in its application; and to Calvert Petroleum Company, King-Stevenson Oil Company, Inc. and Shell Oil Company (and to all the non-operator co-owners of working interests in the Elk City Field ratifying the gas sales contract dated March 23, 1960, between Shell and Panhandle or who may hereafter authorize Shell as operator to deliver to Panhandle their interest in the Elk City Field gas pursuant to the terms and provisions of said contract, as herein conditioned) for the sale of natural gas in interstate commerce for resale as proposed, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described above and in their applications.

(B) Ordering paragraph (D) in our Opinion No. 350 is hereby deleted and the following paragraph is inserted in substitution thereof:

(D) The certificate herein issued to Shell Oil Company and the Elk City Field non-operator co-owners of working interests referred to in ordering Paragraph (A) hereof, is granted upon the express condition that Shell shall file a rate schedule with the Commission within 40 days from the date of the issuance of this order providing for a base initial price, replacing the initial contract price as proposed, not in excess of 17.5 cents per Mcf (14.65 psia), including tax reimbursement, for gas sold and delivered to Panhandle at a central point in the Elk City Field, and further providing that adjustments

*Parties and docket numbers printed *supra* p. 35.

in price for variations in Btu content above and below 1,000 Btu's per cu. ft. be computed on the basis of the equivalent wellhead price of the gas, herein found to be 15 cents per Mcf, and be limited to a maximum upward adjustment based on 1,050 Btu's per cu. ft. In all other respects said rate schedule shall conform to Shell's application. Upon Shell making the filing required in this paragraph the non-operators in the Elk City Field shall not be required to duplicate such filing and the filing by Shell shall be deemed to be made for itself individually and for all non-operator co-owners in the Elk City Field ratifying or authorizing the delivery of their share of the Elk City Field gas pursuant to the contract of March 23, 1960, between Shell and Panhandle as conditioned herein.

(C) Ordering paragraph (H) in our Opinion is hereby deleted and the following paragraph is inserted in substitution thereof:

(H) The certificates herein issued to the producer applicants shall be accepted in writing and under oath within 40 days from the date of the issuance of this order; and the facilities authorized by said certificates shall be constructed and placed in actual operation within six months from the date of the issuance of this order.

(D) Ordering paragraph (K) in Opinion No. 350 is redesignated as paragraph (L).

(E) The following paragraph is inserted in our Opinion No. 350 as paragraph (K).

(K) As to Elk City Field which has been unitized, with Shell as Unit Operator, the certificate herein issued to Shell, subject to the rights granted thereunder and the conditions attached thereto, shall apply not only to Shell individually but also to Shell as Operator of the Elk City Unit for and in behalf of the non-operator co-owners of working interests in said Unit ratifying or adopting the gas sales contract dated March 23, 1960, between Shell and Panhandle and accepting this certificate within the time specified in paragraph (H) hereof, as well as each non-operator co-owner of a working interest in the Elk City Unit who may hereafter authorize Shell as operator to deliver to Panhandle his interest in the Elk City Field gas pursuant to the terms and provisions of the contract dated March 23, 1960, between Shell and Panhandle, as herein conditioned.

DECISION

UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 11, 1961)

WESTON, *Presiding Examiner:* In this proceeding, Panhandle seeks authority to build a new 200-mile supply lateral southwesterly from its Haven compressor station in Kansas to connect with Shell's Elk City gas field in western Oklahoma. Shell and the other producers seek authority to sell the gas to be picked up by the proposed new lateral.

The important issue is whether the initial price for the gas (including "fringe benefits" to the producers), as carefully and providently negotiated by the parties is consonant with the public interest protected by the Commission. The gas is uniquely valuable and needed, but the price to Panhandle is high, and is out-of-line in a general sense. After some months of study, two relatively simple points about the "initial price" problem become clear, and should be kept in mind as this decision is read: (1) language in judicial decisions, as Judge Brown of the Fifth Circuit has well shown (see *infra*), is of little or no help in the solution of a case like the one at bar; (2) rulings in specific cases, on the important and

evolving subject of initial price regulation, must follow the general lines of Commission policy expressed in general orders, rather than attempt to effect new departures in such policy.

DESCRIPTION OF THE PROJECT

I. *The Basic Project: Panhandle-Shell.* The feasibility of the lateral depends on supply from Shell's Elk City field. The other producers would supply relatively minor "enroute" deliveries from fields along the proposed lateral line; the deliveries now contracted for are only indicative of ultimate future connections, as new conveniently located gas is discovered.

A. *Panhandle's Situation, In General.* Panhandle, one of the largest pipelines in the country, supplies gas principally to distribution companies located in Texas, Kansas, Missouri, Illinois, Indiana, Michigan, and Ohio. Most of the gas comes from the southwestern part of its system under gas purchase contracts with producers in Texas, Oklahoma, and Kansas; other gas comes from Panhandle's own production. In the past Panhandle has been removing more than 300,000,000 Mcf per annum from its southwestern sources.

To meet demand, Panhandle has had to resort to extraordinary measures. It has obtained 80,573,000 Mcf from other pipelines on temporary short-term supply contracts. It has overproduced (*i.e.* under State conservation allowables) its own gas resources by 85,395,000 Mcf as of January 1, 1960.[1] In July 1959 Panhandle was authorized to discontinue delivery of 46,355,000 Mcf annual supply to Michigan Consolidated Gas Company, and to redistribute this volume among Panhandle's resale (*i.e.*, distribution company) customers, because of the latter's critical needs. See *American Louisiana Pipe Line Co.*, 20 FPC 851; 21 FPC 218; 22 FPC 82.[2]

To Panhandle, as to any pipeline, replacement of gas and maintenance of reserves is, of course, a necessity. During the five-year period January 1, 1955, to January 1, 1960, Panhandle entered into an aggregate of 162 gas purchase contracts connecting aggregate reserves of 607,125,000 Mcf. When annualized, such acquisitions do not begin to meet Panhandle's market. Panhandle's existing customers take about 410,000,000 Mcf per year, but need, and are anxious to purchase, more than 483,000,000 Mcf per year—an unsatisfied market of about 75,000,000 Mcf per year. Panhandle's most recent expansion program was based on new deliveries instituted under temporary certificates issued in 1954 and 1955, permanently authorized in *Panhandle Eastern Pipe Line Co.*, 15 FPC 46. Panhandle has currently pending before the Commission a proposal for major sales expansion (Docket CP60–60), for which the gas supply involved in this proceeding is a basic necessity.

Further findings centered on Panhandle's needs and the value of this gas to Panhandle and its customers are detailed later herein.

B. *Shell's Situation, In General.* Shell is the 75 percent owner of, and operator of, the unitized Elk City field, mostly located in Beckham County (balance in Washita County) of western Oklahoma. The field was discovered in 1947. It was unitized in 1950 by order of the Oklahoma Corporation Commission for the production of oil, condensates, and gas, and has since been operated, for maximum recovery of liquids, by cycling and reinjection of gas as produced with the liquids. Currently, operation of the field for recovery of liquids has become marginal, recycling has diminished liquids to the point that Elk City should be

[1] Possibly to be retroactively increased by 12,000,000 Mcf, depending on validity of a Kansas Corporation Commission order which liberalized Panhandle's allowables.

[2] The Commission's order was reversed and remanded, *Michigan Consolidated Gas Co. v. F.P.C.*, 282 F. 2d 854; 283 F. 2d 204 (CADC), and hearings are currently in progress on Michigan Consolidated's demand for restoration of the 46,355,000 Mcf per annum.

operated as a gas field, and recycling is scheduled to be discontinued at the end of 1963.

The field extends over some 11,800 acres. It contains nine separate producing reservoirs at depths between 8,950 and 10,900 feet, tapped by 295 wells. Because of the long cycling history, reserves can be estimated with great accuracy. Reserves in place total 807,893,000 Mcf, of which 746,316,000 Mcf are recoverable. After allowance for shrinkage and fuel, 701,536,000 Mcf will be available for use and sale in Panhandle's system. This one "package" of gas is considerably larger than all of Panhandle's acquisitions in 162 separate purchases in the 1955–1960 five year period, *supra*.

Under the contract, Panhandle would deplete the Elk City field in 15 years, beginning with withdrawals of 45,625,000 Mcf in 1961, continuing with 49,275,000 Mcf in 1962 and 1963, and at a predominate rate of 46,611,000 Mcf in subsequent years. The "early depletion of the field * * * in 15 years instead of 20 or 22" was a main consideration moving Shell to close with Panhandle rather than with other bidders. (Tr. 43, 66–67.)

The deliverability capacity of the field is unusually high. Shell must furnish Panhandle, at the latter's 5-year option, up to 225,000 Mcf per day on a continuous basis, and Panhandle has other options down to a floor of 125,000 Mcf per day.

Shell decided to sell its Elk City gas in October 1958, and received three firm offers for an "in place" sale[3] and six firm offers from pipelines (including Panhandle) for a conventional per-Mcf sale. All of the other pipeline offers (El Paso, Northern, Natural Gas Pipeline, Michigan Wisconsin, and Transwestern) involved initial prices[4] and total prices (after future escalations) substantially higher than Panhandle's offer, but contemplated depletion of the field over a 20-year period.

Shell's facilities at Elk City include gathering lines, well equipment, a processing plant for removal of liquids, and reinjection equipment. Direct cost of the wells and surface facilities (excluding cost of leases and other costs termed "indirect" in the industry) has been about $75 million. Under the contract, Shell will supply Panhandle with pipeline quality gas at the tailgate of the processing plant, and Shell will spend between $200,000 and $300,000 immediately for dehydration equipment. Under the contract, Shall agrees to continuously deliver the gas at the high minimum pressure of 825 psig (maximum 875 psig), and over the life of the contract will have to spend some $6 million for changes in the gathering system and compressors, and for additional compression.

In the Oklahoma-Texas area, it is highly unusual, if not unprecedented, for a producer to undertake the quality, pressure, and delivery features of Shell's agreement in this case. Most gas in the area is picked up at the wellhead by the pipelines. The pipelines provide and operate all processing and gathering facilities. Panhandle is advantaged in respect of jurisdictional revenues and expenses, consequently its customers and the ultimate consumers are equally advantaged, to a substantial dollar amount, not susceptible of exact computation, by Shell's present and future facilities, and Shell's future services, in respect of the Elk City deliveries.

---

[3] *I.e.*, direct sale of the total block of the gas for a single cash consideration, payable in installments. These offers are "still outstanding, and they are kind of confidential in the sense that we might want to take advantage of them." (Tr. 42.) Considering the size of the reserves, it may be assumed that the offers involve interstate transportation to the point of consumption of the gas, and consequently would require Commission approval, including consideration of price. See *F.P.C. v. Transcontinental Gas Corp.*, 365 U.S. 1; cf. *P.S.C. of N.Y. v. F.P.C.*, 287 F. 2d 143 (CADC).

[4] Because of the Commission's power to suspend and disallow escalations, initial price is the significant fact.

C. *Jurisdictional Facilities and Feasibility.* On account of the Elk City connection (incidental connections, *infra*), Panhandle will lay 50 miles of 22-inch and 150 miles of 24-inch high pressure pipe with valves and fittings. No compression will be needed, because Shell will through the life of the contract supply the gas at high pressure.[5] Fully powered, the line will carry volumes up to 340,000 Mcf per day, compared to Shell's possible maximum deliveries of 225,000 Mcf per day.[6] The cost will be approximately $15.7 million, easily financed by Panhandle out of cash on hand and short term bank loans already committed. All preliminary right-of-way engineering, and other details have been completed, and the lateral can be installed and operating in about three months, or in time for the 1961–1962 winter heating season.

With respect to feasibility, it is clear that, even without needed expansion of Panhandle's deliveries, the addition of the line will be economically sound. As we have seen, Panhandle has had to depend on over-production and "spot" purchases to meet its existing loads. Panhandle can take the full Elk City lateral supply without incurring any take-or-pay-for penalties. Although there may be some "cutback" of Panhandle's takes from existing connections, this "cutback" will be beneficial rather than detrimental, because of past overproduction. Out of the proposed new facilities Panhandle will realize operating revenues of approximately $10 million. After deduction of operating expenses, including slight increases in average cost of gas purchased, Panhandle will realize an average of between 2.29 cents and 2.75 cents per Mcf in operating revenue during the first three years of operation, based on existing Panhandle rates and sales contracts. The total impact of the new supply on Panhandle's cost of gas will be a *de minimis* increase of about one-tenth of one cent per Mcf. Certification of the sales here involved will not cause Panhandle to seek a rate increase. (Tr. 640.) In this and other connections, it is noteworthy that no customers or regulatory authorities oppose the project.

It is concluded that the facilities to be installed are soundly engineered and financed, and that economic feasibility, not seriously controverted, is clear.

D. *Contract Provisions In Issue.* The principal question for determination is the proposed initial price of 20.5 cents per Mcf agreed on between Shell and Panhandle for the Elk City gas, and set out in Article VIII–1–(A) of the purchase contract. Staff contends that the price should be conditioned to 15 cents per Mcf. This issue must be considered primarily in the light of *Atlantic Refining Co.* v. *P.S.C. of N.Y.*, 360 U.S. 378 (commonly known as "Catco"), and the Commission's Statement of General Policy No. 61–1, 24 FPC 818, 25 F.R., 9578, issued September 28, 1960, during the pendency of hearings herein (hereafter referred to as "Policy Statement 61–1"). The scope and application of these authorities to the facts at hand, however, is a matter for expert judgment, not "arithmetical comparison of two prices," taking into consideration the prevailing realities of producer price regulation and the practical consequences of given Commission action. Cf. Brown, J., dissenting in *United Gas Imp. Co.* v. *F.P.C.*, 290 F. 2d 133 (CA5, February 22, 1961), slip opinion, p. 17. *Cert.* den. *sub. nom. Sun Oil Co.* v. *UGI*, 368 U.S. 823.

A group of ancillary questions are presented:

1. *Btu Adjustment.* The contract provides for a Btu adjustment to the 20.5-cent price for heating values above or below the conventional industry standard of 1,000 Btu per Mcf of gas, within a range of a floor, 985 Btu (at which point Panhandle may reject the gas), and a ceiling of 1,200 Btu (no adjustment for any heating value in excess). The adjustment factor is the actual Btu content

[5] Compression will be added later to take care of new "enroute" gas picked up.
[6] The difference will come from "enroute" connections.

divided by 1,000. The Elk City gas will actually have an estimated Btu content of 1,050. Shell's actual realization, counting Btu adjustment, will therefore amount to 21.525 cents; the ceiling which Shell could realize is 24.6 cents. Staff contends that the Btu adjustment provision should be eliminated.

2. *Rate of Take.* Minimum required "take" by Panhandle under the Shell contract is as follows:

First, fourth, and fifth years—annual volume equal to average daily volume of 125,000 Mcf. Second and third years—annual volume equal to average daily volume of 135,000 Mcf. Sixth and subsequent years, 1,000 Mcf per day for each 3,650,000 Mcf of remaining reserves, "it being the intent hereof that all economically recoverable gas from contract acreage be fully depleted in the first 15 contract years." [Art. V–1(A).]

Staff contends that rate of take should be changed to reflect annual deliveries not greater than one Mcf per day for each 8,000 Mcf of recoverable reserves. This would result in a contract life, to exhaustion of the field, of approximately 22 years.

3. *Take-or-pay-for.* Under the contract, Panhandle must in each year either actually take or else pay for all of the minimum annual volumes above specified; provided, that Panhandle may during the three succeeding years take down the amount of any such paid-for deficiency for any given year without further cost. [Art. V–4(B).] However, as we have seen, Panhandle has an option to increase the delivery rate. If Panhandle thus increases contract quantities to 125 percent of contract quantities, the take-or-pay-for would automatically become 80 percent. Staff contends that, to the revised rate of take suggested by Staff, item 2 *supra*, the take-or-pay-for provision should be reduced to 80 percent.

II. *The Enroute Connections.* Along the route of the 200-mile Haven Station-Elk City lateral lie the extensive existing and potential gas producing areas of northern Oklahoma and southern Kansas. As originally presented, Panhandle had five contracts, all in identical standard form, for enroute deliveries from Oklahoma fields, as follows:

Producer	Mcf of proven reserves	Field	County location, proven reserves	Initial price
				Cents
Union	17,691,000	W. Putnam	Dewey	0.17
King-Stevenson	3,880,000	NE. Seiling and Unnamed-Dewey	Major and Dewey	.17
Ashland	21,709,000	W. Chester and NE. Seiling	Woodward and Major	.17
Continental [1]	548,000	NE. Seiling	Major	.17
Calvert	2,003,000	Avard and Unnamed-Dewey	Woods and Dewey	.17
Pioneer	11,529,000	W. Chester	Woodward	.17

[1] Continental is a "carried interest." Its acreage is properly attributable, in unstated portions, to the other producers who applied herein.

Acreage covered by these five contracts substantially exceeds proven acreage. Through exploration and development, further proven reserves are to be confidently expected.

Producer	Dedicated acreage	Proven
Union	40,192	2,800
King-Stevenson	4,918	662
Pioneer	1,856	960
Calvert	6,286	547
Ashland	7,180	2,145

On May 2, 1961, Union's withdrawal of its application in Docket No. CI60-802, based on cancellation of its contract with Panhandle, was permitted to become effective. By notice of May 26, 1961, to Panhandle, Ashland cancelled its contract with Panhandle, and Pioneer has taken the same action by notice dated May 29, 1961. The Commission has not acted on the last two withdrawals.

These withdrawals do not significantly affect the feasibility or financial details of the project. Because of this fact, and because the lateral, if constructed, will unquestionably connect replacement deliveries and more, probably at the original price and on similar conditions, the volumes, estimates, and other material facts as originally presented are used in this decision.

A. *Contractual Arrangements and Issues.* As is conventional in the area, the enroute sales are to be at the wellhead, with all facilities installed by Panhandle. Panhandle's costs in this regard, covering the five connections originally contemplated, were estimated at $987,000.

The contracts, in identical form, as noted above, all provide for a 17 cents per Mcf price. Staff presents the same issues concerning these contracts as in the case of the Shell contract, as follows:

1. *Initial Price*—Except in the case of Pioneer, whose price is not questioned, Staff contends for 15 cents rather than 17 cents.

2. *Btu Adjustment*—Staff contends that the provision should be eliminated. In this connection, it is noted that the estimates of actual Btu content from the enroute producing fields are as follows: Avard and Unnamed-Dewey, 1,000; W. Chester, 1010; NE. Seiling (Mussellem) 1,100, (Chester) 1,108. On this basis, consecutive actual per Mcf realization for the same producing fields would amount to 17.0 cents, 17.17 cents, and 18.70 cents.

3. *Rate of Take*—The contracts call for depletion of the fields over a 20-year term (life index). One-tenth of the reserves is to be depleted in each of the first two years. The remaining 80 percent is to be depleted during the succeeding 18-year period, or at approximately 4.44 percent per year, with exact volumes dependent on pressure drop as actually experienced. Overall rate-of-take balances out to amount to the purchase by Panhandle of one Mcf per day for each 7.300 Mcf of recoverable reserves in the separate fields. Staff contends that rate of take should be required to be adjusted to one Mcf per day for each 8,000 Mcf of recoverable reserves, or a 22-year life index.

4. *Take-or-pay-for*—Staff contends that the provision, essentially the same as that described above for the Shell contract, should be revised to reduce the amount to an 80 percent required take of the annual contract quantities.

Pricing-Area Considerations

As we have seen, Staff contends that the Commission should offer Shell and the other producers (except Pioneer) certificates conditioned on a 15-cents per Mcf price, rather than the price as negotiated. It is appropriate at this point to consider the factual derivation of Staff's price.

Staff's price derives from Policy Statement 61–1, with attached Press Release, which is a compendium of geographically defined gas producing areas of the United States. The areas of, and adjacent to, the sales proposed in this proceeding are divided by county lines in Oklahoma, and by Railroad Commission Districts in Texas. To each geographical area a "price level" is stated. The Policy Statement says that the Commission in arriving at such price levels, "considered all of the relevant facts available to us." It also says that:

> For the present, and in the absence of compelling evidence calling for other action by us, proposed initial sales of natural gas by independent producers which include rates [i.e., proposed prices] higher than those

> indicated in the appendix attached to this statement shall be denied a certificate or certificated only upon the condition that lower rates be filed * * *.

Policy Statement 61–1 is thus a factual *datum* bearing on the disposition of this case, and we must consider the location of the new sales here proposed in relation to the areas and price levels there set out.

As we have seen, the Elk City field lies mostly in Beckham County, and partly in Washita County, which bounds Beckham to the east. The enroute connections as originally proposed involve fields to the northeast, in the contiguous counties of Woodward, Woods, Alfalfa, Major, and Dewey.

Policy Statement 61–1 sets up three pricing areas in Oklahoma:

1. *Panhandle Area*—Cimarron, Texas, Beaver, Harper, Woodward and Ellis Counties, which form a contiguous group of counties in northeast Oklahoma. The level of initial price for new service, "for the purpose of guidance and initial action by the Commission," is set at 17 cents per Mcf.

2. *Carter-Knox Area*—a portion of Grady and Stephens Counties known as the Knox Field, lying in the geological formations below the base of the Pennsylvania Series. Grady and Stephens Counties lie in the southwest-central portion of Oklahoma. The price level is set at 16.8 cents per Mcf.

3. *"Other" Area*—all Oklahoma except the two areas above-described. The level is 15 cents per Mcf.

Beckham County, the site of the Elk City connection, is bounded on the north by Ellis, one of the Panhandle area counties. Beckham is bounded on the west by two of the twenty-six contiguous north Texas counties which comprise the large area of Railroad Commission District No. 10, for which the Policy Statement prescribes a 17-cent price. However, Beckham County, not being part of the Panhandle or Carter-Knox, is assigned the 15-cent price stated for "Oklahoma-Other." The counties along the route of the lateral are also in the "Oklahoma-Other" area, except for Woodward County, which is included in the Panhandle."

It appears that Pioneer's connection is in Woodward County, and Staff, construing the Policy Statement as a rigid and unchangeable set of price ceilings, contends for:

> An initial service rate of 15.0 cents per Mcf for all producers herein, exclusive of Pioneer. Pioneer should be certificated at the requested intial service rate of 17.0 cents per Mcf. (Br. 44.)

I. *Construction of Policy Statement 61–1.* However, it is clear enough, *a priori*, that the Commission intended changes in ceilings and in the boundaries of areas, as well as the creation of new areas, in accordance with the facts and public interest as found in specific proceedings such as the instant case.[7] The Commission said in the Policy Statement:

> * * * The geographical areas which we have used are convenient and well known. They are not necessarily in complete accord with geographical and economic factors which may be relevant to the establishment of pricing areas. As experience and changing factors may indicate we will change or alter these areas from time to time in order to eliminate such inequities as may appear to exist because of our use of geographical boundaries.

This construction of the Policy Statement is required as a matter of law, for the Natural Gas Act itself provides for notice, hearings, and findings with regard to the public convenience and necessity of specific applications. Act,

[7] As well as in "area hearings," also contemplated by the Statement.

sec. 7 (c), (d), and (e). Policy Statement 61–1 was issued without notice, hearings, or public record. The Commission cannot legally, and therefore should not be considered to have attempted to, determine without notice or hearing the convenient and necessary price applicable to the Elk City and enroute sales. Consequently, Staff's broad contention that the price issue is disposed of by Policy Statement 61–1 is disallowed without further analysis. Policy Statement 61–1, so far as presently pertinent, is an *approach* toward definition of the price "line" mentioned in *Catco* (360 U.S. at 391), not a *determination* of that line.

It also seems clear enough, simply from looking at the map of Oklahoma and north Texas pricing areas, that the specific "Oklahoma-Other" area, whence most of the gas here involved comes, was created as a temporary catch-all, intended to be the subject of refinement, further definition, and further delineation, according to the facts and public interest as found in particular proceedings before the Commission. The Statement, in its opening paragraph, characterizes its utility as that of "a guide to us and to interested parties;" *i.e.*, suggestive rather than determinative.[8]

So construed, the Policy Statement (a) gives scope for the basic natural facts of geology, market area history, and oil and gas economics as adduced in specific cases in connection with pricing new gas supply; (b) does not establish arbitrary pricing zones, contrary to specific evidence, based on county or other artificial geographical lines; (c) is not a final order subject to review. See *Wisconsin* v. *F.P.C.*, 292 F. 2d 753 (CADC, decided May 18, 1961).[9] So construed, the Policy Statement is for present purposes a statistical compilation (confirmed by price statistics presented in this record by a Staff witness) and no more.

II. *Geological and Other Factors.* The entire upper Oklahoma gas producing area lies in the Anandarko Basin, and constitutes a single geological province. In general, the producing horizons therein trend downward, *i.e.*, to greater depths, from the Colorado border southeasterly to Woodward County, Oklahoma. The productive formations from which the gas involved in this proceeding is derived (*e.g.*, Chester, Mussellem, and Tonkawa) are common to the entire Panhandle area (as commonly known) of Texas and Oklahoma, and are related or identical in all parts of the area in respect of age, lithology, and physical characteristics.

In respect of marketing area, geography, and well-drilling and operating attributes, the Elk City and enroute connections are like the conditions encountered in the Laverne Field of Harper County, Oklahoma (*i.e.*, in the Panhandle area), except that Laverne is shallower, consequently less expensive to drill and operate.[10] For the Elk City and other formations here involved, drilling depths are as follows:

---

[8] It may well be that Policy Statement 61–1, insofar as presently relevant, is intended only as a publication of the theretofore undisclosed standards by which the Commission had previously determined whether or not to hold full hearings on proposed new connections, rather than shortened procedures under Sec. 1.32 of the Rules of Practice and Procedure.

[9] In the cited case, the decision dismissing the appeal was grounded on Wisconsin's lack of status as a "party to a proceeding" before the Commission, citing *United Gas Pipe Line Co.* v. *F.P.C.*, 181 F. 2d 796, cert. denied, 340 U.S. 827. As construed, the Policy Statement does not "aggrieve" producers or others, thus is not appealable on more conventional grounds.

[10] Costs actually incurred in the NE. Seiling and Unnamed-Dewey fields are 20 percent greater than costs in some of the deepest portions of Laverne.

Field	County	Depth
Avard	Woods	4,895
W. Chester	Woodward	7,977
NE. Seiling	Major	8,400
Unnamed	Dewey	8,885
W. Putnam	Dewey	10,500
Elk City	Beckham	8,950–10,900

Production in the Oklahoma Panhandle derives from the Mississippian and Pennsylvanian formations, which continue into the western Oklahoma area of the present proposed sales. More gas is expected to be discovered at deeper levels in western Oklahoma when exploration is continued. From a geological standpoint, there is no reason to differentiate between (a) the Panhandle (six county) and north Texas pricing areas now assigned a 17-cent initial price, and (b) the area of the Elk City and enroute sales, now assigned a 15-cent initial price.

Assuming a firm Commission policy to give producers an extra price incentive to "encourage and enable producers to explore for and develop gas from these deeper formations," *Phillips Pet. Co.*, 22 FPC 528, 529, it is clear that any distinction between the Panhandle area and the area of the present sales should reflect higher prices, rather than lower, for the latter area.[11]

From the standpoint of marketing or "shopping," areas, there is no basis for distinguishing the area of the Oklahoma Panhandle (17-cent price) or the upper portion of Texas R.R. Commission District No. 10 (17-cent price) from the contiguous or one-county removed areas of Beckham, Washita, Woodward, Dewey, Major, Ellis, and Alfalfa Counties, from which the Elk City and enroute deliveries are proposed in the case at bar. The entire area is a part of, or on the periphery of the territory known as "pipeline alley," whence many of our nation's largest pipelines have, since commencement of large scale natural gas operations, drawn a major part of their gas supplies. The commonly used point of reference for the sales herein, and neighboring sales, is the Anandarko Basin.

Alternative Supply

If Panhandle is unable to connect the gas involved in this proceeding, the testimony is that it will have to institute an intensive purchasing program from sources as nearly as possible adjacent to its main southwesterly pipeline. Panhandle has made studies looking towards such a program, which would involve extensive new drilling by producers in Beaver and Harper Counties, Oklahoma, and in Clark County, Kansas.

Producers in this area conventionally sell gas at the wellhead; in the words of an experienced oil man, "it is a rare thing if a producer builds a foot of pipeline" (Tr. 214). Therefore, to connect the alternative gas, Panhandle would have to build an extensive new gathering system, and new mainline facilities, connecting an estimated 233 wells, to replace the Elk City lateral supply. Estimated first year costs for the whole program would amount to over $26 million, with additional costs in future years of some $6,750,000.[12]

If we consider only the facilities required to gather and treat the hypothetical alternative gas, Panhandle would have to spend about $6 million, at a first year

[11] There is considerable testimony in the record specifically showing that drilling costs are higher in the area here involved than in areas of 17-cent Commission-allowed prices. However, such evidence is not, and cannot be, meaningfully stated in the form of dollars and cents allowances for extra costs.

[12] For comparison, total Panhandle expense for gathering, dehydrating, and field compression of gas obtained from January 1, 1955, to January 1, 1960, was $12,411,600.

cost of service of some $2.5 million, or 5.03 cents per Mcf. Panhandle's actual cost of gathering recently acquired gas amounts to 3.98 cents Mcf. In both cases, for purposes of comparison with the case at bar, in which Shell will maintain at least 825 pounds of pressure full term, future compression must be added by Panhandle to offset pressure decline; Panhandle's current field compression costs about one cent per Mcf.

In summary, it may be said that considering the alternative presented, Panhandle is advantaged to the extent of five to six cents per Mcf by Shell's gathering compression and dehydration services at Elk City.

In *El Paso Natural Gas Co.*, 23 FPC 369, 376, rehearing denied, 23 FPC 610, the Commission adjusted Aneth Field prices to compare with San Juan Basin prices by adding "some 5 cents per Mcf representing processing and related costs" otherwise payable by the pipeline for prime supply. See also, *J. M. Huber Corp.*, 22 FPC, 338, 340, which in effect allows 2 cents per Mcf for pressurizing to 250 pounds and 2.71 cents per Mcf for gathering the gas. However, this is not an acceptable method or basis for upward adjustment of prevailing prices generally, or in the case at bar.

"Alternative supply," as presented here, is a purely hypothetical, conjectural, imaginary project useful only to make an argument in support of the Elk City and enroute prices. An infinite variety of other projects, or infinite variations on the stated project, could as well be conceived and presented in the record. If Elk City is not connected and the stated alternative does not materialize (much of the contemplated alternative acreage is not available, being contracted for by other pipelines), then Panhandle might incur even greater costs to connect gas from more distant sources. Proponents of low prices could, as well, imagine new discoveries of dry gas comparable in volume to Elk City, and even more conveniently located to Panhandle, as possible "alternatives" arising from the extensive new drilling program envisaged by the argument. Speculation of this character could be endless, and fruitless in the resolution of actual prices for actual new gas supply.

The argument does, however, bring to light a fundamental problem—whether the price issue is to be determined from the point of view of the producer—what the producer receives—or the pipeline—what the pipeline pays. There is a very real difference when the unstated premise for the point of view is one or another aspect of cost. Thus, in some cases depth of drilling—a cost related factor—is used to explain current producer price levels. In other cases, such as Shell's Elk City situation, costs may have already been completely returned, and realizations may be excessive or inordinate on public utility "cost" concepts.

As will be shown *infra*, the fact that the producer receives excessive return is not material on the currently applicable premises that "value" and "area price" of gas are the important standards. The consumer is, for the present, adequately protected if "the price is right" so far as the pipeline is concerned.

Value, Cost, and Need

The clear indications from the facts so far recited are that in terms of *value* to gas-hungry pipelines Elk City is a highly desirable property. Let it be perfectly clear that, because of size of reserves, certainly of reserve estimates, flexibility of deliveries to meet Panhandle's changing needs ("swing"), high pressure, pipeline quality, single point delivery, and location and accessibility of supply, the Elk City gas is, in the words of Panhandle's consultant, "the most desirable single source of supply of gas available in the United States today" (Tr. 195).

Let it also be perfectly clear that the terms of the Shell-Panhandle contract reflect *value of gas*, not price control on cost or other standards. Part of this value is reflected in the "early depletion" provisions of the contract; the other fringe benefits (Btu adjustment and take-or-pay-for) are also part of the consideration moving to Shell. Panhandle's situation is such that the price can be stated at 20.5 cents per Mcf, with early realization of all gas value by Shell. There is a clear inference that the fact of regulation powerfully motivated this deal on Shell's "minimum terms" (Tr. 60) as one most likely to be accepted by the Commission (Tr. 50–51, 67). The matter of Shell's alternatives to the acceptance of price conditions will be discussed *infra*; we may anticipate to say that at the present stage in the evolution of producer regulation, the Commission is in no position to apply rigid price reduction standards to transactions like Elk City without risking serious impairment of gas supply, at least for a perod of time measured in years.[13]

With regard to the enroute supply, the *values* for gas to be picked up on the Elk City lateral are at least equivalent to the values which have been translated into existing prices elsewhere in the Anandarko Basin, particularly in the Texas and Oklahoma Panhandles.

Coming to the matter of Panhandle's *need for gas*, it is crystal clear that such need is (as recited in the basic Shell contract) "critical," and immediate, for the supply of existing customers. These customers, mainly midwestern distribution companies, have been deprived of the opportunity to expand their gas sales—and opportunity which has been afforded to, and availed of by, customers located elsewhere and served by other pipelines. The failure of the project here considered would mean the collapse of Panhandle's program in Docket No. CP60–60, to the discriminatory disadvantage of consumers in its territory.

With regard to *cost of gas* to Shell and the enroute producers, there is no evidence in the present record to support even a horseback estimate. Figures indicating the reasonableness of the Panhandle-producer contract prices measured on traditional public utility standards of producer cost-of-service including return are not presented. Proceeds to the producers from their contracts with Panhandle may or may not result in inordinate profits. In this connection, note that as to Shell:

(a) The Elk City field was unitized in 1950, with well spacing, subsequent operation, and use of associated gas exclusively for the maximum production of liquid hydrocarbons. Only now, as the recoverable liquids are nearly exhausted, will the field be dedicated to gas production for sale. There is no evidence as to capital recovery or profitableness of the liquid hydrocarbon operation.

(b) The sizable gathering and processing facilities at Elk City were not bought or installed for the production of pipeline-quality gas, but for the recovery of liquids at a profit. The $75 million of costs associated with such facilities are not a factor in deciding initial gas prices here, for there s no claim of a rate base for gas service, and none exists.

(c) The only producer investment directly associated with the commencement of Elk City sales will be for dehydration equipment, and will amount to between $200,000 and $300,000. In future years, delivery at the contract pressure of 825 psig will require additional compression, which may cost the producers in the neighborhood of $6 million.

---

[13] The Commission faces, rather than "abdicates," its responsibilities by considering and timing the assumption of the risk that price conditions will cause transactions for new gas to "collapse." Cf., *contra, P.S.C. of New York* v. *F.P.C.*, 287 F. 2d 143, 145 (CADC).

Weight to be given to value, cost, and need. Summing up—Panhandle is financially advantaged by Shell's agreement to supply the entire Elk City reserves in the form of pipeline quality gas at a central point and at a constant high pressure during the life of the field. Consistent with industry practice, Panhandle would have to incur substantial outlay in the form of capital investment and operating expenses to obtain equivalent gas from other sources in the area. The value of the Shell services to Panhandle in this regard is between five and six cents per Mcf.

On the other hand, the record does not show that Shell is financially disadvantaged to the same extent or degree. The principal facilities—the gathering lines and the processing plant—have long ago been installed by Shell, not for the purpose of creating an attractive gas purchase deal, but for the purpose of extracting liquids and reinjecting gas to maintain reservoir pressures. To an unknown extent, Shell has already recovered all of its Elk City capital and operating expenses through sales of liquids, and has perhaps made substantial profits on operations to date, after amortization of all investment. If we focus on the Shell situation, there is no showing that Shell is not, in terms of cost and financial needs (whether measured by conventional utility conceptions or industry economics), receiving windfall returns from the projected gas sales at 20.5 cents.

In this situation, it is concluded that for purposes of Section 7 certifications, the "price line" is to be measured by the comparative prices of given gas purchases to the pipeline, after giving effect to any applicable discounts for costs otherwise borne by the pipeline on account of, for instance, services such as Shell will perform in the case at bar. Panhandle's savings are *jurisdictional* in that they lower and are directly reflected in Panhandle's regulated rates. The savings accrue directly to Panhandle's customers in the form of lower rates prescribed in the FPC tariffs. Panhandle's distribution customers, in turn, effect savings which are directly beneficial to the ultimate customers. In a proximate sense, consumers are not prejudiced by even inordinate profits to Shell, so long as the outlay by the pipeline for connecting the new reserve is not excessive.[14]

Therefore, the Elk City transaction is to be viewed as one in which Panhandle is paying about 15 cents per Mcf for gas, and about 5–6 cents per Mcf, plus fringe benefits, for the value of its savings in capital and operating outlay for wellhead connections in the area.

Towards a Rationale of Initial Prices Consonant With the Public Interest

We may start by confirming that, as the title of this section indicates, we are today, seven years after *Phillips* and two years after *Catco*, still without a clear formula for determining the price issue for new gas connections. We are working *towards* a rationale of initial prices in Policy Statement 61–1; we have not arrived at final conclusions. The case at bar brings into focus all of the important considerations involved in the evolution of pricing policy—the principles, mostly economic, for price determination, the practical consequences of the adoption of given pricing principles, and the bearing of court and Commission authorities on this case.

I. Principles of Pricing. Since the authorities have not yet done so, it is time to set down a synthesis and evaluation of the known methods which might be applied in fixing producer prices for new gas:

1. *Cost-of-service. Catco* and other authorities reiterate a general distinction between the kind of proof necesary in a proceeding to determine fair and rea-

[14] "As Shell is, no doubt, well aware, after connection of the gas it will be subject to whatever rate regulatory control that may evolve in the future, with regard to the limitation of its profits from the Elk City supply.

sonable rates under Sections 4(e) and 5(a) of the Act (rate cases), and the kind of proof necessary in the determination of an acceptable initial price under Section 7 of the Act (certificate cases). There is a verbal distinction, of course; Section 7 does not specify "fair and reasonable" initial prices for producer certifications.

The distinction, which the cases seem to make one of *quantum* of proof, does not apply to pipelines and other utilities regulated by this Commission. Pipelines must present showings, as to new service, of the effects thereof on costs and return. Regulations Under the Natural Gas Act, Sec. 157.14(a) (16) and (18). If producers were regulated as conventional utilities, costs would be considered in the derivation of their initial rates, for the "fair and reasonable" conception or something closely akin thereto, under *Catco*, and subsequent judicial authorities (*infra*) inheres in the initial price issue, as it does in the rate increase issue. Thus, the *desideratum* in both cases is consumer potection, *i.e.*, in a general sense, no exorbitant prices; the distinction between proof of fair and reasonable rates under Sections 4(e) and 5(a) and the "lowest possible reasonable rate consistent with the maintenance of adequate service" [25] is a distinction only of degree.

The People and Public Utilities Commission of California continue to press the need for "relevant cost evidence" in certificate cases. Brief in *Standard Oil Co. of California*, Dkt. No. C160–333 *et al.*, pending, p. 23; brief and indications from the opinion in *Texaco Inc.* v. *F.P.C.*, 290 F. 2d 149 (CA5, decided April 14, 1961). The Commission Staff has not abandoned the contention that some cost evidence should be presented. (Br. herein, pp. 16–18.) Evidence as to the producers' costs "might or should appropriately be adduced in justification of the proposed price" in some cases, according to *El Paso Nat. Gas Co.*, 23 FPC 369, 375 (ftn. 13), and cost evidence "may well be relevant in some situations in determining a proper producer initial price" according to the order on rehearing, 23 FPC 610, 612–613.

However, it is clear that the Commission has not grounded its principal recent decisions on conventional cost-of-service considerations, and has flatly ruled such considerations immaterial even in rate proceedings. Order of April 5, 1961, in Area Rate Proceeding AR61–1; Policy Statement 61–1; *Phillips Petroleum Co.*, 24 FPC 537, 547.

As a practical matter, at the present stage in the evolution of initial price regulation, it is concluded, in accordance with the discussion of "value, cost, and need" (*supra*), that the traditional public utility standards which focus on producer cost-of-service cannot have any relevance to the determination of proper initial prices for gas. The ultimate value and use of such standards after producer regulation has evolved further is uncertain, and need not be decided now. The Area Rate Proceeding above referred to may take three or four years to hear. Presiding Examiner's Report of Prehearing Conference, AR61–1, isued May 26, 1961, p. 15. The second Area Rate Proceeding, AR61–2, primarily concerning initial prices for new gas in southern Louisiana, was convened for prehearing conference on June 26, 1961. Order of May 10, 1961, instituting rate proceeding. In the meantime, while ultimate principles are being worked out, we must have a *modus vivendi* under which new gas is connected.

2. *Revenue Requirements of the Industry.* In *Phillips*, 24 FPC 537, 547, the Commission indicated that "the ultimate solution to producer regulation will be in the determination of fair prices for gas, based on reasonable financial requirements of the industry." To that end, "industry-wide data" concerning

[25] *Catco*, 360 U.S. at 388, quoted with approval in *P.S.C. of New York* v. *F.P.C.*, 287 F. 2d at 150 (CADC).

costs in given areas and for producers and groups of producers, "company-wide," will be presented in Area Rate Proceeding AR61–1. Order of April 5, 1961, 25 FPC 614 at 616.

In the case at bar, there is no evidence on this proposed method for gas price determination. The ground rules for procedure and evidence thereunder have not been evolved. See proffers, protests and pleadings filed in Proceedings AR–1 and AR–2. In the case of initial prices generally, we may not wait on the evolution of the "revenue requirements" method, but must resolve pending cases *pro tem.*

3. *Value of Service.* In conventional public utility regulation, value of service has no relevance in the determination of utility rates or prices.[16] As a practical matter, however, value of service seems to have been the controlling factor in Commission decisions and to be recognized as a matter of importance by the courts in initial price determinations.[17] In candor, it must be recognized that value of gas considerations reflect aspects of the open market in an unregulated economy.

As indicated in a prior section of this opinion, value of the Elk City gas to Panhandle is given controlling weight in connection with the 20.5 cent price. As of 1961, considering the practical consequences of a contrary ruling, the current facts as to the evolution of pricing control permit no other result.

4. *Trended Base-Period Prices.* In analogy to excess profits tax legislation and in partial analogy to OPA practices, this method of price control selects with some degree of arbitrariness (a) a period of time at which prices deemed "normal" were prevailing, and (b) geographical areas in which "normal" price differentiations then existed, and to new gas offered for sale, applies the given normal price trended for changes in costs or value of the dollar. This method seems to be the basis for the approach taken to "initial prices" by Policy Statement 61–1. See *Phillips, supra*, 24 FPC at 547.

As applied to gas prices, the method has a serious inherent defect, brought out in its application to the case at bar, in that it tends to freeze given price situations which happen to exist (mainly by historical accident as to the timing of gas marketing negotiations) during the "base period" in a given area. Those prices in such period only reflected the then market value of gas, and have no relationship to (a) the public interest in new exploration and development in "likely" areas of low base prices, or (b) the proper price for new gas of different economic characteristics (magnitude, quality, pressure, accessibility). Should producers have a 2-cent initial price differential (incentive) for drilling in the six-county Panhandle area of Oklahoma, over the adjacent counties of the enroute deliveries? Should Elk City gas have a presumptive base price of 15 cents, while south Louisiana gas has a price of 20.96 cents? See First Amendment to Policy Statement 61–1, issued October 25, 1960.

Can we logically find a 15-cent area price for Elk City gas and a 17-cent price for Pioneer gas in this proceeding? The comparative facts are as follows:[18]

---

[16] *E.g.*, the high value of telephone service to a physician, or bus service to a "necessity" (auto-less) rider, does not determine the fair and reasonable levels of charges for service.

[17] In *South Georgia Natural Gas Co.*, 22 FPC 211, 220, the Commission recites the facts as to value, very similar to the facts of the present case, warranting prices centering at 21.5 cents per Mcf plus over 2 cents tax reimbursement (22 FPC at 227). In *United Gas Imp. Co.* v. *F.P.C.*, 283 F. 2d 817, 823 (CA9), the Court enumerates "value of service" considerations held to have a bearing on initial prices.

[18] Table from Panhandle's Reply Brief, page 4.

	Shell	Pioneer
Staff price	15¢	17¢.
Recoverable reserves	746,316,000 Mcf	11,529,000 Mcf.
Availability:		
Peak day	156,250 Mcf	1,580 to 7,350 Mcf.
Average day	127,701 Mcf	1,580 Mcf.
Potential average	225,000 Mcf	1,580 Mcf.
Proven acreage	39,990	960.
Number of wells	295	4.
Producing horizons	9	1.
Depth of wells	8,950 to 10,900 feet	7,977 feet.
Gathering	Yes	No.
Compression	Yes	No.
Dehydration	Yes	No.

But Policy Statement 61–1 is, as we have seen, only an *approach* to initial prices, not a determination thereof. Not only is the "area" of given prices subject to change, but "the prices will be adjusted from time to time as such facts as may come before us compel such adjustments." The base period is defined; in the case at bar we deal with 1961 conditions, not conditions as of the time of *Catco* or before.

4–a. *Base-Period Prices—Further Analysis in Principle.* Because the base-period method is the Commission's method for price control, selected after years of deliberation, and because it is relavant hereto and has not been clearly explained, the following observations are necessary with regard to its application:

(a) A tissue of engrafted exceptions, variances, and divergences, resulting in new ceilings according to the facts of each case on initial price, would defeat the purpose of simplicity, ease of administration and firm control so obviously desired. As *comparability* of gas packages comes into issue, scope is given for possible claims for an infinite variety of areas and ceilings following claims as to *value* of one supply as compared to and contrasted with selected other supply.

(b) Each exception, divergence or variance found on a given record, challenges the ingenuity of counsel for other applicants to find new reasons for nonstandard treatment of their particular new gas connections. The result in each case would, absent firm administration, depend upon ability of counsel or expert witnesses. However, the matter can be controlled. Price ceilings should be revised only on "compelling" evidence (Policy Statement 61–1, 24 FPC 818 at 820), or on "conclusive proof from the applicant that the public convenience and necessity require certification at that [new high] price." *Texas Gas Transmission Corp.*, 22 FPC 378, 388, reversed and remanded on another point, *P.S.C. of New York* v. *F.P.C.*, 287 F. 2d 146 (CADC), referred to with approval, *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817, (CA9).

(c) Adjustments to area base prices for given situations are necessarily grounded on considerations of comparative *value* of new gas purchases, despite the theoretical unsoundness of this approach.

(d) Each upward revision of prices based on special circumstances will tend to set a new base for price negotiation for nearby gas, no matter how carefully the revision is circumscribed in the words of the decision. However, this effect can be mitigated or entirely controlled, in the case of interstate sales, by firm Commission action on the peripheral contracts.

(e) The Commission is working towards, but has by no means firmly established, the appropriate *areas* in which given prices are to be applicable, and the *price levels* (base period prices) to be applied in the given areas. Policy Statement 61–1 did not, and could not, make definitive determinations. The matter is still in flux; the resolution applicable to the instant case will be made *infra* herein.

5. *Policy of Deferral.* *Catco* suggests that the Commission temporize with the problem of setting proper initial price levels for new gas by approving the negotiated price after one-day suspension, subject to the condition that refund be made of any portion thereof found in subsequent rate proceedings to be excessive.[19] The use of this device for deferral of decision is particularly attractive in the case of important, valuable, unconnected reserves needed immediately by pipelines. However, on balance, the Commission has reasonably determined that the device is unacceptable because it (a) would actually establish, in negotiations, the new higher price level in the area, and (b) would compound the existing rate-case uncertainties of gas pricing. *Gulf Oil Corp.*, 23 FPC 664 at 666–667.

The Commission might also temporize by dismissing certificate applications without prejudice on the basis that given evidence such as that adduced in the case at bar is insufficient to justify negotiated prices in the absence of indications as to producer costs and revenue requirements. The Commission would thus follow the general line laid down by the courts, which have regularly remained initial price cases for more evidence. See cases cited *infra*. Such a ruling would also seem to be consistent with some of the observations made by the Commission in *Phillips*, *supra*, and Policy Statement 61–1. However, there is no indication that, at the present stage in the evolution of producer regulation, this approach will be fruitful. See Brown. J., dissenting in *United Gas Improvement Co.* v. *F.P.C.*, *supra*, Slip Opinion pp. 18 *et seq.* Control of initial prices is up to the Commission; the industry cannot be expected to produce price-reducing evidence. Until the Commission evolves new standards for price control (by way of general, industry-wide orders) the resolution of specific cases must be on the basis of evidence such as that contained in the record before us.

II. *Practical Consequences of Price Limitation.* Let us assume that, since there is no rational basis for any other price level, the Elk City certificate is offered to Shell at the highest prevailing level of nearby sales, i.e., 17 cents per Mcf. Although Shell did not directly say so on the record (perhaps as a matter of diplomacy, cf. *Catco*, 360 U.S. at 388), it is clear enough from the testimony and from current industry practice, that the certificate will be refused.[20] Shell's alternatives include: intrastate sale (Oklahoma Natural Gas Company); sale for use at the site in chemical production; "in place" sale for interstate transportation to large gas users;[21] and the "shut-in" of the gas in the hope that federal price control will be eased or abandoned.[22] Cf. Judge Brown, dissenting in *United Gas Improvement Co.* v. *F.P.C.*, *supra*, Slip Opinion pp. 20–21.

Unless the price-conditioning order in this case expressly or by implication ruled otherwise, Shell would also have the alternative to decline the certificate and resell the gas to another of the interstate pipeline bidders, e.g. to Michigan Wisconsin Pipe Line Company at a "flat thirty cents per thousand cubic feet for

---

[19] This was the action taken by the Commission, at one stage, in *Catco* itself, and is the reading of slightly more general language, 360 U.S. at 389 and 392 (contracting Section 4(e) refund procedures and Section 5 action on initial rates), adopted by the Examiner in *Gulf Oil Corp.*, 23 FPC 664 at 670 *et seq.*, and generally confirmed by two Courts of Appeal, *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817, 823 (CA9); *P.S.C. of New York* v. *F.P.C.*, 287 F. 2d 146, 149 (CADC).

[20] Price-conditioned certificates for less valuable unconnected gas are being currently refused. See e.g. *Phillips Petroleum Co.*, 22 FPC 694, certificates refused January 14, 1960; *Gulf Oil Corp.*, 23 FPC 664, certificates refused, case dismissed, 23 FPC 926; *Socony-Mobil Oil Co.* (Docket No. G–17849 *et al.*), temporary certificate refused May 18, 1960, withdrawal allowed by order of June 30, 1960.

[21] This alternative involves the legal issue, whether a high per Mcf price for the gas would be a relevant consideration in the transportation permit proceeding. See cases in footnote 3, *supra*.

[22] There is reason to believe that shut-in of dry gas is becoming commonplace and increasing.

this gas for twenty years." (Tr. 46.) Absent a ruling herein to the contrary (express or implied), such a proposition would have to be reheard and redecided on a new record as to the public convenience and necessity at an indefinite future time and general price level. Since it is perfectly clear that Panhandle needs the gas and needs it right now, the national public interest would require that this alternative be eliminated, and that the Commission now fix the price at which Shell can sell the Elk City gas to an interstate pipeline now or in the future. Shell would have to be told, in effect, in any price-conditioning order, that certification of the Elk City gas for interstate sale elsewhere would not be granted by the Commission, if Shell refused the price-conditioned certificate for the sale to Panhandle.

What would be the implication of such an order? Clearly, it would involve the principle of rationing and allocation procedures to be imposed by the Commission, designed to insure that new gas, in short supply and at a Commission-fixed price less than price reached by solid negotiations in a free market, is channeled to the pipeline and ultimately to the consumer area which most needs the gas.

Specifically in this case, then, a price condition would mean both (a) loss of the Elk City gas to the conventional interstate market, and (b) by implication, at least, sanctions in the nature of rationing and allocation, on later reoffer of the gas for sale to another pipeline at a higher price, to be written into the order. We are not yet ready for this step in producer regulation. We are still in an era when *value* of gas (a non-utility concept) to Panhandle and the ultimate consumers is given importance in the decision of proper initial prices. See prior sections, *supra*. Until the Commission evolves more rigid controls, industry-wide, we must take account of these consequences, and be prepared, in a price-conditioning order, to find them compatible with the present and future interests of Panhandle and its utlimate consumers.

It is implicit in the foregoing that we cannot now impose effective *ad hoc* initial price control on the Elk City gas at an amount, say 17 cents per Mcf, less than its solid market value to Panhandle of 21 cents plus fringe benefits. This does not mean that such price control will not be practical at some time in the future, when implemented properly by general orders. In candor, we should be explicit about the evolving conditions which will ultimately make pricing below levels of value practical for unusually desirable reserves such as Elk City:

1. Saturation of the given intrastate consumer market (and chemical market) for gas at higher prices than the controlled price. At present, the Oklahoma intrastate market sets the price ceilings. See *Phillips Petroleum Co.*, 22 FPC 528.

2. Elimination of the "shut-in and wait" alternative as a sound business policy for producers. This implies forced acceptance by the oil industry of gas pricing at levels less than prevailing values. The acceptance will probably not come until resistance to general orders (setting initial price levels) is broken after a waiting period during which much gas will be shut-in.

3. Rationing and allocation procedures, designed to insure that new gas priced below its value is assigned to the pipeline and consumer territory that most needs the gas, rather than by the caprice or favoritism of producers.

4. A rational basis for price fixing, other than value. Such a basis will, according to *Phillips*, be found in Shell's, or the oil industry's, "revenue requirements" in northwest Oklahoma, or nation-wide.

5. Elimination, by saturation or otherwise, of the apparent alternative open to Shell to make an "in place" sale at prices higher than the controlled price.

III. *Court and Commission Authorities.* An extended analysis of the authorities is unnecessary; those affected by or reviewing this decision are well aware

of what has been decided and said, beginning with *Catco*. The judicial authorities have expressed commendable attitudes protective towards consumers, and have decided that the concrete problems should be remanded to the Commission.[23] Generalities and attitudes are not helpful to the decision of particular cases during a period of fluid, evolving Commission policy.

The recent Commission authorities show a disposition to reduce negotiated prices by price conditions, but fail to produce a consistent pattern or policy; indeed, abound with inconsistencies. A vital matter—not, however, of logical significance—seems to be whether or not the gas is already connected, i.e., not subject to disconnection without Commission approval. Recent Commission decisions include: *Trunkline Gas Co.*, 21 FPC 704; *South Georgia Nat. Gas Co.*, 22 FPC 211; *Phillips Petroleum Co.*, 22 FPC 528; *Phillips Petroleum Co.*, 22 FPC 694, 1021; *Western Nat. Gas Co.*, 23 FPC 332; *El Paso Natural Gas Co.*, 23 FPC 369, 610, affirmed *sub nom Texaco, Inc.* v. *F.P.C., supra; Gulf Oil Corp.*, 23 FPC 664, 926, *Peoples Gulf Coast Nat. Gas Pipeline Co.*, 24 FPC 1, 106, 323, 351, *Hope Nat. Gas Co.*, Dkt. No. CP60–75 *et al.*, order issued July 11, 1960; *Humble Oil & Refining Co.*, 24 FPC 191; *Natural Gas Pipeline Co. of America*, 24 FPC 222, 305, amendment denied, October 10, 1960, 24 FPC 853; *Trunkline Gas Co.*, 24 FPC 1020, Opinion No. 339, issued November 29, 1960; *Texaco, Inc.*, 24 FPC 979, Dkt. No. G–18078 *et al.*, issued November 22, 1960, rehearing granted January 19, 1961. Nothing is found in these decisions specifically applicable to the resolution of the price issue in the case at bar.

Findings and Conclusions

(1) *Approach.* The decision of this or any other specific case must be in accord with the general direction of evolving Commission policy. At the present writing, the policy is one of gradualism in the application of price restrictions to new unconnected gas supplies. The *value* of gas to willing pipeline buyers and ultimately to willing consumers—the *need* for new gas on the part of the same interests—are considerations of high importance. An important breach of existing price ceilings (such as is here involved) is a serious step, not to be undertaken without the most careful balancing of all interests, including the public interest in the ultimate attainment of regulated prices at levels below, and perhaps far below, those of the free market.

While the Commission evolves further general policy towards price restrictions and standard contracting practices, connection of new gas supplies must go on. In the average case of small reserves or casinghead gas, the Commission can probably at present hold the price line with confidence that such supply will be connected at prevailing area prices. Such is not the present case. We here, at the outset of effective regulation, face the unusual situation in terms of value and need, for which an exception must be made.

(2) *Elk City Reserves: Area Price.* The 20.5-cent per Mcf initial price for the Elk City reserves is fully consonant with the public interest, and should be certificated as negotiated and applied for. It is suggested that, as in the Knox Field case,[24] the initial price be incorporated into the general area pricing

[23] *P.S.C. of New York* v. *F.P.C.*, 361 U.S. 195; *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817 (CA9), *certiorari* denied April 17, 1961; *Public Service Commission* v. *F.P.C.*, 287 F. 2d 146 (CADC), *certiorari* denied April 17, 1961; *same* v. *same*, 287 F. 2d 143 (CADC); *United Gas Improvement Co.* v. *F.P.C.*, 287 F. 2d 159 (CA10); *United Gas Improvement Co.* v. *F.P.C.*, Nos. 18112, 18113 (CA5), decided February 22, 1961, 290 F. 2d 133 and 147; *Texaco Inc.* v. *F.P.C.*, Nos. 18349, et al. (CA5), decided April 14, 1961, 290 F. 2d 149. In the *Texaco* case, the Fifth Circuit affirmed a price condition of *already connected* 20-cent gas to a 17.7-cent level.

[24] *Phillips Petroleum Co.*, 22 FPC 694.

patterns established by Policy Statement 61-1.[25] As restricted to the specific dedicated reserves, the Elk City price will not establish or tend to establish a new level for other gas in the Anandarko Basin, because such other gas does not have the unusual cost-saving features of such reserves discussed *supra*.

It is also specifically concluded that as of the current stage in producer regulation, it is not possible to establish a discount to the negotiated 20.5-cent per Mcf price for the Elk City reserves except on an arbitrary or impressionistic basis, and that such a discount would fail to allow for clear qualitative and quantitative differences between Elk City and other gas, and would be inequitable and discriminatory.

(3) *Enroute Contracts—Area Price.* The 17-cent per Mcf initial price for the enroute reserves is fully consonant with the public interest, and should be certificated as negotiated and applied for. The geological and marketing area from which the enroute sales will be made is a part of the same area as that of the six Panhandle counties. As a result of the specific determinations on the record herein, 17 cents per Mcf should be established as the area price for new gas sold from the Oklahoma counties of Woods, Alfalfa, Woodward, Major, and Dewey, and for gas (except Elk City gas) sold from Beckham and Washita Counties.

(4) *Btu Adjustment: Shell and Enroute Contracts.* On the record herein, the conditioning of certification on elimination of upward price adjustment for Btu content of over 1,000 per Mcf is unnecessary to the protection of consumer interest, and would unfairly discriminate against the producers in respect of a conventional contract provision (with a basis in extra value of high Btu gas) often accepted by the Commission in prior certifications.[26]

In recent months, several temporary certificates issued by the Commission have been conditioned on the elemination of upward Btu adjustment. See e.g. Commission public files in Docket Nos. G-19542, CI60-699, CI60-602, CI60-578, CI61-314, CI61-155 and CI61-16. The question, whether the Commission can legally make such a requirment is before the courts in several cases, see e.g. *Pure Oil Co.* v. *F.P.C.*, CA 7 No. 13243 argued May 25, 1961, and *J. M. Huber Corp.* v. *F.P.C.*, CA3 No. 13535 argued June 23, 1961, both pending undecided.

There is no need to go into the legal issue in this case. Staff has presented no evidence showing that the Btu adjustment provision works any special detriment to Panhandle and its customers in this case[27]; Staff relies on the general premise that this conventional provision should be eliminated from *all* purchase contracts. Assuming the correctness of the premise, it is not appropriate to effect the desired result piecemeal, by application of the elimination policy retroactively to such contracts as may be scrutinized in particular proceedings. The appropriate way to effect the result is, to enter a Commission order of general application to all future contracts, after due rule-making proceedings under the Administrative Procedure Act. Only this method avoids the problem of discrimination.

The Commission has, consistently with this conclusion, recently proposed to rule generally against, *inter alia*, future upward price adjustment contract provisions for gas with Btu content of over 975 per cubic foot. *Notice of Proposed Additions to the Commission's Statements of General Policy* (etc.), Docket

[25] Note that in *Knox Field* and the instant case, the price pattern thus incorporated will be based on full hearings and specific determination, thus will be firm rather than tentative and statistical.

[26] See, e.g., *Phillips Petroleum Co.*, 22 FPC 528, and *Natural Gas Pipeline Co. of America*, 24 FPC 222.

[27] Of course, there is a price differential which results, as pointed out in the statement of facts. The same differential exists in other certificated contracts containing the Btu provision.

No. R–200, issued May 22, 1961. The results of the proposal may or may not be a rule; in all events, the rule will not affect prior contracts such as those involved in the proceedings at bar.

(5) *Rate-of-Take: Shell and Enroute Contracts.* On the exceptional facts of this case, the rate-of-take provisions of the Elk City contract are consonant with the public interest, and the Commission should not offer Shell a certificate conditioned on the stretch out of Panhandle's takes. The facts, *supra*, are very clear that Panhandle needs gas for existing customers and replacement of overproduction, and Panhandle needs the gas *now*. Panhandle and its customers are advantaged, not detrimented, by fast Elk City take-down. Panhandle's future buying program for conventional gas supply will be expected, as a matter of good business, to provide for the distant as well as the immediate future.

In reaching this conclusion, weight is necessarily given, under current conditions, to the negotiating facts of life showing that Shell's deal with Panhandle (at a price less than other offers) was principally motivated by rate-of-take as written into the contract.

As in the matter of Btu adjustment, Staff's approach is towards a general problem of the industry—preservation of long life index of reserves, to care for future needs—which should not be resolved by an attempt on the part of the Commission to retroactively renegotiate the Elk City contract. The problem has been properly attacked by the proposal of a general order for future application to contracts entered into after the order becomes effective. *Non-Acceptability of Contracts Between Independent Producers and Interstate Natural Gas Companies* (etc.), Docket No. R–199, issued May 22, 1961.

With regard to the enroute contracts, most of the conclusions stated above are of equal applicability. In addition, the standard enroute contract rate-of-take provision results in a conventional 20-year life index, worked out to avoid (1) the inaccuracies and uncertainties of depletion based on advance estimated, (2) the necessity for continuous reserve recalculation, (3) wide fluctuation in estimated deliverability.

(6) *Take-or-Pay-for: Shell and Enroute Contracts.* Because of Panhandle's enormous and growing need for gas, it has never since commencing operations paid for gas not taken, and there is no likelihood that such a condition will occur in the future, under the facts of record in this proceeding. The take-or-pay-for provisions as written, with long make-up periods advantaging Panhandle, are fully consonant with the public interest. Again, this matter of general concern, not of particular detriment to Panhandle or the consumers in this proceeding, is properly dealt with by the proposed rule for the future announced in Docket No. R–199, *supra*.

(7) *Line Blockage From High Btu Gas.* There is no evidence supporting Staff's contention that the gas here involved will cause line blockage or other damage to Panhandle's pipeline facilities. Nor is there any evidence that Panhandle will have to install liquid extraction facilities in order to handle the gas in its lines. Staff's contention is speculative, and disproved by Panhandle's affirmative evidence.

(8) *Storage Aspects.* Panhandle and Shell claim extra value for the contract provision under which, after production from Elk City ceases, Panhandle may acquire the gathering and other facilities there in place and may use the field for storage of injected gas from other fields. It is not possible, however, to assign any concrete dollar value to the storage feature. Conditions which may obtain 15 years from now with respect to the desirability of storage at Elk City (towards the far end of Panhandle's line) are not predictable. Panhandle is not buying a storage field, and current ultimate consumers should

not, in terms of purchased gas costs, be assessed with any amounts on that account.

(9) *Matters Not Controverted.* To satisfy judicial and other authority, formal findings are made on the following points:

(a) The contracts were made at arm's length, and represent the minimum terms of the producers for sale of the gas, and Panhandle's view of the best deal it could make for gas.

(b) The price escalates 2.5 cents per Mcf every five years, and the buyer pays one-half of all taxes. There are no "favored nations" or other indefinite escalation clauses. Operation of the fixed escalation clause is, of course, subject to Commission suspension and review under Section 4(e) of the Natural Gas Act.

(c) The 20.5 cent price to Shell and the 17-cent price to the other producers will not trigger increases in other Panhandle contracts.

(d) The certification of the sales involved here will not cause Panhandle to seek a rate increase.

(e) All producers who have not withdrawn are willing and able to perform under their Panhandle contracts, and to conform to the Natural Gas Act and the regulations thereunder. The enroute producers who have cancelled their contracts and withdrawn from this proceeding should be permitted to rescind their cancellations and reinstate their applications, *nunc pro tunc*, within 30 days from the date of the issuance of this order, under the exact terms and conditions as originally contracted and presented. In the event of any such reinstatement, certificates should issue to such producers on the record herein.

(f) Panhandle is able and willing to undertake the construction of the Elk City lateral, and to conform to the Natural Gas Act and the regulations thereunder.

ORDER

WHEREFORE, IT IS ORDERED, SUBJECT TO REVIEW BY THE COMMISSION, THAT:

(A) A certificate of public convenience and necessity is hereby issued to: Panhandle Eastern Pipe Line Company, Shell Oil Company, Calvert Petroleum Company, and King-Stevenson Oil Comapny, Inc. for the construction and operation of facilities for the transportation of natural gas in interstate commerce for resale, and for the sale of natural gas by independent producers, all subject to the jurisdiction of the Commission, as prayed for in the respective applications filed by such parties in these proceedings.

(B) Within 30 days from the date of this order Pioneer Production Corporation, Ashland Oil & Refining Company and Union Oil Company of California shall have the option to rescind their cancellation of their contracts with Panhandle and their notices of withdrawal from this proceeding and to notify the Commission of their resubmittal of their applications on the same terms and conditions as originally applied for and proven in these proceedings. In the event such resubmission is made a certificate will thereupon issue, *nunc pro tunc*, for the sale of natural gas in interstate commerce by said producers as prayed for in their respective original applications herein.

(C) The certificates issued herein shall be accepted in writing and under oath within 30 days from the date of the final determination of these proceedings in accordance with Section 1.30 of the Rules of Practice and Procedure.

(D) The general terms and conditions of Paragraphs (a), (b), (c) and (e) of Section 157.20 of the regulations under the Natural Gas Act shall attach to the issuance of the certificate granted to Panhandle Eastern Pipe Line Company in Paragraph (A) above, and the time within which the facilities hereby author-

ized shall be constructed and placed into actual operation is hereby fixed at six months from the date of the issuance of this order.

(E) The certificates issued to the independent producer applicants are not transferable and shall be effective only so long as the respective applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the rules, regulations and orders of the Commission.

(F) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objection relating to the operation of any price or related provision in the gas purchase contracts herein involved.

ROBERT M. WESTON,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

PORTLAND GENERAL ELECTRIC COMPANY, PROJECT NO. 2030

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued January 16, 1962)

Application was filed June 20, 1961, by Portland General Electric Company, licensee for major Project No. 2030, located on the Deschutes River in Jefferson County, Oregon, and affecting lands of the United States within the Deschutes National Forest, lands of the Warm Spring Indians and other lands of the United States, for further amendment of the license for the project, seeking modification of Articles 10 and 31 as hereinafter specified. Project No. 2030 consists of two developments known as Round Butte and Pelton developments.

The requested revision of Article 10 would modify the clearing requirements for the Round Butte reservoir to require complete clearing of margins and bottoms only between elevations 1,850 feet and 1,950 feet (5 feet above high-water level) together with clearing of merchantable timber below elevation 1,850 feet, rather than the presently required complete clearing of the entire reservoir up to high-water level.

According to the application, the changes in Article 10 are necessary and desirable because savings of about $250,000 can be affected by leaving willows, alders and other small trees below elevation 1,850 feet, all of which will be well submerged during the recreational season. Based upon costs experienced by Applicant in clearing the Pelton reservoir, our staff advises that the actual savings to be realized by partial clearing below elevation 1,850 feet should exceed Applicant's estimated savings by a substantial amount. Moreover, this proposed alternative method of clearing the reservoir has been authorized by the Commission in several other licenses and, besides reducing the cost of clearing, has proved acceptable for project purposes, including recreation.

Applicant seeks revision of Article 31 to extend by one year—to September 1, 1962—the time for submission of revised Exhibits F and K for the Round Butte development other than for the 230-kv transmission line. The surveys and land

acquisitions required in connection with the revised exhibits could not be completed prior to September 1, 1961, the date presently specified for submission, and a year's extension is needed to complete the preparation of these exhibits.

Although in his report on the application for license the Secretary of Agriculture recommended insertion in the license of Article 10 which requires full clearance of the Round Butte reservoir, that agency in its later report on the pending application for amendment advises that the proposed amendment of Article 10 will not be inconsistent with the purposes for which the Deschutes National Forest and the Crooked River National Grasslands were created or acquired, provided that clearing in potential recreation areas on National Forest land be limited to normal high water of Round Butte reservoir and to such trees in the recreation areas along the margins of that reservoir which may die during operation of the project; and that the Forest Service will designate the potential recreation areas to the authorized representative of the Commission.

An Assistant Secretary of the Interior, in reporting on the application, has requested that an additional provision be included in any amended license that disposal of material cleared from Round Butte reservoir be in a manner which will result in no harmful effects on fish resources and that ashes from such disposal be kept out of the rivers.

By letter filed September 26, 1961, Applicant furnished us copies of letters to Applicant dated August 14, 1961, and August 18, 1961, respectively, from the Oregon State Game Commission and the Fish Commission of Oregon indicating no objection to the proposed revision of Article 10. No objection to such revision was raised in the Oregon State Game Commission's letter to us dated August 31, 1961.

The Commission finds:

(1) Public notice of the filing of the application for amendment has been given. No protests have been received.

(2) The license for Project No. 2030, further amended as hereinafter ordered, will not interfere or be inconsistent with the purposes for which the Deschutes National Forest was created or acquired or with the purposes of any reservation or withdrawal of public lands, and is in the public interest.

The Commission orders:

(A) The license for Project No. 2030 is further amended, effective as of September 1, 1961, as follows:

PARAGRAPH I. Article 10 of the license, as amended, is further amended to read as follows:

Article 10. The Licensee shall, prior to flooding, clear the area of the three project reservoirs as follows:

Pelton Reservoir—All bottoms and margins of the reservoir area between the plane 5 feet above normal high-water level and the plane at 1,555 feet, and all coniferous trees from the bottoms and margins below the plane at elevation 1,555 feet;

Regulating Reservoir—All lands in the bottoms and margins of the reservoir up to high-water level; and

Round Butte Reservoir—All lands in the bottoms and margins of the reservoir area between the plane at elevation 1,950 feet (5 feet above the normal high-water level) and the plane at elevation 1,850 feet, and all merchantable timber and debris created by the logging thereof from the bottoms and the margins below the plane at elevation 1,850 feet; *Provided, however,* That in areas designated as potential recreation areas by the Commission's representative, upon advice of the Forest Service, clearing shall be limited to normal

high-water level of the reservoir, and to such trees in the recreation area as may die during operation of the project;

and shall clear and keep clear to an adequate width lands of the United States along open conduits, and shall dispose of all temporary structures, unused timber, brush, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the margins of reservoirs which may die during operations of the project shall be removed. The Licensee shall dispose of the material resulting from clearing of the lands within Round Butte reservoir so that there will be no harmful effects on fish resources. All ashes resulting from this disposal shall be kept out of the rivers. The clearing of the lands and the dipsosal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission.

PARAGRAPH II. Article 31 of the license, as amended, is further amended to read as follows:

Article 31. The Licensee shall submit for Commission approval by September 1, 1962, revised Exhibits F and K for the Round Butte development other than the 230-kv transmission line, in accordance with the Commission's rules and regulations.

(B) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision of conditon of the license as heretofore amended.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act and failure to file such an application shall constitute acceptance of this amendment of license. In acknowledgment of the acceptance of this amendment of license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles Ross.

HOUSTON TEXAS GAS AND OIL CORPORATION, DOCKET NOS. G–9262, CP62–52

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND CANCELLING DOCKET NUMBER

(Issued January 17, 1962)

On August 24, 1961, Houston Texas Gas and Oil Corporation (Applicant) filed in Docket No. CP62–52 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the increase in quantities of natural gas to be delivered to nine of its existing resale and direct sale customers above the volumes authorized to be delivered to said customers in Docket Nos. G–9262, *et al.*, all as more fully set forth in the application. This application is being treated as a petition to further amend the existing certificate authorization in Docket No. G–9262.

The proposed increases in deliveries will be under Applicant's preferred interruptible rate schedules and involve an additional 9,509,856 Mcf per year or an average of 26,000 Mcf per day.[1] No additional facilities are proposed.

[1] Based on gas having a heating value of 1,000 Btu per cubic foot.

The proposed increased sales and deliveries are as follows:

Customer	Annual preferred interruptible service (Mcf)		
	Column (1) G–9262 authorized volumes	Column (2) CP62–52 proposed increase	Column (1) plus column (2)
Resale:			
Peoples Gas System, West Coast Division [1]	113,000	1,438,000	1,551,000
Gulf Natural Gas Company:			
Ocala Division [2]	53,436	137,946	191,382
Panama City Division [3]	346,093	801,162	1,147,255
The Houston Corporation:			
Orlando Division [4]	[5] None	73,250	73,250
Miami Division [6]	[5] None	49,640	49,640
Florida Public Utilities Company	330,000	216,900	546,900
Florida Home Gas Company	[5] None	14,600	14,600
Direct sale (power plants):			
City of Blountstown	3,324	58,676	62,000
City of Tallahassee	115,045	3,534,955	3,650,000
City of Lakeland	140,610	3,071,390	3,212,000
City of Starke	5,113	113,337	118,450
Total	1,106,621	9,509,856	10,616,477

[1] Formerly Tampa Gas Company.
[2] Formerly Ocala Gas Company.
[3] Formerly West Florida Gas and Fuel Company.
[4] Formerly South Atlantic Gas Company.
[5] These customers purchase gas from Houston under other service categories, i.e., firm, primary interruptible.
[6] Formerly Florida Power & Light Company.

In the case of Peoples Gas System, Inc., West Coast Division, Gulf Natural Gas Company, both divisions, and Florida Public Utilities Company, industrial and commercial gas requirements have grown far beyond those existing at the time of the hearings in Docket Nos. G–9262, *et al.*, similarly, in the cases of the Orlando and Miami divisions of The Houston Corporation and in the case of Florida Home Gas Company, requirements have developed that were not previously anticipated. Requirements of the four municipalities for gas for electric generation have increased as a result of the growth in population and industrial activity in their respective service areas.

Applicant proposes to make the additional deliveries possible as a result of (1) cancelling 194,063 Mcf per year of the preferred interruptible sales to the cities of Avon Park, Graceville, and Green Cove Springs, for which authorizations were revoked by the Commission's letter order dated May 11, 1961, and (2) upgrading of the remaining balance by reducing existing primary interruptible sales and correspondingly increasing the preferred interruptible service.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order of the Commission accompanying Opinion No. 301 in Docket Nos. G–9262, *et al.*, issued December 28, 1956, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The order of the Commission accompanying Opinion No. 301 in Docket Nos. G–9262, *et al.*, issued December 28, 1956, as amended, be and the same is hereby further amended to authorize an increase in quantities of natural gas to be delivered to nine of the existing resale and direct sale customers of Houston Texas Gas and Oil Corporation, as hereinbefore described and as more fully described in the application in Docket No. CP62–52.

(B) In all other respects said order, as amended, referred to in paragraph (A) above shall remain unchanged and in full force and effect.

(C) Docket No. CP62-52 is hereby cancelled.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

HOUSTON TEXAS GAS AND OIL CORPORATION, DOCKET NOS. G-9262, RP61-3, AND RP62-4; COASTAL TRANSMISSION CORPORATION, DOCKET NOS. G-9960 AND RP61-4

ORDER GRANTING APPLICATION FOR ISSUANCE OF SUBPOENA DUCES TECUM

(Issued January 17, 1962)

These proceedings involve requests to modify certificate conditions and proposed increased rates under Sections 4, 7, and 15 of the Natural Gas Act. Direct cases have been submitted by the Respondents, Sun Oil Company (Sun), an intervener herein, and the Commission staff. These proceedings are presently in recess until January 29, 1962, at which time the Commission staff is to file its direct case on original cost studies made on the original construction costs of the subject project and a revised direct case reflecting these original cost studies.

On January 5, 1962, Sun filed an application for a subpoena *duces tecum*, wherein it requested that a subpoena be issued to the President of the Respondent companies requiring him to produce certain memoranda, letters, schedules, reports and financial and other statements and to testify thereon on January 22, 1962. The documents requested to be produced are described in said application under paragraphs (A), (B), (C), (D), and (E).

In support of its application, Sun states that the documents identified in Items 1 through 6 under paragraph (A) of its application contain forecasts of operating results for the year 1960 through 1964 on the basis of operating the originally certificated facilities; that these estimates are necessary to assess the reasonableness of the proposed rates herein; and that the operating results of the parent company, Houston Corporation, are pertinent to these proceedings in that they relate directly to the amount of income taxes includable in the Respondents' costs of service. In support of its request for the report identified in paragraph (B) of its application, Sun states that the operating results anticipated under the newly certificated expansion program of the Respondents, which are contained in this report, are necessary to test the reasonableness of Respondents' rates and would update the information on this aspect of the case, which information is contained in Exhibit Nos. 44, 50, and 51 admitted to evidence in these proceedings. In support of its request for the financial statements identified in paragraphs (C) and (D) of its application, Sun states that similar financial statements were admitted into evidence, Exhibit Nos. 26, 27, 48, and 49, and that the subject financial statements are necessary to update this information especially in light of the recent development of the accrual of Federal income taxes on the books of Coastal Transmission Corporation. In support of its request for the statement identified in paragraph (E) of its application, Sun states that the estimates contained in the subject statement should be reviewed in testing the reasonableness of the proposed rates. Sun, further, states that the "requested information containing, among other matters, projections of sales and revenues

beyond the first three years of operations, goes directly to the subject of anticipated revenues", which bears on the issue of whether the additional and improved loads beyond the development period would be the solution to the problem of improving the Respondents' rate of return. In addition, Sun states that production of these documents would not place a burden on Respondents.

The Respondents filed a joint answer to Sun's application for a subpoena *duces tecum*, wherein they agree to furnish copies of the documents described in paragraphs (C) and (D) of Sun's application. However, with respect to the documents described in paragraphs (A), (B), and (E) of Sun's application, the Respondents, while conceding that these documents contain future sales forecasts, contend that they are not relevant or material to the issues involved in these proceedings inasmuch as the forecasts go beyond the test period of these proceedings. However, in its application, Sun states that the Commission, in setting prospective rates, must look at the operating results anticipated under the expanded operations. In view of the statements of both the Respondents and Sun, it would appear that one of the issues involved in these proceedings is the proper test period for determining the reasonableness of Respondents' rates and, inasmuch as financing of the expanded facilities were not completed until December 22, 1961, it appears that the forecasts contained in the requested documents will not extend beyond the third year of operations of the expanded facilities.

Section 6(c) of the Administrative Procedure Act, 5 U.S.C. § 1005(c), reads, in part, as follows:

> * * * Agency subpoenas authorized by law shall be issued to any party upon request and, as may be required by rules of procedure, upon a statement or showing of general relevance and reasonable scope of the evidence sought. * * *

The Commission is empowered to issue subpoenas (Section 14(c) of the Natural Gas Act) and has promulgated rules of procedure for issuance thereof (Section 1.23(a) of the Rules of Practice and Procedure).

The documents requested by Sun in its application for a subpoena appear to be generally relevant and material to the issues involved in these proceedings and meet the requirements of our regulation for issuance of a subpoena *duces tecum*.

As stated hereinbefore, these proceedings are presently in recess until January 29, 1962. Sun, in its application, states that it intends to offer revised exhibits to reflect therein the pertinent data in the documents specified in its application and the results of the staff's original cost studies. In order to avoid further delay of these proceedings, Sun requests that the subpoena be returnable on January 22, 1962, one week prior to the scheduled reconvening of these proceedings. In view of the foregoing, it is determined that the subpoena ordered herein should be made returnable on the date requested by Sun.

The Commission orders:

That an appropriate subpoena *duces tecum*, in the usual form, be issued to W. J. Bowen, President of Houston Texas Gas and Oil Corporation and Coastal Transmission Corporation, to compel him to appear and produce the documents described in paragraphs (A), (B), (C), (D), and (E) of Sun's application for issuance of a subpoena *duces tecum* filed herein on January 5, 1962 at a hearing to convene on January 22, 1962 at 10:00 a.m. (e.s.t.) in a Hearing Room of the Federal Power Commission, 441 G Street NW., Washington, D.C.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

HOUSTON TEXAS GAS AND OIL CORPORATION, DOCKET NO. CP62-74

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 18, 1962)

On September 22, 1961, as supplemented on November 2, 1961, Houston Texas Gas and Oil Corporation (Applicant) filed in Docket No. CP62-74 an application pursuant to Section 7(c) of the Natural Gas Act for a certficate of public convenience and necessity authorizing the construction and operation of certain natural gas pipeline facilities in order to sell and deliver natural gas on a firm and interruptible basis to two new direct industrial customers in the Port Tampa area, Flordia.

Applicant proposes to construct and operate approximately 6.1 miles of 4-inch lateral pipeline extending from a point of interconnection with its 8-inch lateral, serving the Bartow Plant of the Flordia Power Corporation, Pinellas County, Florida, and across Old Tampa Bay to the industrial plants on National Gypsum Company (Gypsum) and Tiffany Tile Corporation (Tiffany), together with meter and regulating facilities. Applicant states that Gypsum will use natural gas in the processes of drying and calcining of gypsum rock and in the drying of gypsum board, and that Tiffany will use natural gas for firing kilns in the process of manufacturing glazed ceramic tile. Both Gypsum and Tiffany have indicated that they prefer natural gas in their manufacturing processes because of fuel economy, improved quality of finished products and increased plant productivity.

Pursuant to contracts entered into with the two industrial customers, Applicant will deliver the following maximum daily quantities of natural gas:

	Therms
Gypsum, preferred interruptible	35,8000
Tiffany:	
Firm	820
Preferred interruptible	5,860

The estimated cost of the proposed construction of facilities is $300,000, which cost will be financed from internally generated funds.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 11, 1962, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Houston Texas Gas and Oil Corporation, a Delware corporation having its principal place of business in St. Petersburg, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G-9262, *et al.* (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof

by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Houston Texas Gas and Oil Corporation, to construct and operate the proposed facilities and to transport and deliver to National Gypsum Company, on a preferred interruptible basis, a maximum daily quantity of 35,800 therms of natural gas and to transport and deliver to Tiffany Tile Corporation, on a firm basis, a maximum daily quantity of 820 therms of natural gas, and, on a preferred interruptible basis, a maximum daily quantity of 5,860 therms of natural gas, as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

PENNSYLVANIA ELECTRIC COMPANY AND PENNSYLVANIA POWER COMPANY, DOCKET NO. E-7004

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued January 18, 1962)

Pennsylvania Electric Company (Penelec) and Pennsylvania Power Company (Penn Power) filed a joint application on July 14, 1961 and amendments thereto on July 28 and October 4, 1961, pursuant to Section 203 of the Federal Power Act, for authorization to acquire the electric distribution properties of Carpenter

Light and Power Company (Carpenter). Penelec, Penn Power and Carpenter are corporations organized under the laws of the Commonwealth of Pennsylvania and doing business in that State, with their principal business offices at Johnstown, New Castle and Meadville, Pennsylvania, respectively.

Penelec provides electric service within a territory located in western, northern and south central Pennsylvania, and furnishes electric service at wholesale to five municipalities which are engaged in the distribution of electric energy and to fourteen rural electric cooperatives. As lessee of the property of The Waverly Electric Light and Power Company, a wholly-owned subsidiary, Penelec also serves the Village of Waverly, New York and vicinity. Penn Power furnishes electric service in 136 communities, as well as in rural areas of five counties of Pennsylvania, and also sells electric energy to four municipalities for resale therein. Carpenter purchases its entire energy requirements, wholesale, from Penelec, and furnishes electric service to portions of Crawford, Erie, Mercer and Warren Counties, all in Pennsylvania.

By an Agreement, dated as of March 31, 1961, Carpenter agreed to sell all of its property, excluding cash and prepaid insurance, to Penelec and Penn Power, for a consideration of $2,150,000. Applicants state that the price was determined among the three parties to the Agreement through arms' length negotiation. By a subsequent Apportionment Agreement, dated as of May 22, 1961, Penelec and Penn Power agreed to a division of Carpenter's property and of the consideration therefor. Penelec will take over the portion serving about 2,349 customers in parts of Crawford County, and the few customers in Erie, Mercer and Warren Counties, paying therefor $1,053,750, subject to adjustments. Penn Power will take over the portion situated in the southwest corner of Crawford County serving about 3,461 customers in Conneaut Lake Borough and the Townships of East Fallowfield, West Fallowfield, North Shenango, South Shenango, West Shenango, Sadsbury, and Summit Township, paying therefor $1,096,250, subject to adjustments.

Under the provisions of the Agreement, Penelec, which presently supplies all of the requirements of Carpenter, will continue to supply the requirements of Penn Power for that portion of Carpenter's property which it acquires until such date as Penn Power shall have completed the building of a transmission line or lines connecting the service area of Carpenter to be acquired, with the present service area of Penn Power and Penn Power's facilities. Upon completion of the building of the said transmission facilities the present service area of Carpenter to be acquired by Penn Power will then be served from Penn Power's own facilities.

The application indicates that Carpenter's properties are recorded at original cost as approved by the Pennsylvania Public Utility Commission. The following statement shows the amounts for the facilities which are to be acquired by the two vendee companies, the considerations therefor, and the acquisition adjustments which will be created by the transactions:

	As of Apr. 30, 1961	
	By Penelec	By Penn Power
Electric plant (original cost):		
Electric plant in service	$835,550	$1,078,351
Construction work in progress	1,866	480
Total electric plant	837,416	1,078,831
Accumulated provision for depreciation	(176,795)	(228,809)
Electric plant less depreciation	660,621	850,022
Nonutility property	940	
Plant materials and supplies	12,500	12,500
Total assets	674,061	862,522
Consideration	1,053,750	1,096,250
Electric plant acquisition adjustment	379,689	233,728

As indicated above, an Electric Plant Acquisition Adjustment of $379,689 will be created on the books of Penelec. General Public Utilities, the parent corporation of Penelec, will make a cash contribution of $379,689 to Penelec, authorization having been granted by the Securities and Exchange Commission by order issued September 7, 1961 (File No. 70-3982) in accordance with the provisions of the Public Utility Holding Company Act of 1935. On the books of Penelec this contribution will be recorded by a debit to Cash and a credit to Miscellaneous Paid-in Capital. Penelec's Acquisition Adjustment of $379,689 will be completely eliminated by a debit to Miscellaneous Paid-in Capital and a credit to Electric Plant Acquisition Adjustments.

An Electric Plant Acquisition Adjustment of $223,728 will be created on the books of Penn Power, which proposes to amortize the Acquisition Adjustment over a period of 10 years by debits of $23,373 each year to Account 406, Amortization of Electric Plant Acquisition Adjustments, and credits of the same amount each year to Electric Plant Acquisition Adjustments. However, based upon Commission precedents for the disposition of Electric Plant Acquisition Adjustments, Penn Power's Electric Plant Acquisition should be amortized, over a period of not more than 10 years, by debits to Account 425, Miscellaneous Amortization, instead of by debits to Account 406.

Applicants state that the acquisition of the respective portions of Carpenter's property by Penelec and Penn Power will provide in each case a larger operating organization which should result in better service to the customers served by the facilities to be acquired, and that the greater financial strength of the respective companies, as well as the opportunity for them and for their parent corporations to obtain financing for additions and improvements to their respective systems at lower cost, will be beneficial to the customers served by those systems.

Applicants state that, upon completion of the transfers of property, each of the Applicants proposes to make its system rates effective in the territory acquired by it from Carpenter, within the first full month of service after acquisition; and, the amounts of electric revenue to be collected in their respective newly acquired territories will be less than the amounts which would have been collected under Carpenter's rate schedules. According to the application, the proposed acquisitions of property will have no effect upon any contract for the purchase, sale or interchange of electric energy by Penelec or Penn Power other than Penelec's contract with Carpenter.

Written notice of the application has been given to the Pennsylvania Public Utility Commission and to the Governor of that State. Notice of the application was also published in the Federal Register on August 1, 1961 (26 F.R.

6868), stating that any person desiring to be heard or to make any protest with reference to said application should, on or before the 14th day of August, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Pennsylvania Public Utility Commission, by orders dated January 2, 1962, approved the proposed acquisitions of facilities by Penelec and Penn Power in the manner and for the purposes described above.

The Commission finds:

(1) Penelec, a Pennsylvania corporation, owns and operates facilities, among others, for the transmission and sale at wholesale of electric energy which is transmitted between the States of Pennsylvania and Maryland and between the States of Pennsylvania and New York, and consumed at points outside the State in which it is generated, all of which facilities are in addition to and do not include facilities used for the generation of electric energy, facilities used in local distribution, or only for the transmission of electric energy consumed wholly by the transmitter, and Penelec is, therefore, a public utility within the meaning of that term as used in Section 201 of the Federal Power Act.

(2) Penn Power, a Pennsylvania corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is transmitted between the States of Pennsylvania and Ohio and is consumed outside the State in which it is generated. These facilities are in addition to and do not include facilities used for the generation of electric energy or facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Applicant is, therefore, a public utility within the meaning of that term as used in Section 201 of the Federal Power Act.

(3) The electric facilities which Carpenter currently owns and/or operates do not include facilities for the transmission or sale at wholesale of electric energy for resale in interstate commerce; and Carpenter is, therefore, not now a public utility within the meaning of that term as used in Section 201 of the Federal Power Act.

(4) By the proposed transactions, as described above, Penelec will acquire and merge or consolidate with its facilities, subject to the jurisdiction of the Commission, a portion of the electric facilities of Carpenter, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act; and Penn Power will acquire and merge or consolidate with its facilities, subject to the jurisdiction of the Commission, a portion of the electric facilities of Carpenter, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(5) The proposed acquisition of Carpenter's electric facilities by Penelec and Penn Power, as described above, upon the terms and conditions specified in the application and subject to the provisions of this order, will be consistent with the public interest, as expressed in Section 203 of the Act, for the reasons set forth in the recital above.

(6) Neither Penelec nor Penn Power is subject to a requirement of the Public Utility Holding Company Act of 1935 or of a rule, regulation, or order thereunder which would exempt them, pursuant to Section 318 of the Federal Power Act, from the requirements of Section 203 thereof, as the case may be, with respect to any matter wtih which this order is concerned.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of Carpenter's electric facilities, located in the State of Pennsylvania, by Penelec and Penn

Power, all as described above, are hereby authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) Penelec and Penn Power shall record the transaction herein authorized and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees. Penn Power, in disposing of the amount of electric plant acquisition adjustment created upon its books of account by reason of the above-described transactions, shall do so by equal annual charges to Account 425, Miscellaneous Amortization, over a period of 10 years commencing January 1, 1962.

(C) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body or tribunal.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO CP61-296

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 19, 1962)

On May 22, 1961, as supplemented on August 28, 1961, El Paso Natural Gas Company (Applicant) filed in Docket No. CP61-296 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 8.2 miles of 34-inch diameter pipeline loop on the eastern end of its San Juan pipeline system near Applicant's Gallup Compressor Station, McKinley County, New Mexico.

Applicant presently operates, as part of its over-all system, a pipeline extending from the Permian Basin area of Texas to a point known as Valve City, near Gallup, south of the San Juan Basin, northwestern New Mexico; this pipeline is known as the San Juan Crossover. Applicant also operates a pipeline system connecting available gas supplies in the San Juan-Aneth area to Valve City; this system is known as the San Juan Mainline. Applicant proposes herein to loop a segment of the San Juan Mainline located between Gallup Compressor Station and Valve City.

Applicant states that the proposed facilities will allow full utilization of its existing production and gas treating facilities in the San Juan and Aneth areas and that said facilities will make available additional sources of supply in the event casinghead and residual gas supplies from the Permian Basin area become restricted. Further, the proposed facilities will make available additional sources of supply in the event of facility breakdown in other portions of the system.

The proposed facilities will increase the present transport capacity of Applicant's San Juan-Aneth area outlet facilities by approximately 100,000 to 109,000 Mcf of natural gas per day.

Applicant states that the proposed facilities will not increase the transmission or delivery capacity of its over-all transmission system.

The total estimated over-all cost of construction of the proposed facilities is $1,148,000, which cost will be financed from current working funds, supplemented by short-term bank loans as required.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 11, 1962, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within eight months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

LAKE SHORE PIPE LINE COMPANY, DOCKET NO. CP62-75; PAUL L. BRITTON, JR., OPERATOR, *ET AL.*, DOCKET NO. CI62-333

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 19, 1962)

On September 22, 1961, Lake Shore Pipe Line Company (Lake Shore) and Paul L. Britton, Jr., Operator, *et al.* (Britton), filed, respectively, applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing: (1) Lake Shore in Docket No. CP62-75 to construct and operate approximately 2,700 feet of 4½-inch and 1,450 feet of 3½-inch field lines, a meter station, and appurtenant facilities to enable Lake Shore to purchase and receive natural gas produced by Paul L. Britton, Jr., Operator, *et al.*, from the Clinton Sand formation in Conneaut Township, Erie County, Pennsylvania, and (2) Britton in Docket No. CI62-333 to make the above-described sale to Lake Shore from 137 acres (2 producing wells) in Conneaut Township, Erie County, Pennsylvania, pursuant to a gas sales contract dated September 5, 1961. The proposals of Lake Shore and Britton are more fully set forth in their respective applications.

Lake Shore's proposed lines will extend from the wells operated by Britton to a point of connection with the facilities of East Ohio Gas Company (East Ohio) in Monroe Township, Ashtabula County, Ohio, at which point the proposed meter station will be constructed. The estimated cost of the subject facilities is $18,155, to be financed from cash on hand.

The gas transported through the subject facilities will be sold and delivered to East Ohio under Lake Shore's existing Rate Schedule E-1 as "excess gas."

Concurrently with the certificate application in Docket No. CI62-333, Paul L. Britton, Jr., Operator, *et al.*, filed the aforementioned gas sales contract as an initial rate schedule to cover the proposed service. The contract provides for an initial rate of 27.0 cents per Mcf at 15.025 psia.

Temporary authorization was issued to each applicant on November 15, 1961.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 11, 1962, respecting the matters involved in and the issues presented by the applications in this proceeding. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Lake Shore Pipe Line Company, an Ohio corporation having its principal place of business in Cleveland, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of February 13, 1951, in Docket No. G-1236 (10 FPC 22).

(2) Applicant, Paul L. Britton, Jr., Operator, *et al.*, upon commencement of the service hereinafter authorized, will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and will therefore, be a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities to be constructed by Lake Shore, as hereinbefore described and as more fully described in the application in Docket No. CP62-75, are pro-

posed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Lake Shore's existing pipeline system and the construction and operation thereof by Lake Shore are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sale of natural gas by Britton to Lake Shore, as hereinbefore described and as more fully described in the application in Docket No. CI62–333, will be made for resale in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Britton, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Lake Shore and Britton, respectively, are able and willing to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction and operation of the facilities proposed by Lake Shore in Docket No. CP62–75 and the sale of natural gas proposed by Britton in Docket No. CI62–333, together with the construction and operation by Britton of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Lake Shore Pipe Line Company to construct and operate the facilities hereinbefore described, all as more fully described in the application in Docket No. CP62–75, for the transportation and sale of natural gas in interstate commerce as therein set forth, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The time within which the facilities authorized in paragraph (A) above shall be completed and placed in actual operation is hereby fixed at six months from the date on which this order issues.

(D) A certificate of public convenience and necessity be and the same is hereby issued authorizing the sale by Paul L. Britton, Jr., Operator, *et al.*, to Lake Shore Pipe Line Company of natural gas in interstate commerce for resale, together with the construction and operation by Britton of any facilities subject to the jurisdiction of the Commission necessary therefor, as hereinbefore described and as more fully described in the application in Docket No. CI62–333.

(E) The certificate granted in paragraph (D) above is not transferable and shall be effective only as long as Paul L. Britton, Jr., Operator, *et al.*, continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission thereunder.

(F) The grant of the certificate in paragraph (D) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Section 154 of the Commission's Regulations thereunder requiring the filing of a rate schedule for the service herein authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Britton. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provision in the gas purchase contract herein involved.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-78

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 19, 1962)

On September 26, 1961, Northern Natural Gas Company (Applicant) filed in Docket No. CP62-78 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the delivery of natural gas on a firm basis to Minnesota Mining and Manufacturing Company (Minnesota), an existing interruptible customer.

Minnesota manufacturers chemicals, lithograph plates and reflective tapes at its Chemolite Plant in Washington County, Minnesota. Applicant states that Minnesota has several different heating processes that require closely controlled combustion conditions, and that firm service would be more advantageous than interruptible service since Applicant's curtailment procedure would result in a change of fuels many times during a heating season and would affect the efficiency of fuel use as well as plant operation if the heating processes were not closely controlled.

Pursuant to a gas sales agreement, dated September 11, 1961, Applicant will deliver, through its Peoples Division, up to 720 Mcf per day of firm gas to Minnesota. Applicant states that Minnesota will continue to purchase small volumes of interruptible gas when the same are available.

Peoples Division will provide the firm volumes to Minnesota from its existing authorized contract demand in its Billing Group 5.

The combined firm and interruptible annual sales to Minnesota are estimated to be 196,000 Mcf; of that amount 4,600 Mcf are interruptible volumes.

Minnesota will pay Applicant's Peoples Division a demand charge of $4.25 per Mcf of contract demand per month in addition to a commodity charge of 34 cents per Mcf for the firm gas.

No new facilities will be required to render the proposed service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 8, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the

application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The proposed transportation and delivery of natural gas hereinbefore described, as more fully described in the application in this proceeding, are to be made in interstate commerce, subject to the jurisdiction of the Commission, and are, therefore, subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed transportation and delivery of natural gas by Applicant, through its Peoples Division, to Minnesota are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), and (c) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to transport and deliver to Minnesota, through Applicant's Peoples Division, up to 720 Mcf of natural gas per day on a firm basis, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), and (e) of Section 157.20 of such Regulations.

(C) The transportation and delivery of natural gas hereby authorized shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP61-332

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 19, 1962)

On June 19, 1961, as supplemented on August 23, 1961, Northern Natural Gas Company (Applicant) filed in Docket No. CP61-332 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of measuring and regulating facilities and the delivery of firm and interruptible volumes of natural gas to the Brockway Glass Company (Inc.) (Brockway) for use in Brockway's new manufacturing plant located near Rosemont, Minnesota.

Pursuant to a gas sales agreement, dated May 23, 1961, Applicant by October, 1962, will sell and deliver, through its Peoples Division, to Brockway, and Brockway shall purchase up to 1,600 Mcf of firm gas per day. All gas purchased over and above the daily contract demand will be sold as interruptible volumes.

The combined firm and interruptible sales are estimated to total 351,600 Mcf in the fist year and 619,300 Mcf in the second and third years. The firm volumes of natural gas to be delivered to Brockway will be provided from Peoples Division's authorized contract demand with Applicant in Billing Group 5; the interruptible volumes will be delivered as permitted under Applicant's FPC Gas Tariff.

Brockway will pay to Peoples Division a demand charge of $4.25 per Mcf of contract demand per month in addition to a commodity charge of 30.5 cents per Mcf of gas delivered.

Applicant states that the proposed service will provide Brockway with a direct natural gas supply for use as a fuel in two furnaces producing both flint and amber glass. Applicant indicates that firm gas is required because the high degree of control necessary in glass production does not lend itself to the interruption required by conversion to a standby fuel.

The cost of Applicant's proposed facilities is estimated to be $23,600, which cost will be financed from general funds.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 8, 1962, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof by Applicant are

subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant, through its Peoples Division, to Brockway are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities and to transport and deliver to Brockway Glass Company, Inc., through Applicant's Peoples Division, up to 1,600 Mcf per day of firm natural gas and such interruptible volumes of natural gas as may be permitted under Applicant's FPC Gas Tariff, as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order. Total deliveries of firm and interruptible gas to Brockway shall not exceed Northern's estimate of 619,300 Mcf per year.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SINCLAIR OIL & GAS COMPANY, ET AL., DOCKET NO. RI61-547

ORDER PERMITTING FILING OF SUPERSEDING RATE SCHEDULE ALLOWING WITHDRAWAL OF SUPPLEMENT TO SUPERSEDED RATE SCHEDULE AND TERMINATING PROCEEDING

(Issued January 19, 1962)

On December 21, 1961, Sinclair Oil & Gas Company (Operator), *et al.* (Sinclair Operator) tendered for filing a renegotiated rate increase designated as Sinclair

Operator's FPC Gas Rate Schedule No. 230, and Supplement No. 1 and 2 thereto, to supersede Sinclair Gas & Oil Company, *et al.* (Sinclair) FPC Gas Rate Schedule Nos. 20 and 21, and requested withdrawal of the related Supplement No. 2 to Sinclair's FPC Gas Rate Schedule No. 20, and termination of the proceeding in Docket No. RI61–547.

Sinclair Operator proposes to supersede Sinclair's FPC Gas Rate Schedule Nos. 20 and 21, under which the contract rates are 7.5 cents and 6.0 cents per Mcf, respectively, at 15.025 psia, by submitting a renegotiated contract and notice of change providing a rate of 9.0 cents per Mcf for gas sold to North Central Gas Company from the Sand Draw and Muskrat Field, Fremont County, Wyoming. The increases, 1.5 cents and 3.0 cents per Mcf, for gas previously sold under Sinclair's FPC Gas Rate Schedule Nos. 20 and 21, respectively, total $60,943 annually.

The term of the contract[1] comprising Sinclair's FPC Gas Rate Schedule No. 20 ended on July 1, 1957. Sinclair and the purchasers have executed a cancellation of the contract comprising Sinclair's FPC Gas Rate Schedule No. 21, to be effective contemporaneously with the effective date of the superseding rate schedule. By letter to the Commission dated December 26, 1961, the Wyoming Public Service Commission has advised that it has found the superseding contract to be proper in form and content and in the public interest.

Sinclair Operator requests that the 30-day notice requirement provided in the Commission's Regulations under the Natural Gas Act be waived to permit the proposed increase to become effective January 1, 1962.

By order issued June 28, 1961, in Docket No. RI61–547, Supplement No. 2 to Sinclair's FPC Gas Rate Schedule No. 20 was suspended until September 2, 1961, but has not been made effective subject to refund.

The renegotiated rate increase proposed by Sinclair Operator is below the applicable area price level set forth in the Commission's Statement of General Policy No. 61–1, as amended (18 CFR, Chapter I, Part 2, Section 2.56).

The Commission finds:

Good cause exists for permitting the filing of Sinclair Operator's superseding rate schedule, and the supplements thereto, to allow the withdrawal of Sinclair's superseded supplement, and for terminating the above-designated proceeding. Good cause has not been shown for permitting waiver of 30-day notice required by the Commission's Regulations under the Natural Gas Act.

The Commission orders:

(A) Supplement No. 2 to Sinclair's FPC Gas Rate Schedule No. 20 is hereby permitted to be withdrawn.

(B) Sinclair Oil & Gas Company (Operator), *et al.* Gas Rate Schedule No. 230 and Supplement Nos. 1 and 2 thereto, are accepted for filing to be effective January 21, 1962.

(C) The proceeding in Docket No. RI61–547 is hereby terminated.

---

[1] Supplement No. 2 to Sinclair's FPC Gas Rate Schedule No. 20 reflects a proposed increased rate of 13 cents per Mcf based on a unilateral filing by Sinclair subsequent to the expiration of the contract.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SUNRAY MID-CONTINENT OIL COMPANY, DOCKET NO. RI62-196

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued January 19, 1962)

On December 28, 1961, Sunray Mid-Continent Oil Company (Sunray) filed a motion for reconsideration[1] of the Commission's suspension order issued December 1, 1961, in the above-entitled proceeding. By that order, Supplements No. 14 to Sunray's FPC Gas Rate Schedule Nos. 20 and 53, respectively, were suspended until May 2, 1962 and until such further time as they are made effective in the manner prescribed by the Natural Gas Act. The above-designated supplements relate to two renegotiated rate increases to a level of 14.6 cents per Mcf at 14.65 psia for sales by Sunray to United Gas Pipe Line Company (United) in North McFaddin, Keeran, and North Keeran Fields, Victoria County, Texas (Railroad District No. 2).

The contract comprising Sunray's FPC Gas Rate Schedule No. 53 did not contain any favored-nation provision and neither rate schedule involved herein contained any price redetermination provision. Sunray contends, however, that a favored-nation provision was contained in its FPC Gas Rate Schedule No. 20 and has now been eliminated by amendment of the contract. Sunray points to the letter amendments of December 23, 1952, and January 21, 1953, designated as Supplement Nos. 4 and 5 to Sunray's FPC Gas Rate Schedule No. 20, which were filed on November 10, 1954, in support of its position that its FPC Gas Rate Schedule No. 20 contained a favored-nation provision. Examination of these letter amendments discloses that such amendments represented unilateral action by United, the buyer, to pay Sunray the same price United was paying to Gulf Oil Corporation (Gulf) in the same field, in the event that Gulf's price was higher than Sunray's contractual price. It does not appear from the contents of the letter that there was any consideration by the seller for the promise made by the buyer to pay a higher price. Indeed, the letter amendment of December 23, 1952 provides that, upon notice, United could terminate its agreement to pay Sunray the same price that it was paying Gulf. We recognize, of course, that Supplement No. 13 to Sunray's FPC Gas Rate Schedule No. 20, a notice of change in rate tendered for filing by Sunray on the basis of the above-mentioned letter amendments, was accepted for filing and permitted to go into effect on June 11, 1959, the first day after expiration of the required 30 days' notice. Nevertheless, because of the lack of consideration by the seller, it appears that the so-called letter amendments did not constitute a valid contractual favored-nation provision. Accordingly, Sunray's FPC Gas Rate Schedule No. 20 did not contain a valid contractual favored-nation provision.

Sunray in its motion for reconsideration requests that the Commission set aside its order of December 1, 1961, insofar as applicable to the above-entitled

---

[1] The document filed by Sunray was entitled an "Application for Rehearing and Reconsideration." Although an application for rehearing of an interlocutory order may not properly be filed (Section 1.30(e) of the Rules), the document was accepted for filing as a motion for reconsideration pursuant to Section 1.12 of the Rules.

proceeding and that the Commission declare that Supplements No. 14 to Sunray's FPC Gas Rate Schedule Nos. 20 and 53, respectively, became effective as of December 2, 1961. In support thereof, Sunray states that its proposed rate increases comply with the standards set forth in the Second Amendment to the Commission's Statement of General Policy No. 61–1. Sunray contends that its FPC Gas Rate Schedule No. 20, as supplemented, fully complies with the Second Amendment, and that its FPC Gas Rate Schedule No. 53, as supplemented, in all material respects complies with the Second Amendment. Sunray claims that the important substantive consideration involved in the Second Amendment is that the contract, after amendment, does not contain favored-nation or price-redetermination provisions. Sunray also points out that the Commission, by order issued April 20, 1961, in the proceeding in Docket No. G–14758 involving Texas Gulf Producing Company under the same circumstances as involved herein decided that the Second Amendment was applicable to the increased rates involved in that proceeding.

By the Second Amendment to Statement of General Policy No. 61–1 issued December 20, 1960, 24 FPC 1107, the Commission amended its Statement of General Policy No. 61–1, issued September 28, 1960, 24 FPC 818, to provide in pertinent part:

> *For rate schedules from which favored-nation and price-redetermination provisions have been eliminated*, the area price level for increased rates for natural gas sales by independent producers in Texas District Nos. 2, 3, 4, and 6 is 14.6 cents per Mcf at 14.65 psia, provided, however, that any escalations contained in such rate schedules shall not take effect prior to February 5, 1963, further escalations shall not take effect at less than five-year intervals from the effective date of the initial escalation, and the increase in rate for such escalation shall not exceed one cent per Mcf. (Emphasis supplied.)

As previously mentioned, Sunray's subject contracts have never contained price-redetermination or favored-nation clauses. Accordingly, it is clear that the proposed increased rates of Sunray involved herein do not come within the specific provisions of the Second Amendment to Statement of General Policy No. 61–1 set forth above, because Sunray has not eliminated any favored-nation or price-redetermination provisions from its contracts. In exercising our suspension powers, it is our purpose to avoid, in individual cases, any future deviations from the general policies which have been declared.

In view of the foregoing, we reaffirm our position, as set forth in the order of December 1, 1961, that the proposed increased rates of Sunray exceed the applicable area price level of 14.0 cents per Mcf. We therefore conclude that the discretionary power to suspend proposed increased rates was reasonably exercised and that we should not alter our prior order.

The Commission finds:

Sunray's motion for reconsideration filed on December 28, 1961, should be denied.

The Commission orders:

Sunray's motion for reconsideration filed on December 28, 1961, is hereby denied.

CONTINENTAL OIL COMPANY, DOCKET NO. G–11024; THE ATLANTIC REFINING COMPANY, DOCKET NO. G–11034; CITIES SERVICE PRODUCTION COMPANY, DOCKET NOS. G–11046, G–15330; TIDEWATER OIL COMPANY, DOCKET NO. G–11049.

OPINION AND ORDER ISSUING PERMANENT CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY UPON REMAND

(Issued January 22, 1962)*

Syllabus

1. Determination of initial rates on basis of field prices adjusted upward for increases in drilling costs found inappropriate; since field prices were not found equivalent to cost, it was not proper to apply percentage escalation derived from cost factors to a base derived from field prices. P. 100.
2. Question of "in lineness" should be determined as of 1956 contract date using prevailing field prices not affected by initial prices courts have called into question; otherwise CATCO would be enriched because of procedural delays. P. 100.
3. Commission notes that method used here (*Supra*—note 2) would not be appropriate where area price levels are applicable or where area rate proceedings have been held with resulting elimination of price problem. P. 100.
4. A sale of gas would not meet test of public convenience and necessity if price at time contract was made was not "in line" with other prices in area. P. 100.
5. Under instant circumstances, price is not "in line" as of given time if it is highest or in highest group of prices theretofore paid; Commission finds that price not in excess of 18½ cents would be "in line" for CATCO sales, although higher than majority of 1956 prices. P. 102.
6. Commission *reaffirms* and *adopts Phillips* case economic factor of 4, as sufficient in this certificate case, for determining Continental's unit cost of exploring for gas as opposed to oil; although on proper record in rate case a different factor might be justified. P. 103.
7. In allocating production cost Commission uses gross revenues method; it not seeming unreasonable to utilize relationship between price CATCO expected to get for gas and price it did get for liquids. P. 104.
8. No contentions being made that after taking into account statutory deductions Continental would pay any Federal income taxes, no "actual taxes" were included in cost of service computation. P. 105.
9. CATCO *allowed* overall rate of return of 11 percent. P. 106.
10. Noting that proof of reserves should ordinarily be made in producer cases, Commission finds CATCO reserves sufficient. P. 109.
11. CATCO permitted to continue collection of additional 1.5 cents per Mcf on Zone 3 production for partial reimbursement of Louisiana Severance tax, subject to refund should Zone 3 be adjudicated to lie within Federal jurisdiction. P. 109.
12. Provisions of CATCO contracts would not trigger existing favored nation clauses in Tennessee's other contracts because Cameron area is outside TGT supply area; nor would any other company's contracts be triggered. P. 109.

---

*Designated Commission's Opinion No. 351; Initial decision appears on p. 115. Order granting motion for stay, issued March 12, 1962; order issued March 22, 1962 denying rehearing and clarifying opinion, 27 FPC 498 and 592, respectively.

See order approving settlement, 28 FPC 1090.

13. CATCO contention that no refund requirement existed until issuance of mandate by the Third Circuit is *rejected;* if permitted to file 18½ cent rate prospectively only, CATCO would retain portion of rate found unlawful, Supreme Court's decision and subsequent hearings would be rendered in part futile, and CATCO would be unjustly enriched. P. 109.
14. Requiring restitution of difference between 21.4-cent rate and 18½-cent rate *found* reasonable condition of issuance of permanent certificates to CATCO companies under provisions of Section 7(e) of the Natural Gas Act. P. 110.
15. Upon *remand* from Supreme Court, Commission issues permanent certificates of public convenience and necessity under Section 7 of the Natural Gas Act. P. 111.

Bruce R. Merrill and *Robert C. Hawley* for Continental Oil Company.

Bernard A. Foster, Jr., William R. Dotson, Charles B. Ellard, and *Edward J. Kremer, Jr.,* for The Atlantic Refining Company.

Bernard A. Foster, Jr., Cecil Cammack, Gentry Lee, and *R. J. Leithead* for Cities Service Production Company.

Clyde E. Wilbern, Robert O. Koch, Raybourne Thompson, and *J. E. Atwell* for Tidewater Oil Company.

Jack Werner, William W. Bedwell, L. R. Pankonien, Harry S. Littman, and *William C. Braden, Jr.,* for Tennessee Gas Transmission Company.

Edwin F. Russell, Harry G. Hill, Jr., and *Robert Lisle* for The Brooklyn Union Gas Company.

James O'Malley, Jr., and *John A. Lodge* for Consolidated Edison Company of New York, Inc.

Edward M. Barrett, David K. Kadane, J. David Mann, Jr., S. G. Miller, Henry P. Sullivan, John E. Holtzinger, Jr., and *Bertram D. Moll* for Long Island Lighting Company.

Edward S. Kirby, William R. Duff, James R. Lacey, John McDonald, and *J. Harry Mulhern* for Public Service Electric and Gas Company (New Jersey).

Barbara M. Suchow and *Kent Brown* for Public Service Commission of the State of New York.

Herbert E. Squires for Pennsylvania Public Utility Commission.

John Paul Geneau, Robert W. Perdue, and *Robert L. Russell* for Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SWIDLER, *Chairman:*

This is a certificate proceeding before the Commission on remand by the Supreme Court.[1] Previously the Commission had granted certificates to Continental Oil Company, The Atlantic Refining Company, Cities Service Production Company and Tidewater Oil Company, collectively called CATCO, for the sale of gas to Tennessee Gas Transmission Company from offshore Louisiana areas. The Commission, in the final order of three, accepted the proposed initial price of 21.4 cents per Mcf at 15.025 psia[2] without conditions, and the Supreme Court reversed it for lack of record support. After a second series of hearings, and exchange of briefs, the examiner issued his decision on August 14, 1961, and exceptions were filed by CATCO, Interveners,[3] the Public Service Commission of

[1] *Atlantic Refining Co.* v. *F.P.C.,* 360 U.S. 378.

[2] Unless otherwise noted, unit prices and volumes in this opinion are on a basis of 15.025 psia.

[3] Long Island Lighting Company, Public Service Electric and Gas Company, and The Brooklyn Union Gas Company.

New York (PSC), the Pennsylvania Public Utility Commission, and the staff. The principal question before the Commission is the initial price that is required by the public convenience and necessity in accordance with the provisions of Section 7(e) of the Natural Gas Act.

Procedural and Factual Background

Each of the four applicants owns a quarter interest in a number of gas leases located 20 to 30 miles off the coast of Louisiana in the Gulf of Mexico.[4] Thirty-nine wells have been drilled, of which 13 are dry holes, 3 are dry gas wells and 23 are gas-condensate wells. The offshore operations are conducted from seven platforms. CATCO owns the platforms, wells, separators and meters but no pipelines. To connect with the offshore wells, Tennessee has built some 46 miles of 26-inch line from its main line at Kinder, Louisiana, to the shore, and some 60 miles of line on the Gulf bottom to the platforms.

In August of 1956, CATCO contracted to sell the production of these leases to Tennessee for a base price of 21.4 cents per Mcf. While provision is made for reimbursement by Tennessee of part of the Louisiana taxes, there will probably be no state taxes because the land underlying the leases appears to be located in the federal domain. Deliveries to Tennessee began in July of 1958.

Turning to the procedural aspects of these proceedings, the original applications were filed by CATCO in September of 1956 and hearings were held on February 28 and March 1, 1957. After an examiner's decision the Commission issued an order April 22, 1957, granting CATCO temporary certificates but denying permanent certificates because the rate had not been shown to be in the public interest (17 FPC 574); on May 20, 1957 (17 FPC 732) the Commission granted permanent certificates on the ground that CATCO would not accept temporary certificate, but conditioned the initial price at 18 cents per Mcf, to include an allowance of one cent for the supposed Louisiana gathering tax; and on June 24, 1957 (17 FPC 880) after oral argument on rehearing the Commission removed the price condition because of the need for the gas and because it appeared that CATCO would not accept conditioned certificates. The final action, therefore, was to grant a certificate on the terms for which application had been made.

The PSC and Interveners initiated review and the order was vacated by the Court of Appeals, *P.S.C. of New York* v. *F.P.C.*, 257 F. 2d 717 (CA3); this action was affirmed by the Supreme Court in *Atlantic Refining Co.* v. *F.P.C.*, 360 U.S. 378, on a finding that the record did not show the proposed price was required by the public convenience and necessity. The vacation and remand was issued by the Court of Appeals on November 16, 1959, and on November 17, 1959, CATCO was granted temporary authorization effective upon issuance of the Court's mandate.

Meanwhile CATCO filed applications for the sale of additional gas from the East Cameron area. By order issued February 16, 1959, in Docket No. G–15330 the Commission granted a certificate to Cities conditioned so that the initial price should agree with the price finally resulting from these proceedings. A temporary certificate was issued to Atlantic on July 14, 1958, in Docket No. G–15374, but this was replaced by the temporary certificate issued to the Company on November 17, 1959 in Docket No. G–11034, and the earlier authorization was rescinded.

---

[4] Originally the leases were located in the East Cameron, West Cameron and Vermilion areas; a number of leases have since been surrendered because not commercially productive including all of those in the Vermilion area.

On December 11, 1959, following receipt of the court's mandate the Secretary reopened the hearing, and, after a prehearing conference, hearings commenced March 15, 1960 and concluded January 19, 1961. Briefs were filed and the examiner issued his decision August 14, 1961.

Briefly, the examiner proposed issuing certificates to CATCO conditioned on an initial price of 19.92 cents per Mcf determined as of the date of the original certificates, June 24, 1957. In doing so he determined reserves on the basis of the record in the reopened proceeding and arrived at 1,244,363 Mmcf representing recoverable reserves as of January 1, 1960. With respect to field prices he concluded that none of the contract prices available in evidence could be directly compared with the proposed price because of the size of the CATCO reserves. On the basis of the evidence he determined a base price of 17 cents representing the weighted average initial price under South Louisiana contracts dated 1953–1955. He adjusted this base price upward by a factor of 17.2 percent representing the increase in per foot costs of drilling and equipping productive offshore wells in Louisiana from 1954 to 1956. This resulted in the cost of 19.92 cents per Mcf (15.025 psia) before taxes or transportation costs. The examiner considered the cost of service evidence introduced by CATCO, the Interveners and the staff. As discussed below, he found difficulties with the several methods but, using a 16.2 percent rate of return, found that the staff method resulted in a cost per Mcf of 20.58 cents as adjusted by him to 1957 and substantially confirmed his 19.92 cents per Mcf result. He ordered refunds to Tennessee from the date of initial delivery.

The exceptions of CATCO, Interveners, the New York and Pennsylvania Commissions and the staff were filed October 30 and 31, 1961.

The Methods To Be Followed

Our principal guide in making a determination of an initial price here is the Supreme Court's opinion in these proceedings. The Court points out that the Act does not require a determination of just and reasonable rates in a section 7 producer proceeding as it does in one under section 4 or section 5, nor is a "just and reasonable" rate hearing prerequisite to the issuance of producer certificates. Nevertheless, the Court requires careful scrutiny of proposed initial prices. The proposals of the applicants must be supported by evidence showing their necessity to the present or future public convenience and necessity before permanent certificates are issued. The Court said that where "the proposed price is not in keeping with the public interest because it is out-of-line or because its approval might result in a triggering of general price rises or an increase in the applicants' existing rates by reason of 'favored nation' clauses or otherwise, the Commission in the exercise of its discretion might attach such conditions as it believes necessary." [5] The Court recounted the instances where statements made by the Commission in support of its approval of the 21.4 cent per Mcf initial price lacked record support.

The question immediately arises as to the approach to be used to a determination of the proper initial price. The record contains evidence of field prices in the Southern Louisiana area and cost of service evidence, which, however, falls short of that usually found requisite in a rate case. As noted, the examiner's basic method was to find a price based on the field price evidence for the years 1953–1955 in the amount of 17 cents and to adjust it upward by the increase in drilling costs between that period and 1956 to arrive at 19.92 cents per Mcf as the initial price to be allowed. He used the cost of service evidence, principally as presented by the staff, in confirmation of his result, but made a number of

[5] 360 U.S. at p. 391.

important adjustments. His determination of recoverable reserves did not appear to be utilized by him in reaching his result on the initial price.

As will be seen, we agree with the examiner that the initial price should be determined as of a past period. However, we agree with the Interveners and PSC that it was not appropriate to determine an initial rate on the basis of field prices adjusted upward for increases in the cost of drilling. The field prices were not shown to be equivalent to cost. Therefore, it was not proper to apply a percentage escalation derived from cost factors to a base derived from field prices. Furthermore, the data on drilling costs in 1954 were derived from one source while the data for 1956 were derived from another source. We shall rather determine the "in line" price using the field price evidence available in the record. This evidence includes prices at the time of the sale in 1956, and before, which were not affected by initial prices which the courts have called into question.[6] Like the examiner, we shall then compare the "in line" price with the cost of service evidence. Before going further, we may note that the method used here would not be appropriate where area price levels announced by us are applicable or where area rate proceedings have been held with the resulting elimination of the price problem. We shall now consider the question of the price line.

The Price Line

The first question is as to the date of the "in lineness". This question should be determined as of a past date; otherwise CATCO would be enriched because of procedural delays. The sale was to be made under contract of August 1956. While our previous determination reversed by the Supreme Court was made in June of 1957 and deliveries did not begin until July of 1958, we think that the question of "in lineness" should be determined as of 1956. It was then that the parties agreed on a price. The Supreme Court was thinking of the origination of price levels by contract when it stated that "New price plateaus will thus be created as new contracts are made and unless controlled will result in 'exploitation' at the expense of the consumer"[7] and referred to the proposed "contract price" as higher than any paid by Tennessee.[8] In our opinion a sale would not meet the test of public convenience and necessity if the price at the time the contract was made was not "in line" with other prices in the area.

The CATCO opinion has not defined what is meant by a price being "in line", nor have the Courts of Appeals done so with any precision.[9] The Ninth Circuit case states that the "line" referred to in CATCO "may properly be referenced to relevant existing producer prices under which substantial amounts of natural gas move in interstate commerce." This case also points out that the prices must be comparable.

Before going into the comparative price evidence it is necessary to examine the situation with respect to Louisiana taxes. The Louisiana gathering tax referred to in our prior order (17 FPC 732, 734) was suspended by the Louisiana Legislature on August 1, 1958.[10] The prior Louisiana severance tax of .3 cents

[6] See cases cited in footnote 9 below.

[10] Louisiana Acts 1958, Ex. Sess. No. 3 § 1, Louisiana Statutes Annotated 47: § 681.1 after the gathering tax had been declared unconstitutional under the Louisiana Constitution, *Bel Oil Corp.* v. *Fontenot*, 238 La. 1002, 117 SO 2d 571.

per Mcf was increased on December 1, 1958 to 2.3 cents per Mcf, but is not applicable to the most seaward area known as Zone 4 in which are located part of the CATCO leases. With respect to the Zone 3 production after December 1, 1958, Tennessee has paid a 1.5 cents per Mcf severance tax reimbursement, which is being held in suspense by CATCO and will be refundable to Tennessee if the Federal Government is ultimately determined to be the owner of the Zone 3 lands. In *United States* v. *Louisiana*, 363 U.S. 1, 79, it was held that Louisiana is "entitled to submerged-land rights to a distance no greater than three geographical miles from its coastlines, wherever those lines may ultimately be shown to be." We agree with CATCO that it appears unlikely that any of the Cameron production is subject to Louisiana tax, although the question is not yet free from doubt. Therefore, we think it proper to compare the Cameron area tax-free base price with base prices elsewhere, but in the order we shall make provision for the contingency that state taxes are applicable.

The applicants, as well as other parties, have put in evidence a considerable amount of price data in order to overcome the deficiencies in the record found by the Supreme Court. However, most of the price evidence dating from the time of the CATCO contracts and earlier relates necessarily to onshore sales, which differ in some degree from the sales made here from platforms in the Gulf of Mexico. Nevertheless, we believe them useful in establishing the price line in the area. The Supreme Court considered them relevant in observing how prices had vaulted from one level to another.

In general the evidence shows that while there were prices of 20 cents or more in Southern Louisiana as early as 1952, there were few prices above a basic rate of 18 cents before the CATCO contracts. Interveners show that out of 290 contracts dated January 1, 1950, to December 31, 1956, only 20 had base prices of 20 cents or above and only 22 more had base prices of 18 cents or above. In the year 1956, 4 were in the range 21–21.49 cents per Mcf, 4 were 20–20.49, 12 were 18–18.99, 17 were 17–17.99, 33 were 16–16.99 and 4 were under 16 cents. CATCO points out that upon cross examination certain errors were revealed in Interveners' study. These alleged errors relate to the omission or inclusion of certain contracts, particularly the duplicative inclusion of contracts having multiple sellers where each one had filed a separate rate schedule. While there appear to have been some errors, the general picture is the same even on the basis of the evidence presented by CATCO.

CATCO plots on a graph the South Louisiana contracts from 1947 through 1959 showing numbers, initial base prices and pipeline buyers. The general pattern of this study up until the end of 1955 portrays a few contracts on the 20-cent level in 1952, 1953 and 1955, with the other contracts ranging down to about 6 cents (in 1947). Beginning with 1952 there appear a number of contracts in the 16-cent range; in 1953 in the 18-cent range and in 1955 in the 17-cent range. In 1956 the number of contracts proliferated considerably. Numbers appear in the 16-, 17- and 18-cent range, six appear around 20 cents and 4 around 22 cents. In 1957, 1958 and 1959 many contracts appear in the range between 20 and 23 cents, but even in those years there were many contracts around 18 cents and below and a scattering below 15 cents. More specifically, CATCO shows that in the years July 1, 1954 to June 30, 1956, out of a total of 68 contracts, 12 were above 18 cents, 47 were in the range 16 cents through 18 cents, and 9 were below 16 cents.

The average of the initial base prices for contracts dated during the respective quarters of 1956 weighted by 1958 volumes are as follows: 17.00 cents, 18.22 cents, 17.38 cents, 16.65 cents. The weighted average prices actually paid for 1958 deliveries under contracts of the year 1956 was 18.59 cents for interstate gas and

16.87[11] cents for intrastate gas. CATCO has made the point that prices are higher for the larger volumes, but for contracts entered into during the period July 1, 1954 to June 30, 1956, out of a total 1958 volume of 241,215 Mmcf only 63,979 Mmcf were obtained at prices above 18 cents, while the remaining volumes were sold at lower prices. The two largest volumes sold, 61,305 Mmcf and 91,988 Mmcf were sold at 16 and 17 cents, respectively.

The only offshore price brought specifically to our attention was the base price of 17 cents per Mcf found in the CATCO contracts with Tennessee dated January 1956, dedicating the West Delta reserves. This price is not strictly comparable although it does offer some light on prices in the area. In contrast to the Cameron area leases which are 20 to 30 miles from the Coast, the West Delta acreage lies within 10 miles of the shore. The record indicates CATCO was anxious to dispose of the West Delta gas promptly to avoid flaring, and Tennessee was unwilling to pay more than 17 cents for fear of triggering the favored-nation provisions of earlier contracts. While there may have been limitations on Tennessee, it appears that no other pipeline was willing to offer a higher price.

Under the circumstances here involved a price, in our opinion, is not in line as of a given time if it is the highest price or in the highest group of prices theretofore paid. For the year 1956 a contract for 21.4 cents per Mcf is clearly out of line. In our opinion, a price not in excess of 18½ cents would be "in line", although higher than the majority of prices in 1956.

Cost of Service

Although taking the position that it was impossible to determine actual costs in a certificate proceeding and that cost of service evidence was not necessary, Continental, as operator of the Cameron properties, presented such evidence on the basis of the test year 1959 in support of the CATCO application on the assumption that its costs would represent the costs of the other members of the CATCO group. It allocated Cameron area production costs between gas and condensate by the Btu method and derived a unit production cost for gas; and it allocated company-wide exploration costs, also by the Btu method, to arrive at a unit exploration cost. In making these computations it used a rate of return of 14 percent plus an allowance for income taxes without taking advantage of the statutory deductions and reached a cost of gas of 43.67 cents per Mcf.

The Interveners contend that the cost of service presented by Continental is valueless and that a meaningful cost of service cannot be determined for less than company-wide operations. Nevertheless they prepared adjustments to Continental's cost of service presentation using the relative cost method for allocating production costs, the reserves added realization method for exploration costs and an 11 percent rate of return, to arrive at a unit cost of 18.16 cents per Mcf.

The staff followed the same general method as Continental but allocated company-wide exploration costs to gas on the basis of the Btu method modified by the economic factor of 4 as set forth in the *Phillips* case[12] and production costs on the basis of gross revenues. Using a 9 percent rate of return, the staff arrived at a unit cost of service of 17.33 cents per Mcf. With some reservations, the examiner followed the same general method as the staff, but used a 10.2 percent rate of return to arrive at a unit cost of 21.38 cents per Mcf. The ex-

[11] These two unit prices are computed at pressure bases used by the pipeline companies in their FPC Form 2 Reports.

[12] 24 FPC 537, 560; affirmed *State of Wisconsin* v. *F.P.C.*, 303 F. 2d 380, CADC, No. 16175, decided November 30, 1961, *cert.* granted May 14, 1962, 369 U.S. 870.

aminer adjusted his result for capital expenditures made in the years 1958 and 1959, and increases in the cost of drilling and labor to arrive at unit cost of 20.58 cents per Mcf as of 1957.

It is clear enough that the cost of service evidence here is not complete as presented by any of the parties. In the first place the evidence relates to Continental alone and not to the other CATCO companies. Furthermore, it combines Continental's production costs for the Cameron area leases with Continental's system-wide exploration costs. While the incomplete nature of the evidence makes it impossible to make a definite finding as to cost of service, it does provide a basis of comparison with the field prices which may assist us in determining whether the proposed initial price meets the standards of the Act.

The examiner's computation of cost of service appears to be as follows although not set forth in this form:

	Costs allocated to gas	Unit costs (cents)
Production cost:		
Lease expense	$237,302	
Retirements and abandonments	112	
Leasehold depletion	4,906	
Depreciation of Lease and well equipment	91,405	
Amortization of Intangible drilling costs	339,165	
Overhead	114,336	
Total production expense	787,226	
Special facilities depreciation and amortization	6,897	
Production taxes	31,216	
Return at 16.2 percent	817,139	
Total production cost	1,642,478	
Unit cost using the 1959 volume of 10,014,362 Mcf		16.40
Exploration costs:		
Company-wide exploration expense per unit		4.03
Company-wide exploration return per unit (at 16.2 percent)		.95
		21.38
Total exploration cost	498,715	
Total cost of service	2,141,193	

In the first place we do not think that the 1959 cost of service should be adjusted backward to the year 1957, as the examiner did in arriving at 20.58 cents.[13] The year 1959 was the first full calendar year of operation. It is appropriate to compare the initial price with costs from actual operation in the year when they are available without speculating on what they would have been in a previous year. We may now consider the contentions made by the parties in their exceptions.

CATCO objects to the examiner's modifying the Btu method of allocating company-wide exploration costs by the use of the economic factor of 4 utilized in the *Phillips* case. CATCO argues that the nature of the CATCO production requires the use of the straight Btu method and points out that the examiner adopted the Phillips factor "subject to considerable reservation" since there was no record evidence to support it. In the *Phillips* case we allocated the company's exploration costs between oil and gas by the Btu method modified by the factor of 4 to reflect the economic relationships between the two products as discussed fully in our opinion.[14] We reaffirm that method and adopt it for determining Continental's unit cost of exploring for gas as opposed to oil; and this unit cost may then be applied to the gas produced from the Cameron

[13] Or 20.60 cents including an allowance for regulatory expense.
[14] 24 FPC 537, 558–561.

leases. We think that the use of the *Phillips* case factor of 4 is sufficient for the purposes of this certificate case, although on a proper record in a rate case a different factor might be justified.

CATCO also argues that the straight Btu method should have been used to allocate the Cameron area production costs. CATCO contends that this method is appropriate here where the problem is to allocate costs between gas and condensates as it was to allocate costs between gas and liquids at the gasoline plants in *Phillips*, 24 FPC 537, 563–564. The record shows that the condensates are carried in Tennessee's gathering lines to shore and processed in refineries. We can take notice that condensate is not the equivalent of the natural gasoline separated in the Phillips plants, but is rather a light petroleum which can be used for a number of purposes, including the manufacture of chemicals, so that our discussion in the *Phillips* case as to the inapplicability of the straight Btu method (for exploration costs) applies here. In *Phillips* we used the relative cost method based on unit costs abtained from Phillips' 100 percent oil wells. Here we have no 100 percent oil wells or sufficient volumes from the 100 percent gas wells to make the relative cost method possible. It was, therefore, necessary to use the gross revenues method, but merely for the purpose of arriving at a ratio. It does not seem unreasonable to utilize the relationship between the price CATCO expected to get for the gas and the price it did get for the liquids as a basis of allocation.

CATCO also objects to the failure of the staff and the examiner to include, in the amortization of intangible drilling costs shown above in the amount of $339,165 computed on a lease by lease basis, any allowance for two wells allegedly abandoned in 1959. The record shows that as to Lease No. 9830511 the well was completed in 1955 and the intangible drilling costs had been depleted through production to $100,118 as of December 31, 1958. As to Lease No. 9837511 completed in 1957 none of the intangible drilling costs amounting to $262,119 had been written off because the well had been shut-in. The total amount still to be amortized was thus $362,237. CATCO proposed to write the whole amount off in the test year.

We agree with the staff that this amount was non-recurring and should not have been written off in the test year, for such a write-off would give a distorted picture of cost. However, we think that the unamortized amount should be recovered. Alternatively the staff had submitted a study showing the effect of amortizing the intangible well drilling costs for all wells including the two dry wells on an area basis rather than on a lease by lease basis. The area basis of amortization, in our opinion, is the more appropriate because it is not affected by swings of production between the high cost and low cost leases so that it leads to a more stable result. It also takes into account amortization applicable to the two dry holes. It will, therefore, be followed in the computation below. The amortization item, however, is less than shown above for the examiner's computation largely because his estimate of reserves is used rather than Continental's, as will be discussed later, but also because the particular pattern of production in 1959 results in a slightly higher allowance on a lease by lease basis than on the area basis that we find appropriate.

In its cost of service computation, Continental included an allowance for Federal income taxes computed by adding an item representing 108 percent of the amount of return. This would represent taxes without taking into account the statutory deductions for percentage depletion and intangible well drilling costs under Sections 613 and 263 (c) respectively of the Internal Revenue Code. This is, of course, contrary to *El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567 (CA5), certiorari denied, 366 U.S. 912, and our treatment in the *Phillips* case.[15]

[15] 24 FPC 537, 568–569.

Apart from this, CATCO objects to the staff and examiner making no allowance for taxes. There is nothing to show and there is no contention made that after taking into account the statutory deductions Continental would pay any Federal income taxes as a result of its producing business in the year 1959. On the other hand, considering the Cameron area properties separately Continental does show in its discounted cash flow study estimated income taxes payable of $561,000 after all deductions for the year 1959 taking into account investment, revenues and expenses over the entire life of the properties. Furthermore, using an 11 percent return CATCO has submitted in its answer brief an "Actual Federal Income Tax Calculation" for Continental in the Cameron area in which it shows the tax applicable to gas production to be $528,114 and applicable to gas exploration to be $54,416.

The latter figures are derived by deducting from return the alleged Cameron area intangible well drilling costs in the amount of $10,516 for the year 1959. However, the cash flow study indicates that the equivalent deduction was much larger in 1958 and prior years, so that due to this deduction and the absence of revenues, except in 1958, there were large tax losses relating to the Cameron properties. The effect of this is that in the early years the Cameron area deductions offset the company's income elsewhere while in 1959 and succeeding years presumably the Cameron area income is in turn offset by deductions from drilling in other areas. However, assuming for the purposes of this cost of service that all of Continental's revenues and deductions arise from the Cameron area, we would also have to assume that under Section 172 of the Internal Revenue Code Continental would carry forward its losses in the years through 1958 to 1959 and succeeding years. It is entirely clear from Continental's cash flow study that any "actual" taxes in 1959 would be eliminated as well as the taxes for several years thereafter. Beyond that what revenues, deductions and taxes are applicable to the Cameron area are entirely speculative. Therefore, we shall include no "actual" taxes in the cost of service computation.

With respect to rate of return the record does not include the extensive financial data usually found in a rate case. Continental, however, did present (1) an exhibit showing the return earned after taxes on book net assets by groups of corporations in a variety of industries; (2) an exhibit showing rates of return earned each year on computed rate bases by ten Class A producers of oil and gas, that is those that produce but do not refine or engage in other activities; (3) testimony by its witness on the risks of the Cameron area operation and the need for a rate of return of 14 percent in addition to the statutory tax benefits.

In the first place we are of the opinion that the return earned by other companies, while it should be taken into consideration, does not constitute a complete rate of return presentation. What is earned by other companies may or may not be reasonable. In rate of return cases we have ordinarily considered earnings-price ratios as reflecting how the money market considers the risk involved, and there are instances where the earnings-price ratios of the companies which are solely producers are less than those of the integrated companies.

The first exhibit shows a rate of return on book net assets for the period 1947–1958 of 21.3 percent for Class A petroleum companies, and 15.5 for Class B petroleum companies, which engage in other activities as well as producing. However, if the year 1958 alone is considered, the rates of return are 12.7 percent and 10.9 percent respectively. Continental is engaged in production, manufacturing and marketing and should be considered a Class B type company for the purposes of the exhibit, although the examiner treats it as a type A company. Furthermore, this first exhibit actually measures return on

equity rather than on the entire capitalization so that the returns shown would have to be adjusted downward to reflect the cost of debt and proportion of debt in the total capitalization in order to reach an overall cost of money.

The second exhibit shows rates of return ranging from 30.99 percent in 1947 to 15.22 percent in 1958 or an average of 21.88 percent. It deals with such a narrow group of successful Class A companies that in our opinion it is not at all persuasive. Therefore, we do not adopt the examiner's use of a 16.2 percent rate of return which was derived by using the average return from this exhibit for the years 1954–1958 and weighting the years more heavily as they approached the test year 1959. Nor do we adopt the staff's rate of return of 9 percent which was merely illustrative. We are fully cognizant of the risks of drilling for gas and the need to encourage continued exploration and production. However, with respect to the peculiar hazards of offshore drilling, we are of the opinion that they are at least in part offset by the opportunity for discovering large reserves, as indeed has proved to be the case. In view of this incomplete record and the fact that this is not a rate case we shall make use for purposes of this case of the overall rate of return we allowed in *Phillips*, namely 11 percent. As set forth in the *Phillips* case the 11 percent return includes an amount in addition to other financial needs designed specifically to provide an incentive for exploration and development. In arriving at this allowance in the *Phillips* case we were, of course, looking at the financial needs of the company as a whole and we do the same here. From the financial viewpoint it would not be proper to consider Continental as though it owned only the Cameron area leases because its ability to raise money is not dependent only on this limited segment of its business.

In order to show that its proposed 21.4 cents price would not yield an excessive return CATCO presented in evidence its discounted-cash-flow analysis. In this study CATCO showed, with respect to the Cameron project, investment, production, revenues, expenses, taxes and return from 1947 through 1982. The study shows, according to CATCO, that the Cameron area properties would yield a return on investment of only 10 percent if the initial price were collected throughout their life and only 11.2 percent with escalations. In our opinion this type of study, dependent heavily on speculation, does not provide a reliable support for the initial price or rate of return. Continental's witness admitted there was room for an appreciable margin for error in a study which requires estimating the rate of production, revenues and expenses for a quarter of a century in the future.

Although not taking any exception on the point CATCO contends that it should be given an allowance for regulatory expense totaling $495,548 as of April 30, 1960 for the four companies. It would amortize Continental's share of such expense over three years to arrive at a cost of $58,306 using an 11 percent return including an allowance for taxes. We agree that reasonable regulatory expense should be allowed, but this is a certificate case and not a rate case in the sense that we could expect that it be repeated every three years. We think that a reasonable treatment would be to amortize Continental's share ($123,887) of the regulatory expense over a period of five years and we have included the resulting amount of $24,777 in the cost of service.

Interveners have made the point in oral argument that the examiner developed with some care a reserve estimate for the Cameron area and then failed to make use of it in the cost of service. In their cost of service computations Continental, the staff and the examiner arrived at a unit cost on the basis of the 10,014,362 Mcf of gas actually produced in the test year 1959. This is, of course, the method ordinarily followed when making use of a test year, for it is appropriate to relate test year costs to test year volumes. We do not agree

with Interveners' contention that the normal deliverability of 13,816,045 Mcf per year [16] based on the examiner's reserve estimates should be used in determining a unit cost, for if this volume were produced, other items in the cost of service would be affected, so that it would be necessary to devise a purely theoretical test year not shown by the record.

Apart from these considerations the question of reserve does affect the cost of service. Continental, the staff and the examiner used Continental's reserve estimates in their computations. The item relating to the amortization of intangible well drilling costs, already discussed in another connection, would be affected, as well as the less important item of depletion. Therefore, it is relevant to consider the issue of reserves.

CATCO presently estimates the initial reserves in place (at 14.73 psia) to be 871,956 Mmcf located in Blocks 62, 64, 71 and 192, in the offshore Cameron area, but in the original hearing it adopted the estimate of Tennessee's witness for Blocks 49 (abandoned), 62, 71 and 192 totaling the larger amount of 1,995,659 Mmcf. Tennessee now estimates initial reserves in place of 1,580,825 for the 62, 64, 71 and 192 Blocks. For the same four blocks the examiner, CATCO and Tennessee estimate recoverable reserves as follows:

Mmcf at 14.73 psia	CATCO	Tennessee	Examiner
Initial recoverable reserves	711,017	1,322,921	1,305,315
Recoverable reserves as of Jan. 1, 1960	650,065	1,261,969	1,244,363
Salable reserves as of Jan. 1, 1960	642,660	1,245,410	1,228,195

The record shows that the major differences between CATCO and Tennessee relate to net pay (thickness of gas bearing formations), areal extent of the reservoirs, porosity values, and connate water content. In important instances, there were unreconcilable differences between the experts for CATCO and Tennessee, and the staff in its brief contended that the recoverable gas reserves of the four fields cannot be determined from the facts and testimony submitted by the parties. The staff, however, advocated using Tennessee's higher estimate to avoid injuring the public. On our part the record does not permit us to arrive at a definite conclusion with respect to these reserves. For the purposes of our comparative cost computation we shall use the examiner's carefully considered estimate, which is close to Tennessee's but somewhat smaller. As can be seen, the item for the amortization of intangible well drilling costs applicable to gas becomes $145,290 on the area-wide basis using the examiner's estimate of reserves.[17] We may note, however, that if we had used CATCO's estimate of reserves the amortization figure would be raised to $289,813 and the final unit cost of service would become 18.86 cents per Mcf at 15.025 psia, still close to the price which we consider to be "in line".

A final factor should be reflected in the price paid by Tennessee. Under its arrangements with the CATCO companies Tennessee carries the gas which it has purchased and the condensates owned by CATCO in its gathering lines from the offshore platforms to the shore of Louisiana. As to transporting its own gas, we see no reason why the cost of such transportation should not be borne by Tennessee, because it is Tennessee's custom to extend pipelines to the gas supplies. We think these transportation costs should be considered to be

[16] This represents Continental's share (¼ of ⅞) of the 20-year average deliverability of 176,504 Mcf per day found by the examiner.

[17] See the computation in Appendices 3 and 1. The record does not supply sufficient information to permit us to adjust the small depletion figure employed by the examiner.

nearer the staff's 4 cents per Mcf based on a period closer to the test year than the examiner's 1.98 cents per Mcf based on developments extending to 1963. A different problem arises with respect to the condensates which are transported to CATCO's Grand Chenier separation station, where they are removed and the gas redelivered to Tennessee. Such transportation in effect is a service performed by Tennessee for Continental and the other CATCO companies, and in a cost calculation a credit should be given Tennessee for an allocated part of the transportation costs. The allocation should be made on the basis of the volumes of gas transported and on the basis of the vapor volumes of the liquids multiplied by an estimated cost factor of 4. This results in an estimated amount of $17,117 [18] applicable to the gas delivered to Tennessee.

On the basis of the foregoing discussion, Continental's cost of service is computed as follows: [19]

	Costs allocated to gas	Unit costs (cents)
Production costs:		
Lease expense	$237,302	
Retirements and abandonments	112	
Leasehold depletion	4,906	
Depreciation of lease and well equipment	91,405	
Amortization of intangible drilling costs	145,290	
Overhead	114,336	
Total production expense	593,351	
Special facilities expense	6,897	
Production taxes	31,216	
Regulatory expense	24,777	
Less: Tennessee's Liquids Transportation Service	(17,117)	
Return at 11 percent	640,767	
Total production cost	1,279,891	
Unit cost using 1959 volume of 10,014,362 Mcf		12.78
Exploration cost:		
Company-wide exploration expense per unit		4.03
Company-wide exploration return per unit (at 11 percent)		.65
Total exploration cost based on Continental's 1959 volume	468,672	
Total cost	1,748,563	17.46

The Initial Rate and Other Matters

It has already been shown that an 18½ cents per Mcf price in 1956 would be "in line" and would represent the price "line" as of the year when the CATCO contracts were made The limited cost of service evidence in this proceeding does not require another result. Our computed cost figure of 17.46 cents per Mcf was reached after ruling against CATCO on a number of disputed points and thus represents a minimum amount. It indicates that an initial price of around 18½ cents would cover the CATCO costs, include an incentive for continued exploration and development either in the Cameron area or elsewhere, and would provide a margin for error on the disputed points, particularly in case the Cameron area reserves were not as great as found by the examiner. In our prior order of May 20, 1957 (17 FPC 732), later changed in our order of June 24, 1957 (17 FPC 880), we prescribed an initial rate of 18 cents per Mcf, including, however, a one cent Louisiana gathering tax supposed to be applicable. On the basis of the present record we are of the opinion that an initial rate of 18½ cents per Mcf will meet the requirements of the public convenience and necessity.

[18] See Appendix 4.

[19] See more detailed computations in attached Appendices 1, 2 and 3.

As noted above it does not appear that CATCO will be liable for state taxes in the offshore areas, but all doubt has not been removed with respect to the Zone 3 area. Therefore, we shall permit CATCO to continue to collect an additional 1.5 cents per Mcf with respect to Zone 3 production to reimburse it in part for the Louisiana state severance tax amounting to 2.3 cents per Mcf if that should prove to be applicable. However, CATCO will be required to continue to hold the 1.5 cents per Mcf in suspense, subject to refund if it should be adjudicated that the lands in Zone 3 lie within Federal jurisdiction.

In its opinion the Supreme Court referred to certain other matters that should be considered in connection with an initial price. The Court was concerned whether a proposed price might result in "a triggering of general price rises or an increase in the applicants' existing rates by reason of 'favored nation' clauses or otherwise." The record shows that the provisions of CATCO's contracts would not trigger the existing favored nation clauses in Tennessee's other contracts because the Cameron area is outside of Tennessee's supply area. Furthermore, the record indicates that no contracts other than Tennessee's would be triggered.

The Court was also concerned that the CATCO price was higher than the price Tennessee had paid elsewhere and some 70 percent higher than the weighted average cost of gas to Tennessee (for 1957). We have concluded on the record that the Court's concern was justified, and that a reasonable initial price should not exceed 18½ cents.

The Court found no support in the record that the public served through the Tennessee system was greatly in need of increased supplies of natural gas. We agree with CATCO that this question has become moot. We have already relied on the CATCO reserves in granting a certificate for a large expansion by Tennessee,[20] and the record in this case shows large increases in Tennessee's needs for gas since 1956.

Apart from the rate aspects we are of the opinion that proof of reserves in this case are sufficient. While CATCO contends that proof of reserves should not be considered part of the essential showing by a producer, we think that proof of reserves in producer certificate cases should ordinarily be made to enable us to consider the ability of the producer to deliver gas, as well as the cost of the gas in the absence of applicable area prices. Here, however, the August 1956 contract between Continental and Tennessee did not require deliveries of so much per day or year, but rather 1,000 Mcf per day for each 8,000,000 Mcf of recoverable gas originally in place in the dedicated reserves. The record indicates that such a contract provision can be met substantially and that deliveries of gas will continue during the term of the contract expiring in 1977.

Refunds

The examiner required CATCO to refund with interest at 6 percent the difference between the sums received from Tennessee and the sums that would have been received under the examiner's 19.92-cent rate. The refund period would extend from the date of initial delivery until the effective date of his order.

CATCO excepts to this requirements saying that from the commencement of deliveries on July 12, 1958, until November 16, 1959, when the mandate of the Court of Appeals for the Third Circuit was issued there was no refund requirement and there is no power available to the Commission under which refunds could be lawfully prescribed. While a refund requirement was inserted in the temporary authorization issued November 17, 1959, CATCO argues,

[20] *American Louisiana Pipe Line Co. et al.*, 21 FPC 70, 75.

this requirement was invalidated by *Sunray Mid-Continent* v. *F.P.C.*, 270 F. 2d 404 (CA10, 1959). Further, CATCO contends, Atlantic was given an unconditional temporary authorization in Docket No. G–15374 that was improperly rescinded on November 17, 1959, when temporary authorization with conditions was issued in Docket No. G–11034.

In our opinion the examiner acted properly in ordering refunds, although we have no power to order reparations. Here we granted CATCO a certificate and approved the proposed 21.4 cent rate. That certificate was subject to challenge when issued and was challenged successfully. The proceedings were remanded by the Supreme Court, and our order of June 24, 1957 was "vacated" by the mandate of the Court of Appeals. We now find that the rate should have been 18½ cents. If CATCO were permitted to retain what it has collected under the 21.4 cent rate and file the 18½ cent rate prospectively only, CATCO would be permitted to retain the portion of the rate found unlawful, the Supreme Court's decision and the subsequent hearing would be rendered in part futile, and CATCO would be unjustly enriched because of procedural delays. As has been said the "right to recover what one has lost by the enforcement of a judgment subsequently reversed is well established." *B. & O.R. Co.* v. *United States*, 279 U.S. 781, 786; compare *United States* v. *Morgan*, 307 U.S. 183, 197. To require restitution of the difference between the two rates, in our opinion, is a reasonable condition of issuing permanent certificates to the CATCO companies under the provisions of Section 7(e) of the Natural Gas Act. In a somewhat analagous situation we required the payment of interest on amounts refunded under a settlement order although no provision for interest had been made in the settlement agreement. *Mississippi River Fuel Corporation* v. *F.P.C.*, 281 F. 2d 919, 927 (CADC), certiorari denied 365 U.S. 827. When ordering a refund under a temporary certificate with a refund provision, the Commission was held authorized to order the payment of interest to avoid unjust enrichment. *Texaco, Inc.* v *F.P.C.*, 290 F. 2d 149 (CA5).

With respect to the period since November 17, 1959, when the Commission's temporary certificates become effective, a refund is appropriate in any case because the temporary certificates in letter form were issued "upon the condition that the rates charged shall be subject to such conditions as the Commission shall lawfully prescribe in issuing a permanent certificate in Docket No. G–11024, including any provision for refund thereby imposed." Such a broad condition is lawful. *Pure Oil Co.* v. *F.P.C.*, 292 F. 2d 350, 353–354 (CA7). CATCO had already begun service, so that it did not have the choice whether to accept or reject the temporary certificate contemplated in *Sunray Mid-Continent* v. *F.P.C.*, 270 F. 2d 404 (CA10) where the Court held that the applicant must not be offered a certificate which leaves entirely open for a future proceeding the question of an initial rate.

With respect to the unconditioned temporary certificate issued to Atlantic in Docket No. G–15374, the refund provision is likewise applicable. The temporary certificate gave no unalterable right to the proposed price. Under Section 7(c) the Commission may issue a temporary certificate in case of emergency pending the determination of an application for a certificate. This appears to contemplate a continuous course of adjustment until the time that a final order determines the conditions under which a permanent certificate shall be issued.

The Commission finds:

(1) Continental, Atlantic, Cities, and Tidewater (CATCO) independent producers of natural gas are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of

the Commission, and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by CATCO, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) CATCO is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas by CATCO, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in the administration of the Natural Gas Act that the initial price charged by CATCO for sales of gas from its offshore reserves be 18.5 cents per Mcf at 15.025 psia subject to downward Btu adjustment provided in the contract insofar as the Btu content falls below 1000 Btu per cubic foot during any month, except that CATCO may continue to collect an additional 1.5 cents for gas produced in Zone 3 subject to refund with interest to Tennessee if it is finally adjudicated that Zone 3 is subject to Federal jurisdiction.

The Commission orders:

(A) Permanent certificates of public convenience and necessity are hereby issued to Atlantic, Continental, Cities, and Tidewater, authorizing the service and sale, proposed by:

(a) Atlantic in its contract with Tennessee dated August 10, 1956, and filed as Atlantic's FPC Gas Rate Schedule No. 185, as amended;

(b) Continental in its contract with Tennessee dated August 17, 1956, and filed as Continental's FPC Gas Rate Schedule No. 154, as amended;

(c) Cities in its contract with Tennessee dated August 14, 1956, and filed as Cities' FPC Gas Rate Schedule No. 6, as amended;

(d) Tidewater in its contract with Tennessee dated August 14, 1956, and filed as Tidewater's FPC Gas Rate Schedule No. 72, as amended;

and, in each instance the operations and construction reasonably necessary thereto.

(B) Each certificate issued severally to the CATCO companies as provided in Paragraph (A), above, is hereby conditioned so that the base price effective under each of the aforesaid contracts, from the date of initial service thereunder, shall be, until lawfully changed in the manner provided by the Natural Gas Act, 18.5 cents per Mcf at 15.025 psia subject to the downward Btu adjustment provided in the contract insofar as the Btu content falls below 1000 Btu per cubic foot during any month except that CATCO may continue to collect an additional 1.5 cents per Mcf for gas produced in Zone 3 subject to refund to Tennessee with interest at 6 percent if it is finally adjudicated that Zone 3 is subject to Federal jurisdiction.

(C) Each of the CATCO companies shall, within 60 days of the date upon which this order shall become effective, refund to Tennessee with 6 percent interest a sum equal to the difference in the price charged to and collected from Tennessee and the base price set forth in (B) above, applied to all volumes delivered to Tennessee under the contracts which form the subject matter of this

proceeding (Paragraph (A), above) from the date of initial delivery to Tennessee until the effective date of this order.

(D) Within 10 days of the date of refund provided in Paragraph (C), above, each of CATCO companies shall file with the Commission an officially certified statement showing the amount of the refund, its manner of computation, and the interest payments related thereto, and a statement from Tennessee acknowledging the receipt.

(E) The certificates issued to CATCO are not transferable and shall be effective only so long as they continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations, and orders of the Commission.

(F) The grant of the certificates to CATCO herein is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the CATCO companies.

[2] Production allocated between 1959 and 1958 on basis of Continental net interest production:

	Continental net interest (14.65 psia)	Percent	Allocated production (14.73 psia)
	Mcf		*Mmcf*
Year 1958	3,832,695	27.72	16,896
Year 1959	9,996,224	72.28	44,056
Total	13,828,919	100.00	60,952

APPENDIX 4

While the condensates may not be in vapor form, movement of such liquids through the pipeline constitutes an engineering problem out of proportion to mere volumes. The factor of 4 was employed in order to recognize the cost relationships between the transportation cost of the gas and the condensates. The computations employed the cost figure of $2,365,584 for the period June 30, 1959–June 30, 1960 from the staff's exhibit as follows:

78,058 barrels (Continental's 1959 liquids) × 1.2 (vapor volume factor) = 93,670 Mcf;
93,670 × 4 (relative cost factor) = 374,680 Mcf.

Mcf gas (1959)	10,014,362	96.394%
Mcf liquids (1959)	374,680	3.606

$2,365,584 (transportation costs June 30, 1959—June 30, 1960) × 3.606% = $85,302;

$$\$85,302 \times \frac{47,169,830 \text{ (CATCO volumes)}}{4 \text{ (companies)}} \times \frac{1}{[1]\ 58,769,006} = \$17,117.$$

[1] CATCO and Shell volumes June 30, 1959—June 30, 1960.

The disparity between the periods covered by these figures and between total volumes and Continental's net working interest volumes requires that the result be considered an estimate only. Furthermore, it is assumed that Shell's gas is being handled in the same way as the CATCO gas.

DECISION

FURTHER PROCEEDINGS ON REMAND UPON APPLICATIONS FOR SECTION 7(C), NATURAL GAS ACT, CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND UPON RELATED SUBSEQUENT APPLICATIONS FILED UNDER THE SAME SECTION OF THE ACT

(Issued August 14, 1961)

SIMPSON, *Presiding Examiner:* This proceeding involves a remand on instructions issued by the Supreme Court of the United States and the reconsideration, as required thereby, of the several applications filed in September 1956, by Continental Oil Company (Continental), The Atlantic Refining Company (Atlantic), Cities Service Production Company (Cities), and Tidewater Oil Company (Tidewater),[1] respectively, each for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act (Act), to authorize the sale to Tennessee Gas Transmission Company (Tennessee) of natural gas produced by or for them from certain joint leases lying offshore Louisiana.

Each of the aforesaid original applications propose the interstate sale of natural gas pursuant to the terms of a separate contract between each Applicant and Tennessee originally committing the producer's 25% share or interest in production from certain specified or limited reservoirs under some 5 joint leases in the West Cameron, 12 such leases in the East Cameron, and 7 such leases in the Ver-

[1] Hereinafter collectively "Applicants" or "CATC companies". Continental filed on September 5, 1956 (G–11024); Atlantic on September 7, 1956 (G–11034); and Cities and Tidewater on September 10, 1956 (G–11046, G–11049), respectively.

million areas of the Gulf of Mexico, respectively, offshore Cameron and Vermillion parishes, Louisiana.[2]

After hearings on the original applications on February 28 and March 1, 1957, the Presiding Examiner filed his initial decision wherein, subject to a condition pertaining to a related application for a certificate filed by Tennessee in Docket No. G–11107, there would have been issued permanent certificates to each Applicant, which for reasons stated in the initial decision would not have been conditioned as to the initial price proposed of 21.4¢ per Mcf (15.025 psia) plus the Louisiana tax of 1¢ per Mcf then in effect.

Summarizing further, the Commission thereafter issued three successive orders—the first on April 22, 1957 (17 FPC 574) granting temporary certificates because of the Commission's view that the evidence of record lacked justification for the price proposed,[3] the second on May 20, 1957 (17 FPC 732) modifying the first to provide for the granting of permanent certificates subject to certain conditions which served to limit the initial price (with tax) to 18¢ per Mcf;[4] and the third on June 24, 1957 (17 FPC 880) after oral argument on rehearing, modifying the second to remove the price condition in order to meet an indication by Applicants of the alternative loss of the gas to Tennessee and its interstate markets.[5]

As the consequence of review initiated in the Court of Appeals by certain petitioner public utility interveners and the New York Public Service Commission the order of the Commission was vacated on jurisdictional grounds (*Public Service Commission of New York* v. *Federal Power Commission*, 257 F. 2d 717, 723 (C.A. 3d, 1958)), a result affirmed by the Supreme Court of the United States on certiorari, but with instructions to remand for further proceedings in accord with its opinion and judgment delivered June 22, 1959, which placed particular emphasis upon the issue of public convenience and necessity as related to the price proposed.[6]

In June 1958, three of the CATC companies had each filed a further separate application seeking additional authorization to sell and deliver to Tennessee natural gas produced from East Cameron Block 63 in accordance with a dedication contained in a certain separate proposal which the latter had accepted that same month. Subsequently Tidewater similarly filed,[7] and by order issued

---

[2] The contract date and the producer's FPC gas rate schedule designation: Continental-Tennessee contract, August 17, 1956, Rate Schedule No. 154; Atlantic-Tennessee contract, August 10, 1956, Rate Schedule No. 185; Cities-Tennessee contract, August 14, 1956, Rate Schedule No. 6; and Tidewater-Tennessee contract, August 14, 1956, Rate Schedule No. 72. On various dates in 1957, 1958 and 1959, each Applicant released its interest in certain leases in 6 blocks in the East Cameron Area and in an equal number of blocks or parts of blocks in the Vermillion Area and assigned or farmed-out a lease in Block No. 86 in the latter area—involving in all interests in some 56,250 acres of the 95,250 acres originally dedicated. Immediately prior to the commencement of the reopened proceedings each Applicant filed an amendment deleting such leases from its application as originally filed. One of the Applicants (Atlantic) has also filed an appropriate supplement to its rate schedule.

[3] Substantially on the grounds that the price proposed (21.4 cents per Mcf, plus tax) was higher than Tennessee was paying under any other contract and that the record contained insufficient evidence on which to base a finding that public convenience and necessity required the sale at the rate level proposed.

[4] The highest price then paid by Tennessee for the purchase of any gas produced in the Southwest area.

[5] Three of the CATC companies were already involved in rate proceedings before the Commission which had been initiated under Section 5(a) of the Act. The latter order advised that the Commission was concurrently instituting a similar rate investigation with respect to the remaining CATC company—Cities, Docket No. G–12780.

[6] The vacation and remand was issued by mandates of the Court of Appeals November 16, 1959. Each Applicant received from the Commission a temporary conditional authorization effective with the issuance of the mandate.

[7] February 29, 1960; based on a corresponding letter agreement of July 1958.

February 16, 1959, in Docket No. G–15330, the Commission granted a certificate to Cities, conditioned as to price,[8] the remaining applications being considered, respectively, as a pending amendment to the original application of the Applicant.

Following the issuance of the mandates by the Court of Appeals, November 16, 1959, the Secretary of the Commission issued his "Notice of Hearing, and Consolidation" dated December 11, 1959, reopening the original proceedings, consolidating that in Docket No. G–15330, and setting the matters involved and the issues presented by the aforesaid original applications, the pending amendments, and the consolidated docket for hearing commencing January 12, 1960. However, upon motion by Applicants for a postponement of the hearing and for a prehearing conference, the Secretary, by notice dated December 30, 1959, entitled "Notice Vacating Hearing and Fixing Prehearing Conference", vacated his previous notice of hearing and directed a prehearing conference be held commencing January 11, 1960, before the designated Presiding Examiner, for the purpose, in part, of fixing a date of hearing within the limits of a date specified by him. The prehearing conference so arranged was held in the manner provided, the Presiding Examiner thereafter filed his "Ruling Specifying Results of Prehearing Conference and Fixing Date of Hearing", dated January 12, 1960, which, among other matters, directed that Applicants prepare and serve the expert testimony to be offered on their behalf not later than, and that the hearing convene on March 15, 1960, for the purpose of receiving, as provided, Applicants' entire cases-in-chief, and for the further purpose of setting a date for the commencement of cross-examination with respect thereto.

In accordance with the foregoing notices and prehearing ruling, these remanded, reopened, and consolidated proceedings came on for hearing, commencing March 15, 1960, and concluding January 19, 1961.[9] Six interveners entered an appearance in the reopened proceedings, of which four took an active part in the presentation of evidence and the cross-examination of witnesses.[10] Simultaneous initial and reply briefs have been filed on behalf of all active participants, including the Applicants, the four interveners, and the Commission's Staff.[11] A final brief has been filed by the Applicants.

By order issued February 24, 1961, the Commission denied a motion made on behalf of Applicants at the conclusion of the hearing on January 19, 1961, to omit the intermediate decision procedure.

The Issues

In the original proceedings the basic issues were those prescribed by the provisions of Section 7(c) and Section 7(e) of the Act—the former section relating to the Commission's jurisdiction over the person and the proposed action, and the latter section relating principally to the qualifications and ability of the

---

[8] *Viz.*, the initial price shall agree with that in Docket No. G–11046 herein and any change which finally results from these proceedings.

[9] There were, in all 48 days of hearing sessions. The record thereof consists of 7,482 pages of additional transcript, 45 additional exhibits, and 27 additional items by reference. Applicants presented 18 witnesses in chief and 3 in rebuttal; three gas distributor interveners presented jointly 7 witnesses; intervener Tennessee 3 witnesses; and Staff 3 witnesses. This compares with 327 pages of transcript, 6 exhibits, 4 items by reference, and 3 witnesses of the remanded earlier proceedings of February 28 and March 1, 1957.

[10] In these reopened proceedings the active interveners are: The Brooklyn Union Gas Company, Long Island Lighting Company, Public Service Electric and Gas Company, (N.J.), and Tennessee Gas Transmission Company. While the New York Public Service Commission, reentered its appearance, and Consolidated Edison Company of New York, Inc., and the Pennsylvania Public Service Utility Commission, respectively, entered initial appearances, none of these latter actively participated in the introduction of evidence.

[11] The New York Commission filed a statement in lieu of initial brief in which it concurred in the joint initial brief of the three gas distributor interveners.

Applicant to perform, as well as to the issue of public convenience and necessity.

In these immediate proceedings no issues remain with respect to the Applicants' status as a "natural-gas-company" (Sections 7(c) and 2(6)) or the jurisdictional character of the existing and proposed deliveries and sale of Cameron area gas to Tennessee, or as to whether any one of the Applicants is "qualified" or is "able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Act and the requirements, rules, and regulations of the Commission thereunder" (Section 7(e)).

The primary issues in these remanded proceedings lie under Section 7(e) and, in effect, are: (1) whether the proposed service, sale, operation, construction—is or will be required by the present or future public convenience and necessity without condition as to the proposed price of 21.4¢ per Mcf (before tax), and, (2) if a condition be required as to price, what that condition should be.[12]

THE CONTENTIONS

In substance, Applicants contend that public convenience and necessity require certificating the CATC sales at 21.4¢ per Mcf; intervener gas distributors contend that the in-line price for the CATC gas is 17¢ per Mcf exclusive of tax reimbursements; and Staff contends that the CATC gas unit cost of service is 17.33¢ per Mcf, that the certificates should be conditioned at a price of 16.4¢ per Mcf (15.025 psia),[13] and that Applicants should be required to refund amounts collected to date attributable to charges made for CATC gas in excess of said rate of 16.4¢.

In support of their contention Applicants assert, in brief, that the CATC 21.4¢ price is in line with prices paid in South Louisiana by interstate pipeline companies during the period 1952–1955 for deliveries of gas to begin as early as November 1953, as well as with the current onshore prices paid under earlier contracts; and that the proposed price is in line with comparable prices as of the time of the Commission's decision herein (June 1957), as well as with prices current.

Applicants additionally assert, in brief, that the reserves dedicated to Tennessee are needed to replace reserves being used to meet the constantly rising demands of Tennessee's customers; and that the reserves are convenient to Tennessee's system, are one of the largest reserves available to the domestic market, and provide Tennessee with access to an area of substantial potential additional uncommitted reserves.

---

[12] Briefly, in its remand opinion the Supreme Court held that the evidence of record was insufficient to support a finding of public convenience and necessity prerequisite to the issuance of permanent certificates, instancing, in effect, that the proposed price (a) was higher than any price paid by Tennessee, including that paid for offshore purchases in the West Delta area of Louisiana; (b) was some 70 percent higher than the weighted average cost of gas to Tennessee; and (c) was greatly in excess of prices paid by Tennessee for gas from leases in southern Louisiana. It also remarked that Tennessee's undertaking to construct the pipeline to the producers' offshore wells was unsupported by evidence of practice or custom in that respect; that there was no data to support treating Tennessee's free transportation of producers' distillates ashore as *de minimis;* that evidence that increases would not be triggered under existing "favored nation" clauses was not convincing; and that there was no support for finding that Tennessee's system was sufficiently in need of increased supplies of natural gas in the premises. The court further held that rates are not the only factor bearing on public convenience and necessity, that a "just and reasonable" rate hearing was not a prerequisite to the issuance of a producer certificate, but that recent price trends made price a matter of prime importance in such cases.

[13] No explanation is given for recommending a 16.4 cent price.

Applicants also assert, in brief that trends in demand, supply, costs, revenues, and price support the proposed price (21.4¢).

Applicants further assert, in brief, that Tennessee's construction of the offshore CATC pipeline and gathering facilities is based upon a general industry practice to receive the gas in the field where produced; that the contract provision for the transportation by Tennessee of CATC distillate and liquifiable hydrocarbons without charges confers upon Tennessee operating advantages of a substantial nature and in any event would impose upon the latter but *de minimis* costs.

Applicants finally assert that the proposed price has not triggered the favored nation clause in any purchase contract.

Tennessee asserts, in brief, that at the time of the negotiation of the CATC contracts other sales were being made in the southern Louisiana area at total prices ranging from 20¢ to 21.4¢ per Mcf; that with an originally assumed purchase of 87,600,000 Mcf of CATC gas for an entire year (240,000 Mcf per day) the weighted average cost of gas to it for 1958 would have been increased by but 0.97¢; and, that the actual increase in Tennessee's weighted average purchase costs for 1959 attributable to a full year's purchase of CATC gas was less than 0.44¢ per Mcf.[14]

Tennessee also asserts, in brief, that it has an urgent need for the additional supply of natural gas; that the CATC gas reserves are readily accessible to its system; that these reserves have a suitable deliverability and their acquisition is particularly beneficial to it; and that its construction of facilities affords ready access to additional potential reserves in the area.

Tennessee further asserts, in brief, that with respect to larger reserves of natural gas it is common practice for pipelines to take the gas in the field and to construct the necessary facilities to do so; that its transportation of distillate and liquifiable hydrocarbons for the CATC Applicants in the gas stream from the platform to a shore separation facility affords an advantage to Tennessee in contributing to the disposal of these products in a manner which assures a steady rate of delivery of the gas; that no cost for this movement is incurred so long as Tennessee has unused capacity in its CATC facilities and that even if the gas carrying capacity of these facilities are reduced by the volume of these products carried the cost of transportation would be equivalent to but 0.015¢ per Mcf of gas transported.

Tennessee finally asserts that the CATC contracts do not affect or trigger the price in any other gas purchase contract of itself or any other purchaser.

The intervener gas distributors assert in support of their contentions, in brief, that the benchmark is the 1957 price level in the southern Louisiana producing area; that the evidence in these proceedings falls short of establishing that Tennessee's need for the CATC gas is of such urgency as to justify issuance of unconditioned certificates; that the capital cost per Mcf of gas reserves discovered in the Cameron area is in line with average company experience, that Applicants' conclusions with respect to the trends of productivity and drilling costs per Mcf of new reserves found are unwarranted; and, that the infirmities shown in major items render Continental's cost of service evidence unacceptable as a justification for a price higher than Interveners' contended-for in-line price of 17¢.

Staff asserts, in brief, that utilizing book figures of the operator, Continental, for the test year 1959, making proper adjustments thereto for out-of-period

[14] Approximately 10,000,000 Mcf of CATC gas as compared with Tennessee's 1959 actual requirements of 721,076,409 Mcf—15,025 psia. The former figure represents an average of 27,397 Mcf per day.

or non-recurring costs, and applying accepted methods of allocation, a unit cost of service of 17.33¢ per Mcf is obtained for the CATC Applicants' Cameron area gas.

Further contentions of the participants are as set forth in following sections of this decision which dispose of the specific matter in controversy.

The Evidence and Findings

Tennessee's Gas Requirements

Tennessee's system traverses 16 states from Texas to New England and serves some 100 customers, among them distributing companies supplying natural gas in many large cities and industrial areas east of the Mississippi River. Some 70% of Tennessee's customers are requirements type of customers, solely dependent upon Tennessee for their supplies of natural gas.

While as of August 1956, when the CATC gas purchase contracts were executed, Tennessee's system peak day deliverability was 2,361,000 Mcf as of 1959 Tennessee's authorized peak day deliverability amounted significantly to 3,083,000 Mcf. Correspondingly, 1956 actual annual requirements of 635,152,000 Mcf increased, to an actual total of 666,139,000 Mcf in 1957, and again to 735,518,000 Mcf in 1959 (14.73 psia).[15]

In 1958, Tennessee's life index, including Cameron area reserves, stood at 17.3 years,[16] but it is to be noted that in the matter of the application filed by Tennessee in 1958 to serve gas to the Chicago-Gary area of northern Illinois and northern Indiana (Docket No. G–16842), it appeared that Tennessee could assure a deliverability for full system requirements from slim and depleting reserves for only 11 years and that the Commission in its opinion issued May 12, 1959, there held, in effect, that in the matter of future expansion applications Tennessee would first have to demonstrate its ability to supply all existing and proposed requirements for a period of at least 12 years (Opinion No. 320, 21 FPC 653 at 657 and 664).

It is also to be observed that Tennessee has been filing substantial applications year by year to meet the increased requirements of its customers and that

[15] Including sales, net storage, and used, lost and unaccounted for gas. While these figures represent a 1956–1959 increase in annual requirements of 15.8% they fail to give full effect to two large deliveries which did not commence until the fall of 1959. Increases in peak day deliverability, including latterly, Midwestern Gas Transmission Company, are generally reflected in the following table, thus:

Docket and filing date	Peak day deliverability (Mcf)	Status
At August 1956	2,361,000	Authorized.
G–11107 (1956)	2,719,000	Authorized.
G–16842 (1958)	3,083,000	Authorized.
CP60–94 (1960)	3,234,000	Application.

[16] However, in this proceeding Tennessee has reduced its estimate of Cameron offshore original recoverable, reserves from an initial 1.68 trillion cubic feet to some 1.323 trillion cubic feet (14.73 psia). Applicants have also currently revised their original estimates downward to 0.7 trillion cubic feet (14.73 psia) which would have provided a life index contribution of about one year.

based upon customers' estimates Tennessee is confronted with the probability of having to continue to meet such increases in requirements in the future.[17]

There is no doubt but that in 1956 Tennessee required, and also now requires, the Cameron gas volume as a part of a supply which it had to have and has to have to maintain deliveries from depleting reserves and to meet the continually increasing demands of its customers.

CATC-Cameron Natural Gas Reserves

Current estimates of initial reserves in place dedicated to the Tennessee contract are (14.73 psia) :[18]

Field Block	Applicants' (Exh. 21) (Mmcf)	Tennessee's (Exh. 40) (Mmcf)
62	89,038	95,843
64	44,750	141,810
71	178,085	220,811
192	560,083	1,122,361
Total	871,956	1,580,825

The estimate of such reserves for the Blocks 49 (abandoned) 62, 71 and 192 fields, testified to by the same Tennessee witness and received in the original hearing (1957) as a part of Applicants' case-in-chief, totalled the considerably larger amount of 1,995,659 Mmcf (14.73 psia).[19]

The evidence pertaining to witnesses' qualifications, and to the volumetric methods of estimating reserves used by each, affords an insufficient basis upon which to select between reserve estimates on the basis of the relative competency of the two witnesses or on the basis of the method used. However, previous estimates of reserves, in effect presented on behalf of both Applicants and Tennessee in the original hearing, serve to cast upon Applicants a particular burden of proof or persuasion which, as a matter of law, is in no-wise altered either by the fact that Applicants' witness for the first time presents his own

[17] The increases in estimated annual requirements, including those of its affiliate Midwestern Gas Transmission Company have been in part as follows :

For	Estimated requirements	
	G–9454, 1956 (Mcf)	CP60–94, 1960 (Mcf)
1962	856,526,000	948,624,000.
1963	864,289,000	945,583,000 (sic).
1964	864,333,000	949,704,000.

[18] Unless otherwise stated all reserve volumes are on a 14.73 psia pressure basis.

[19] The exclusion of the overestimate of original gas in place in the Block 49 field (38,141 Mmcf) reduces the 1,995,659 Mmcf to 1,957,518 Mmcf. The application of 80% and 85% recovery factors to the 1,995,659 produces the then estimated recoverable reserves of 1,673,926 Mmcf.

estimate of such reserves or by the mere fact that Applicants have conducted additional drilling since the earlier estimates.[20]

Omitting reference to the depleted and abandoned Block 49, and also excluding at this stage reserve estimates presented for the first time with respect to Block 64, Applicants' N, P and Q sands of Block 71, and the C, D, I, No–1, and S sands of Block 192,[21] there results the following direct comparison between the current estimates of original reserves in place and those previously testified to in 1957 with respect to Exh. 2 (14.73 psia):

Field Block	Joint Exh. 2 (Mmcf)	Applicants' Exh. 21 (Mmcf)	Tennessee's Exh. 40 (Mmcf)
62	232,776	89,038	95,843
71	288,840	127,154	171,311
192	1,435,903	538,757	1,059,968
Total	1,957,519	754 949	1,327,122
Percent of Exh. 2	100.0	38 6	67.8

The volumetric method as used by both witnesses requires a determination of the reservoir void space (cubic feet per acre-foot) as a step in estimating gas in place,[22] and a determination of average reservoir pressure at datum level,[23] reservoir temperature,[24] and a compressibility factor related to gravity and reservoir pressure,[25] all to obtain gas in place per acre foot. Upon the further determination of area and sand thickness to get reservoir volume in acre feet and ultimately total gas in place, the subsequent application of a recovery factor yields the estimated recoverable gas.[26]

Thus the eight factors having a prime bearing upon the volumetric method's result include productive area, sand thickness, porosity, connate water percent, average reservoir pressure, reservoir temperature (°F), compressibility, and the recovery factor, and with respect to each, as applied to most of the sands in each of the fields, there are generally substantial differences between the two witnesses, and between each of them and Exh. 2.

---

[20] Exh. 2 sub-surface data rests principally upon the drilling of 10 CATC producing wells and 2 dry holes, Exh. 40 data upon the drilling of a cumulative total of apparently 23 CATC producing wells and 5 dry holes, by fields as follows:

Field Block	Exhibit 2 producers	Dry holes	Exhibit 40 producers	Dry holes
49	1	1		
62	1		2	1
64			2	1
71	2		5	1
192	6	1	14	2
Total	10	2	23	5

[21] The witnesses only infrequently correlate their differently designated but corresponding sands. However, depths, reservoir pressures, adjusted production data, and completions, laboriously paralleled, appear to yield reasonably safe correlations.

[22] Involving the application of a porosity percent and connate water factor to a gross void of 43,560 acre-feet.

[23] Used in terms of atmospheres, i.e., a multiple of an assumed atmospheric pressure, here 14.73 psia.

[24] Used in terms of a temperature correction factor.

[25] The "Z" factor; used as 1/Z.

[26] Before a small shrinkage due to condensation and fuel losses.

The Original Fields and Sands Block 62 Field

The productive limits of a reservoir represent the gas-water contact, or the location of faults or barriers, or limits established by means of log and core analysis.

The productive area for the sands in the Block 62 field, less the D–4 sand omitted in Exh. 40, is computed in Exh. 2 to total 4,530 acres, compared with 3,109 acres computed in Exh. 21, and 2,159 acres in Exh. 40, the indicated average reductions in the original acreage (Exh. 2) amounting to 31% in the former exhibit and 52% in the latter.

This field has had a dry hole (A–4) drilled since the preparation of estimates in 1957. While from both exhibits it would seem that this fact operates to effect a reduction in the estimated productive limits for the D–3, D–4, F–1, and F–2 sands, it would likewise appear that no such effect results with respect to the F–3 sand. However, other than inconclusive testimony of Tennessee's witness pertaining generally to the removal in Exh. 40 of the seismic fault (Exh. 2) of the F–1 sand, and the extension of the adjacent MCN area in the case of the F–3 sand, the only testimony which throws any light on the reductions is the reference by Tennessee's witness to the additional drilling which, in the witness' summary language, more or less narrowed sand productive limits down to the confines of the drilling unit. Thus, the current conclusions of neither witness as to sand productive limits are so supported by the testimony as to justify the respectively proposed reductions.

All other things being equal the evidence does require here acceptance of those estimates which would have the lesser effect in reducing the estimated productive area upon which Applicants have herein previously stood. Accordingly, Applicants' witness' estimate of 3,424 stated acres of productive area for the Block 62 sands, including the D–4 sand, is accepted.[27]

Sand thickness or the net pay rests principally upon an interpretation of electric and micrologs.

Applicants' witness consistently reduces the estimated sand thicknesses in this field, whereas Tennessee's witness manifests a certain tendency to increase them, explaining elsewhere in his testimony that such increases have been due to changes based on further experience in the interpretation of electric logs in the offshore area. As above stated, since the time of Exh. 2 there has been certain additional drilling, particularly in the MCN–CATC field unit. Data obtained from the resulting wells and dry holes has apparently influenced the sand thickness as well as the productive area results obtained.

Using the above accepted 3,424 acre-feet for the four stated sands and the individual thicknesses assigned them in Exhs. 2, 21, and 40, respectively, a general overall comparision of the sand thickness determinations, in the form of weighted averages, results as follows:

	Exh. 2	Exh. 21	Exh. 40
Average sand thickness (feet)	24 3	13 1	21 9
Relative percent	100 0	53. 9	90. 1

As before stated, in relation to estimates of productive areas, it is here also appropriate to take that qualified or supported estimate which shows the lesser reduction with respect to the previous Exh. 2 individual sand results. It is

[27] Including an estimate of 315 acres for the D–4 sand. The participants treat the difference in reserve estimates for the Block 62 field as not significant. However, larger differences in results, such as those which appear with respect to the Block 192 field, require a general analysis of similar underlying factors in other fields.

noted that in the instance of the D–3 and F–2 sands, however, the witnesses disagree as to the direction of the sand thickness correction, as compared with Exh. 2, Applicants' witness reducing and Tennessee's increasing it.

On the basis of the foregoing and in these prevailing inconclusive circumstances and consistent with the method of selection herein established, it is appropriate to make the following selections of sand thicknesses from the three exhibits: D–3 sand, 8.0 feet; D–4 sand, 3.9 feet; F–1 sand, 21.6 feet; F–2 sand, 16.0 feet; and the F–3 sand, 20.3 feet.

With respect to porosity, all three exhibits use a factor of 30% except that Applicants' witness applies 28% to the F–1 sand and 32% to the F–2 sand which to that extent serves to produce a relative net negative difference of but 321 acre feet (1.6%) a matter of relatively minor proportion. The 30% therefore appears to be an acceptable porosity factor for these sands.

Applicants' witness employs a connate water factor of 25%, as compared with the 20% used in Exh. 21 and retained by Tennessee's expert. No justification appears for a change to the 25% factor.

Average pressures vary only with respect to two sands, but due to differences between the witnesses as to average depths, Applicants' witness is using, in effect, slightly lower pressures with increases in depth. This witness measured reservoir pressures where available but otherwise calculated pressure by applying an established regional gradient to the average depth of the reservoir. Tennessee's witness used average initial pressures based on actual pressure surveys where available or derived a pressure from a gradient curve normal for the general area. Nothing in the evidence indicates what was done in the instance of this (Block 62) field. However, the differences are not critical.

Temperatures differ substantially only with respect to the shallower D–3 sand and, except for the use of an interpolated temperature for the D–4 sand, it is proper to accept those used by Tennessee's witness.[28]

Applicants' witness calculates the compressibility factor from data obtained from gas analyses where available and otherwise from general charts based on the laboratory compressibility of gases of various gravity, whereas Tennessee's witness obtained the deviation factor from prepared curves of an undisclosed nature. The evidence of record fails to impeach the deviation factors originally presented in Exh. 2.

The reserves resulting from the foregoing selection of porosity, connate water, atmospheres, temperature correction and compressibility factors and selections of sand Mcf per acre foot are in general close to those determined by Tennessee's witness but higher than those obtained by Applicants' witness.[29] Reservoir volumes in terms of productive acre feet, while lower than the results in Exh. 2, are generally so much higher than those contained in Exh. 40 and Exh. 21

[28] Only Tennessee's witness provides data concerning the related temperature correction factor.

[29] Gas unit volumes by sands, thus (14.73 psia):

Sand	By selected factors (Mcf/acre-feet)	Exhibit 21 (Mcf/acre-feet)	Exhibit 40 (Mcf/acre-feet)
D–3	1989	1912	2019
D–4	1965	1928	
F–1	2183	1914	2190
F–2	2337	2328	2334
F–3	2328	2228	2323

as not to be entirely comparable.[20] The foregoing considerations indicate, in totality, that the evidence fails to support acceptance of a gas reserve estimate for the Block 62 field less than that testified to by Tennessee's witness. (95,843 Mmcf).[21]

Block 71 Field

Here too the testimony affords no simple basis upon which a selection may be made between the conflicting reserve estimates for the Block 71 field. The combined results do indicate, however, the propriety of a downward revision of the estimates set forth in Exh. 2.

Less the untested G–1 sand omitted in Exh. 40, and not including the later N, P and Q sands, the overall sand productive area for the field is computed in Exh. 2 to total 6,940 acres, compared with 3,979 acres computed in Exh. 21, and 4,533 acres in Exh. 40. The average areal reduction thus amounts to some 43% in Exh. 21 and 35% in Exh. 40. In arriving at their respective estimates both witnesses used the available well information, but Tennessee's witness also consulted geophysical interpretations, which Applicants' witness did not do.[22]

The Block 71 field has had a dry hole (A–5) and 3 wells drilled since the preparation of estimates in 1957 (Exh. 2). The drilling has apparently led both witnesses to reduce productive limits of the various sands, except that in lieu of previous limits Tennessee's witness assigns 640 acres of productive area to the I–4 sand, penetrated by the A–2, –4, and –6 wells and a dry hole, as contrasted with Applicants' witness' enlargement of the corresponding original productive area. Exh. 2 indicates a single well completion in each of the H–1 and I sands, later Exhibits 21 and 40 indicating 3 completions in the H–I sand, 2 in the I sand, and 1 in the I–4 sand. Proceeding according to the premises established in the instance of the Block 62 field, above, Tennessee's witness' estimate of 4,533 acres of productive area for the Block 71–H–I, I, and I–4 sands is accepted, to which is added an area of 431 acres for the so-called H (or G–1) sand as computed by Applicants' witness. While there are no completions in this latter untested sand, Applicants' witness did have core analyses pertaining thereto. Accordingly, a productive area of 4,964 acres is accepted for the four original sands in the field.[23]

---

[20] Productive acre-feet, thus:

Sand	By selected factors (acre-feet)	Exhibit 2 (acre-feet)	Exhibit 21 (acre-feet)	Exhibit 40 (acre-feet)
D–3	3,584	9,808	2,395	6,867
D–4	1,229	5,084	1,240	
F–1	23,587	35,848	10,989	11,515
F–2	7,536	9,741	4,706	7,064
F–3	31,073	43,559	22,484	17,334
Total	67,009	104,100	41,814	42,780

[21] In totals (14.73 psia): on the basis of the selected factors—150,984 Mmcf; Exh. 21—89,038 Mmcf; and Exh. 40—95,843 Mmcf. Cf., Exh. 2—232,776 Mmcf.

[22] The witness's direct examination and cross-examination going to the employment of geophysical data as a tool in the instance of multi-layer sands such as characterize these fields is very inconclusive as to the reliability and usefulness of such data.

[23] The total includes the assignment by Tennessee's witness of 640 acres to the I–4 sand in lieu of Applicants' witness' estimate of 1,736 acres and the 1,232 acres of Exh. 2. While this sand appeared in 4 wells, has a completion in one well, and was tested in yet another, the witness testified that a permeability barrier and some water is involved—matters which Applicants' witness does not mention or reflect in his exhibit and which Applicants' did not rebut.

Except for the G–1 sand both witnesses increase the sand thicknesses. Using the foregoing accepted productive area acreage as a weighting factor generally comparable weighted average sand thicknesses for the combined H–1, I and I–4 sands results as follows:

	Exh. 2	Exh. 21	Exh. 40
Average sand thickness (feet)	17.32	18.46	18.63
Relative percent	100.0	106.6	107.6

For the reasons stated previously, in relation to the Block 62 field, and in the absence of a specific justification or support in the testimony for any other determination, it is appropriate here also for testing purposes to take that estimate of thickness which shows the lesser change with respect to the earlier Exh. 2 results upon which both Applicants and Tennessee previously stood. Accordingly, the following thicknesses are accepted, to wit: G–1 sand, 5.8 feet; H–1 sand, 21.3 feet; I sand, 15.2 feet; and the I–4 sand, 8.0 feet.

The Exh. 2 porosity of 30% is reduced in both Exhs. 21 and 40 to 25%, except with respect to the H–1 sand where Applicants' witness uses 27%. Tennessee's witness did not use the inherently unreliable side-wall core analyses as a sole determining factor but relied on higher porosities in the Miocene sand as indicated by electric logs and information pertaining to southern Louisiana and off-shore fields. Applicants' witness considered available core analyses but used the electric logs and employed a judgment based upon his 15–16 years experience and familiarity with area fields. However, there is no specific justification in this evidence for using in the single instance of the H–1 sand a porosity higher than the otherwise generally applied 25%.

Tennessee's witness retains in Exh. 40 the 20% connate water factor previously used in Exh. 2. Applicants' witness uses 20% for the H–1 and I sands, 25% for the G–1 sand, and 30% for the I–4 sand. Because of core contamination by the drilling fluid, Tennessee's witness did not use side-wall core analyses for the determination of the connate water percent, but did use as a guide those certain laboratory results pertaining to Miocene samples taken by other companies in area fields which indicated connate water factors in the order of 12–20%. Applicants' witness considering the available side-wall core analyses, determined connate water percents from the electric log. However, he offers no specific support for the higher percents selected by him. Accordingly, a connate water factor of 20% is acceptable for these sands.

Initial reservoir pressures used by Applicants' witness are higher for the G–1, H–1, and the I–4 sands[34] but lower for the I sand; while those used by Tennessee's witness are lower for the H–1 sand and higher for the I and I–4 sand. The methods used by the witnesses to determine pressures—actual pressures where available or pressures calculated from gradient curves—is explained in connection with the above considerations pertaining to the Block 62 field. None of the testimony attempts to reconcile or explain these several differences. Adopting, again, the rule of least departure from the data contained in Exh. 2, for the reasons and to the extent previously stated, the following pressures are accepted: G–1 sand (untested), 3470 psia, H–1 sand, 3551 psia, I sand, 4118 psia, and the I–4 sand 4459 psia.

Applicants' witness adopts for each sand a reservoir temperature significantly lower than that appearing in Exh. 2, while Tennessee's witness substantially retains the earlier temperatures.

[34] The exceptionally low pressure given the I–4 sand in Exh. 2 cannot be reconciled in any degree with those currently used for that sand by either witness. The differences between the witnesses in pressures does not appear to be directly related to differences in depth.

As before Applicants' witness used available measured reservoir temperatures, otherwise temperatures calculated by the application of an established regional gradient. Tennessee's witness, who made the earlier determinations in Exh. 2, following the same procedure, used where necessary temperatures taken from a curve derived from reservoir measurements taken in southern Louisiana area fields. Neither witness explaining the temperature determination here used by him,[35] the reservoir temperatures appearing in Exh. 2 are retained along with the corresponding temperature factor.

With respect to deviation Applicants' witness has used factors generally higher than those in Exh. 2, while Tennessee's witness, in substance, retains the Exh. 2 factor for the H–1 and I sands but increases the factor for the I–4 sand.[36] No justification exists for changing the factors used in Exh. 2 for the untested G–1 sand or the H–1 and I sands. The factor determined for the I–4 sand by Applicants' witness is accepted.

The reserves in place which result from the foregoing selections of porosity, connate water, atmospheres, temperature correction and compressibility factors, as well as area and sand thickness, as a test indicate that the record supports the acceptance of a gas reserve estimate for the above 4 stated sands of the Block 71 field of the approximate magnitude of that derived by Tennessee's witness. (171, 311 Mcf.) [37]

Block 192 Field

With respect to this field the testimony again affords no sufficient basis upon which to choose directly between the reserve-in-place estimates proposed by the two witnesses.

The Block 192 field had 6 producing wells and 1 dry hole drilled at the time of the 1957 estimates, since which an additional 8 producing wells and 1 dry hole have been drilled. All the original Exh. 2 sands have been at least tested.[38]

[35] Applicants' witness testified offhand to a general gradient of 1.2°–1.4° F. per 100 feet of depth plus a mean surface temperature of 74° and it would appear that this witness has used an average of the foregoing while Tennessee's witness has used the 1.4° F. rate.

[36] The general methods by which the witnesses derived these factors has been previously explained (Block 62 field, *supra*).

[37] The comparative initial reserves are (14.73 psia):

	By selected factors (Mmcf)	Exh. 2 (Mmcf)	Exh. 21 (Mmcf)	Exh. 40 (Mmcf)
Total gas in place	160,649	288,840	127,154	171,311
Less G–1 reserve	4,847	31,081	4,463	
Resulting reserves	155,802	257,759	122,691	171,311
Percent index	60.4	100.0	47.6	66.5

[38] Completions are as follows:

Sand	Exh. 2 (1957)	Exh. 40 (1960)
B–15	1	4
C–1		
D–2	1	2
D–4	1	1
G–2		2
I	1	2
I–2	2	2
J–3	1	1
L–1	1	4
Total	8	18

For structural interpretation Tennessee's witness used log and core information available from all wells drilled in the Block 192 field, including that from certain wells drilled by Shell Oil Company in adjacent Block 82,[39] as well as certain geophysical information Applicants' witness proceeded in the same manner, on the basis of like information obtained from like sources, and in brief, found productive limits through the use of electric logs and core analyses but did not use seismic data.

The estimated productive area for the Exh. 2 sands of this field totalled 24,892 acres in Exh. 2, as compared with a generally corresponding estimate of 10,185 acres in Exh. 21 and 15,095 acres in Exh. 40. The reduction in areas of sands appearing in Exh. 2 thus averages some 60% in Exh. 21 and 40% in Exh. 40.[40]

The resort by each witness to substantially the same underlying data contributes to the impossibility of making a simple selection between the area results obtained by each. However, as in the instance of the preceding fields, it is appropriate to resort to the earlier estimates contained in Exh. 2 as a guide to the determination of whether Applicants have here sufficiently discharged their burden of proof as to the issue of initial reserves in place.

The productive areas determined by Tennessee's witness are less than those in Exh. 2 in six sands.[41] Applicants' witness' sand areas are less than those in Exh. 2 or Exh. 40 in all instances except with respect to the L–1 sand, where the area is greater than in Exh. 2 but less than in Exh. 40.

For the 6 sands the total area found by Tennessee's witness of 9,640 acres is accepted. With respect to the C–1 sand Tennessee's witness' area is but 2.7% greater than that in Exh. 2, while Applicants' witness' area is 46.7% less. With respect to the I sand Tennessee's witness determines an area some 15% larger than in Exh. 2, while Applicants' witness determines an area smaller than in Exh. 2 by approximately 5%. In these circumstances the areas used in Exh. 2 for the C–1 and I sands are not to be considered as impeached. With respect to the L–1 sand, where completions have increased from 1 to 4 since 1957, Applicants' witness increases the area computed in Exh. 2 of 1,357 acres by some 34% while Tennessee's witness increases the area by some 94%. While neither change is specifically supported, for the reasons previously given, the L–1 sand area determined by Applicant's witness of 1,821 acres is accepted.

There is agreement by the witnesses that the previously listed E–1, E–2, and F–2 sands contain no recoverable reserves.[42]

Using the pay thicknesses set forth in each of the three exhibits for the sands here in question and weighting by the respective portions of the 14,022 acres of total productive area, determined as in the second preceding paragraph, average thicknesses result as follows:

	Exh. 2	Exh. 21	Exh. 40
Average sand thickness (feet)	24.6	21.6	25.1
Relative percents	100.0	87.7	102.3

Proceeding as previously herein it is appropriate in the absence of any specific justification for any other determination, to take generally that estimate of sand thickness supported by the testimony of a qualified expert witness which shows the lesser reduction from the Exh. 2 computation, as follows: B–15 sand,

[39] Used in relation to the ER, FL, FQ, FN, IB, IE, and JK sands

[40] For the E–1, E–2 and F–2 sands, excluded both by Exhs. 21 and 40, Exh. 2 computes a combined productive area of 5,300 acres.

[41] I.e., all but the C–1 I, and L–1 sands.

[42] Formerly estimated to total some 202,527 Mmcf.

18.3 feet; C–1 sand, 9.1 feet; D–2 sand, 13.2 feet; D–4 sand, 26.0 feet; G–2 sand, 13.1 feet; I sand, 23.4 feet; I–2 sand, 26.7 feet; J–3 sand, 29.9 feet; and the L–1 sand, 35.2 feet. These selections yielded an overall average which is 95.6% of the foregoing Exh. 2 average of 24.6 feet.

Porosity determined in Exh. 2 to be a consistent 30%, is uniformly increased sand by sand in Exh. 40 to 32%, whereas in Exh. 21 Applicants' witness employs porosities which range from 29% to 32%.

The sands in this field are similar in type and Tennessee's witness assumed that each would have the same porosity. This witness also testified that while core analyses served as a good guide to porosity, the sidewall core, due to the manner in which taken from the sand, often gives a lower porosity than is actually present, and therefore, in effect, based these conclusions in part upon the results of similar analyses made from samples taken on the Shell Oil Company acreage which ran as high as 32% to 35%, and in part upon more reliable analyses of conventional or diamond cores of which he had available a fair amount for the Miocene sand in certain fields in southern Louisiana.[42] Applicants' witness particularly emphasized his use of electric log interpretations in such circumstances.

Using the volumes resulting from the previously selected area and thicknesses factors, *supra*, the porosities determined by Applicants' witness produce a weighted average of 30.3%, as compared with 30% of Exh. 2 and 32% in Exh. 40.

In accordance with the general principle of selection previously adopted the porosities determined in Applicants' Exh. 21 are generally appropriate and are therefor here selected.

In determining the interstitial or connate water percent, Applicants' witness considered all available core analyses but because the CATC cores were, as before, generally contaminated side-wall samples relied upon electric logs and judgment. He uses a lower percent than the Exh. 2, particularly for the C–1, D–2, and J–3 sands (15–18%), and a higher percent for the I sand (22%).

While Tennessee's witness had available 24 core analyses from the CATC and Shell Oil Company wells in the field he appears to have relied upon the interpretation of electric log data and a general knowledge of similar sands in the area. For instance, he had seen laboratory results of samples taken by other companies in similar type sands in various fields throughout the general area which ran within the range of 12% to 20%, and knew that Shell Oil Company also uses 12–15% with respect to Block 192 field. On this basis, apparently, he continues the use of a 20% connate water factor as in Exh. 2. A lower connate water percent has the tendency of increasing the reserve estimate while a higher one has the contrary effect.

The testimony of Applicant's witness is too general to support the varying percents which he uses and, accordingly, those established in Exh. 2 are not considered to have been impeached.

As before, Applicants' witness determines reservoir pressures by using measured pressures or, where such are not available, by using an established regional gradient to the average depth of reservoir; and, Tennessee's witness by using the actual initial reservoir pressure or a normal gradient curve derived from actual pressure surveys for the general area. The pressures in Exhs. 21 and 40 vary from those in Exh. 2 particularly for most of the deeper sands (below G–2) with the I sand exhibiting in Exhs. 2 and 40 a possible anomalous pressure-depth situation.

---

[42] The same witness also stated generally that his increases were due to additional information and growing experience with respect to this type of sand throughout the general area.

The comparative average relationships in order of sand depths are as follows: [44]

Sands	Exh. 2 (Av. psi/ft)	Exh. 21 (Av. psi/ft)	Exh. 40 (Av. psi/ft)
B–15—G–2	0.466	0.468	0.470
I	.589	.490	.574
I–2, J–3, L–1	.542	.508	.523

With due regard to the pressure-depth relationships and the practical rule, hereinbefore adopted, of generally selecting data from Exhs. 21 and 40 which represent the least departure from that previously established in Exh. 2, and in the absence of justification for any other determination, the pressures for sands B–15, G–2, I, and J–3 are selected from Exh. 40 and for the C–1, D–2, D–4, 1–2, and L–1 sands from Exh. 21. Applicants' witness offers no justification for the use of an I sand pressure other than that which appears in Exh. 2 or Exh. 40. [45]

Temperatures are determined, as described in relation to the preceding fields, by actual measurements or from gradient curves. Applicants' witness' temperatures for the 4 upper sands (B–15 through D–4) are substantially consistent with those in Exh. 2. Tennessee's witness uses slightly lower temperatures for the D–2 and D–4 sands, along with a datum shallower than that indicated in Exh. 2 for the D–2 sand, and a temperature gradient smaller for the D–4 sand. With respect to the remaining 5 deeper sands Applicants' witness employs markedly higher temperatures due to an unsupported average 1.4° (F.)/100 ft. temperature gradient as compared with a 1.2° gradient in Exh. 2.[46] Tennessee's witness uses a gradient approximately equal to the 1.2° of Exh. 2 with no significant adjustments in datum depths. The result is that one expert in effect confirms the data of Exh. 2 for the upper sands and the other the data for the lower sands. In these circumstances, and in the absence of evidence requiring some other determination, the average reservoir temperatures of Exh. 2 and the accompanying temperature correction factors are retained.

The Exh. 2 deviation or compressibility factors for the upper sands (B–1 through D–4) are confirmed by one or the other of the two witnesses. Each witness arrives at some small increase for the G–2 and J–3 sands. While Applicants' witness reduces the factor for the I sand, Tennessee's witness confirms the Exh. 2 determination. The factor used in Exh. 2 for the I–2 sand is, in effect, unimpeached. Accordingly, these factors are selected as indicated, including that which accords with the agreed estimates for the G–2 and J–3 sands, along with that computed in Exh. 2 for the I sand and Tennessee's 0.99 for the L–1 sand.

Initial reserves in place for these 9 sands of the Block 192 field, computed by use of the foregoing selected factors, areas, and sand thicknesses, compare with the results of Exh. 2, 21, and 40, as follows:

[44] Cf., *Petroleum Reservoir Engineering,* Amyx Bass and Whiting (1960), specifically "Reservoir Pressures", p. 579, where it is stated that 0.465 psi/ft., is normal for the Louisiana and Texas Gulf Coast area.

[45] The sand is a tested sand. At the time of the preparation of Exh. 2 the sand had 1 completion and at the time of the two later exhibits, 2 completions.

[46] As to the nature of these gradients see the part of this decision above which deals with the preceding Block 71 field.

	By selected factors (Mmcf)	Exh. 2 (Mmcf)	Exh. 21 (Mmcf)	Exh. 40 (Mmcf)
Total gas in place	843,895	1,233,376	538,757	1,059,968
Percent index	68.4	100.0	43.7	85.9

Thus, Applicants' estimates of initial reserves in place are 43.7% and Tennessee's are 85.9% of those estimates in Exh. 2. While selected factors indicate a test possibility that Tennessee's reserves are 17.5% too high they deny support for Applicants' lower estimates.[47]

The conclusion to be drawn from the conflict of the expert testimony, the foregoing test results, and resulting reserve comparisions is that Applicants' estimates for this field which appear in the current exhibit are not supported by the evidence, and that an estimate lower than Tennessee's is not of necessity acceptable.

New Field and Sands

In addition to the sands originally appearing in Exhibit 2, Applicants' witness and Tennessee's include in their current estimates initial reserves for the Block 64 field, not established at the time of the earlier estimates, and for some 8 additional sands in the Block 71 and Block 192 fields. Due to incomplete supporting evidence, and absent a reference such as was available for the old sands in Exhibit 2, the question immediately involved is whether Applicants' mere listing of eight component factors in the instance of each sand is of itself sufficient to prevail over what amounts to a completely similar listing by Tennessee's witness supporting substantially different results.[48] In the light of the overall precedent results relating to the old sands the answer is necessarily in the negative.

The estimates of initial reserves for the new sands compare by fields as follows (14.73 psia):

Field block	Exhibit 21 (Mmcf)	Exhibit 40 (Mmcf)
64	44,750	141,810
71	50,931	49,500
192	21,326	62,393
Total	117,007	253,703
Percent index	46.1	100.0

Thus the percent index of 46% for the Exhibit 21 results for the new field and sands compares with the corresponding percent index of 57% for the old sands. On the other hand test results obtained by the selection of factors according to the methods hereinabove set forth, constitute an overall 87.07% of the results set forth in Exhibit 40. In the absence of supporting data, or indeed of any data permitting any other approach, the initial reserves accepted for the purposes of this decision as appropriate for the new field and sands will

[47] The difference between the result derived by the selected factors and those of Exhs. 21 and 40, respectively, are largely due to the areal and pay thickness considerations. With respect to Exh. 21 results, 80% of the difference is due to the selection of sand area and thickness while with respect to Exh. 40 71% of the difference is due to such selections.

[48] These component factors, as for the Exhibit 2 sands, are porosity, connate water, atmospheres, temperature correction, deviation, productive area, pay thickness and a recovery factor.

constitute the same relative percent as do the herein computed test results for those sands originally listed in Exhibit 2, and considered in the preceding sections of this decision.[49]

Except for the reserves recovered from the abandoned Block 49 field, the resulting totals of accepted initial reserves in place, old and new, and the comparable Exhibit 21 and Exhibit 40 total results are (14.73 psia):

Field block	Accepted (Mmcf)	Exhibit 21 (Mmcf)	Exhibit 40 (Mmcf)
49			
62	95,843	89,038	95,843
64—new	123,474	44,750	141,810
71—old	171,311	127,156	171,311
—new	43,100	50,931	49,500
192—old	1,059,968	538,757	1,059,968
—new	54,326	21,326	62,393
Total	1,548,022	871,968	1,580,825

Recovery Factors

Tennessee's witness supports the use of his percent recovery factors by testifying that the factor is based upon his judgment and general experience related to similar types of reservoirs. Applicants' witness supported his selection of recovery factors ranging from 80 to 85%, on the general basis of the capacity of wells, size and structural conformation of the reservoir, past production history, and anticipated future well performance. However, in no instance does either witness specifically support the use of any percent with respect to the claimed basis therefor.

Applicants' witness uses an 85% factor for each of the sands in the Block 62 field, Tennessee's witness a 75% factor, after having used 85% in Exhibit 2. No justification of substance appears for the change and accordingly 85% is here considered appropriate for use for this field.

For those sands in the Block 71 field, which appear first in Exhibit 2, both witnesses employ an 85% factor for the H–1 and I sands, reduced to 80% by Applicants' witness for the G–1 and I–4 sands, for which latter (I–4) Tennessee's witness employs 85%. For the newer sands (Applicants' N, P, and Q, or Tennessee's JN, KJ, and KM) Tennessee's witness employs 85% throughout, while Applicants' witness employs 85% for the N sand and, without explanation, an 83% factor for the latter two (P and Q). In the absence of further evidence an overall 85% factor is appropriate for the sands of this field.

With respect to the sands of the Block 192 field, Exhibit 2 established an 80% recovery for the shallower and an 85% for the deeper sands. Currently, Applicants' witness uses 80% for all sands while Tennessee's witness uses 85% for

[49] The computed test reserves are lower than the accepted reserves for reasons which are implicit in this method of checking which, it is to be said, has been adopted because of the absence of better evidence of record. Test reserves and Tennessee's Exhibit 40 reserves compare as follows (14.73 psia):

Field block	Test reserves (Mmcf)	Exhibit 40 reserves (Mmcf)
62	150,984	95,843
71	160,649	171,311
192	843,895	1,059,968
Total	1,155,528	1,327,122
Percent index	87.07	100.0

those below the B–15 and C–1 sands, for which latter he uses 80%. Thus, an 80% factor seems satisfactorily established for the upper B–15, C–1, D–2, and D–4 sands and an 85% recovery factor for the lower G–2, I, I–2, J–3, and L–1 sands. The new shallower sand (Applicants' I, or Tennessee's FL) and the two new deeper sands (Applicants' NO–1 and S, or Tennessee's HH and IS) should carry recovery factors consistent with those determined for the applicable general depth division—80% and 85% respectively.

Finally, a recovery factor of 85% as employed by Applicants' witness is appropriate for the Block 64 field.

Summary of Recoverable Reserves

On the basis of the foregoing recovery factors the accepted initial recoverable reserves compare as follows (14.73 psia):

Field block	Accepted (Mmcf)	Exhibit 21 (Mmcf)	Exhibit 40 (Mmcf)
62	81,467	75,668	71,884
64	104,953	38,037	113,447
71	182,249	149,300	187,689
192	936,646	448,012	949,901
Total	1,305,315	711,017	1,322,921
Percent index	100.0	54.5	101.35

Allowing for shrinkage and fuel losses the respective initial salable reserves become: [50]

Field block	Accepted (Mmcf)	Exhibit 21 (Mmcf)	Exhibit 40 (Mmcf)
62	81,467	75,668	71,884
64	102,854	37,276	111,178
71	181,474	148,665	186,891
192	922,681	441,332	935,738
Total	1,288,476	702,941	1,305,691

On the basis of the operator's computed past production, recoverable reserves remaining as of January 1, 1960, are:

Field block	Accepted (Mmcf)	Exhibit 21 (Mmcf)	Exhibit 40 (Mmcf)
62	74,506	68,707	64,923
64	96,501	29,585	104,995
71	165,626	132,677	171,066
192	907,730	419,096	920,985
Total	1,244,363	650,065	1,261,969

Allowing for the same shrinkage and fuel losses the various remaining salable reserves are approximately as follows:

Field block	Accepted (Mmcf)	Exhibit 21 (Mmcf)	Exhibit 40 (Mmcf)
62	74,506	68,707	64,923
64	94,571	28,993	102,895
71	164,922	132,113	170,339
192	894,196	412,847	907,253
Total	1,228,195	642,660	1,245,410

[50] Shrinkage factors by fields, approximate—Block 62, none; Block 64, 2.00%; Block 71, 0.425%; Block 192, 1.491%.

Annual and Daily Average Availability

Applicants' witness bases availability on his estimates of initial recoverable reserves and on provisions of the CATC-Tennessee contracts, except that for the year 1960 the availability represents the withdrawal estimated by the CATC companies.[51] Thus, his figure, in effect, of 87,866 Mcf of average daily deliveries for the period 1961–1972 substantially represents the contract daily provision of 1,000 Mcf per 8,000,000 Mcf of recoverable reserves applied to the current figure of 703,661 Mmcf of initial reserves of salable gas (Exh. 21; Sch. 1).[52] The evidence is that these availabilities do not exceed the total capacity of the wells to produce. On the basis of the contract daily provision, aforesaid, and the accepted initial salable reserves, daily deliveries would average 161,059 Mcf and on the basis of the average over a life of 20 years the delivery would be 176,504 Mcf per day.

The Contract Price—Development in Negotiations

As stated in the initial decision in the original proceedings in 1947 and 1948, the CATC companies acquired leases from the State of Louisiana on some 95,000 acres offshore Cameron and Vermillion Parishes, and by mid-1955 in the course of drilling seven shut-in wells on two blocks in the East Cameron (Blocks Nos. 49 and 71) and one block in the West Cameron Areas (Block No. 192) had discovered the existence of three multipay gas condensate fields with substantial reserves. Applicants were under some pressure to dispose of the available production in that they construed the terms of Section 6(a) of the Outer-Continental Shelf Lands Act of 1953 as applicable in the premises and to require either production by early August 1958 or continued drilling on and after that date and were advised as to the possibility of a leasee's implied covenant binding the CATC companies to use due diligence in marketing gas already discovered. Further, each of the companies needed current revenue particularly for developing other offshore leases and for further lease bidding.

Accordingly, in September 1955, Continental forwarded letters to nine major interstate pipeline companies having transmission facilities in Southern Louisiana advising of the availability for sale of gas production from up to 2 trillion cubic feet of the Cameron-Vermillion offshore reserves.[53] Tennessee responded on October 21, 1955, with a combination offer which included an initial price of 17¢ per Mcf, with escalation and tax reimbursement, for the West Delta reserves,[54] and an initial price for the Cameron-Vermillion area gas which was later revised to one of 17¢ plus an escalation of 1½¢ per Mcf each four years to 23¢ and tax reimbursement. The CATC companies severally accepted Tennessee's offer for the West Delta reserves but continued with further negotiations for the Cameron-Vermillion area gas reserves.[55] By June 18,

[51] For 1960—147,440 Mcf per day.

[52] On the basis of a uniform delivery over an assumed 20 year life the average daily volume becomes 96,392 Mcf per day.

[53] In its negotiations Continental in part contacted some 20 pipeline, gathering, chemical, manufacturing, and electric generating companies, 15 of which expressed interest in purchasing the gas either in the field where produced or at a point outside the field. Tidewater contacted Coastal Transmission Corporation, among others, in April 1955, and otherwise investigated the various possibilities of disposal. Atlantic first mentioned the matter in April 1955 to United Gas Pipe Line Company and later to Tennessee.

[54] The upper limit of the West Delta reserves was then considered to be some 1.5 trillion cubic feet.

[55] Applicants' acceptance was based substantially on the fact that no other offer as attractive price-wise had been received, Tennessee refusing to increase its price due to triggering considerations.

1956, some six interstate pipelines had made offers considered to be substantial,[56] but which differed variously as to price; the proposed date of first delivery from which the take-or-pay obligations would commence; the first year's take-or-pay quantity; daily minimum and maximum volumes; make-up periods; delivery points;[57] delivery pressures; and metering obligations. Other than Tennessee's later offer (21.4¢ per Mcf plus tax reimbursement), initial prices varied from a low of 18¢ to a high of 21¢ per Mcf (15.025 psia) plus tax reimbursement. Fixed 5-year escalations ranged from 1¢ to 2½¢ per Mcf, and some offers included favored nation and price redetermination clauses.

Finally, on or about July 12, 1956, Applicants accepted Tennessee's offer principally because, in addition to the price, the latter agreed to accept additional commitments of Cameron area reserves;[58] build lines to the location of the additional reserves;[59] accept deliveries at 700 psia; carry ashore, for a fee, gas over and above the deliveries from reserves committed; and to permit Applicants to supply up to 50,000 Mcf of additional gas per day should West Delta deliveries be reduced because of cycling operations in that field.

The testimony in these overall proceedings is to the effect that there was no affiliation at the time of the negotiations between the CATC companies and Tennessee and that the CATC contracts resulted from arm's-length bargaining.[60]

Interveners reject arm's-length considerations on the ground that oil for househeating, and commercial and industrial uses constitutes, generally, the principal competition for gas and that producers therefor have an incentive to increase gas field prices and fuel prices or to increase gas field prices alone so that oil might encroach on the gas market. However, it appears among other things that fuel oil production is controlled principally by the general refining of gasoline, but in any event there is no evidence to support these conclusions of the witness. Neither arm's-length bargaining nor the incentive referred to constitutes a real issue in this proceeding.

Contemporary Field Price Pattern

None of the contract prices available of evidence can be directly compared with the proposed price in that at the time Tennessee negotiated the CATC contract the assumed volume of reserves was larger than any which had been committed to that time by a single contract.

Applicants' evidence is that certificated contracts for gas purchased in the Erath Field, Acadia Parish, Louisiana, by United Fuel Gas Company, executed some four years before the CATC contracts, carried initial prices of 20¢ per Mcf plus tax which, with fixed escalations, would have provided a total price by the date scheduled for the commencement of the CATC deliveries of 20.6% per Mcf; that contracts[61] for gas purchased from two fields in Southwestern Louisiana by American Louisana Pipe Line Company, executed in June and July 1953, with first deliveries in August 1956, carried initial prices of 20¢ per Mcf with fixed escalations; that contracts for gas purchased in East Lake Palourde Field, Assumption Parish, Louisiana, by Texas Gas Transmission Corporation,

[56] That by American Louisiana Pipe Line Company, Southern Natural Gas Company, Tennessee Gas Transmission Company, Transcontinental Gas Pipe Line Corporation, United Fuel Gas Company, and El Paso Natural Gas Company, respectively.

[57] Central point in field or at each production platform.

[58] Including an additional trillion cubic feet by August 1, 1958 and 400 billion cubic feet each 12 months following for 10 years.

[59] At a specified ratio of miles of line to the volume of additional reserves.

[60] The recent testimony is in the present tense. However, testimony in the original proceeding is of a supporting nature.

[61] The Erath contract was somewhat flexible, allowing a minimum daily quantity of 50% and a maximum daily quantity of 150% of the contract quantity as compared with the CATC minimum and maximum of 66⅔% and 125%, respectively.

executed in April 1955, with first deliveries in December 1956, carried initial prices of 20¢ per Mcf plus tax, with fixed escalations; and, lastly that contracts executed by United Gas Pipe Line Company, in the latter part of 1954 for gas from the Pistol Ridge-Maxie Field, Forrest County, Mississippi carried initial prices of 20¢ per Mcf. At the time of the negotiation of the CATC gas contracts with Tennessee, United Gas Pipe Line Company was also paying 21.2¢ per Mcf in the Duck Lake Field, Louisiana, and Olin Gas Transmission Company was paying 21.4¢ per Mcf in the Bateman Lake Field, Louisana, for a nonjurisdictional use.

Applicants' further evidence is that prices for gas purchased in Southern Louisiana since the execution of the CATC contracts have been substantially higher ranging from 23.55¢ to 24.8¢ per Mcf,[62] and it is the opinion of Tennessee's senior vice-president in charge of gas supply that CATC gas would currently bring more than the proposed 21.4¢ plus tax.

The foregoing evidence goes little further than to establish that several pre-CATC contract initial prices were at the 20¢ level.

Further evidence submitted on behalf of Applicants discloses that of a total of 68 Southern Louisiana contracts dated from July 1, 1954 to June 30, 1956, 25 carried an initial price of 16¢, 17 a price of 17¢ and 5 a price of 20¢ per Mcf, with the median of the high 10% being 20¢ per Mcf.

Interveners' case premises that the cost data presented in these proceedings, relating primarily to the limited area of the CATC Cameron leases, is too restricted to be useful and that in order to test the CATC price resort must be had to area price data.[63]

Interveners' case assumes, however, that the area price determination is to be made as if the present record had been available when the case was first before the Commission in early 1957, and that prices subsequently certificated in other proceedings involving sales in Southern Louisiana are not applicable to this proceeding, on the principal ground that post-CATC prices are substantially infected with the alleged illegality of the original CATC prices.

Interveners made a study of initial base prices[64] in some 290 producer rate schedules having at least a 10-year contract term and pertaining to interstate sales from fields located in Southern Louisiana.[65] The underlying contracts are dated from January 1, 1950 through December 31, 1956, when prices rose from an initial base price level of 8¢ to 9¢ per Mcf in 1950 to the 20¢ levels prevailing at the time of the execution of the 20-year CATC contracts.

According to the Interveners' evidence four Southern Louisiana contracts had, prior to the 1956 CATC contracts, severally initiated a new and higher price which achieved a so-called "break-through" to a higher level or plateau.

The first such movement instanced by Interveners was that effected in a contract executed by Southern Natural Gas Company in 1951, in connection with a major system expansion from a capacity of 670,000 Mcf per day to 1,020,000 Mcf per day, which provided an initial base price of 12¢ per Mcf as compared with a previously prevailing price of 9¢ per Mcf. Interveners' witness' opinion that

[62] The evidence on this matter relates to four contracts at 23.55¢, one at 23.8¢, and one at 24.8¢, including tax reimbursement. Whether any of these has been suspended does not appear.

[63] A pricing area consisting of Southern Louisiana including the off-shore region, although the contracts available relate almost entirely to on-shore sales.

[64] The initial price when the contract was signed, not here including the tax reimbursement.

[65] Including fields in Louisiana parishes lying on or south of latitude 31° north. A given contract will result in a multiple filing of separate rate schedules depending upon the number of jointly contracting producers. Hence the number of rate schedules are no indication of the number of contracts executed.

this increase was substantially due to Southern's relatively short transmission system having a relatively low transmission cost which minimized the competitive pressure of other fuels on the field price for gas is not supported by a presentation of fact.

The second movement instanced by Interveners occurred particularly in the second and third quarters of 1952, as effected in contracts negotiated for the United Fuel Gas Company-Gulf Interstate Company project of the Columbia Gas System to supply an 860 mile 30-inch line having an initial capacity of 375,000 Mcf per day. Of the required supply some 100,000 Mcf per day was contracted for in the Erath field, Louisiana, at an initial price of 20¢ per Mcf, and the remainder in 15 other southern Louisiana fields having relatively smaller reserves at initial base prices of 16¢ per Mcf.[66] During this period other producers were buying gas at a price lower than 16¢.

The third movement, similarly instanced, occurred primarily in the second quarter of 1953 in contracts negotiated to provide the initial gas supply for American-Louisiana Pipe Line Company (American-Louisiana), then newly formed to bring additional gas into the area served by Michigan Consolidated Gas Company and Michigan Wisconsin Pipe Line Company.[67] American-Louisiana's pipeline was designed to operate at an initial capacity of approximately 300,000 Mcf per day against which approximately 250,000 Mcf was purchased in southern Louisiana at initial prices, depending upon the contract, of 17¢, 18¢ and 20¢ per Mcf.

However, during 1954 and the first quarter of 1955 the highest initial contract price in the area was 17¢ per Mcf, with most prices placed at 16¢ or below.

The last movement instanced by Interveners came in the second quarter of 1955 in 20¢ contracts entered into by Texas Gas Transmission Corporation (Texas Gas) for a gas supply for its 110,000 Mcf per day expansion program. Sources were so selected as to avoid the triggering of favored-nations' clauses in substantial contracts previously negotiated by Texas Gas.[68]

Interveners contend that except for those contracts which were influenced by the United Fuel-Erath field transaction, 16¢ had become a virtual ceiling for area prices in the pre-CATC period. This view of the action of the 16¢ price is compromised by evidence to the effect that by June 30, 1954, a majority of initial prices were at a level of 16¢ or above and by June 30, 1956, the 16¢ was in fact a floor.[69] Of some importance in appraising Interveners' study is the further fact that prices current in 1951 and 1952 afford an uncertain basis upon which to judge the nature of the price rise to 20¢, as during those years, and until March 12, 1953, regulations of the Office of Price Stabilization limited to some degree new field prices charged by a producer to the highest price charged by him in a particular market or producing area during the base period December 19, 1950, to January 25, 1951.

---

[66] The line was certificated May 20, 1953 (12 FPC 115). OPA regulation of gas prices prevailed until March 12, 1953. The average initial base price of all gas so purchased was 17¢ per Mcf. The contracts contained fixed escalations, favored-nations clauses, and, except for Erath, periodic renegotiation provisions.

[67] Because of the price increases reflected in the preceding Columbia Gas System Erath contracts Interveners' witness questions these later American Louisiana contracts as representing a "break-through" but includes them in view of the fact these failed to provide certain non-price benefits contained in the former.

[68] According to the witness, Texas Gas suffered a triple handicap in its negotiations; its own favored-nations situation, and the results of the United Fuel gas contracts and the American-Louisiana contracts in fixing higher levels for initial base prices. The Texas Gas contracts also failed to provide certain advantageous non-price provisions contained in the earlier Columbia System Erath contracts.

[69] In the second quarter of 1956 the average price weighted by 1958 volumes had become 18.22¢ per Mcf, increasing from 16¢ for the third quarter of 1955.

On the basis of Interveners' plot of the initial base prices in 1950–1956 southern Louisiana rate schedules, and relying on the array of prices to average out varying conditioning factors,[70] Interveners' principal price witness testified that the most prevalent price for new contracts in his selected 1953–1956 period[71] was 16.0¢ per Mcf (15.025 psia), which he testified represented in his opinion a solidly established price level and a reasonable price expectation for producers during the period.

Interveners' principal price witness did not directly relate cost trends to price trends. Though generally aware that inflation in labor and material costs could have had an effect on a producer's cost of service, he made no independent study of what increases in cost may have so occurred in connection with the discovery and production of oil and gas. He did obtain from a general construction index an 8.5% increase in the index between January 1, 1955 and June 1, 1956,[72] from which he reasoned that the price line could have been established as of the latter date at 17¢ per Mcf (15,025 psia) before tax.

Interveners added a 1¢ State severence tax to their prices. While this tax is now 2.3¢ with the amount reimbursed by the purchaser ranging between 1.754¢ (75%) and 2.07¢ (90%) of the tax imposed, in view of the off-shore land title controversy it is possible that no tax will apply to at least a substantial portion of the gas sold under the CATC-Tennessee contracts.

It would appear that in the preparation of Interveners' price data (Exhs. 41 and 42) treating each schedule filed as a separate contract without taking into account the difference between a multiple-party sale and the multiple rate schedules filed by the vendors compromises the use of these exhibits for the purpose of establishing a price trend to a degree which cannot be determined, and, indeed, Interveners' principal price witness indicated some significant doubt as to the reliability in question because the exhibits did not allow for either the related possible non-filing by multiple party signatories or for the possible filing of a ratification of a sales agreement as a rate schedule. Testimony attempting to rehabilitate the exhibits on the basis of the witness' general statistical feel for numbers is an inadequate substitute for an erroneously prepared exhibit.

Price Effects on Tennessee

At the time of the execution of the CATC contracts Tennessee anticipated that the derived weighted average cost of gas to Tennessee of 12.54¢ per Mcf in 1957, without Cameron deliveries, would be increased to 12.71¢ with the then expected November and December deliveries of Cameron gas, or by 0.17¢ per Mcf, and that, similarly, on the basis of 12 months delivery of Cameron gas, in 1958, such costs would increase from 12.73¢ to 13.70¢ or by 0.97¢ per Mcf for that year.[73]

In fact, for 1957 the weighted average cost of gas, with no Cameron deliveries to consider, was actually 12.63¢ per Mcf; and, for 1958, with 6 months actual Cameron deliveries 13.15¢, as compared with a derived weighted average cost, without the Cameron gas, of 12.92¢ per Mcf—a partial difference in that year of 0.23¢ per Mcf.[74]

[70] Such as those concerning contract terms, reserves and deliverability, delivery conditions, swings, distance from the pipeline, pressure, and quality of the gas. Due to the few offshore sales available onshore sales had to be resorted to for establishing the price line.

[71] Selected to iron out the 1954 low with the 1953 and 1955 highs.

[72] Or 13.2% for January 1, 1954, to January 1, 1958, and 17.4% to January 1, 1960.

[73] Assuming for this purpose deliveries of 240,000 Mcf (14.73 psia) per day from the CATC Cameron acreage.

[74] However, on the improbable assumption that CATC gas could be replaced in 1958 (and 1959) at Tennessee's average cost.

Again, for 1959, the weighted average cost was 15.20¢ per Mcf against a computed 14.76¢ if the CATC Cameron deliveries were not included,—a difference of but 0.44¢ per Mcf (14.73 psia).[75]

While the 1957 variation between the CATC price and Tennessee's weighted average cost of gas was 169.4%,[76] in cases involving construction costs of more than $700,000 where, in the period January 1, 1950 to July 1, 1959, 85 certificates were granted by the Commission to the 23 major pipelines which, in the aggregate, purchase over 90% of the field gas purchased by reporting pipelines, initial prices for new gas have averaged from 66% less to 138% more than the pipeline's weighted average cost of gas. However, to apply such considerations in judging the propriety of prices proposed for new gas would simply mean that in seeking new reserves companies with a lower weighted average cost of gas would be penalized as compared with those new pipeline companies which have a higher weighted average cost of gas.[77]

The West Delta Contract Price

The CATC contracts with Tennessee of January 1956, dedicating West Delta reserves carried an initial base price of 17¢ per Mcf, plus the reimbursement of the Louisiana gathering tax.

The factors affecting the price offered by Tennessee for the West Delta gas, and accepted by the CATC companies, were particular. As compared with the Cameron area leases which are at a distance of 20 to 30 miles from the coast in some 50–57 feet of open water (average well 54 feet) where platforms are required to produce a well, the West Delta acreage lies within 10 miles of shore in some 5–57 feet of water (average well 25 feet) and is more or less protected by the Mississippi River delta.[78] Further, the 17¢ offer for reserves up to 1.5 trillion cubic feet represented in fact a level which had been fixed in earlier transactions between Tennessee and other producers with respect to a specified contract area which included offshore reaches of the West Delta Area,[79] and a limitation imposed by Tennessee's knowledge that a higher price for this gas would trigger the favored-nations provisions of the earlier contracts respecting large supplies located in 18 or more fields in

[75] Due to a change in the purchase pattern and increases from price redetermination effective as to Texas and Southwestern Louisiana purchases, which were not dependent upon the CATC-Cameron contracts, the computed weighted average cost of gas to Tennessee of non-Cameron gas increased from 12.63¢ per Mcf in 1957 to 14.76¢ per Mcf in 1959. Using the actual purchase pattern of October 1959, and a 15.025 psia pressure base, Tennessee's system-wide weighted average contract price as of November 1, 1959 for its Texas and Louisiana purchases, after the price redeterminations, without the Cameron gas, equals 17.69887¢ as compared with 18.24217¢ including the Cameron gas, for a difference of 0.54330¢. Confined to Louisiana purchases the weighted average non-Cameron contract price becomes 22.61685¢ as compared with the weighted average Cameron price of 21.85918¢.

[76] The ratio of the 21.4¢ per Mcf to Tennessee's weighted average cost before CATC deliveries of 12.63¢ per Mcf.

[77] The weighted average cost of gas to American Louisiana Pipe Line Company was 19.0¢ in 1957. Its purchase of gas priced at 21.4¢ would have meant a variation of but 112.6%.

[78] Average depth of water over dry holes was approximately equal: West Delta 44 feet Cameron 48 feet.

[79] The area is defined in Tennessee's contracts as a favored-nation area and extends seaward to the state boundary or 3-mile line, including the CATC West Delta Blocks Nos. 52, 53, 54, 55, and portions of 56 and 84, landward of the 3-mile limit. Four other CATC blocks are seaward of the 3-mile limit. The contracts contain quinquennial escalations as well as redetermination and favored-nation provisions.

the basic five-parish area.[80] The CATC companies had no other offer as attractive as Tennessee's, particularly as to the matter of early takes,[81] and, as about 75% of the CATC West Delta gas was produced and flared as associated oil well or casinghead gas, were confronted with the possibility of operating under future State shut-in or recycling orders.

Triggering

The evidence is beyond dispute that as of the time of execution of the CATC-Tennessee contracts the Cameron-Vermillion areas were considered by Tennessee and by the CATC companies to lie beyond the range of the favored-nation provisions of contracts executed by Tennessee in the 5 parish area of Southeastern Louisiana.[82] Tennessee's particular and early concern in its continuing negotiations for the CATC-West Delta and Cameron production as to the triggering effects on contracts in its 5 parish area and the explicit testimony of Tennessee's senior vice-president in charge of gas supply, and others, categorically negative the possibility that the CATC contracts would trigger Tennessee's favored-nation clauses in its other gas purchase contracts.

Indeed, since the time of initial deliveries under the CATC-Cameron contracts in July 1958, no seller has asserted under any other Tennessee gas purchase contract any claim to a favored-nation price increase based upon the CATC-Cameron area price;[83] and there is no evidence of triggering as to another purchaser's contract.

Alternative Markets

Contemporaneously with the 1955–56 consideration of a jurisdictional sale, and again as late as June 1957, the CATC companies considered the possibility of making a direct consumer sale at Lake Charles, Louisiana, where Continental and Cities each had an oil refinery and were also owners of Cit-Con Refinery and Petroleum Chemicals, Inc.[84] It was estimated that, including various existing short term gas purchases commitments, Lake Charles users would require approximately 129,000 Mcf daily in 1957, 196,000 Mcf in 1958 and 1959, and 348,000 Mcf in 1960, increasing to some 672,000 Mcf by 1976, with an estimated net re-

[80] These parishes are: Assumption, Terrebonne, La Fourche, Jefferson and Plaquemines, lying in southwestern Louisiana. The contracts included those executed by Tennessee with the following producers on the dates stated—The California Company, April 1, 1955, and later (11 fields in 3 parishes); Shell Oil Company, March 29, 1955 (4 fields in 2 parishes); The Superior Oil Company, April 6, 1955 (2 areas in one parish); Mayfield, et al., April 1, 1955 (1 field in 3 parishes), and subsequently some three or more others.

[81] The area was located convenient to Tennessee's newly constructed Muskrat line which extended along the southern limits of the Louisiana Delta coast and which had available capacity. The role of costs in fixing the level at which the CATC Applicants started their negotiations is not disclosed. As of December 31, 1959, in the CATC Marine Region, Applicants had drilled or particapated in the drilling of 15 wells and 10 dry holes in the West Delta Area against 26 wells and 13 dry holes in the Cameron area. Cameron average well costs were 23.4% higher, average dry hole costs 2.3% higher, and average gas lease operating expense 3.8% higher than corresponding figures for the West Delta wells (13% deeper) and dry holes (20% deeper) which figures, however, standing alone are not conclusive.

[82] The favored-nation area in the West Delta contract in terms did not include the offshore Cameron area.

[83] Prices agreed to in 1959 price determination procedures under Tennessee's Louisana contracts were not affected in any way by the CATC contract prices.

[84] Both Continental and Cities were willing to purchase the production from Atlantic's and Tidewater's reserves.

quirement of the CATC companies of 26,000 Mcf per day in 1957, 93,000 Mcf in 1958 and 1959, and 329,000 Mcf in 1960,[85] increasing to 672,000 Mcf by 1976.[86]

No firm prices were determined upon with these related interests, but in 1956 the latter were paying delivered prices of 13.5¢ and 17.5¢ per Mcf which were expected to increase as the level of the weighted average cost of gas to the pipeline vendors also increased.[87]

The CATC companies, however, would have to had to construct the pipeline from the offshore fields to Lake Charles at some undisclosed cost, and this approach was considered desirable only as a method of protecting the CATC leases.

Further, commencing March 9, 1956, Continental took steps looking to possible negotiation of a sale of the CATC gas to certain industrial concerns then considering the location of plants along the Mississippi River in the Baton Rouge-New Orleans area, including the Dow Chemical Company, Kaiser Aluminum Company, Wyandotte Chemical Corporation, and Gaylord Container Corporation, as well as Louisiana Power and Light Company, which latter expected to have a new electric generating plant in operation sometime in 1960. Although the new industrial plants would have had substantial requirements,[88] all of these were either in various stages of planning or early stages of construction, and could not have been ready to take the gas by the aforesaid critical date of August 7, 1958.

The CATC companies also tentatively negotiated, both prior to August 1956 and during April 1957, for the sale of their entire production to industrial users in Arkansas,[89] at takes generally comparable to, and at a price schedule competitive with, Tennessee's, but this arrangement would have resulted in some delay in sales reaching full market volumes and in receipt of revenues.

A study of major industrial markets within a 400 mile radius of the Cameron area,[90] submitted in evidence on behalf of the Applicants, discloses that in the opinion of the witness substantial alternate market outlets were available to the CATC group in 1956, and that there are at least 12 market areas of suffi-

[85] Here matching Applicants' estimate of available offshore supplies.

[86] Applicants' more recent estimates, based on a downward revision of estimated production from the Cameron properties and some elimination of assumed plant expansion by Petroleum Chemicals, Inc., compare as follows:

	Requirements as percent of offshore-CATC supply	
	1956 estimates (percent)	March 1960 estimates (percent)
1957	61	53.
1958	50–55	76.
1959	48–50	65.
1960	Over 100	Over 100.

[87] Thus, the 13.5¢ was expected to increase to 18.5¢ in 1957 and by about 1¢ per Mcf a year thereafter. In fact the Lake Arthur plants paid 18.64¢ and 18.87¢ per Mcf in 1957, 20.16¢ to 22.93¢ in 1958, and 21.83¢ to 23.6¢ in 1959. This market was available to Applicants through June 24, 1957, the date of the Commission's third and final order in the preceding stages of this proceeding.

[88] The Dow Chemical Company's operation at Freeport, Texas, as an example had estimated daily requirements of some 235,000 Mcf.

[89] With delivery to be made to Arkansas-Louisiana Gas Company in the field. The competitive price would have been within perhaps 1¢ per Mcf of the Tennessee price. A limited quantity of gas could also have been sold to Central Louisiana Electric Company for use in power generation provided other markets were obtained and the gas was delivered at plant.

[90] The range of the CATC negotiations above set forth.

cient size to absorb deliveries approximating the 100,000 Mcf per day assumed as an average of the magnitude of the CATC-Cameron production.

In summary, in the absence of firm commitments in relation to the foregoing alternative negotiations it can be concluded only that the best that Applicants could have expected from the intrastate market was a price which would have approximated 18.87¢ per Mcf in 1957, the year in which initial deliveries were intended to be made to Tennessee under the original provisions of the contracts of August 1956, less a cost of transportation.

Price in Relation to Trends—Market Projections and Drilling Trends

Applicants' first witness on the subject of prices in relation to trends in gas requirements obtains an estimate of the 1960–1964 increase in local demands upon reserves of natural gas in Louisiana and Texas by projecting 1946–1958 data derived from Louisiana and Texas historical market developments, including the witness' survey of industrial sales,[91] correlated with data pertaining to the relative characteristics of the various components of local market demands including those of the residential, commercial and mixed industrial sections. He obtains a corresponding estimate of the increases in national demands [92] upon the same reserves, using generally accepted growth forecasts for the national markets,[93] and related economic data, assuming that the proportion of production from reserves located in Louisiana and Texas which went into the interstate market in 1958 (61.263%) will hold in the future. He further assumes that annual new reserves plus extensions and revisions will continue to average the 14.4 trillion cubic feet attributable to the four years 1955–1958;[94] and that reserve additions must, at a minimum, provide each year for the equal replacement of those used to serve the existing markets and a 14 years supply for the year's expansions.[95] On the basis of all the foregoing, the witness estimates that Texas and Louisiana market consumption will increase at a minimum from approximately 6.2 trillion cubic feet in 1960 to 7.2 trillion cubic feet in 1964 and that the interstate market consumption supplied by the two States will increase likewise from about 8.2 trillion cubic feet in 1960 to at least 10.5 trillion cubic feet in 1964, and concludes that on a minimum basis the deficiency in annual additions with respect to requirements will amount increasingly to 3.3 trillion cubic feet by 1964 or 23.24% of the assumed reserve additions.

The witness further testified that the Louisiana and Texas markets will constitute an increasing portion of total demands upon the reserves of the two states, and his ultimate conclusion is that current gas prices are inadequate to stimulate the accelerated exploration and development to provide the additions necessary to meet the market requirements which might reasonably be expected in even the immediate future.

It is to be observed that in 1959, total additions to proved Texas and Louisiana reserves amounted to 18,726,591 Mmcf, a figure which is not only 30% higher than the witness' assumed 1955–1958 average addition but which, if sustained, would yield a life of 15.8 years for additions for use in connection with load growth as compared with the 7.8 years resulting from the witness' assumption that annual additions would continue at the 1955–1958 average of 14,394,421 Mmcf.

---

[91] Consulting statistics published by the U.S. Bureau of Mines, and information available from official state sources and bureaus of business research of state universities, as well as from chambers of commerce, industrial associations, and individual industries.

[92] Of the United States generally but excluding Louisiana and Texas.

[93] Those of the American Gas Association (1958–1964) converted to rates and applied to Bureau of Mines data.

[94] Which was the highest of any four years in the post war period.

[95] In fact a 14 years supply is not equal to 14 years of deliverability but rather to some 10 years of deliverability.

In relation to the foregoing, and consistent therewith, it independently appears that even over a period as recent as 1951–1958, the average annual rate of increase in total consumption has been 9.1% for the Eastern States or 6.2% for the United States as a whole, and that the rate, which may be expected to decline with the relative completion of construction of lines to new markets, may be expected nevertheless to equal or exceed prospectively 5% per year.

Moreover it also appears that in the Southwestern States and in the United States as a whole market demand has increased more rapidly than have new discoveries, extensions and revisions, reported by the Gas Reserves Committee of the American Gas Association. Indeed, excepting in Louisiana, these show a decline relative to net production.[96]

At the same time the number of wells drilled, which increased at first in all the producing areas have since declined (1957–1959), so that, depending upon the area, it appears that wildcat drilling has fallen (1959) to between 63% and 77% of 1956 drilling, and development drilling to between 87% and 97%, except again, in Louisiana development drilling declined only in 1958. While the falling off in drilling is a matter of some importance in relation to the predicted increase in market requirements, its effect cannot be appraised without reference to following sections of this decision which refer to trends relating to drilling costs and productivity and the success ratio.

Trend in Productivity of Drilling

Applicants' evidence is to the effect that there is operative a primary long term trend for exploration to yield less, as disclosed in an indicated decline in the productivity of drilling and the tendency for the ratio of dry hole to total footage to increase,[97] and for the average size of new fields (gas and oil)[98] and for new discoveries of natural gas relative to wildcat footage to decline.[99] Applicants' evidence is to the further effect that while methods of exploration and production have been improved principally in the matters of geophysics, secondary recovery, and well spacing, the trend with respect thereto has been gradual and no marked improvement therein is in prospect for the foreseeable future.

[96] Indicated by the more or less continuous decline in the ratio of new supplies to net production as follows:

	1951	1958
Seven Southwestern States	2.19	1.67
United States	2.01	1.65
Cf., Louisiana	1.41	2.56

[97] The U.S. ratio of wildcat dry hole to productive wildcat footage increased from 560% in 1947–1949 to 645% in 1957–1959, while the ratio of development dry hole to productive development footage increased from 23.3% to 30.5% on the same basis. The relative higher success in the deep drilling is encumbered with higher drilling costs except where the reserves added are also relatively larger.

[98] New fields with reserves in excess of 6 billion cubic feet of gas or 1 million barrels of oil declined as follows:

	Gas fields (percent)	Oil fields (percent)
1943–1945	53.6	27.4
1951–1953	42.7	21.6

[99] Not including extensions and revisions. New discoveries have declined since 1947–1959 at an average annual rate of 4.6%, despite the fact that wildcat footage drilled has increased in greater proportion.

Interveners' evidence is to the effect that since 1955 there has been a reversal of direction of the trend in productivity and is contradictory of the findings of Applicants' witness that the industry is in a state of decline in the relation of productivity to drilling. Interveners' witness, does not recommend the employment of such trends for forecasting the productivity of drilling and accepts as a characteristic of the industry a probable declining primary trend in this ratio.

While the decline (oil and gas) in Louisiana has been negligible,[100] in the seven Southwestern States annual gross additions of oil and gas reserves (Btu basis) per foot drilled have been in a downtrend since 1947 to 1958[101] and the average rate of decrease, on a trend basis, has been at least 4.3% per year,[102] matched by a similar decline for the United States (3.8%), the three Southwestern States (4.5%),[103] and Texas (7.5%). As a result of these declines (oil and gas), in 1958 the trended average productivity of drilling was 68% of the 1947–1949 average for the United States, 64.2% for the seven Southwestern States, 63.3% for the three Southwestern States, 98.6% for Louisiana and 45.9% for Texas.

The productivity of drilling index for gas shows a smaller but still significant decline, except in Louisiana where productivity has in fact substantially increased in the period (1947–1958).

As between the average of the indices for 1952–1953 and the index for 1956 it appears that the declines (oil and gas) were 12.7% for the United States; 14.7% for the three Southwestern States; 14.4% for the seven Southwestern States; and negligible for Louisiana.

The conflict between the two witnesses concerns basically the method of trending. To obtain a trend for the data relating to annual additions of oil and gas (Btu) and to annual well footage drilled, respectively, Applicants' witness employs the straight line method placing the line by the method of least squares, while Interveners' witness by inspection selects a parabolic trend, the parabola being placed by the same least squares method.

The conflict concerning trends can best be resolved for the purposes of this proceeding by accepting Interveners' witness finding of a recent uptrend and concluding, on the basis of recent past experience, that for that portion of the future to which the findings in this decision may properly relate any recent uptrend will be effectively offset by at least a relatively equal decline.

---

[100] Louisiana, 0.1%. As of 1958 drilling for 12 years past had been nearly three times more productive in Louisiana than in Texas.

[101] Arkansas, Kansas, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas. Reserve additions as reported by the joint American Petroleum Institute-American Gas Association Reserves Committee; drilling footage from World Oil magazine, service wells excluded. It is here assumed that reserves added, which include also extensions and revisions of estimates of previous years' explorations, are related only to the drilling of the year in which additions, extensions, and revisions are reported. Footage drilled cannot be directly related separately to new supplies of natural gas, oil, or liquids, and here has to be allocated to gas. However, Applicants' witness testified there is no basis upon which wildcat footage can be allocated, as results are no gauge of the managerial intent which led to the drilling, and he, therefore, considered all such footage to be assignable to gas. Development footage was allocated on the basis of drilling results in the instance, separately, of oil wells, gas and condensate wells, and dry holes—using as to oil wells an assumed 1.5 Mcf/bb, of associated gas recovered, and as to gas wells 2.5 gals./Mcf of natural gas liquids recovered.

[102] Accumulating to a total of about 39% (1947–1958), without taking into account the lag between drilling activity and additions to reserves.

[103] Louisiana, Mississippi, and Texas.

Drilling Cost Trends

Applicants' oil and gas industry indices indicate that with reference to a 1947–1949 base,[104] there has been a sharp increase in production wages,[105] cost of casing,[106] and a weighted composite cost of casing, special contract services, drilling mud, labor, rock bits, and equipment.[107] The increase between the average of the 1952 and 1953 [108] indices and the 1956 index amounting to 23.9% for casing, and 16.9% for the composite items including 15.3% for wages.

Applicants' witness combines an index for operator drilling costs derived from nation-wide data for cost of labor, materials and services by weighting [109] with a generally undefined index of contract drilling rates to get an index of drilling costs per foot at constant depth. The witness in turn combines (multiplies) this latter index, with (by) an index based upon 1956 costs per foot weighted by depth to get an index of drilling costs as affected by the increasing depth of drilling. The final result indicates that by 1958 there had been an increase in this oil and gas drilling cost index which, in each of the above-mentioned areas and based upon 1947–1949 as 100, amounted to at least 40% with that between the 1952–1953 average and 1956 amounting to the following percents: United States 13.0%, three Southwestern States 17.9%, seven Southwestern States 13.9%, and Louisiana, 39.8%.

Combining the above referred to indices of productivity and of changes in cost of drilling as affected by depth the witness obtains composite results which indicate increases in drilling cost per unit of reserves (oil and gas) ranging from 29.2% for the United States to 40.5% for Louisiana; or for natural gas on an attributed footage basis ranging from 19.8% for the United States to 30.9% for total Louisiana.

Applicants' witness' index results as to drilling costs per foot and per unit of reserves are all dependent upon the validity of the results obtained by way of an index of changes in drilling costs based upon changes in depth,[110] and the

[104] Incidentally, a period of relatively depressed prices for natural gas.

[105] From U.S. Department of Labor data, Monthly Labor Review.

[106] U.S. Department of Labor data, carbon steel oil well casing.

[107] Cost Study Committee Report (1959), Independent Petroleum Association of America, contrasting with a decline in the contract drilling rate.

[108] The first definite upward movement to natural gas prices after the 1947–1949 period of relatively depressed prices occurred in these two years, which are also those years immediately prior to the June 1954 decision of the United States Supreme Court in the so-called *Phillips* case relating to the jurisdiction of the Commission with respect to natural gas producer prices.

[109] In the ratio of 1954 nation-wide drilling rates to nation-wide operator drilling costs, i.e., 46% and 54%, respectively. A different weighting is used for Louisiana data.

[110] Interveners' witness took exception to Applicants' witness' index of drilling cost per foot on grounds which relate severally to each of the component indices: (1) the operator's cost index of labor, materials, and services; (2) the contract drilling rate index; (3) the index of drilling costs per foot at constant depth—a combination of the preceding two by use of weights; and (4) the index of cost change resulting from changes in depth. The witness excepts, *as to the first index*, on the grounds that the operator's cost index involves the weighting of component costs year by year by the proportions indicated for 1959 on the ground that retaining this weight throughout makes no allowance for technological changes. The evidence is that such changes have been gradual and there is a presumption that use of the 1959 proportions would, as to this matter, be conservative. The witness adds that operator's costs relate to rotary drilling on-shore only. The evidence is that cable tool and off-shore cost data are lacking through no fault of the compiler. The witness concludes with the objection that four of the component cost series, based on U.S. Bureau of Labor statistics, and two component cost series, compiled by an industry committee, are usable on a nation-wide basis only. This objection has some merit. Interveners' witness excepts, *as to the second index*, on the ground that the contract drilling rate is assumedly a nation-wide index and is therefore not directly applicable to separate states and regions. Interveners' witness excepts, *as to the third index*, repre-

assumption of the applicability of the general index of drilling cost per foot to these particular proceedings concerning the question of conditioning a 1956 price applicable to gas produced from the Louisiana off-shore area.

While the indices constructed by Applicants' witness should not be brushed aside Interveners' basic objection that the indices result from data compiled by various industry associations or related organizations whose methods and techniques have not been subjected to cross-examination cannot be ignored. Only the data which has been submitted pertaining to the changes in average per foot cost of drilling and equipping wells as reported by the U.S. Bureau of the Census and in the Joint Association Survey can be sufficiently related to or checked against official sources to substantially avoid Interveners' objections in this respect.

With respect to the changes in average total costs [111] per foot of drilling and equipping gas and oil wells in all depth categories as reported by the U.S. Bureau of the Census and an industry wide survey [112] it appears that between 1954 [113] and 1956 such costs increased for productive wells in the United States, three Southwestern States, and seven Southwestern States approximately 9% to 12%, and for both Louisiana on-shore and off-shore wells by as much as 34%, while the cost of drilling dry holes increased for all areas in an order ranging from 18.2% for the Louisiana on-shore wells to 37.1% for the three Southwestern States. The increase in cost for both productive wells and dry holes ranged from 12.0% for the United States as a whole to 31.6% for total Louisiana wells.

Tabularly, the results for Louisiana are as follows: [114]

	Cost per foot (dollars)		Increase (percent)
	1954	1956	
Productive wells:			
Offshore	$34.50	$40.42	17.2
Onshore	17.09	21.64	26.6
Total	18.38	24.52	34.0
Dry holes:			
Offshore	38.86	47.55	22.4
Onshore	14.93	17.64	18.2
Total	16.00	21.37	33.6
Total:			
Offshore	35.34	42.89	21.4
Onshore	16.47	19.99	21.4
Total	17.71	23.31	31.6

The difficulty with respect to the acceptance of the foregoing Louisiana statistics is that Applicants' evidence is related principally to average drilling costs for all depths and the record is generally deficient with respect to average costs for wells in depth categories similar to those which obtain with respect to the CATC-Cameron area wells, in that data pertaining to wells drilled to

---

senting the combination of a weighting basis of the preceding two, on the ground that the weights used (1954) do not necessarily apply to regions. Both of these objections, as here summarized, have some merit. Exception is finally taken to Applicants' witness' adjustment to the index for changing depth on the ground that average depth data is available only for 3 of the 12 years involved; that data as to the cost per foot within each depth class are available only for 1956.

[111] Not including overhead costs, taxes, insurance, interest, or capital costs.

[112] Joint Survey of Industry Drilling Costs (1955 and 1956) by American Petroleum Institute, Mid-Continent Oil and Gas Association, and Independent Petroleum Association of America.

[113] Data not available of record for all areas for 1952–1953.

[114] Data is available only for the years 1939, 1954, 1955, and 1956, with 1952 and 1953 not being included.

such depths is generally limited to that available for the years 1955–1956. Indeed, in the 1955 and 1956 data there is some indication that changes in costs are greater for those depths which lay outside the Cameron brackets.[115]

On the basis of the foregoing it is concluded that the only reliable indication of the amount of a cost adjustment to be applied to a base price is that afforded in the statistics presented from the Bureau of the Census publications and the Joint Association Survey of Industry Drilling Costs 1955 and 1956. In consideration of this limited data the adjustment cannot very well exceed the least percent of increase which pertains to the Louisiana on-shore and off-shore areas (17.2%, *supra*).

In selecting the base price and applying the correction for increasing costs several matters are involved.

The above mentioned effort of Applicants' to justify the 21.4¢ proposed price in part by reference to a small selection of contemporaneous prices of 20¢, 21.2¢ and 21.4¢ has hereinbefore been rejected, as has Interveners' effort to establish 16¢ per Mcf as the prevailing area price of the pre-CATC period.

Interveners' witness, whose principal interest is in the area of statistical measurement, testified that the unweighted average of South Louisiana new contract prices in 1953–1955 was 14.7¢ per Mcf,[116] but Applicants' witness obtains a corresponding volume-weighted price of 16.9¢ for the same period.[117] and of these two prices that weighted by volume is the more appropriate.

The 17¢ Muskrat Area price offered by Tennessee as a combination price for both the West Delta and the Cameron Areas is not inherently inapplicable to gas produced in the latter, or otherwise it would not only not have been offered by Tennessee as a basis for serious negotiations, but it would not so closely approach the price hereinabove found to have been the best which Applicants could have expected at the time from the alternative intrastate market (18.87¢ less transportation ashore).[118] As the origin of the Muskrat Area price lay in negotiations had in 1954–1955 presumptively those producers would have necessarily anticipated rising costs of drilling. With a continuation of these trends negotiations in 1956 would presumptively and properly have proceeded in the matter of price upon the basis of similar cost considerations. In other words, the permissible adjustment would consist of a translation to the latter date (1956) of an increment equivalent to the estimated actual average increase experienced between the two dates.

On the basis of the foregoing, and the state of the evidence of record, it is concluded that a price of approximately 17¢ effective for the year 1954 is an appropriate base price in the circumstances and that allowance for an in-

---

[115] No data is available for the average cost per foot for drilling gas wells since 1954.

[116] He would adjust this price to 16.9¢ as an appropriate 1958 level by applying the relative increase in the trend of drilling costs which he found in the period 1953–1955 to 1958 of 14.3%.

[117] Which he would adjust to a 1958 level of 21.4¢ per Mcf (15.025 psia) by a combination of indices of reserves added per foot and of drilling costs per foot on a 1953–1955 base yielding an increase of 26.6% in drilling costs per Mcf of reserves added. The indices, however, involve resort to Louisiana wide data which relate to wells in depth brackets not the same as those in the off-shore CATC Cameron area. The unexplained indication of a difference in changes of costs related to these respective brackets has already been mentioned above.

[118] The problem is that as only Tennessee and Transcontinental buy off-shore there is no off-shore price pattern. Of 68 Southern Louisiana contracts dated within the period here under consideration (July 1, 1954–June 30, 1956), 17 had an initial base price of 17¢, 25 of 16¢, 14 of prices ranging from 18¢–20¢. The 17¢ contracts yielded 1958 volumes of 91,988 Mmcf (15.025 psia), the 16¢ contracts 61,305 Mmcf, the 18¢–20¢ contracts a combined total of 73,074 Mmcf (15.025 psia). No other price appears to bear as direct relation to the Cameron Area, geographically, as does that of the Muskrat Area.

crease in costs between that year and 1956 of 17.2%, or 2.92¢ per Mcf, which is likewise appropriate and that the resulting price of 19.92¢ per Mcf (15.025 psia),[119] is acceptable for the purposes of the case.

The correlation of drilling costs and gas reserves added, which represents a step in Applicants' witness' general cost index procedure, is not possible on this record with respect to Applicants' overall Louisiana operations. The possibility that such a consideration would be relevant is somewhat indicated by the fact that in the Cameron Area the CATC reserves represent approximately 3,333.3 Mbtu per foot drilled, including producers and dry holes, an apparently not unfavorable showing.

In the absence of some correlation of the productivity of drilling results and drilling and operating costs Applicants' evidence to the effect that 66.3¢ of the total costs of CATC-Cameron Area off-shore productive wells represents costs peculiar to off-shore operations, that Louisiana off-shore drilling costs are more than twice those onshore, and actual Cameron offshore operating costs are more than three times those of the Applicants' onshore operating costs, can be given only that effect in this decision which the foregoing use of drilling cost indices provides.

Custom as to Pipeline Connections

It is a common practice, where gas reserves are sufficiently attractive, for the pipeline to build and own the line connecting the gas producing field to the main line system, particularly in new areas where the pipeline purchaser desires to be in a favorable position to purchase reserves subsequently developed. Accordingly, during negotiations construction of a pipeline was not discussed as it was assumed by both Applicants and Tennessee that the latter would construct and own the connecting line,[120] and, further, in relation to the so-called "favorable position," Tennessee has since executed further contracts with Shell Oil Company and the so-called Magnolia, Continental and Newmont (MCN) group in the Cameron area which commit to it substantial reserves,[121] and, is anticipating the delivery to the line of even additional volumes.

It has been Tennessee's custom over a long period of time to build at its own expense without monetary contribution by others [122] both short and main laterals from its main transmission lines in the Gulf Coast area to its various sources of supply, among which are the principal laterals to: Sullivan City and Tobasco fields in Hidalgo County, Texas;[123] fields in Duval and McMullen Counties,

---

[119] Before taxes or consideration of transportation costs. Weighting the 1954–1956 increase in drilling cost of 17.2% for off-shore productive wells by the number of Cameron productive wells (26) and the increase in such costs of 22.4% for off-shore dry-holes by the number of Cameron off-short dry holes (13) would yield a result of 20.2¢ per Mcf as the adjusted price. However, this refinement should have had, but does not, the support of expert testimony. The evidence permits no weighing of the less significant effect of relative levels of production operating expense.

[120] In all approximately 46 miles of 26-inch line on shore, and 25 miles of 26-inch, 11 miles of 20-inch, 13 miles of 16-inch, and 11 miles of 12-inch main and lateral line offshore. At least five of the leading offers received by the CATC companies for the Cameron gas proposed taking the gas either at a central point in each field or at the platform. Of course, the nearer the gas to established facilities the more valuable it is to the pipeline.

[121] On the basis of an average day Tennessee expects in 1960 to receive 205,400 Mcf of gas from the three sources (CATC, MCN, and Shell), this amount rising in 1963 to 258,000 Mcf (14.73 psia). The volume of the deliveries from CATC, Shell, and MCN, severally, are not available, but the relative recoverable reserves as of January 1, 1958, give an indication of the relative order of magnitude of such deliveries, and, according to a statement of record by Tennessee's counsel, were: CATC, 1,322,921 Mmcf; MCN, 498,051 Mmcf; and Shell, 330,921 Mmcf.

[122] With those several exceptions which pertain only to small 2, 4, or 6-inch lines, including the line to the Zim-Rickaby field, Starr County, Texas.

[123] Built in 1956, 40 miles in length, 8 and 12 inches in diameter.

Texas;[124] Mustang Island and Corpus Christi Bay fields, San Patricio County area, Texas;[125] East Bay City and Lucky fields, Matagorda County, Texas;[126] Carthage field, Panola County, Texas;[127] and Bayou Sale field, St. Mary Parish, Louisiana.[128] It also built the so-called Muskrat line as an extension from the Bayou Sale field to various South Louisiana fields in the South Pastor delta area, for the same purposes.[129]

Insofar as the practice is recognized in the operations of the Applicants it is disclosed that Cities and its affiliate, Cities Service Oil Company, made all 1959 interstate and intrastate deliveries of dry, condensate, casinghead, and residue gas of 231,357,947 Mcf (14.65 psia at the well, a central point in the field, or the tailgate of the processing (gasoline) plant located in or near the field)[130] and that Tidewater and Atlantic did the same with respect to their jurisdictional and non-jurisdictional current sales.

In the same supply area other pipelines, including Transcontinental Gas Pipe Line Corporation (Transco), Trunkline Gas Company, Texas-Illinois Natural Gas Pipeline Company, and United Gas Pipe Line Company, among others, have constructed similar lines in the Texas and Louisiana Gulf Coast areas to pick up gas from various fields with which they connect.

The Kinder line extensions to the Cameron area appears to be of the same general nature as the extensions cited, and, accordingly, insofar as a comparison of the Muskrat Area operations and price is involved in the testing of the Cameron Area price the cost of transportation need not be considered *per se* as a discriminatory factor. The magnitude of the cost of transportation on the Kinder-CATC line as computed by Staff is considered in a following section of this decision.

Transportation of Distillate

In its initial proposals Tennessee offered to transport the distillate produced with the gas from the offshore properties without cost to the producers. It has installed no facilities for the specific purpose of handling the distillates and, therefore, the cost of its line from Kinder, Louisiana, to the platforms would have been no less even had it assumed no transportation obligation.

The condensate liquids, or distillates, are separated from the gas at the platform where the latter is also dehydrated to 7 pounds of water per 1,000 Mcf. These steps facilitate measurement of the gas by the operator (Continental) for the purpose of determining the production taken from each lease as well as the related working interest and royalty rights with respect thereto, and also facilitate the efficient operation of both wells and pipeline.

After measurement the condensate liquids and gas are recombined and delivered to Tennessee which then transports the composite to shore where the

[124] Built before 1957, in various sections and at various times, in all about 70–80 miles in length.

[125] Built in 1951, 32 miles in length, 12 inches in diameter.

[126] Built in 1949, some 40–50 miles in length, probably 12 inches in diameter.

[127] Built in 1948, 72 miles in length, 20 inches in diameter.

[128] Built about 1951 via Midland and South Tigre Lagoon fields, 130 miles of pipe, 16 inches in diameter.

[129] Built in 1956, 85 miles of 24-inch diameter plus 32 miles of 20-inch diameter line, and considerable other lengths of various smaller sizes of pipe. Whether looping of the Bayou Sale line is here included is not clear. The line was constructed by Tennessee in order to serve the fields in a five-parish area. Laterals located more or less at the southeastern extremity reach, respectively, to Dixon Bay, South Pass, and Main Pass to connect with the CATC and Shell acreages. Other principal laterals also extend from mid-sections of the line to connect with the Mayfield acreage, principally in Assumption Parish, and California acreage in La Fourche and Jefferson Parishes, and again in Plaquemines Parish.

[130] The sales contracts which require the purchaser pipeline company or gatherer to build facilities connecting the field go back as far as 1927.

gas is processed in Applicant's Grand Chenier separation station for final removal of condensate liquids and dehydration, and for the limited recovery of liquefiable hydrocarbons. After these steps the gas is remeasured and redelivered to Tennessee.[131]

The alternative transportation of liquids by barge would result in loading operations which with sea and weather could interrupt the delivery of gas to Tennessee by as much as 14% of the time.[132]

The ratio of condensate to gas in the Cameron area is exceptionally low, averaging during 1959 some 7.9 barrels per 1,000 Mcf,[133] and, accordingly, on the assumption that the line is consistently operated at capacity so that liquids would occupy space otherwise usable for the transportation of gas, Tennessee computes the maximum cost of transporting both distillates and liquefiable hydrocarbons to be about 0.0148¢ per Mcf of gas delivered.[134] However, on the possibility that additional gas purchased by Tennessee may have the same degree of wetness and, accordingly, on the premise that line capacity would be shared on a pro rata basis this cost would then increase to some 0.044¢ per Mcf.[135]

This aspect of the CATC-Tennessee Cameron Area transaction is of no substantial effect.

Staff Transportation Costs Computations

Staff tendered a witness who testified, in effect, that with offshore annual volumes of 60 million Mcf (15.025 psia) 4¢ per Mcf would a reasonable estimate of the cost incurred by Tennessee in gathering and transporting the CATC gas from point of purchase at the offshore platform to Tennessee's main line station (No. 823) at Kinder, Louisiana.[136]

The CATC facilities lie in what is known as Tennessee's Kinder, (La.) operating district.[137] As Continental, for bookkeeping purposes, commingles CATC facility operating expenses with those related to other district pipelines Staff obtains its CATC direct operating costs on an incremental basis involving the month by month deduction of prior expenses from those of the 12 months ended

---

[131] Applicants are charged with losses in volume in the processing and dehydration which takes place ashore. It is not feasible to construct a gasoline plant for processing the gas at the platform location.

[132] Also in barging some 0.85% of the gas escaping as solution gas when pressure on the condensate is released would be flashed and lost beyond recovery.

[133] As compared with 60–65 barrels in the gas produced in the West Delta area. In addition the Cameron gas contains 5.6 barrels of liquefiable hydrocarbons per 1,000 Mcf with 30% propane recovery; the West Delta gas containing 15 barrels of natural gas liquids with the same propane recovery.

[134] As to condensate liquids; assuming CATC deliveries of 240,000 Mcf per day (14.73 psia) with 8 barrels of distillate per Mcf occupying 5.61 cubic feet per barrel, a daily maximum powered line capacity of 424,000 Mcf, and maximum line operating pressure of 1000 psig. As to liquefiable hydrocarbons: assuming in addition a shrinkage of 1.6% of the volume of gas processed. To get annual operating costs Tennessee applies a factor of 17% to its pipeline cost of approximately $12,000,000 (sic).

[135] It may be observed that Tennessee's pre-CATC contract pertaining to the purchase of gas in the Corpus Christi Bay and Mustang Island fields carried a provision reserving to the producers the right to extract liquid hydrocarbons after delivery and transportation ashore. It also appears that Cities and others have several contracts of various dates, operative in other areas which permit the producer to process gas on the main pipeline, after the pipeline has carried without charges the gas laden with the liquefiable hydrocarbons to the processing plant site.

[136] Compared with a similarly computed cost of 5½¢ per Mcf for the preceding 12 months ended June 30, 1959, when the total volume was 43,004,062 Mcf (15.025 psia).

[137] According to Staff witness the Kinder district is a supply district with feeder lines only. The CATC facilities embrace some 108.96 miles of line extending 71.66 miles from Kinder to a central offshore point and thence to platforms. The section which constitutes the onshore portion is 46.36 miles in length while the remaining 25.30 miles to the field point is all offshore.

June 30, 1960, and the pro rating of these results in the ratio of gross CATC facility mileage to gross district feeder pipeline mileage including that of the CATC facilities.[138]

Direct costs thus computed by Staff on an incremental basis for the 12 months ended June 30, 1960, are:

Operating:		
Supervisory labor	$2,994	
Supervisory-other	3,994	
Employee expense	1,426	
Other direct costs	6,293	
Total operating costs		$14,707
Maintenance:		
Supervision	$951	
Field lines	6,009	
Other	7,903	
Total maintenance costs		14,863
Total direct costs		29,570

To the foregoing incremental direct costs Staff adds $12,851 of administrative and general costs computed at the company-wide rate of 43.46¢ per dollar of direct (supervised) costs, to obtain total operating expenses of $42,421.

The administrative and general expense ratio ($43.46¢) derives from studies made by Staff in the Tennessee rate proceeding (Docket No. G–19983) involving a 12-month test period ended July 31, 1959.[139] The just criticism of this method is that it assumes that administrative and general expense for a gathering facility is at a common level with those for all the other varied facilities and functions of a large pipeline system as comprehensive in nature as Tennessee's,[140] with no evidence of the nature of the supervision which the CATC or similar facilities must necessarily receive.[141] In the absence of some such showing so-called costs determined by the employment of a ratio are not useful in this proceeding.

[138] The witness testified to the effect that an attempt to precisely segregate costs from commingled book figures would be impracticable. As of June 30, 1958, there were 349.19 miles of pipeline of all sizes in the district, to which were subsequently added the 108.96 miles of CATC facilities. The witness' method does not take into account pipe sizes although size has a bearing on cost. Allocation of test period total costs on the basis of a simple ratio of pipeline mileage would have imposed a lesser ultimate cost on the CATC facilities.

[139] This ratio involves some adjustments to book expenses both in administrative and general and in supervised expenses, which the witness states are minor in character. Staff witness testified to the effect that this ratio has been a stable one as far back as 1951. For the year ended July 31, 1959, unadjusted company-wide administrative and general expenses per books ($8,691,625) constituted some 42.48¢ per dollar of total supervised expenses per book which related to natural gas production and gathering ($1,949,641), production extraction ($1,226,503), exploration ($1,736,085), other gas supply expense ($320,637), underground storage expense ($273,239), transmission expense including compressor station operation and maintenance ($14,241,696), and distribution expense ($714,507), for a total of $20,462,308.

[140] See the preceding footnote. Tennessee has no compression on the CATC line.

[141] Passing reference in Counsel's cross-examination to the allocation of administrative and general expense by Tennessee to construction (capitalizing) as well as operations is inconclusive as suggesting a contradiction of Staff's witness' procedures. Also the latter's opinion that it is not possible to make a study which would lead to a direct determination of the cost of supervision is likewise inconclusive.

Staff computes from work orders an average net plant for the year ended June 30, 1960, of $19,462,272, after a so-called normalization of gross investment as of the commencement of the period.[142]

Depreciation is taken at a composite annual rate of 3.25%, on the basis of testimony in the Tennessee rate case (Docket No. G–19983) in Staff's behalf which the witness in this proceeding, however, could not directly support as applicable to the CATC facilities. Nevertheless, the rate so proposed is less than the composite 3.5% rate which has been used by Tennessee since July 1, 1957, as applicable to all of its facilities, and it may be assumed that offshore conditions would more probably require the application of a higher rate than a lower one. In any event, this is a matter which Applicants could have easily rebutted if prejudiced thereby. On this basis the annual depreciation expense for the test period computes to $664,547.

Return ($1,192,064) is computed at the 6.125% rate prescribed by Commission's order issued August 9, 1960, in the Tennessee rate proceeding (Docket No. G–19983, *supra*) in which Tennessee claimed a 7% rate as a proper allowance. Staff's use of a 6.125% rate is appropriate in the circumstances.

The Federal income tax allowance ($278,439) is determined by the witness by the use of a ratio computed by Staff in the aforesaid Tennessee rate proceeding, in which income tax losses arising from Tennessee's non-utility and foreign operations were utilized to effect reductions in utility net taxable income and yield an income tax ratio of 23.3577% of return, as compared with a ratio of 44.2739% without the reductions. The merit of the ratio is not here at issue, it being sufficient to observe that as used by the Staff for the purposes of these proceedings it is the lower of the ratios available, the book ratio or the amount claimed by Tennessee in its rate proceeding (Docket No. G–19983) which is on review also being, in effect, higher.

The determination of the allowance for State income taxes ($15,568) is based upon a composite ratio (1.306%) also determined in the aforesaid Tennessee rate proceeding which is derived by dividing Staff's allowance for total state income taxes for several states ($654,129)[143] by the total return, without giving effect to consolidation or the offsetting of nonutility losses. No reason is given for using other than the Louisiana tax and the ratio of the latter is not here available.[144] Therefore, the computation here used by the Staff is not appropriate.

The Louisiana ad valorem tax allowance ($172,545) is based on the 1959 composite State rate and is improperly spread to all of Tennessee's CATC facilities extending from Kinder out to, and beyond, the offshore field central point, or, apparently, in substantial part beyond the jurisdiction of the State.[145]

On the basis of the foregoing, and the premises adopted by the Staff, costs acceptable for the purposes of tentatively appraising the proposed price for gas in the light of CATC transmission costs to Tennessee are:

---

[142] By adding an estimated $3,000,000 to some $17,000,000 of actual facility cost. The reasoning is not explained, but in any event is said not to affect the 1959–1960 test year results.

[143] Arkansas, Kentucky, Louisana, Mississippi, New Jersey, and Pennsylvania. The assumedly composite per book figure is somewhat lower ($566,760).

[144] Further, the basis upon which Louisana might validly apply the tax to Tennessee's CATC offshore operations is not stated.

[145] Kinder, it will be recalled, is approximately 46.36 miles in from the Louisana shore while the platforms are approximately 25.3 miles or more offshore. However, the location of the shore-line is involved in the offshore title dispute between the State and the Federal Government.

Direct costs	$29,570
Depreciation	664,547
Return	1,192,064
Federal income tax	278,439
Total	2,164,620

Staff witness uses a volume of 58,769,006 Mcf (15.025 psia) to obtain the unit cost of 4¢ per Mcf for the test twelve months ended June 30, 1960, but concedes that generally the facility costs are very largely fixed costs and will decline unit-wise with increases in the volumes of gas transported.

The main portion of the CATC facilities are designed to transport, when powered, some 416,000 Mcf per day (15.025 psia) and even before that event to provide additional capacity to enable Tennessee to transport substantial additional quantities of gas which it might acquire from others in adjacent offshore areas. Indeed, of 58,769,006 Mcf transported by Tennessee during the test period ended June 30, 1960, a total of 11,599,176 Mcf (15.025 psia) represented offshore purchases by Tennessee from the Shell Oil Company.

Staff witness was not informed as to the certificated capacity of the CATC line, did not know what portion of the capacity is now used to transport the CATC gas, and made no studies to determine whether the facilities would be called upon in future periods to transport additional volumes before or after the installation of additional facilities,[146] although it appears in Docket No. G–14562 (1958) that Tennessee has already considered this matter and has since (1960) proposed in the same docket to transport through these CATC facilities production from some 341,557 MMcf (15.025) of reserves acquired by it in offshore Block 64.[147]

The CATC volumes are even now increasing,[148] and totals for Applicants, Shell Oil Company, and the so-called MCN leases are expected to average 252,934 Mcf (15.025) per day by 1963 and again by 1967. Indeed, in May 1960 the facilities were taking as much as 176,000 Mcf per day of CATC gas and in June 1960 some 127,000 Mcf. For 1960 Tennessee estimates a total of 201,400 Mcf per day from the CATC, Shell and MCN combined sources.[149] Use of this latter volume would yield an indicated cost of 2.94¢ per Mcf, or adding in a normalized rate of production from Tennessee's own reserves, an indicated cost of 2.39¢ per Mcf, or with the 1963 expected CATC, Shell and MCN volumes, plus Tennessee's normalized production, an indicated cost of 1.98¢ per Mcf which is generally consistent with the findings in this decision pertaining to the Cameron Area reserves.

Gas flows into Kinder from other fields in Texas and Louisiana, some from as far as the Rio Grande valley (Texas), 400 to 450 miles distant. Staff witness made no determination of the gathering and transportation costs incurred by

[146] As a related matter, the witness did not consider the existence or nonexistence of potential reserves adjacent to Tennessee's CATC line.

[147] This would mean an average of 17,077,850 Mcf per year over an assumed 20 year life.

[148] Thus, from Exh. 38 and the latest figures available (15.025 psia):

	1958 (Mcf)	1959 (Mcf)	1960 (Mcf)
July	531,419	3,715,836	4,766,938
August	2,450,000	3,544,342	5,267,833
September	3,047,589	4,067,575	5,365,193
October	4,167,786	2,786,699	5,618,838

[149] On an assumed 15.025 psia basis.

Tennesssee with respect to such other gas and was not able to state whether at Kinder the cost of purchasing, gathering, and transporting the CATC gas was more, less, or the same, as that for gas obtained by Tennessee from other fields. Interveners, also, were content to rest in this respect upon the general state of the evidence of record.

The evidence would not support the use of a higher cost for gathering and transporting CATC gas than the 1.98¢ per Mcf above obtained. Moreover, in connection with the resort to the so-called Muskrat Area rate above, and with respect to the extensive facilities owned and operated by Tennessee to transport the Muskrat Area gas to its main-line transmission facilities, it would clearly appear that grounds do not exist that would justify giving effect to the computed transportation figure of 1.98¢ per Mcf, in determining a reasonable price in this this proceeding.

Cost of Service—Continental's Cost Results

Continental's position is that it is impossible to determine the actual separate cost of liquids and gas produced as joint products, that actual costs could not be available for use in the usual certificate case, and further that if costs are to be used, a company-wide basis of cost determination would be a necessity.

Specifically, applicants' witness, Continental's vice president in charge of finance,[150] testified to the effect that at the certificate stage, a cost of service study for a specific gas property would not provide a reliable basis upon which to determine whether the price for gas was, or was not, consistent with the public interest, assertedly because, in particular: direct operating expense experience would not be available, and the allocation of joint costs and, also the calculation of depletion and amortization expenses would have to be made on the basis of initial reserve estimates of an inherently tentative nature.[151]

This witness also testified that the best cost of service determinations for specific properties in the same supply area would be subject to such wide dispersions [152] that the direct application of such results would serve to disrupt the area price structure. He further testified that "guaranteeing" the recovery of costs would eventually serve to increase the cost of gas to interstate users as against the cost of gas to intrastate users.

However, Continental's cost of service witness prepared a test year (1959) computation in which he arrives at 43.69¢ per Mcf as the isolated cost of gas delivered by Continental to Tennessee from the CATC Cameron offshore leases.[153]

While direct production operating costs related to the Cameron area leases are shared equally by each of the Applicants, exploration costs are computed by each Applicant separately.

A simplified comparison of production costs associated with Cameron gas-only leases and the gas portion of the combination leases, which omits the relatively minor allocated special facility costs, discloses a gas-only production cost of service of 40.30¢ per Mcf and a condensate gas cost of service of 24.73¢ per

[150] Officially, Vice President, Finance and Transportation.

[151] In the Cameron area 23 of the CATC wells produce condensate along with natural gas.

[152] In the normal course of bargaining small supplies usually bring prices lower than those for large supplies, though having the higher associated unit cost.

[153] Including also Continental's interest in the MCN portion of the CATC–MCN Cameron offshore unit in computing the amortization of intangible drilling cost, but the effect of omitting or including this unit is relatively insignificant. Continental's test year (1959) production from the Cameron leases is some 10,014,362 Mcf (15.025 psia). No part of regulatory commission expense, which is presently estimated to be $495,548 for the whole case, is included in the cost of service.

Mcf, each of which is, in general, significantly larger than the price proposed in these proceedings (21.4¢/Mcf).[154]

Continental's production department net investment applicable to the Cameron leases includes in part lease and well equipment ($1,164,600), intangible drilling cost ($3,722,625), producing leaseholds ($137,614), and allocated general investment ($175,414).[155] The investment also includes an allocation ($141,816) of the CATC region drill tools investment ($1,162,427) effected on the basis of the number of CATC Cameron wells drilled to the total CATC oil and gas wells drilled in the region,[156] plus investment in certain special facilities ($88,215) charged entirely to gas, for an area total investment of $5,430,284.

After allocation production department total gas net investment in Cameron leases, direct and allocated becomes:[157]

Lease and well equipment	$1,122,277
Intangible drilling costs	3,577,583
Producing leaseholds	131,629
General investment [1]	168,983
Total	5,000,472
Drill tools and facilities [2]	221,481
Cameron area production investment	5,221,953

[1] Production department general investment and general company investment as allocated.

[2] Correcting to allocate a portion of special facilities to liquids.

Cameron area production expense includes the direct and indirect operating expense ($264,082), depletion ($5,574), depreciation ($109,247), and amortiza-

[154] No particularly significant allocation problems are involved with respect to most production costs, as the general investment and overhead expense items are less than 4.5% of the respective totals. Depletion is an insignificant item of expense and depreciation is generally in accord with established company rates. However, amortization of intangible drilling costs of $412,749, out of a total of $499,501 of production expenses, involves the write-off in 1959 of the remaining investment in two abandoned wells: $262,119 and $100,118 respectively, for a total of $362,237.

[155] General company investment allocated to the production department ($9,950,899) on the basis of gross direct department assets and the production department's own net general investment ($9,389,083), are allocated to the Cameron leases on the basis of direct lease operating expense, $90,255 and $85,159, respectively. The ultimate allocation to condensate gas utilizes the Btu equivalent of 1959 production of condensate gas (8,267,685 Mcf at 1,097,400 Btu per Mcf) and the Btu equivalent of production of lease liquids (78,058 barrels at 5,400,000 Btu per barrel).

[156] The total, inconsistently including that part of the drill tool investment which is, in effect, allocated to dry gas leases on a per well basis, is allocated to gas on the basis of the Btu equivalent of 1959 production of Cameron gas from both gas and combination leases (10,014,362 Mcf at 1,056,000 Btu per Mcf for the dry gas and 1,097,400 Btu per Mcf for the wet gas) and the 1959 production of Cameron liquids from the combination leases (78,058 barrels at 5,400,000 Btu per barrel).

[157] Excepting drill tools and special facilities the amounts allocated compare as follows:

	Gas only	Gas allocated	Total
Lease and well equipment	$211,385	$910,892	$1,122,277
Intangible drilling costs	455,917	3,121,666	3,577,583
Producing leaseholds	2,821	128,808	131,629
General investment	30,578	138,405	168,983
Total	700,701	4,299,771	5,000,472

tion ($741,641), and production department and general company overheads ($127,178), of which all but the overheads can be related to the lease.[158]

Combination lease expenses ($740,530) are allocated 95.56% to gas ($707,651) on the basis of the Btu equivalent of gas and liquid production in the 1959 test year. The Cameron area production total of gas-only and allocated gas expenses thus becomes:[159]

Operating expense	$254,280
Indirect expense	120
Depletion	5,332
Depreciation	97,882
Amortization	727,022
Overhead-allocated [1]	122,516
Total	1,207,152

[1] Allocated to leases on basis of direct lease operating expenses and to gas on combination leases on basis of Btu equivalent of 1959 production of liquids and gas.

To the foregoing there is added special facilities depreciation and amortization expense ($7,406)[160] and allocated production taxes associated with special facilities ($30,059) for a total of Cameron area gas production expense of $1,244,617.

Adding a 14% return ($731,073) on Cameron area gas production net investment ($5,221,953) and the tax allowance ($791,996 at 108.3333% of return) Continental's method yields a Cameron area gas production cost of service of $2,767,686 or 27.64¢ per Mcf.[161]

Continental uses five year (1955–1959) averages to even out general fluctuations in the costs of exploration.

[158] Overheads do not include FPC regulatory expense. Company general and administration expense ($12,618,166) is allocated to the production department ($8,506,663) on the basis of department direct gross operating assets (67.416%); the production department and allocated company general overheads ($5,515,216 and $8,506,663, respectively), are then allocated to the Cameron area gas-only and combination leases on the basis of lease operating expense (90.7%).

[159] Omitting the relatively minor special facility expense the amounts allocated compare as follows:

	Gas only	Gas allocated	Total
Operating expense	$46,013	$208,267	$254,280
Indirect expense	19	101	120
Depletion	114	5,218	5,332
Depreciation	18,436	79,446	97,882
Amortization	412,749	314,273	727,022
Overheads	22,170	100,346	122,516
Total	499,501	707,651	1,207,152

[160] That is, depreciation $7,389 and amortization $17, as corrected to allocate a portion to combination lease liquids.

[161] Using test year production of 10,014,362 Mcf from the Cameron area gas-only and combination leases.

Continental derives its exploration department net investment as follows:

	Five year total	*Five year average*
Exploratory authorizations	$13,802,127	$2,760,426
Non-producing leaseholds	256,278,955	51,255,791
Core-drill investment	224,940	44,988
Geological investment	94,601	18,920
Geophysical investment	2,361,849	472,370
Land department field equipment	32,055	6,411
Exploration department authorizations	1,238,001	247,600
Total	274,032,528	54,806,506

Applicant's general investment allocated to exploration on the basis of direct departmental assets (5.603%) amounts to $827,027 of a total of $14,760,441 of company-wide general net investment.

Continental computes company-wide exploration department expense also on the basis of 1955–1959 five year averages as follows:

	Five year total	*Five year averages*
Depreciation expense	$1,447,718	$289,544
Dry hole costs	63,197,535	12,639,507
Department expense	37,497,110	7,499,422
Dry hole payments	2,738,311	547,622
Lease rentals	23,338,689	4,667,738
Social security, etc., taxes	901,062	180,212
Geophysical operations	31,334,500	6,266,900
Core drill operations	1,549,106	309,821
Leaseholds sold	(176,096)	(35,219)
Surrendered leases	40,279,216	8,055,843
Total	202,107,151	40,421,430

Continental's general and administrative expense allocated to the exploration department on the basis of direct gross operating assets (5.603%) totals $706,996 of a company-wide total of $12,618,166.

A 14% return ($7,788,695) on the exploration department total net investment ($55,633,533, above) and tax allowance ($8,437,750 at 108.333% of return) added to the foregoing total of exploration department expense ($41,128,426) results in a total cost of service for exploration of $57,354,871 of which $21,946,841 (38.265%) is allocated to gas on the basis of the company-wide five-year (1955–1959) average production of liquids and gas expressed in terms of Btu equivalents, for an average company-wide exploration unit cost of service of 16.03¢ per Mcf,[162] or, applying to the Cameron area test year (1959) production of 10,014,362 Mcf (15.025 psia), a Cameron area exploration cost of service of $1,605,302.

Continental's Cameron cost of service, not including regulatory expense,[163] thus totals:

[162] The 38.265% company-wide allocation of expenses, return and taxes to gas rests on the conversion of the five-year (1955–1959) average of annual production of liquids (48,943,454 bb.) and gas (136,950,646 Mcf, 15.025 psia) to Btu equivalents at the rate of 5,880,000 Btu per barrel and 1,302,500 Btu per Mcf.

[163] As of April 30, 1960—$495,548.

	Total costs	*Production* (Mcf)	*Unit cost* (¢/Mcf)
Production department	$2, 767, 686	10, 014, 362	27. 64
Exploration department	1, 605, 302	10, 014, 362	16. 03
Total	4, 372, 988		43. 67

Interveners' Cost Results

Interveners use Continental's Cameron area on-lease production expenses, adjusting Continental's $362,237 write-off of two leases in the gas-only category [164] so as to provide for a substantial capitalization and an amortization thereof effectively at the rate (9% appr.) at which Interveners amortize allocated intangible drilling costs.[165] Continental's on-lease expenses of the combination leases are allocated to gas (78.26%) on a so-called imputed cost basis by taking a ratio of Continental's 1957 company-wide gas-only on-lease costs of 3.03¢ per Mcf [166] applied to its 1959 Cameron area condensate gas production (total $250,511) and Continental's 1957 company-wide oil-only on-lease costs of 89.14¢ per barrel [167] applied to Continental's condensate production from the Cameron area combination leases (total $69,581). The allocation of combination lease expenses to condensate gas ($49,277), plus the adjusted on-lease expense for the four gas-only leases ($160,951), results in a 1959 allocated production expense of $658,228—before indirect expense, overhead, production taxes, and regulatory expense, or, unit-wise some 6.57¢ per Mcf on the basis of Continental's 1959 Cameron area production of 10,014,362 Mcf of dry and condensate gas.

Interveners also use Continental's Cameron area production net direct investment, adjusting in the instance of gas-only leases to add the portion of the two 1959 write-offs capitalized ($316,351),[168] and allocate the on-lease net investment for the combination leases ($4,354,716) to gas by use of a relative investment cost factor (87.68%) based on Continental's on-lease company-wide

[164] Continental's expenses plus the write-off adjustment as indicated are:

	Gas-only leases	Combination leases
Operating expense	$46, 013	$217, 944
Depletion	114	5, 490
Depreciation	18, 436	83, 137
Amortization (gas-only, adjusted)	96, 388	328, 875
	160, 951	635, 416

[165] Also substantially the average rate obtained from book figures appearing in Staff's Exh. 37, Sched. 5. The mathematics of the determination of the total gas-only amortization of $96,388, contained in work papers which are not in evidence, is only partly explained by reference to the 9% rate which Interveners here employ.

[166] Involving 1957 operating expenses, depletion, depreciation and amortization related to some 180 gas-only leases.

[167] Involving aggregate expenses on some 760 oil-only leases which are pumping.

[168] Thus—

	Gas-only leases	*Combination leases*
Lease and well equipment	$211, 385	$953, 215
Intangible drilling cost	455, 917	3, 266, 708
Producing leaseholds	2, 821	134, 793
Total direct investment	670, 123	4, 354, 716
Adjustment (write-off capitalized)	316, 351	
Total adjusted investment	986, 474	

gas-only unit investment (16.77¢ per Mcf) applied to Continental's 1959 Cameron area condensate gas production (8,267,685 Mcf) and Continental's on-lease company-wide oil-only investment ($.496 per bb.) applied to Continental's 1959 Cameron area liquid production (78,058 bb.). The resulting allocation of combination lease investment to condensate gas ($3,818,215), plus the on-lease net investment in gas-only leases ($986,474), represents an assignment of investment to gas equal to 89.96% of the total direct net investment in all Cameron area leases, which ratio applied to the Cameron area indirect net investment ($322,538)[169] further allocates as gas investment $290,155. Gas production net investment, including general investment, thus becomes $5,094,844.

Interveners accept Continental's 1957 book exploration department expense of $45,180,462 of which $4,915,634, or 10.88%, is allocated to gas on the basis of the so-called reserve-added-realization method,[170] however, without provision for administrative and general expense. Using 1957 gas production of 133,037,858 Mcf, including that from the since sold Rayne Field, Interveners obtain a unit exploration expense of 3.69¢ per Mcf. The Interveners also accept, in effect, Continental's 1957 company-wide exploration department year-end net investment of $55,939,725, of which they allocate, according to this same method, $6,086,242, or 10.88%, to Cameron area gas without provision for general company investment, working capital or tax benefits.

Interveners determine the reserves-added-realization ratio (10.88%) as the value of gas reserves retained from among those added by Continental during the five-year period 1953–1957 to the total value of gas and oil reserves added, eliminating from reserves retained, but not from reserves added, Continental's so-called Rayne Field reserves which were discovered about 1953 and sold in 1958.

To obtain the value of Continental's gas reserves added in the period 1953–1957, as well as the value of the Rayne reserves sold, Interveners use the average price of 15.31¢ per Mcf for gas delivered in 1958 under contracts executed in 1957 by a group of 27 interstate pipeline companies, escalated at 1¢ per Mcf each 4 years and discounted, at the assumed rate of return of 11% over an assumed life of 20 years, to 6.58¢ per Mcf. To obtain the value of Continental's liquid reserves added in the same period Interveners use Continental's 1957 average liquids price of $2.97 per barrel, discounted at the assumed rate of return of 11% over an assumed life of 10 years, to $1.75.

Corresponding ratios are not available for other Applicants, but the proposed discount of the average liquids price over 10 years cannot be applied to allocate costs between Cameron area gas and condensate where according to the evidence only 54.2% of the condensate will have been produced by the end of the first 10 years (1969).[171]

---

[169] The Cameron area indirect net investment, allocated per Staff, consists of:

Drill tools	$110,547
General investment:	
Production department	60,090
General company	63,686
Special facilities	88,215
Total	322,538

[170] Interveners' allocation witness was of the opinion that this method would allocate to gas a share of expenses equivalent to the general role that the prospect of finding gas played in motivating the joint outlay in the test year. He conceded, however, that in general exploration cannot be successfully directed as between oil or liquids and gas.

[171] There is no fixed relation between life indices and the time required to produce particularly a reserve of oil—the rate of depletion of a gas field changes very little over the productive life of a field but generally oil fields have a long period of reduced production before abandonment.

There is a further basic objection to the acceptance of the reserves-added realization method of allocation as here proposed for this method would ascertain costs for the purpose of regulating price by reference to that very price, and again, without any further justification, a change in the price of either oil or gas would effect a shift in costs between them.

Staff's Cost Results

Staff uses operator's (Continental) cost data,[172] and employs the same test year for determining the Cameron area cost of production (1959), and the same five-year averages for determining the cost of exploration (1955–1959), as do Applicants.

With an "illustrative" 9% return, actual income taxes and allocations, Staff calculated unit costs of production and exploration, adjusted, compare with Continental's corresponding costs (*supra*) as follows:

	Staff (¢/*Mcf*)	*Continental* (¢/*Mcf*)
Production unit cost	12.77	27.64
Exploration unit cost	4.56	16.03
Total unit cost	17.33	43.67

Continental's Cameron area lease, special facility, department drill tool and general investments are accepted by Staff, but where Continental uses a Btu method to allocate joint on-lease investment in combination leases to condensate gas Staff uses a gross revenue basis of allocation, which reflects a price for liquids of $3.21 per bb. and a price for gas which is substantially the 21.4¢ per Mcf here proposed.

Compared with Continental's use of number of wells and Btu's of production to allocate the CATC region drill tool investment, first to the Cameron area and then to gas, Staff uses a gross investment, and a gross revenue basis, respectively, with prices as above. Finally, where Continental allocates general investment by a combination of gross investment, lease operating expenses, and the Btu of production. Staff uses a combination of two stages of gross investment to department and to lease, and gross revenues to gas.[172a]

Staff's Cameron area gas production investment, including direct investment, drill tools, special facilities, and general investment, thus amounts to $4,781,635 as compared with Continental's corresponding $5,221,953 (*supra*).[173]

The differences in the foregoing results are attributable, substantially, to Continental's Btu and Staff's gross revenue basis of allocation. Continental's Btu method has the inherent objection indicated in a following portion of this decision, while Staff's involves technically an unwarranted assumption as to the validity of a price, despite the fact that the price is the very matter at issue.

Staff accepts Continental's production book operating retirement, depletion, depreciation, overhead and production tax expense for both the Cameron area and gas-only leases.[174] The principal difference between Staff and Applicant here relate to the amortization associated with Staff's treatment of investment

[172] To avoid differences in accounting methods of the several CATC Applicants, Staff, assumes as do Applicants, that the production costs for the other three would be reasonably close to Continental's cost of service.

[172a] No basis is shown for allocating production department general expense to the Cameron area on the basis of an investment ratio which excludes investment in intangible drilling costs and which has in the denominator "other" company investment.

[173] Correcting both Staff and Continental in the minor matter of allocation of special facilities.

[174] Although allocating depreciation and amortization on special facilities differently between gas-only and condensate gas leases.

losses on two wells located in the East Cameron Block 49 (No. A–2) and in the Vermilion Block 96 field (No. 1372), respectively, which were abandoned in September 1959.[175] The Allocation of combination lease joint production expenses to gas here also reflects the previous mentioned differences in method, Continental allocating combination lease expense in the ratio of the Btu equivalents of 1959 Cameron gas and liquid production, while Staff again allocates these expenses, including overheads, in the ratio of lease gas and liquid gross revenues.

Staff's method computes a Cameron area gas production expense of $787,226 corresponding to Continental's $1,207,152, to which is added special facilities depreciation and amortization (Staff, $6,897, Continental, $7,395) and allocated production taxes (both, $31,216).[176]

With a 9% return ($454,966) on a gas net investment (as corrected with respect to special facilities $4,781,635), and a computed gas production working capital ($262,435),[177] Staff's method yields a gas production cost of service of $1,279,305 or 12.77¢ per Mcf, with no allowance for tax benefits.

Staff accepts Continental's company-wide exploration department net investment ($54,806,506) and its portion of general company investment allocated to that department ($827,027). Adding an allowance for working capital ($4,686,387) and employing its "illustrative" rate of return (9%), Staff obtains an exploration department return of $5,401,793 which is allocated (13.417%) to gas ($724,759), on the basis of a modified Btu method which applies an "economic" weight of four to the Btu of oil.[178]

Likewise Staff accepts Continental's computed five-year average exploration expense ($40,421,430) and allocated general and administrative expense ($706,996), of which $5,518,201 is allocated to gas on the same modified Btu basis as before (13.417%).

Total exploration expense and return allocated to gas ($6,242,960) produces an average cost, for Continental's five-year average production of 136,950,646 Mcf, of 4.56¢ and a Cameron area exploration cost of $456,655.

Applicability of Continental's Cost Results to Other Applicants

Continental's cost of service constitutes the formal cost presentation of each of the other three Applicants.

---

[175] Staff's cost of service witness treats the writ-off of these intangible drilling costs as out of period or non-recurring, stressing that the write-off of $100,118 for the Block 49 well should have been anticipated and effected before the test year. Staff's supervisory engineer testified, in effect, to handling both write-offs over the productive life of the Cameron reserves rather than as charges to expenses in the year of abandonment. Under the latter method the intangible drilling cost applicable to the A–2 well would have been charged to the reserve in 1958 and the investment in the Block 96 well would have been so charged in 1959. While the reserve would have suffered a resulting deficit in each year the continued operation thereof would eventually recoup all such losses. Also, as a related matter for rate purposes, at least, the investment would be netted only against the continuing annual reserve provision. The latter witness computed that under such a plan expenses would be increased for the year 1959 by $608, the amount by which the return on the normalized part of the investment exceeds the reduction against the lease by lease method of amortization employed by Continental. A 9% rate of return is assumed.

[176] After minor corrections pertaining to special facilities.

[177] Supported as to the challenged materials and supplies item by the testimony of Staff's qualified supervising engineer.

[178] Except for the weighting the total Btus of gas and oil production are the same as those used by Continental in obtaining its exploration department allocated unit cost (16.03¢ per Mcf) to-wit: 287,787,510 total Btu for oil and 178,378,216 total Btu for gas. Staff's weighting by the factor of four treats oil as having, in effect, a Btu equivalent of 615,150,040 units.

Direct costs associated with the CATC-Cameron properties are substantially identical as the interests of each of the Applicants in the leases here involved are equal [179] and Atlantic, Cities, and Tidewater seek to demonstrate that production department overheads and cost of exploration developed by Continental lie within the range of their corresponding costs.

The ratio of Continental's 1959 production department overheads to direct lease expense, excluding production taxes, is 48.13%, while the corresponding ratios of Atlantic, Cities and Tidewater are, respectively, 46.38%, 42.47%, and 40.78%. While the effect of these variations are not shown the weighted average ratio amounts to 45.16% and any adjustment would be small.[180]

Further, in the matter of exploratory operations, using five year averages of net investment, expense, and production, as did Continental, Atlantic, Cities, and Tidewater derive unit costs of 14.07¢, 9.94¢ and 11.02¢ per Mcf as compared with the former's 16.03¢ per Mcf.[181]

With respect to Cities' and Tidewater's results it appears that general investment and overheads were not included. Accordingly, providing for these items in the same ratio as in Continental's case the arithmetic average result becomes 12.83¢ per Mcf, assuming the allocation of costs to gas by the Btu method of allocation and a return at 14%, along with Applicants' provision for income taxes.[182]

Thus, the application of Applicants' procedure produces a unit cost of service which totals approximately 40.47¢ per Mcf, or 189% of the price negotiated with Tennessee.

However, it is not clear from the record whether Continental has or has not used its witness' reduced estimate of Cameron reserves as a factor in determining the CATC-Cameron gas depletion and amortization expense. Assuming that the reduced estimate has been so used the depletion ($5,332) and amortization ($726,308)[183] expenses should be reduced approximately in the ratio of the remaining recoverable reserves found by Applicants' reserve witness and those which are hereinbefore accepted for the purpose of this proceeding (650,065 Mmcf and 1,244, 363 Mmcf, respectively), or by 52.24%, effecting a reduction in the Cameron Area 1959 gas cost of service of 3.8¢ per Mcf.[184]

Basic Criticism of Proposed Methods of Allocation—The Btu Method

Interveners' evidence is, in brief, that Btu content does not constitute the basic characteristic of oil, condensate, and gas. Their fuel expert testified that 98.7% of crude oil is used as a charging stock for processing into gasoline, jet and diesel engine fuel, kerosene, furnace oil, lubricating oils and greases, road oils, asphalt

[179] Continental's ⅝ths additional interest in certain MCN acreage is apparently of no substantial effect.

[180] Reducing production department gas operating expenses by some $3,879. While the Applicants do not refer to the applicability of Continental's allocation of production department general investment the total allocated by the latter to the Cameron Area, if relevant, amounts to but $175,414 of a total production investment of $5,200,253 plus special facilities of $230,031.

[181] Applicants' evidence is to the effect that unsuccessful exploration costs are not identifiable with any specific area of operations or with any particular type of production and that costing of this item on a restricted area basis would frequently result in impractically high exploration costs in areas of low production and in low exploration costs in areas of high production.

[182] As each Applicant has the same proportionate interest in the CATC-Cameron Area properties the use of an arithmetic average is more appropriate than that of any one of the foregoing computations; Continental's ⅝ths interest in certain MCN acreage being apparently of no substantial effect in this respect.

[183] Using a figure which omits Continental's separate interest in the CATC-MCN unit and which includes amortization in minor amount for the Cameron special facilities.

[184] Obtained by $731,640 × .5224 divided by the 10,014,362 Mcf produced in 1959.

and other products, including residual oil and coke; gasoline is the principal of all of these products, accounting for some 40% to 45% of total volume, and some 60% to 65% of total value, of principal refinery products; the hydro-carbon liquid components of condensate (API 50° gravity or higher) are as much as 90% within the gasoline range; natural gas, generally consisting of some 90% of the true gases methane and ethane, is used fundamentally for burning in stationary installations designed principally to produce heat; the price of crude oil is not based on heating value but principally upon the basis of the amount of commercial grade motor or aviation gasoline recoverable therefrom;[185] refineries generally seek to maximize gasoline and additional high octane components at the expense of the heavier hydrocarbons;[186] and that the special value of gasoline inheres in its compact and mobile form. The witness is of the further opinion that the basic purpose of exploration is the discovery of crude oil.

On the other hand, Applicants evidence is to the effect that while Btu do not measure all physical characteristics of liquids and gas, nevertheless as some 90% of the crude oil produced in the U.S., as well as an even higher percentage of natural gas, is used for purposes primarily concerned with the development of heat energy, Btu do reflect a basic utilization of a major portion of these products. Also that Btu content generally corresponds with weight and thus accords recognition to all hydrocarbon products, including those not used for heat energy purposes, such as lubricants and petroleum oils; the Btu content is generally used as a common measure for all fuel and energy sources; and that as oil discovery is not separable from gas discovery, or vice versa, and as one cannot predict the content of a reservoir or the predominant form of the petreloum gas, crude oil, or condensate laden gas which may be encountered, exploration is in general a search for hydrocarbons.

However, in view of the fact that major crude oil components are processed for uses which have no relationship to, or basis of comparison with, the dominant use of natural gas, a simple unmodified Btu method of allocation is too inexact to be of direct use in determining the costs of exploration and production attributable to natural gas.

The Modified Btu Method

Staff uses a weighting of the Btus of liquids and gas in the ratio of 4 to 1 as was done in Commission's Opinion No. 338 in the *Phillip's* case.[187] In relation to the allocation of exploration costs the Commission in that decision observed that comparing these products upon the basis of a common physical characteristic reflected only in part the potentialities of the several hydrocarbon products and, to be practicable for the allocation of costs, must be modified by the exercise of judgment in consideration of fuel values, market factors, and economic trends. The conclusions relied upon by the Commission for so modifying the relative Btu content of oil and gas (6:1) by an economic factor (4:1) which produced an allocation ratio of 24:1 were that: while exploration cannot be entirely responsive to market price it is directed toward obtaining salable products and, therefore, market relationships should be reflected in the allocation; the demand for natural gas has been expanding faster than that for domestic produced crude oil; in exploration and production casinghead-gas has now come to be considered as a co-product of crude oil and, in connection

[185] Among normal crudes the higher the API gravity the higher the gasoline potential and the higher the price of the crude, the Btu content per gallon dropping from 154,000 for API 10° to 115,100 for API 80° gravity.

[186] Some 65% of major petroleum products is used for transportation purposes while virtually no natural gas is so used. Further in 1958 the volume of liquefied petroleum gases so used was equal to but 1.4% of the domestic demand for gasoline.

[187] *Phillips Petroleum Company,* Docket No. G–1148, et al., issued September 28, 1960, 24 FPC 537.

with condensate wells, equal consideration is given by producers to the discovery of both liquids and gas; and, because of these matters, in allocating joint exploratory and development costs (of Phillips) it is appropriate to give increased consideration to Btu relationships. Also, in order that producers may be encouraged to anticipate and supply growing demands allocations must be so applied as to encourage exploration and development for gas as compared with oil and to provide the producer (Phillips) with funds sufficient to meet future costs of exploration and production. Upon the basis of such considerations, and on the record in that proceeding, the Commission found the proper economic factor to be applied to the straight Btu content of oil to allocate Phillips' test year exploration costs to be four so that cost relationship of finding one Mcf of gas to one barrel of the higher Btu oil would be about one to twenty-four. The Commission remarked that extrapolation to 1958 of the 1951–1956 actual trend in oil and gas prices would also produce the same ratio (24 : 1).

There is no direct support in this record for the application of an economic factor to the Btu of oil. It does appear that in the seven Southwestern States realization for oil has increased from $1.967 per barrel in 1947 to $3.06 in 1958, while that for gas has increased from 3.76¢ to 10.86¢, or from a relative oil-gas ratio of 52 :1 to one of 28 :1.[188]

Conclusions such as those upon which the Commission relied in the Phillip's decision are generally supportable upon the record in this proceeding, but the evidence which concerns Continentals's operations and the price relationships of liquids and gas does not sufficiently support the application of the specific Phillips economic factor in this proceeding. The use by Staff of the factor is therefor subject to considerable reservation.[189]

Imputed Cost Method

Interveners and Applicants separately sponsor technical testimony concerning the operating mechanics of a gas condensate reservoir—the former to establish a foundation for using computed company-wide gas-only on-lease costs and computed company-wide oil-only on-lease costs, as well as corresponding relative investment costs, to allocate on a relative cost basis, respectively, Cameron on-lease expenses and on-lease net investment of those 23 leases which produce both gas and liquids.

Interveners' evidence is to the effect that as to hydrocarbon components there is no sharp line which distinguishes natural gas, crude oil, and condensate; condensate (API 48° gravity or higher) is in fact a low specific gravity crude; generally, in single phase reservoirs, condensate exists as a gas phase liquid dissolved in natural gas in place; and, with a decline in pressure and temperature below dew point conditions the condensate will liquefy in droplets which become entrained with and lifted by the gas.

The testimony of Applicants' expert, a practiced reservoir and production engineer, on this point is, in general, that condensate is neither a crude nor, at the elevated pressures and temperatures of reservoir conditions, a liquid; condensate, at 50° API gravity or greater, is composed of straight chain hydrocarbons lighter than octane and is a gas in the reservoir, flowing as a gas into the well, and up the well-bore;[190] the condensate vapor and gas behaving as a gas mixture to the well mouth, the energy contribution of one is indistinguish-

[188] The ratio for Louisiana for the latter year (1959) was approximately 25 : 1.

[189] Staff made no effort by testimony of witnesses or by reference to any portion of the evidence of record in this proceeding to support use of any specific economic factor, but simply relies upon its use in the *Phillip's* decision. Indeed, as far as the evidence in this case is concerned, the factor could be any other number as well as 4.

[190] According to Applicants' witness any mist which may form as the gas flows up the well-bore will have all the characteristics of a gas.

able from that of the other; and the mechanical work involved in producing a gaseous unit is trivial. On the other hand there is no disagreement between the witnesses that crude oil is a liquid in the earth, flows through the reservoir and is produced as a liquid, and that there is no comparability in the nature and kind of costs incurred in operating condensate and crude oil reservoirs.

Interveners' foregoing witness, a specialist in petroleum engineering, testified to basic laws only and made no study of the CATC-Cameron reservoirs and collected no information concerning the fluid content thereof.

The 23 CATC-Cameron condensate and the three dry gas wells are comparable in depth, have substantially the same sub-surface temperatures and pressures, and are each produced and operated as a gas well. The gas from both types of leases runs through identical pressure dehydration and separation equipment, and, except for a $2,000 condensate filter, production of liquids requires no special field equipment in addition to that used for production of gas on the dry gas leases.

The weight of the evidence thus clearly fails to support the use in this proceeding of on-lease costs derived from Continental's company-wide oil-only leases to allocate a portion of CATC-Cameron combination lease investment and production expense to liquids.

Risks and Rate of Return

Offshore activity of the industry commenced with initial exploratory efforts in the shallow and protected waters of the Gulf and the discovery of the Creole field in 1938. By 1959 the offshore industry had leased 3,357,117 acres, drilled 2,843 wells, spent $2,594,000,000 in direct lease investment, produced 258,865,699 barrels of oil and condensate and 842,390,293 Mcf of natural gas, and had received $725,000,000 in gross revenues.

Of the Louisiana offshore wildcats 35% have been successful as compared with 11% of the total domestic.

As it may take from three to five years after an offshore discovery before revenues are realized and initial investment is high only the larger and better financed operators can undertake the risks involved.[191]

Accordingly, the CATC companies in 1946 combined to share the risks of offshore operations. By 1959, Applicants had spent $284,785,000 compared with revenues received of $67,492,000.[192]

In the Cameron general area Applicants took some 59 leases covering 238,629 acres of which all but 11 leases on 38,750 acres have been surrendered. However, of 243 CATC offshore wells drilled 53% have been successful and of 39 Cameron area wells 66% have been successful. Nevertheless, Applicants' witness makes the significant point that operators have sought to explore and develop the more promising offshore structures and eventually a decline in the success ratio is to be expected as the less attractive prospects are drilled.

Hazards and risks peculiar to offshore drilling concern collision, blowouts, fires, and hurricanes. These have involved as to the CATC group the 1959 collision of a freighter with its Eugene Island Block 208B platform,[193] platform and tender damage from the hurricanes of 1956 and 1957,[194] limitedly, blowouts occurring at

[191] Large and costly reserves necessitate comparatively fast rates of production. Louisiana allowables for a capable offshore oil well within the territorial limits of the State are 1½ times that of an onshore well, but due to current reductions allowables applicable to offshore operations are now but some 35% of those in effect when offshore operations first attained significance.

[192] As related to the whole offshore area including Cameron, Eugene Island, and West Delta leases.

[193] Estimated platform damage $750,000.

[194] All platforms suffered damage.

the Cameron Block 49A–1 well and Eugene Island Block 208B–3 well, [195] and more markedly a fire on the West Delta Block 45E platform which commenced on October 15, 1958, and lasted for two months, with well workovers continuing to February 29, 1960.[196] This fire required heavy equipment and major drilling operations to bring under control. Seven lives were lost. The contractor's drilling rig, the CATC platform and living quarters, production facilities, all rental equipment, and seven multiple completed wells were lost or destroyed, along with an estimated 750,000 barrels of oil.[197] In addition, production of 436,000 barrels of oil was deferred and the reservoirs probably suffered extensive damage.

No participant questions that the risks involved in exploration for oil and gas and the development of oil and gas properties, particularly those offshore, are greater than risks associated with the business of refining, marketing, and transportation;[198] nor that inability to forecast the success of a new investment in production properties and absence of a direct monopoly market serves to differentiate Applicants' jurisdictional operations from those of a typical public utility. Interveners do attempt to show that the increasing demand for natural gas offers the natural gas producer a more assured market than that available to the crude oil refiner, but this subject involves complex matters not adequately developed in the record and for which no answer now available is better than that offered by Applicants' witness in his proposed resort to an earnings investment ratio.

Rate of Return

Applicants' rate of return witness testified to average rates of return on book net assets obtained over the past 12 years (1947–1958) by a broad range of general industry groups which include the petroleum production and refining industry and 64 others.[199] The compilation represents in all some 3,600 leading corporations, to which the witness has added results obtained for 10 selected larger producers whose operations are confined to the production of crude oil and natural gas (Class A), and for 25 selected larger integrated producers whose operations embrace non-producing activities including refining and marketing. He made no study of the industries as to their specific risks and stability of earnings on the ground that under present conditions the comparative return on investment satisfies all other tests and, that specifically, the earnings of the oil and gas producers reflect the risks and requirements of the type of business in which the gas producers are engaged.

---

[195] Bridged over after flowing uncontrolled for short periods of time.

[196] The fire started just after drilling of the seventh well was completed. There were a total of 19 completions in all seven wells. Each well had at least one completion burning along with the fire in the four completions in the seventh well. The platform, as a junction, was connected by pipeline with four other platforms and the production from the other platforms was also shut off for a period of time.

[197] Fire control operations, platform damage and destruction, and restoration operations entailed a net loss after insurance of $4,139,000, not including probable reservoir damage and any liability resulting from third-party legal claims being asserted in pending actions at law.

[198] Interveners question the use of the exploratory well 1:9 success ratio as a measure of risk on the grounds that a large operator drilling many exploratory wells is all but assured to a mathematical certainty a success rate of 10%. However, Applicants' evidence discloses that the 1:9 drilling success rate is not a commercial success rate. In any event this single factor is of little specific importance in the case.

[199] From First National City Bank's Monthly Letters, "Business and Economic Conditions". The rate of return at this point is not conventional but consists of net income after interest and taxes divided by book net assets which comprise the common and preferred equities.

The petroleum production and refining industry group (121 companies) had an average return after taxes of 14.9% over the past 12 years,[200] ranking relatively high because of the risky nature of the business and the requirements of growth and expansion which consumers' demands have imposed upon the industry. Similarly, the average return for the Class A petroleum companies was 21.3% and for the Class B group 15.5%.

Continental is a Class B type company, vertically integrated, is active in exploration, production, manufacturing, marketing, and transportation phases of the oil and gas business, and is engaged as well in petrochemical manufacturing and marketing, and in the transportation of natural gas in liquid form by tankers. However, the witness identifies Applicants' natural gas business as similar in risk and requirement to the Class A petroleum companies.

Considering the foregoing indicated earnings experience of both regulated and unregulated business, and the higher relative demand for natural gas as compared with oil, the witness concludes that the upper portion of the range of rates of return for the Class A petroleum companies (21.3%, above) is applicable to Continental's natural gas production, and supports a fair rate of return for major natural gas producers, such as Applicants, of 20% to 25% on net investment,[201] or 12% to 15% with an allowance for income tax benefits.[202]

The witness characterized offshore single ventures such as that of the CATC group as having natural risks which are accentuated by the difficult nature of sea area operations, and by the necessity of committing large sums of money far in advance of the time of actual commencement of commercial operations, and testified that the proper rate of return in such instances would be materially higher than those for company-wide operations by a major natural gas producer, or not less than 14% plus allowance for taxes computed on the basis of statutory benefits.

The witness also computed what he referred to, in substance, as the life-time "true rate of return," [203] consisting of that discount rate which would equate respective present values when applied to (a) estimated total capital outlays and (b) estimated revenues less estimated operating expenses and actual income taxes.[204] While testifying that the "true rate of return" (10.0% and 11.2%, depending upon prices used) after cash operating expenses and taxes could not be directly compared with his recommended cost of service rate of return, and commenting on the range of possible errors involved in calculations based on allocations, the witness states that the "true rate of return" provides an indication of estimated average return likely to be earned over the life of the property, takes cognizance of the lengthy time lag between the making of an

[200] As reported by the First National City Bank of New York, N.Y.

[201] Ratio of net income after actual taxes but before interest charges to the depreciated net property account plus working capital which effects a return of 21.8%, as compared with the 21.3% return indicated on the page, above, for the Class A group.

[202] Before consideration of the time lag between making capital investment and receiving income therefrom which, he stated, characterized the CATC Cameron project; a matter that could be generally cared for, broadly, by charging interest during construction.

[203] Discounted cash flow rate of return.

[204] Using Continental's estimate of its one-fourth net salable reserves of Cameron gas (150,904 Mmcf) and condensate (1,143,000 bbs.) net after royalties, and annual production through 1982 and remaining life; a price for gas (21.4¢ per Mcf for one result, and the contract escalated price for another) and for condensate ($3.18/bb.) to obtain estimated total revenues (gas, $32,293,600 and, $38,403,000, respectively; condensate, $3,635,200); accumulating 1947–1959 capital outlays and adding estimated limited future capital outlays (total $9,915,100); and, accumulating past operating expense together with allocated exploration and production department and general overheads, and adding estimated future expenses and allocations ($10,612,200), and income taxes ($3,632,900 and $6,015,000, respectively).

investment and obtaining income therefrom,[205] and represents the minimum level of return below which management would ordinarily refuse to commit new funds to the development of a project. This method's necessary reliance on estimates that run far into the future renders it of doubtful usefulness.[206]

The foregoing discussion of risks establishes the similarity of Applicants' offshore operations to those represented in Applicants' witness' Class A producers, for which the witness computes the average 1947–1958 return to be 21.8% (Exh. 23) or some 14.9% with the tax allowance.

However, computing the return for this group for the five year past period, (1954–1958, Exh. 23) and weighting inversely to give effect to the relative closeness of each figure to 1958 the average return becomes 16.2%, which is here accepted as a reasonable return for the purpose of this proceeding.

The Tax Allowance

The problem posed, for the claim by Applicants of either a tax allowance or an equivalent higher rate of return, by the holding of the Court of Appeals for the Fifth Circuit in *El Paso Natural Gas Company* v. *FPC*, 281 Fed 2d 567, 573 (1960) to the effect that the record must afford a basis for a finding on the amount of tax benefits actually necessary to provide an increment for incentive, is substantially answered by Applicants' witness' showing of the ratio of earnings to book net investment plus working capital for the Class A producers. The earnings are after actual taxes and the weighted average ratio of 16.2% indicates the return required to enable the company to obtain its necessary capital in competition with other like companies in the industry. The return approval dispenses with the necessity of giving further consideration to the question of incentive.

Actual Taxes

As the return for Applicants' Class A producers is after taxes there has to be considered the matter of allowing for taxes with respect to the Cameron properties computed by the taking of all deductions.

In connection with the development of its so-called discounted cash flow rate of return Applicants compute an income tax with deductions in the estimated amount of $561,000 for 1959. The company as a whole however, on this basis pays no income taxes. There is no satisfactory basis in the evidence for treating the Area seperately, at least, so long as it is allocated exploration expenses incurred company-wide, and considering the manner in which the rate of return has been determined, hereinabove, no provision for income taxes would be proper in the premises.

Cost of Service Computations Adjusted for Return

For the reasons hereinbefore stated in consideration of the several methods of allocation, neither Applicants' nor Interveners' cost results can be accepted, and Staff's unsupported use of an economic factor can be accepted to obtain a result which will serve only as an indication of the level of an acceptable rate.

Accordingly, adjusting the previous figure found by Staff's method of production department return ($453,966) for the 16.2% rate of return, above, to $817,139, and the company over-all exploration department return ($5,401,793) to $9,723,227 of which $1,304,565 is allocated to gas there is obtained an adjusted total Cameron Area gas cost of production of $1,642,478 and gas cost of exploration of $498,715 for a total Area cost of gas of $2,141,193 which produces a unit cost of 21.38% per Mcf.

[205] Ten years in the instant of the CATC-Cameron project; a situation which admittedly, however, could be generally alleviated by capitalizing interest during the period of lag.

[206] Further, the witness has relied upon an estimate of reserves which has not been accepted in this decision.

However, if costs had been considered on any basis in 1957, when these proceedings were first heard, the lower levels of cost, as indicated by Applicants' witness' indices, would have yielded a somewhat lower unit cost of gas. It appears that Cameron Area capital expenditures increased some 10.3% in the years of 1958 and 1959, the cost of drilling and equipping offshore Louisiana wells some 9.1%, and operating expenses (labor) some 8.5% in the same period. Applying these changes as the only data available to obtain an approximation of costs as of 1957 it would appear that the foregoing 21.38¢ would be reduced by some 0.8¢ per Mcf to a cost of 20.58¢ per Mcf.[207]

In view of the limited consideration which can be given Staff's method due to the unsupported use of an economic factor the 20.56¢ is accepted as substantially confirming the result previously obtained herein of 19.92¢ per Mcf. In the circumstances of the record to which Applicants have in part contributed, and in the matter of a price to be used to condition the issuance of a certificate, the latter are entitled only to that finding which accepts the 19.92¢ per Mcf as the reasonable price.[208]

The Applicable Date

The reasonable price has been determined as if considered and fixed at the time of the issuance of the original certificate of June 24, 1957, as the authorization to Applicants must relate back in order to provide Applicants with the necessary statutory authorization for the initial service to Tennessee. To provide other prices would improperly import into the case matters in the nature of rate relief to the Applicants prior to the earliest definite date (November 1, 1962) contractually provided for the purpose.

FURTHER FINDINGS

Applicants are qualified and able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Act and the requirements, rules and regulations of the Commission thereunder;

The herein proposed service, sale, and operation of the Applicants has been, is, and will be required by the preceding, present, and future public convenience and necessity;

However, it is further found that, pending a determination in an appropriate rate proceeding or proceedings effective as to Applicants or any of them, the reasonable price to have been and to be charged by Applicants to Tennessee therefor, from the date of initial service in the premises, is 19.92¢ per Mcf; and that public convenience and necessity requires that the certificates hereinafter issued to Applicants severally shall, in the manner hereinafter provided, be conditioned accordingly.

Applicants shall be required to refund with interest at 6% the difference between sums received from Tennessee for gas delivered from the CATC-Cameron Area under their respective contracts of August 1956, with the date of initial delivery thereof to the date this order shall become effective, and the sums which would have been received had the charge for such deliveries been 19.92¢ per Mcf as hereinafter provided, less amounts relating to taxes paid or held in reserve therefor.

---

[207] If adjusted for rate case expense the 20.58¢ would be increased by approximately 0.2¢—using a five year amortization and allowing a return on the average unamortized amount.

[208] Adjustments proposed to Staff's Cost of Service and appropriate with respect to reserves are approximately offsetting.

NOTICE

The Intervener Tennessee is on notice that the refund hereinafter provided shall be subject to such directives or orders as may be issued by the Commission at any appropriate future date.

ORDER

Upon consideration of the record herein, the contentions set forth in the proposed findings and in the briefs of respective counsel, and for the reasons and upon the findings and conclusions set forth in the foregoing portions of this decision, of which this order is a part,

IT IS BY THESE PRESENTS ORDERED, subject to review by the Commission on appeal, or on its own motion, as provided by its Rules of Practice and Procedure, that:

(A) A permanent certificate of public convenience and necessity shall be, and is hereby, issued to The Atlantic Refining Company (Atlantic), Continental Oil Company (Continental), Cities Service Production Company (Cities), and Tidewater Oil Company (Tidewater) as applicants, severally, authorizing the services and sale, proposed and provided respectively, by:

(a) Atlantic in its contract with Tennessee Gas Transmission Company (Tennessee) dated August 10, 1956, and filed as the former's FPC Gas Rate Schedule No. 185, as amended;

(b) Continental in its contract with Tennessee dated August 17, 1956, and filed as the former's FPC Gas Rate Schedule No. 154, as amended;

(c) Cities in its contract with Tennessee dated August 14, 1956, and filed as the former's FPC Gas Rate Schedule No. 6, as amended;

(d) Tidewater in its contract with Tennessee dated August 14, 1956, and filed as the former's FPC Gas Rate Schedule No. 72, as amended;

and, in each instance the operations and construction reasonably necessary thereto;

(B) Each certificate issued severally to Applicants as provided in Paragraph (A), above, shall be, and is hereby, conditioned so that the base price effective under each of the aforesaid contracts, from the date of initial service thereunder, shall be, until lawfully changed in the manner provided by the Natural Gas Act, 19.92¢ per Mcf;

(C) Each of the aforesaid Applicants shall, within 60 days of the date upon which this order shall become effective, refund to Tennessee with 6% interest a sum equal to the difference in the base price charged Tennessee and the price specified in the condition provided in Paragraph (B), above, of 19.92¢ per Mcf, applied to all volumes delivered to Tennessee under the contracts which form the subject matter of this proceeding (Paragraph (A), above, from the date of initial delivery to Tennessee;

(D) Within 10 days of the date of refund provided in Paragraph (C), above, applicants shall, each of them, file with the Commission an officially certified statement showing the amount of the refund, its manner of computation, and the interest payments related thereto, and a statement from Tennessee acknowledging the receipt;

(E) The certificates issued to Applicants shall be deemed accepted and of full force and effect, unless refused in writing and under oath by them within 30 days from issuance of this order;

(F) The certificates issued to Applicants are not tarnsferable and shall be effective only so long as they continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations, and orders of the Commission;

(G) The grant of the certificates to Applicants herein is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against them.

EWING G. SIMPSON
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. G–16841, RP61–19 AND CP61–38

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE FILINGS

(Issued January 23, 1962)*

On October 16, 1961, Midwestern Gas Transmission Company (Midwestern) filed separate motions to amend the certificate orders issued to it in Docket Nos. G–16841 and CP61–38 on May 12, 1959, (accompanying Opinion No. 320), and July 27, 1961, respectively, 21 FPC 653 and 26 FPC 201.

The order in Docket No. G–16841 authorized Midwestern to sell natural gas to three distributors in the Chicago area, Peoples Gas Light and Coke Company (Peoples), Northern Illinois Gas Company (Northern Illinois) and Northern Indiana Public Service Company (NIPSCO), said gas to be delivered at Joliet, Illinois, into the facilities of Chicago District Pipeline Company (Chicago District) for transportation to the three distributors. This authorization also provided that the gas delivered to the three distributors at the common Joliet delivery point may be interchanged between all three distributors so long as the total deliveries to the three companies do not exceed the sum of their authorized contract demands.

The order of July 27, 1961, in Docket No. CP61–38 authorized Midwestern to establish a new delivery point near Gilman, Illinois, for the delivery of gas to Northern Illinois to enable the latter to develop a new underground storage field and to furnish natural gas service to the Village of Crescent City and the City of Watseka, Illinois. This order was conditioned on Northern Illinois receiving a certificate from the Illinois Commerce Commission approving the plan to develop the storage project near Crescent City.

By its motions of October 16, 1961, for amendment of the authorization granted in Docket Nos. G–16841 and CP61–38, Midwestern recites that it proposes to establish a third delivery point to Northern Illinois at Kankakee, Illinois, in order to effect certain operational advantages in Northern Illinois' existing service in Kankakee, which new delivery point Midwestern apparently believes is within the purview of Section 2.55 (c) of the Commission's Rules of Practice and Procedure; recites the authorization obtained for the delivery point to Northern Illinois at Gilman, Illinois, in Docket No. CP61–38; and requests that the aforesaid authorizations be amended so as to eliminate application of the provision for the interchange of gas between the three distributor customers to the new delivery points, confining said interchange authorization to gas delivered at Joliet.

*Amended by order issued March 1, 1962, 27 FPC 424.

In view of the fact that Northern Illinois' present service to Kankakee is supplied directly from the system of Chicago District Pipeline Company which contains a mixture of gas purchased by Northern Illinois from Midwestern and gas purchased from Natural Gas Pipeline Company of America, it appears questionable whether Section 2.55 (c) of the Rules applies to the new delivery point at Kankakee; therefore the motion to amend in Docket No. G–16841 will be interpreted to request authorization also for the proposed new delivery point from Midwestern to Northern Illinois at Kankakee.

On November 24, 1961, Midwestern filed a further motion to amend the certificate authorization of July 27, 1961, in Docket No. CP61–38 to enable Midwestern to commence service to Northern Illinois at Gilman for the communities of Crescent City and Watseka immediately, without awaiting fulfillment of the condition requiring final approval by the Illinois Commerce Commission of the development of the proposed storage project near Crescent City. Inasmuch as the Illinois Commission has approved the service to the two communities and the construction and operation of the facilities necessary therefor, and such service is not connected with or dependent upon the storage project, it is reasonable to permit the establishment and use of the proposed Gilman delivery point for service to Crescent City and Watseka, reserving, however the commencement of service for development of the storage project until full approval therefor has been secured from the Illinois Commission.

No change in authorized sales volumes by Midwestern will result from the proposals.

On August 2, 1961, Midwestern tendered its Rate Schedule CD–1 (being original Sheets Nos. 8A, 8B, 8C and 8D to FPC Gas Tariff, First Revised Volume No. 1) and a superseding service agreement with Northern Illinois dated July 20, 1961. The new Rate Schedule CD–1 is identical with presently effective Rate Schedule CDX–1 except that the former is available to any buyer whose system connects or can be made to connect with Midwestern's main transmission line between Portland, Tennessee, and Joliet, Illinois, and that it does not contain a provision for the interchange of gas between buyers. The proposed superseding service agreement is identical with the presently effective service agreement except that it provides for delivery of gas at an additional delivery point near Kankakee, Illinois.

It should be noted that by order issued February 13, 1961, in Docket No. RP61–19, the Commission instituted an investigation of the rates of Midwestern, especially insofar as the rates applicable to Midwestern's southern system (the portion of its system involved in the two subject dockets) are concerned.

The Commission finds:

It is in the public interest and appropriate in carrying out the provisions of the Natural Gas Act to amend as hereinafter ordered the orders of the Commission granting certificates of public convenience and necessity to Midwestern Gas Transmission Company in Docket Nos. G–16841 (accompanying Opinion No. 320) and CP61–38, respectively.

The Commission orders:

(A) The order of the Commission issued May 12, 1959, in Docket No. G–16841 (accompanying Opinion No. 320) be and the same is hereby amended by adding the following sentence to Ordering Paragraph (D) thereof:

However, the requirements of this paragraph shall be applicable only to the sale of gas by Midwestern to Peoples, Northern Illinois or NIPSCO under the terms of Gas Service Agreements providing for a sole point of delivery at the intersection of the facilities of Midwestern and Chicago District near Joliet, Illinois.

(B) Said order issued May 12, 1959, in Docket No. G–16841 (accompanying Opinion No. 320) is further amended by adding thereto a new Paragraph (J) to read as follows:

(J) Midwestern is hereby authorized to establish a new connection between its transmission system and the facilities of Northern Illinois at a convenient point near the Town of Kankakee, Illinois, for the delivery of heretofore authorized natural gas to Northern Illinois, subject to the condition contained in the last sentence of Paragraph (D) as hereinbefore added to said Paragraph.

(C) The order of the Commission issued July 27, 1961, in Docket No. CP61–38 be and the same is hereby amended by deleting therefrom Ordering Paragraph (D), and by adding a new Paragraph (G) to read as follows:

(G) The deliveries of natural gas for the testing and development of storage and for service to the aforesaid communities are to be made from Northern Illinois' existing authorized contract quantity from Midwestern. These deliveries are to be made pursuant to Midwestern's FPC Gas Rate Schedule CD–1 and the related gas service agreement between Midwestern and Northern Illinois dated July 20, 1961.

(D) Said order issued July 27, 1961, in Docket No. CP61–38 be and the same is hereby further amended by deleting therefrom the existing Paragraph (B) and substituting therefor the following:

(B) The certificate granted in Paragraph (A) above is hereby conditioned, as to the development of the proposed gas storage project near Crescent City, upon Northern Illinois receiving the requisite approval therefor from the Illinois Commerce Commission. The proposed delivery of natural gas to Northern Illinois for service in the communities of Crescent City and Watseka is hereby authorized to commence upon the date on which this amending order issues.

(E) Midwestern's tendered FPC Gas Rate Schedule CD–1 and the concurrently tendered gas service agreement between Midwestern and Northern Illinois dated July 20, 1961, are hereby accepted for filing, effective upon the date on which this amending order issues.

(F) Midwestern's aforesaid Rate Schedule CD–1 is hereby made subject to investigation in the proceedings in Docket No. RP61–19.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

PENNSYLVANIA POWER & LIGHT COMPANY, PROJECT NO. 1881

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued January 23, 1962)

Application was filed on September 27, 1961 by Pennsylvania Power & Light Company, licensee for major Project No. 1881, for Commission approval of revised Exhibits L and M so as to authorize and show the conversion of Unit No. 6 from 25 to 60 cycle operation, which is the last 25 cycle unit in the Holtwood powerhouse.

The licensee states that such conversion is necessary inasmuch as the remaining 25 cycle load has decreased to the point where it is now more economical to supply that load from the Lancaster Division local distribution system through frequency changer sets at the load site. The conversion will also make available increased quantities of power for the licensee's growing 60 cycle load.

The Chief of Engineers, Department of the Army, has approved the revised Exhibit L–1–2 (FPC No. 1881–64), which is a general layout of the project structures, insofar as the interests of navigation are concerned.

The Commission finds:

The following described revised Exhibits L and M conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the Exhibits L and M, now part of the license, and hereinafter described as being superseded, should be eliminated from the license—all as hereinafter provided:

Exhibit L–1–2: (FPC No. 1881–64) entitled "General Layout of Structures" superseding Exhibit L–1–1 (FPC No. 1881–56),

L–5–A–3: (FPC No. 1881–65) entitled "Power House—Typical Cross Section—No. 3 Unit," superseding Exhibit L–5–A–2 (FPC No. 1881–57),

L–5–B–4: (FPC No. 1881–66) entitled "Power House—Typical Cross Section—No. 8 Unit," superseding Exhibit L–5–B–3 (FPC No. 1881–58),

L–5–C–3: (FPC No. 1881–67) entitled "Power House—Typical Cross Section—No. 10 Unit," superseding Exhibit L–5–C–2 (FPC No. 1881–59),

L–7–4: (FPC No. 1881–68) entitled "Power House—Sectional Plans and Elevations," superseding Exhibit L–7–3 (FPC No. 1881–61),

M–2A–5: (FPC No. 1881–69) entitled "Electrical Equipment—One Line Diagram, 60—Equipment," superseding Exhibit M–2A–4 (FPC No. 1881–62) and Exhibit M–2B–4 (FPC No. 1881–63), and

M–5: Consisting of 15 typewritten pages, entitled "General Description of Mechanical and Electrical Equipment and Appurtenances," superseding Exhibit M–4.

The Commission orders:

The revised Exhibits L and M described in the above finding as conforming to the Commission's rules and regulations are approved as part of the license for Project No. 1881, and the Exhibits L and M described in the same finding as being superseded are eliminated from the license for the project.

Before Commissioners: Joseph O. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

EL PASO ELECTRIC COMPANY, DOCKET NO. E–7017

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued January 25, 1962)

El Paso Electric Company (Applicant), incorporated under the laws of the State of Texas and doing business in the States of Texas and New Mexico, with its principal place of business at El Paso, Texas, filed an application on December 19, 1961, as amended December 28, 1961, for an order, pursuant to Section 204 of the Federal Power Act, authorizing the issuance and sale at competitive bidding of up to $10,500,000 principal amount of First Mortgage Bonds, due 1992.

Applicant proposes to issue the Bonds under its Indenture of Mortgage, dated as of October 1, 1946, between the Applicant and State Street Bank and Trust Company (formerly State Street Trust Company), of Boston, Trustee, as heretofore supplemented and as to be further supplemented by a proposed Seventh Supplemental Indenture, to be dated as of February 1, 1962.

Applicant proposes to invite, on or about January 31, 1962, sealed, written bids for the purchase of $10,500,000 principal amount of First Mortgage Bonds, by

newspaper publication and by distribution of a Form of Proposal, together with a statement of terms and conditions relating thereto and a form of purchase contract. All bids, whether from a single bidder or from a group of bidders, must be for the purchase of the entire issue of Bonds and must be on the Form of Proposal provided by the Applicant, signed by the bidder or by the Representative in the case of a group of bidders. Each bid must specify the interest rate to be borne by the Bonds, which rate shall be a multiple of ⅛ of 1 percent; the price exclusive of accrued interest to be paid to Applicant for the Bonds, which price shall be not less than 100% nor more than 102.75% of the principal amount thereof; and, that Applicant shall be paid the amount of the accrued interest on the Bonds from February 1, 1962 to the date of payment therefor and delivery thereof.

Applicant reserves the right, at any time before 12:00 noon, New York Time, February 5, 1962, to reduce the principal amount of Bonds for which bids are being invited from $10,500,000 to $7,000,000.

Unless postponed, all bids for the purchase of the proposed issue of Bonds must be presented to Applicant at 90 Broad Street, 19th Floor, New York, N.Y., before 11:00 a.m., New York Time, on February 7, 1962. Applicant, unless it rejects all bids or excludes a bid or bids for reasons specified in the terms and conditions set forth in the bidding papers, will accept the bid which provides for the lowest annual cost of money. Each bid must be accompanied by a certified, bank cashier's or official bank check or checks, payable in New York Clearing House funds, in the aggregate amount of $210,000.

Applicant will apply the proceeds of approximately $10,500,000 to be obtained from the proposed issuance and sale of Bonds, as follows: (1) to refund all of its outstanding First Mortgage Bonds, 5⅛% Series due 1989, in the principal amount of $3,500,000, including the payment of duplicate interest of approximately $14,900 and a redemption premium of $257,250; and (2) toward the financing of Applicant's construction program. If Applicant elects to reduce the principal amount of the Bonds for which bids are requested, then all of the proceeds, of approximately $7,000,000, will be used toward the financing of Applicant's construction program.

Applicant estimated that its construction program expenditures would be $778,000 for the last two months of 1961 and $10,179,000 for the calendar year 1962. The 1962 program includes: $6,820,000 for a proposed 80,000 kw turbo generator and boiler expected to be placed in operation in 1963 as Unit No. 2 at Applicant's Newman Power Station; $452,000 for the construction of 115 kv transmission lines from Newman to the Austin substation in El Paso and to the Las Cruces substation; and $2,908,000 for construction of and extensions and improvements to substations and other transmission and distribution facilities.

Written notice of the application has been given to the New Mexico Public Service Commission, the Texas Railroad Commission and to the Governor of each of those States. Notice of the application was also given by publication in the Federal Register on January 3, 1962 (27 F.R. 23), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before January 18, 1962 with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale for resale of electric energy which is transmitted between the States of New Mexico and Texas, and consumed at points outside the State in which it is generated, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy, facilities used

in local distribution or only for the transmission of electric energy consumed in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Applicant is, therefore, a public utility within the meaning of that term as used in Section 201 of the Act.

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 60 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SOUTHERN NATURAL GAS COMPANY, DOCKET NOS. G–9201 AND G–14587

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 25, 1962)

On August 7, 1961, Southern Natural Gas Company (Petitioner) filed a petition to amend the Commission's orders issued November 2, 1955, in Docket

No. G–9201, and August 7, 1959, in Docket No. G–14587, so as to permit Petitioner to transport and deliver to Southern Nitrogen Company (Nitrogen), an existing customer, a maximum of 16,750 Mcf of natural gas per day, of which 10,100 Mcf will be firm gas and 6,650 Mcf interruptible, in lieu of the presently authorized deliveries of 11,000 Mcf per day, of which 6,500 Mcf is firm gas and 4,500 Mcf interruptible.

In Docket No. G–9201 Petitioner was authorized to construct and operate certain facilities in order to sell and deliver a maximum of 11,000 Mcf of natural gas per day, on an interruptible basis, to Nitrogen, a new direct industrial customer. Nitrogen uses the gas as raw material and fuel in the production of nitrogenous fertilizers at its plant near Savannah, Georgia. In Docket No. G–14587 Petitioner was authorized to transport and deliver to Nitrogen up to 6,500 Mcf of the authorized 11,000 Mcf per day on a firm basis.

Petitioner has been advised that Nitrogen proposes to enlarge its facility at Savannah and will require increased volumes of firm and interruptible gas. Nitrogen's requirements are estimated to be:

Period	Maximum daily quantity—Mcf	
	Firm	Total
Presently	6,500	11,000
For 90 days after completion of expanded plant	6,500	14,500
Thereafter and until Oct. 1, 1964	8,700	16,750
After Oct. 1, 1964	10,100	16,750

Petitioner and Nitrogen have entered into an amendatory agreement, dated July 27, 1961, for the proposed additional volumes of natural gas.

The additional deliveries will not appreciably affect Southern's overall gas supply.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 28, 1961 (26 FR 12637). No protest or petition to intervene has been filed in this proceeding.

The Commission Finds:

It is necessary and appropriate to carry out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's orders issued November 2, 1955, in Docket No. G–9201, and August 7, 1959, in Docket No. G–14587, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's orders issued November 2, 1955, in Docket No. G–9201, and August 7, 1959, in Docket No. G–14587, are hereby amended so as to permit Petitioner, Southern Natural Gas Company, to transport and deliver to Southern Nitrogen Company a maximum of 16,750 Mcf of natural gas per day, of which 10,100 Mcf will be firm gas and 6,650 Mcf interruptible, in lieu of the presently authorized deliveries of 11,000 Mcf per day, of which 6,500 Mcf is firm gas and 4,500 Mcf interruptible.

(B) In all other respects, said orders shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TRUNKLINE GAS COMPANY, DOCKET NO. CP62–41; TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP62–120

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 25, 1962)

On August 17, 1961, as supplemented on September 25, 1961, Trunkline Gas Company (Trunkline) filed in Docket No. CP62–41, and on November 13, 1961, as supplemented on December 1, 1961, Texas Eastern Transmission Corporation (Texas Eastern) filed in Docket No. CP62–120, respectively, applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the construction and operation of facilities to establish an interconnection between the pipelines of the Applicants in Hidalgo County, Texas, and the sale of natural gas through said facilities by Trunkline to Texas Eastern, all as more fully set forth in the applications, as supplemented.

Trunkline seeks authorization to construct and operate approximately 491 feet of 4-inch O.D. pipeline and a metering station to interconnect its facilities with those of Texas Eastern as aforesaid. Trunkline also seeks authorization to make a short-term sale of natural gas through said facilities to Texas Eastern on an interruptible basis up to a maximum daily contract quantity of 30,000 Mcf through the period ending July 1, 1962. Trunkline has an urgent need to commence the sale to Texas Eastern immediately in order to alleviate a temporary take-or-pay situation with respect to its gas purchase contracts. As of the end of the year 1961, Trunkline estimates that it will have incurred liability for payment for accumulated prepaid gas purchase volumes amounting to approximately 28,000,000 Mcf.

Texas Eastern seeks authorization to construct and operate a main line tap and related facilities on its 30-inch McAllen-Vidor pipeline in Hidalgo County, Texas, to receive the aforementioned short-term supply of gas from Trunkline. Texas Eastern will be able to use the gas in augmentation of its existing supplies, as an additional source for service to existing markets. This will enable Texas Eastern to conserve its long-term supply for future use.

The estimated cost of the facilties in Docket No. CP62–41 is $15,000, and in Docket No. CP62–120, $5,900. Both applicants will finance their respective facilities from funds on hand.

The subject sale of natural gas will be at a price of 15 cents per Mcf at 14.65 psia under Trunkline's Rate Schedule F–3.

Trunkline and Texas Eastern were granted temporary authorization in the subject dockets on October 19, 1961, and December 12, 1961, respectively.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 15, 1962, respecting the matters involved in and the issues presented by the applications herein. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) Applicant, Texas Eastern Transmission Corporation, a Delaware Corporation having its principal place of business in Houston, Texas, is a "natural-

gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–1089 (8 FPC 228).

(3) The facilities hereinbefore described, as more fully described in the applications, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof and the proposed sale and transportation of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natuarl Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities by Applicants and the proposed sale of natural gas by Trunkline are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the ceritificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Trunkline Gas Company, to construct and operate the proposed facilities and to sell and deliver a maximum of 30,000 Mcf of natural gas per day at 14.65 psia to Texas Eastern Transmission Corporation until July 1, 1962, as hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP62–41, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Eastern Transmission Corporation, to construct and operate the proposed facilities in order to receive natural gas from Trunkline until July 1, 1962, as hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP62–120, upon the terms and conditions of this order.

(C) The certificates issued by paragraphs (A) and (B) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Sectior 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L.J. O'Connor, Jr., and Charles R. Ross.

LONE STAR GAS COMPANY, DOCKET NO. G–8763

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SERVICE AGREEMENT FOR FILING

(Issued January 29, 1962)

On October 18, 1961, Lone Star Gas Company (Movant) filed a motion to amend the Commission's order issued December 4, 1956, in Docket No. G–8763

so as to enable Movant to sell and deliver additional volumes of natural gas to Natural Gas Pipeline Company of America (Natural).

In the December 4, 1956, order the Commission authorized Movant to construct and operate certain facilities and to sell and deliver an average of 80,000 Mcf of natural gas per day and up to a maximum of 100,000 Mcf of natural gas per day to Natural at a point in Stephens County, Oklahoma. Movant herein proposes to increase these authorized volumes to a daily average of 100,000 Mcf with a maximum of 125,000 Mcf per day.

Movant states that Natural has an immediate need for the additional gas and that because of the loss of certain markets involving power plant sales, Movant will have a total of 30,553 Mcf of gas per day available to help meet the proposed increased sales.

Concurrently with the filing of its motion, Movant filed a superseding service agreement, dated October 10, 1961, providing for the proposed increased sales to Natural.

No additional facilities are required to effectuate the subject proposal.

Due notice of the filing of the motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 28, 1961 (26 FR 12637). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate to carry out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued December 4, 1956, in this proceeding be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued December 4, 1956, in Docket No. G–8763, is hereby amended so as to enable Movant, Lone Star Gas Company, to sell and deliver an average of 100,000 Mcf of natural gas per day and up to a maximum of 125,000 Mcf of natural gas per day to Natural Gas Pipeline Company of America in lieu of the 80,000 Mcf daily average and 100,000 Mcf daily maximum heretofore authorized in this proceeding.

(B) Movant's superseding service agreement, dated October 10, 1961, providing for the increased sales authorized in paragraph (A) above is hereby accepted for filing to become effective on the date this order issues.

(C) In all other respects, said order issued in this proceeding on December 4, 1956, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. G–18313, G–18314, G–18315; MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. G–18316

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued January 29, 1962)

On December 29, 1961, Michigan Gas and Electric Company (MG & E) filed a motion for reconsideration of the Commission's order accompanying Opinion No. 331, issued October 31, 1959, 22 FPC 775 in the above-entitled consolidated

proceeding.[1] MG & E's motion requests that the Commission "* * * reconsider the provisions of its order issued October 31, 1959, which imposed the full burden of the cost of the branch line upon the Upper Peninsula of Michigan, and pending such reconsideration extend the time for compliance with Paragraphs (Q) and (R) of said order". On January 16, 1962, Michigan Wisconsin Pipe Line Company (Mich. Wis.) filed an answer in opposition to the granting of MG & E's motion. We issued an order on January 5, 1962 *supra*, p. 4, in this proceeding extending the time for compliance by MG & E with ordering paragraphs (Q) and (R) of our order of October 31, 1959, pending further consideration of MG & E's motion.

After a thorough review of MG & E's motion, we have been unable to find therein any contentions in addition to those which MG & E has previously raised in its application for rehearing of the order accompanying Opinion No. 331, or in its briefs and arguments before the United States Court of Appeals for the District of Columbia Circuit or in MG & E's petition for writ of certiorari, filed August 30, 1961, in the Supreme Court of the United States. We denied MG & E's application for rehearing of the order accompanying Opinion No. 331 by our order issued December 29, 1959, 22 FPC 1157, in this proceeding. The order accompanying Opinion No. 331 was affirmed in *Michigan Gas and Electric Co.* v. *F.P.C.*, 290 F. 2d 374 (CADC), and MG & E's petition for certiorari was denied by the Supreme Court in *Michigan Gas and Electric Co.* v. *F.P.C.*, S. Ct. No. 368, on November 6, 1961, 368 U.S. 897.

MG & E's motion also refers to Opinion No. 345 issued June 28, 1961, in *Northern Natural Gas Company, et al.*, Docket Nos. G–20570, *et al.*, 25 FPC 1234. All that Opinion No. 345 stated in connection with construction of long laterals was that when Mich. Wis. proposes to construct laterals, to which its ten-cent formula is not considered applicable, it should devise a consistent formula to be used in consructing long laterals. In so holding, we did not refute our previous finding in Opinion No. 331, 22 FPC 775, at page 795, to the effect that:

> * * * providing for purchases by Michigan Gas under the ACQ–1 Rate Schedule and construction by it of the necessary Upper Peninsula facilities does not discriminate against that company.

When the Court upheld our order accompanying Opinion No. 331 and the Supreme Court denied certiorari, as hereinbefore indicated, MG & E's claims of undue discrimination were laid to rest and MG & E's motion raises no new questions of law or fact which have not already been carefully considered by the Commissions and duly reviewed by the courts.

The conditions in paragraphs (Q) and (R) of the order accompanying Opinion No. 331 required that MG & E construct the necessary facilities in the Upper Peninsula and file with the Commission proof of its having (1) obtained a contract with its principal customer and (2) secured the necessary State authorizations prior to the delivery by Mich. Wis. of gas to M G& E at Menominee, Michigan. The tenor of MG & E's motion is that unless the Commission modifies the conditions of the order accompanying Opinion No. 331, MG & E will be unable to provide service to the people of the Upper Peninsula. Furthermore, the prayer for relief specifically requested an extension of time for compliance with the aforementioned conditions pending only our reconsideration of MG & E's motion. Therefore, on the date of issuance of this order, Mich. Wis.' obligation to deliver and sell a maximum daily quantity of 37,200 Mcf of gas to MG & E at Menominee for serving the Upper Peninsula will be terminated.

---

[1] On January 25, 1962, MG & E filed a "Supplement to Motion for Reconsideration" requesting that reconsideration be deferred until the Commission "* * * has made its decision on branch or lateral line formula in Docket No. RP60–9". We have considered the supplement but it does not alter our findings herein.

The Commission finds:

(1) The assignments of error and grounds for reconsideration stated in MG & E's motion for reconsideration set forth no new facts or principles of law which were not fully considered by the Commission when it adopted its order accompanying Opinion No. 331, 22 FPC 775 and its order denying rehearing issued December 29, 1959, 22 FPC 1157, or which have not already been reviewed by the courts as hereinbefore indicated, or which having now been considered warrant any change or modification in said orders.

(2) No request having been made by MG & E for an extension of time within which to comply with the conditions accompanying Opinion No. 331 under the original terms of that order, Mich. Wis.'s obligation to provide a maximum daily quantity of 37,200 Mcf of gas to MG & E at Menominee for Upper Peninsula service should be terminated as of the date of issuance of this order.

The Commission orders:

(A) The "Motion of Michigan Gas and Electric Company for Reconsideration of Requirements of Order Issued October 31, 1959 and Extension of Time for Compliance", filed December 29, 1961, is hereby denied.

(B) Mich. Wis.'s obligation to provide a maximum daily quantity of 37,200 Mcf of gas to MG & E at Menominee for Upper Peninsula service is hereby terminated as of the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET No. CP62–76

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 29, 1962)

On September 25, 1961, Mississippi River Transmission Corporation (Applicant) filed in Docket No. CP62–76 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation and sale of natural gas in interstate commerce for resale, all as more fully set forth in the application.

Applicant proposes to transport and sell natural gas on an interruptible basis to its two existing firm service (Rate Schedule CQ–1) customers, Laclede Gas Company (Laclede) and Illinois Power Company (Illinois). The proposed interruptible service would likewise be available to any additional customers whom Applicant is authorized to serve under Rate Schedule CQ–1 and who enter into an agreement with Applicant for service under said rate schedule.

Under an agreement among Laclede, Illinois, and Applicant dated April 22, 1960, Laclede and Illinois are entitled to purchase 63.75% and 11.25%, respectively, of the gas available to Applicant for purchase on any day from Trunkline Gas Company (Trunkline) under Trunkline's Rate Schedule R-1 (interruptible).

Proportionate quantities, i.e., quantities bearing the same relationship as the respective maximum daily contract quantities under Rate Schedule CQ–1, would be allocated to other firm service customers out of the remaining 25% not allocated to Laclede or Illinois. The initial rate at which Applicant proposes to sell such gas is 36.7 cents per Mcf, which rate is identical to that contained in Trunkline's Rate Schedule R–1 under which interruptible gas would be purchased by Applicant.

Applicant does not anticipate that substantial volumes of gas will be available for interruptible service at times when its customers desire additional gas. Applicant asserts, nevertheless, that to the extent that such gas is available from time to time, it could be of assistance to Applicant's customers in meeting the peak winter loads on their systems.

Uncertainty both as to the needs of the customers and the availability of gas when those needs occur makes it impracticable to prepare a realistic estimate of sales and revenues.

No additional facilities are proposed. Deliveries of interruptible gas to Laclede and Illinois will be made by means of the same facilities that are now used to make firm deliveries to said customers. Authorizations for additional facilities needed for deliveries to new customers will be requested in future proceedings as and when required, Applicant states.

Temporary authority to sell and deliver natural gas as proposed herein was granted Applicant on November 20, 1961. Concurrently with the granting of the temporary authorization, Original Sheet Nos. 9A, 9B, and 9C to Applicant's FPC Gas Tariff, Original Volume No. 1 were accepted for filing to become effective on the date of the initial delivery, subject to the conditions that Applicant pass on any refunds received from Trunkline in Docket No. RP60–6 and make appropriate rate reductions to reflect any reductions ordered in Trunkline's rates, and that such refunds and filings be satisfactory to the Commission.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 9, 1962, respecting the matters involved in and the issues presented by the application in this proceeding. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission under a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis County, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60–95 (24 FPC 1020).

(2) The sale hereinbefore described, and as more fully described in the application in this proceedings will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sale of natural gas as proposed by Applicant is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations; and further, the certificate should be subject to the condition that Mississippi pass on to its customers any refunds received from its supplier, Trunkline Gas Company, in Docket No. RP60–6 and make appropriate rate reductions to reflect any reductions ordered in Trunkline's rates, and that said refunds and rate filings shall be satisfactory to the Commission.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Mississippi River Transmission Corporation authorizing the sale of natural gas as hereinbefore described, and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations; and further, the certificate is subject to the condition that Mississippi pass on to its customers any refunds received from its supplier, Trunkline Gas Company, in Docket No. RP60-6 and make appropriate rate reductions to reflect any reductions ordered in Trunkline's rates, and that said refunds and rate filings are satisfactory to the Commission.

Before Commissioners: Joseph C. Swidler, Chairman: Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

REVISION OF ANNUAL REPORT FORM PRESCRIBED FOR CLASS A AND CLASS B ELECTRIC UTILITIES, LICENSEES AND OTHERS SUBJECT TO THE FEDERAL POWER ACT, FPC FORM NO. 1, DOCKET NO. R-198

ORDER NO. 238-A

ORDER REVISING SCHEDULE PAGES OF ANNUAL REPORT FORM, FPC FORM NO. 1, FOR ELECTRIC UTILITIES, LICENSEES AND OTHERS

(Issued January 26, 1962)*

On December 7, 1961, 26 FPC 798, the Commission issued its Order No. 238 (26 F.R. 11897, December 13, 1961), in this proceeding amending Section 141.1 of the Regulations under the Federal Power Act (18 CFR 141.1). Subsequent to the issuance of Order 238 examination of the Schedule Pages of the Report Form promulgated therein revealed the need for certain minor corrections of an editorial nature. These corrections are as set forth hereinafter. They have been incorporated in the printed blank report forms to be used in reporting for the year 1961 but they did not appear in the Schedule Pages annexed to Order 238 which was mailed to interested parties.

The Commission finds:

(1) It is necessary and appropriate for the purposes of the Federal Power Act that the Schedule Pages of FPC Form No. 1 as set forth in Appendix A to Order No. 238 be corrected to read as set forth hereinafter.

(2) In view of the facts set out above, good cause exists for this order to be effective as of the date of its issuance.

(3) The corrections herein adopted and approved are editorial in nature and so it is unnecessary to provide notice and opportunity for comment thereon pursuant to Section 4(a) of the Administrative Procedure Act.

---

*Published in Federal Register, February 2, 1962 (27 F.R. 970).

The Commission acting pursuant to the Federal Power Act, as amended, particularly Sections 3(13), 4(a), (b), (c), 301(a), 302, 304, 309 and 311 thereof (16 U.S.C. 796(13), 797(a), (b), (c), 825(a), 825a, 825c, 825h, and 825j) *orders:*

(A) The following editorial corrections to the Schedule Pages of FPC Form No. 1 prescribed for electric utilities, licensees and others subject to the provisions of the Federal Power Act as set forth in Appendix A to Order No. 238 are hereby adopted and approved:

General Instructions—last line of instruction 4, change "I, II, III" to "iii, iv, and v."

List of Schedules—page II, change "Common Plant and Expenses and Other Common Expense and Statistical Data" to "Common Section"; page III, change page number for Construction Overheads-Electric from "428" to "427"; change page number for General Description of Construction Overhead Procedure from "427" to "428".

Page 104—item 2 add ")" after "1954".

Page 108—item 11, change "8" to "106".

Page 113—eliminate column (b) "Page No."

Page 204—account 144, item 1, change "reserve" to "accumulated provision"; item 2, delete "reserve".

Page 207—line 3, after "Residuals" add "and Extracted Products".

Page 214—heading for column (a), change "Description of other deferred debit" ot "Description of miscellaneous deferred debit."

Page 219—add "(omit cents)" after schedule heading.

Page 227—add "$" in columns (b), (c), (d), (e).

Page 420—add "(a), (b), (c), (d)" to column headings.

Page 427—place schedule "General description of construction overhead procedure" on page 428.

Page 428—place schedule "Construction overheads Electric" on bottom of page 427.

Page 433—add quotation marks at end of item 8.

(B) The aforesaid corrections to the Schedule Pages contained in FPC Form No. 1 are effective on the date of issuance of this order.

(C) The Secretary of the Commission shall cause prompt publication of this order in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

REVISION OF ANNUAL REPORT FORM PRESCRIBED FOR CLASS A AND CLASS B NATURAL GAS COMPANIES SUBJECT TO THE NATURAL GAS ACT, FPC FORM NO. 2, DOCKET NO. R-201

ORDER NO. 239-A

ORDER REVISING SCHEDULE PAGES OF ANNUAL REPORT FORM, FPC FORM NO. 2, FOR NATURAL GAS COMPANIES

(Issued January 26, 1962)*

On December 7, 1961, 26 FPC 806, the Commission issued its Order No. 239 (26 F.R. 11900, December 13, 1961), in this proceeding amending Section 260.1 of the Regulations under the Natural Gas Act (18 CFR 260.1). Subsequent to the issuance of Order No. 239, examination of the Schedule Pages of the Report Form promulgated therein revealed the need for certain minor corrections of an editorial nature. These corrections are set forth hereinafter. They have been incorporated in the printed blank report forms to be used in reporting for the

*Published in Federal Register on February 2, 1962 (27 F.R. 970).

year 1961 but they did not appear in the Schedule Pages annexed to Order No. 239 which was mailed to interested parties.

The Commission finds:

(1) It is necessary and appropriate for the purposes of the Natural Gas Act that the Schedule Pages of FPC Form No. 2 as set forth in Appendix A to Order No. 239 be corrected to read as set forth hereinafter.

(2) In view of the facts set out above, good cause exists for this order to be effective as of the date of its issuance.

(3) The corrections herein adopted and approved are editorial in nature and so it is unnecessary to provide notice and opportunity for comment thereon pursuant to Section 4(a) of the Administrative Procedure Act.

The Commission acting pursuant to the Natural Gas Act, as amended, particularly Sections 8, 9, 10, and 16 (15 U.S.C. 717g, 717h, 717i, and 717o) *orders:*

(A) The following editorial corrections to the Schedule Pages of FPC Form No. 2 prescribed for natural gas companies subject to the provisions of the Natural Gas Act as set forth in Appendix A to Order No. 239 are hereby adopted and approved:

Cover—add bracket after "(Address of Principal Business Office at end of year)".

General Instructions—last line of instruction 4, change "I, II, III" to "i, ii, and iii."

Excerpts from the law—third line change "prescirbe" to "prescribe."

List of Schedules—page II change "Common Plant and Expenses and Other Common Expense and Statistical Date" to "Common Section"; Page III change page number for Construction Overheads—Gas from "544" to "543"; change page number for General Description of Construction Overhead Procedure from "543" to "544."

Page 104—item 2, add ")" after "1954."

Page 108—item 11, change "8" to "106."

Page 113—eliminate column (b) "Page No."

Page 204—account 144, item 1, change "reserve" to "accumulated provision"; item 2, delete "reserve."

Page 207—line 3 after "Residuals" add "and Extracted Products."

Page 214—heading for column (a) change "Description of other deferred debit" to "Description of miscellaneous deferred debit."

Page 219—add "(omit cents)" after schedule heading.

Page 227—add "$" in columns (b), (c), (d), (e).

Page 510—item 4, change page references "552 and 553" to "560 and 561."

Page 512—heading of schedule change "Abandoned" to "Abandonment of."

Page 513—heading for column (d) change to read "Accumulated Provision for Amortization (Account 115)".

Page 514—change last line to read "Total as above—line 12, columns (d) and (f)."

Page 534—item, top of page, change "page 30" to "page 212"; heading for column (c) change "797" to "795."

Page 539—line 2, delete "process."

Page 543—place schedule "General description of construction overhead procedure" on page 544.

Page 544—place schedule "Construction Overheads—Gas" on bottom of page 543.

(B) The aforesaid corrections to the Schedule Pages contained in FPC Form No. 2 are effective on the date of issuance of this order.

(C) The secretary of the Commission shall cause prompt publication of this order in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. RP61-13

ORDER APPROVING SETTLEMENT, ACCEPTING TARIFF SHEETS, PRESCRIBING REFUNDS AND TERMINATING PROCEEDING

(Issued February 2, 1962)

On October 17, 1960, pursuant to the provisions of Section 4 of the Natural Gas Act, Transcontinental Gas Pipe Line Corporation (Transco) tendered for filing revised tariff sheets[1] proposing an annual increase, based on sales and transportation for the year ended July 31, 1960, as adjusted, of $11,786,567, or 7.0% over the rates established by order of the Commission issued October 19, 1960, in settlement of proceedings in Docket No. G-18783. Certain of the tariff sheets were withdrawn or corrected by filings made on November 7, 1960.[2] The increased rates were suspended by Commission order issued November 16, 1960, in the subject proceeding, and, pursuant to an appropriate motion by Transco, were made effective April 17, 1961, subject to refund.

The hearing in this matter commenced on October 3, 1961, pursuant to Commission order issued July 10, 1961. Upon completion of the direct presentation of Transco, the Staff and Interveners, and cross-examination of Transco's witnesses, the hearing was recessed to reconvene on December 4, 1961. Beginning on November 30, 1961, Transco, its customers, interested State commissions and the Staff participated in a series of conferences, culminating on December 19, 1961, in a general agreement and understanding concerning the settlement of matters in issue. On January 8, 1962, Transco introduced into the record as Exhibit No. 28 a Statement of Proposed Settlement, reflecting the agreement of the parties reached on December 19, 1961. No objection or protest to the proposed settlement has been made by any party to the proceeding.

On January 10, 1962, the presiding examiner certified to the Commission the Statement of Proposed Settlement together with the transcript of the proceeding held on January 8, 1962. The Statement of Proposed Settlement is attached

---

[1] First Revised Sheet Nos. 17-0, 28-A.1 and 28-A.4; Second Revised Sheet Nos. 28-K.2, 28-X, 28-AA and 28-DD; Third Revised Sheet No. 28-R; Fifth Revised Sheet No. 27; Sixth Revised Sheet No. 28-P; Eighth Revised Sheet Nos. 17-B, 17-F and 26-B; Tenth Revised Sheet Nos. 9 and 28-I; and Eleventh Revised Sheet Nos. 5, 12, 16, 19 and 24 to Transco's FPC Gas Tariff Original Volume No. 1 and Eighth Revised Sheet No. 51 to Transco's FPC Gas Tariff Original Volume No. 2.

[2] First Revised Sheet No. 17-0 was withdrawn and another sheet substituted with a proposed effective date of August 12, 1960, which was accepted by the Commission by order issued November 18, 1960 in Docket No. G-18783. First Revised Sheet Nos. 28-A.1 and 28-A.4; Third Revised Sheet No. 28-R; Fifth Revised Sheet No. 27 and Sixth Revised Sheet No. 28-P were withdrawn for the reason that the rates approved by the Commission by order issued October 19, 1960 in Docket No. G-18783 were at the same level as those contained in these sheets. In order to correct the numbers of the tariff sheets filed October 17, 1960 to reflect the numbers subsequently employed on the tariff sheets filed to make the settlement rates in Docket No. G-18783 effective November 18, 1959 Transco filed the following new tariff sheets identical to those filed on October 17, 1960, except for the correction of the sheet numbers: Third Revised Sheet Nos. 28-K.2; 28-X, 28-AA and 28-DD; Ninth Revised Sheet Nos. 17-B, 17-F and 26-B; Eleventh Revised Sheet Nos. 9 and 28-I; and Twelfth Revised Sheet Nos. 5, 12, 16, 19 and 24 to Transco's FPC Gas Tariff Original Volume No. 1 and Ninth Revised Sheet No. 51 to Transco's FPC Tariff Original Volume No. 2.

736-330—64——15

hereto as Exhibit A, and made a part hereof.[3] The proposed settlement would establish rates and charges to be effective as of January 1, 1962. Under those rates and charges Transco will realize an increase in its revenues in the amount of $7,844,046, based on sales for the 12 months ended December 31, 1960, as adjusted, in lieu of the requested increase of $12,472,222[4] under the rates and charges which became effective subject to refund on April 17, 1961.

Pursuant to the terms of the proposed settlement, and subject to approval of the settlement by the Commission, Transco filed with the Commission on January 9, 1962, revised and original tariff sheets,[5] copies of which are part of the settlement agreement (Appendix A thereto not here attached as noted above), to become effective January 1, 1962, superseding the rates presently effective, and among other things providing for new optional general service rates.[6] The rates to be made effective under the designated tariff sheets will provide Transco with jurisdictional revenues of $183,830,971, and when added to non-jurisdictional revenues of $1,736,927, will provide system revenues of $185,567,898.

Under the terms of the proposed settlement, Transco also filed on January 9, 1962 tariff sheets to simplify its tariff with respect to storage service rate schedules so as to establish one rate schedule for such service, Rate Schedule GSS.[7]

The proposed settlement provides for immediate refunds for the period April 17, 1961 through December 31, 1961 in an amount equal to the difference between the revenues collected under the rates which became effective April 17, 1961, and the revenues computed at the rates set out in the tariff sheets tendered for filing by Transco on January 9, 1962, together with interest thereon at the rate of 7 percent per annum from the date of payment to Transco until refunded. In addition, Transco will refund, applicable to the same period, in the manner set out in Article III (B) of the proposed agreement, an amount based upon the difference between the actual average cost per Mcf of purchased gas under regular and other contracts during the period and the 17.41¢ per Mcf representing the average cost of purchased gas under regular and other contracts included in the cost of service for settlement purposes to derive rates and charges to be effective from and after January 1, 1962, plus interest thereon at the rate of 7 percent per annum from the date of payment to Transco until refunded.

The proposed settlement also provides for passing through by Transco to its customers of refunds received by Transco from its suppliers and for reduction in rates to be made by Transco to reflect the reductions, if any, in the rates of its suppliers. The methods to be used by Transco in determining the refunds to its customers and in computing the reductions in its rates are set forth in considerable detail in Articles III, IV and V of the proposed settlement. Such refunds and rate reductions will be made to reflect Transco's

---

[3] Appendix A to the proposed settlement agreement is comprised of copies of tariff sheets to be filed pursuant to that agreement. That Appendix A is not reproduced in the copy of the settlement agreement attached hereto.

[4] Based upon 12 months ending December 31, 1960, as adjusted, as compared with $11,786,567 filed increase based upon the year ended July 31, 1960 as adjusted.

[5] Sheet Nos.: Fourth Revised Nos. 28–K.2, 28–AA and 28–DD; Tenth Revised Nos. 17–F and 26–B; Eleventh Revised No. 17–B, Twelfth Revised Nos. 9 and 28–I, Thirteenth Revised Nos. 16, 19, and 24; Fourteenth Revised Nos. 5 and 12 to its FPC Gas Tariff Original Volume No. 1 and Tenth Revised Sheet No. 51 to its FPC Gas Tariff Original Volume No. 2.

[6] Original Sheet Nos. 26–F through 26–T. Original Sheet Nos. 45–A and 45–B, and First Revised Sheet No. 45 to its FPC Gas Tariff Original Volume No. 1.

[7] Sheet Nos.: Original 17–0.1; First Revised 17–H, 17–K, 17–P, 55–U, 55–V, 55–X.3, 55–W, 55–X.1, 55–X.2; Second Revised 17–I, 17–J, 17–L, 17–M, 17–N and 17.0.

reduced cost of purchased gas resulting from its suppliers' pending proceedings under Sections 4, 5, or 7 of the Natural Gas Act.

Refunds as computed under the proposed settlement will be made by Transco to its customers within 60 days after it receives a refund from any supplier. Similarly, any rate reductions to be reflected by Transco in its rates pursuant to the methods set forth in the proposed settlement, will be filed by Transco within 60 days of the effective date of the supplier's reduced rate, to be effective as of the same date that the supplier's reduced rates are applied in its billings for current deliveries to Transco. No rate reductions are to be made by Transco, however, until the aggregate of its suppliers' reductions exceeds $400,000 on an annual basis.

Transco also agrees that it will not file an increase in rates with the Commission prior to January 1, 1963 (to be effective, after suspension, not earlier than July 1, 1963), unless (1) new taxes or increases in existing tax rates which must be borne by Transco equal or exceed an annual rate of $400,000, or (2) as a result of governmental action (legislative or administrative) permitting Transco's suppliers in Texas Railroad Commission Districts 2, 3 and 4 to charge more than the contract prices, such increases in gas, offset as provided in Article VIII, equal or exceed an annual rate of $400,000.

We have reviewed all of the documents and data submitted in support of the proposed settlement, including the cost of service data utilized for such purposes, and such review indicates that the settlement of this proceeding on the basis of the proposed settlement agreement is in the public interest.

The Commission finds:

(1) The increased rates and charges contained in Transco's proposed revised tariff sheets tendered for filing on October 17, 1960, modified and corrected by withdrawals and filings on November 7, 1960 in this docket have not been shown to be just and reasonable or otherwise lawful under the terms and provisions of the Natural Gas Act and should be disallowed and denied as hereinafter provided and ordered.

(2) The proposed settlement of this proceeding upon the basis of the settlement agreement received in evidence in this proceeding, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act, and such settlement should be approved, and be made effective as hereinafter provided.

(3) Good cause has been shown that the 30 day notice requirement of the Natural Gas Act be waived with respect to the original and revised tariff sheets listed in Article II, Paragraphs (A) and (B) of the Settlement, and filed by Transco on January 9, 1962, and that such tariff sheets be permitted to become effective as hereinafter ordered. Good cause has been shown also to accept without further investigation the tariff sheets listed in Paragraph (C) of Article II of the agreement.

The Commission orders:

(A) The increased rates and charges proposed by Transco in its filing of October 17, 1960, and its filing of November 7, 1960, and referred to in paragraph (1) above, hereby are disallowed.

(B) The settlement submitted by Transco and received in evidence in this proceeding, and the rates and charges set forth therein are hereby approved and made effective, subject to the terms and conditions of this order.

(C) The requirements of Part 154 of the Commission's Regulations under the Natural Gas Act hereby are waived to the extent necessary to permit the tariff sheets listed in Article II of the agreement to be effective, and such tariff sheets, filed by Transco on January 9, 1962 and listed in Article II (A) and (B)

of the settlement are made effective as of January 1, 1962, and the tariff sheets listed in Paragraph (C) thereof are made effective as of the date shown opposite each listed tariff sheet.

(D) Transco shall make refunds to its jurisdictional customers under Article III of the settlement proposal within 15 days after this order has become final and non-appealable.

(E) In the event Transco receives any refunds from any supplier as a result of any pending proceeding under Section 4 or 7 of the Natural Gas Act involving such supplier, and in the event any supplier reduces its rates as a result of any pending proceeding under Section 4, 5 or 7 of the Natural Gas Act, Transco shall in turn refund such amounts to its customers and reduce its rates in accordance with Articles IV, V and VI of the settlement and within the time provided in those articles.

(F) Within 15 days after making the refunds as provided by paragraphs (D) and (E) above, Transco shall report to the Commission, in writing and under oath the amount of the refund made to each of its customers, showing separately the amount of principal and interest so paid, and shall serve a copy of such report upon each of the customers receiving a refund. Concurrently therewith Transco shall file with the Commission releases from its customers showing receipt of the principal and interest.

(G) Upon full compliance by Transco with all the terms and conditions of this order and acceptance of the filings made by it, this proceeding shall be considered terminated.

(H) In issuing this order, the Commission's action is not to be construed as a concurrence with the cost of service determinations, allocation methods and rate design principles used in arriving at rates and charges for future sales, or in computing the amount of refunds agreed upon in the settlement agreement, and neither the Commission, its Staff, or other parties to the proceedings are to be prejudiced or bound thereby in future proceedings.

(I) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Transco, the Commission staff, or any other party affected by this order, in any other proceeding now pending or hereafter instituted by or against Transco or any other companies, persons or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

DUKE POWER COMPANY, DOCKET NO. E-7018

ORDER AUTHORIZING THE ISSUANCE OF FIRST AND REFUNDING MORTGAGE BONDS

(Issued February 5, 1962)

Duke Power Company (Applicant), a corporation organized under the laws of the State of New Jersey and doing business in the States of North Carolina and South Carolina, with its principal place of business at Charlotte, North Carolina, filed an application on December 27, 1961, as amended January 16, 1962, for authorization, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $50,000,000 principal amount of First and Refunding Mortgage Bonds, Series due 1992.

Applicant proposes to issue the Bonds under its Indenture of First and Refunding Mortgage, between Applicant and Guaranty Trust Company of New

York (now Morgan Guaranty Trust Company of New York) and dated as of December 1, 1927, as heretofore supplemented and as to be further supplemented by a proposed, new Supplemental Indenture to be dated as of February 1, 1962.

Applicant proposes, on or about February 7, 1962, to invite sealed, written bids for the purchase of the proposed Bonds by newspaper publication and by distribution of a Form of Proposal, together with a statement of terms and conditions relating thereto and a form of purchase contract.

Each bid, whether made by a single bidder or a group of bidders, must be for the purchase of all of the Bonds, and must be in writing on the Form of Proposal provided by the Applicant. Each bid must specify: (1) the coupon rate to be borne by the Bonds, which rate shall be a multiple of ⅛th of 1%; (2) the price exclusive of accrued interest to be paid to Applicant for the Bonds, which price shall be expressed as a percentage of the principal amount of the Bonds and shall not be less than 98½% thereof; and, (3) that Applicant shall be paid the amount of the accrued interest on the Bonds from February 1, 1962 to the date of payment therefor and delivery thereof. Each bid must be accompanied by a certified or bank cashier's check or checks in the aggregate amount of $2,500,000.

Unless postponed, all bids for the purchase of the proposed Bonds must be received by Applicant before 11:00 a.m., Eastern Standard Time, on February 20, 1962, at Room 2322, No. 15 Broad Street, New York 5, New York. Unless Applicant rejects all bids for the proposed issuance of Bonds (which it reserves the right to do) or excludes a bid or bids for reasons specified in the statement of terms and conditions, it will accept the bid which provides it with the lowest annual cost of money.

The net proceeds to be obtained from the proposed issuance of Bonds will be used to finance, in part, Applicant's current construction program, including reimbursement, in whole or in part, of its treasury for expenditures heretofore made and to be made by it for such purpose between September 1, 1961 and February 28, 1962 (the date on which it is anticipated that the proceeds of such new securities will be available to the Applicant), and also including the payment of short-term notes issued under Section 204(e) of the Federal Power Act. Applicant estimates it will spend $53,036,000 on its 1962 construction program—of which $15,766,000 will be spent on the new Cowans Ford hydroelectric station to be completed in 1963; $1,300,000, on the first unit (350,000 kw) at the new Marshall steam-electric station, to be completed in 1965; $873,000, on other generating plant additions and changes; $7,786,000, on transmission lines and substations; and $27,311,000, on distribution lines, substations and general facilities.

Written notice of the application has been given to the North Carolina Utilities Commission and the South Carolina Public Service Commission, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on January 9, 1962 (27 F.R. 244), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before January 22, 1962 with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The North Carolina Utilities Commission, by order issued January 11, 1962, and the South Carolina Public Service Commission, by order dated January 3, 1962, approved the proposed issuance and sale of Bonds in the manner and for the purposes set forth above.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued December 29, 1955, *Duke Power Company*, Docket No. E–6652 (14 FPC 1163).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission, by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

HUMBLE OIL & REFINING COMPANY, DOCKET NO. CI62-627

ORDER ON MOTION TO DISMISS ORDER TO SHOW CAUSE AND TERMINATE PROCEEDINGS

(Issued February 5, 1962)

On January 16, 1962, Humble Oil & Refining Company (Humble) filed a response to the Commission's order issued December 13, 1961, 26 FPC 854, which required Humble to show cause why it should not file an application pursuant to Section 7(c) of the Natural Gas Act to acquire by stock ownership the facilities of Olin Gas Transmission Corporation.

Humble, by its response, asks in the alternative, that (1) the Commission terminate its show cause proceeding and issue an order declaring that Section 7(c) does not require that Humble obtain a certificate of public convenience and necessity before it consummates the acquisition of the stock of Olin Gas Transmission; (2) the Commission issue forthwith [1] a certificate of public convenience and necessity authorizing it to acquire all the outstanding capital stock of Olin Gas Transmission, if such a certificate is deemed required by Section 7(c); (3) that, if the relief requested under (1) and (2) is denied, the Commission advance the date of hearing to February 19, 1962.

Humble's motion to terminate the proceeding and dismiss the Commission's order to show cause is predicated on the assumption that the acquisition of all the outstanding stock of Olin Gas Transmission by Humble does not constitute an "acquisition of facilities" within the meaning of Section 7(c) of the Natural Gas Act. However, the order to show cause does not preclude Humble from asserting this contention in course of the proceedings. Humble may renew its motion after presenting evidence in support of its application.

The instant order is not to be construed in any way as a determination by the Commission, at this time, of the legal question of jurisdiction raised by Humble to the Commission's order to show cause.

The Commission finds:

(1) There are sufficient grounds for going forward with the proceedings instituted by the order to show cause.

(2) The motion for termination of the proceedings should be denied, without prejudice to its renewal at a subsequent stage of the case.

(3) The motion for issuance of a certificate after an abridged hearing should be denied on the ground that the Commission would not be in a position to make a determination of the issues which would be involved in certification without a record.

(4) It is necessary and appropriate in the public interest that the date of hearing be advanced to a date earlier than set in the Commission's order of December 13, 1961.

The Commission orders:

(A) The motion of Humble Oil and Refining Company to dismiss the order to show cause contained in its response to the Commission's order of December 13, 1961, is hereby denied, without prejudice.

(B) For the reasons stated above, the motion requesting the issuance of a certificate of public convenience and necessity after an abridged hearing is hereby denied.

---

[1] I.e., after an abridged hearing.

(C) The public hearing in this proceeding, heretofore set for March 27, 1962, is advanced to March 2, 1962, at the same hour and place provided in the Commission's order of December 13, 1961.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TEXAS EASTERN TRANSMISSION CORPORATION AND TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP62-6

ORDER PERMITTING INTERVENTION AND GRANTING LIMITED CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY UPON MOTION FOR RECONSIDERATION

(Issued February 5, 1962)

This matter is before us upon a joint motion filed on January 11, 1962, by Texas Eastern Transmission Corporation (Texas Eastern) and Texas Gas Transmission Corporation (Texas Gas) for reconsideration of our order issued December 14, 1961, 26 FPC 876, remanding the above-styled proceeding to the presiding examiner for formal hearing. Ohio Valley Gas Corporation (Ohio Valley), whose interest in the proceeding is made obvious by facts hereinafter set forth, on January 5, 1962, filed a petition to intervene in the proceeding. In its petition to intervene Ohio Valley also requests reconsideration of our order issued December 14, 1962.

This proceeding involves a joint application, as supplemented, filed by Texas Eastern and Texas Gas for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act authorizing Texas Gas to sell up to 6,000 Mcf of natural gas per day to Ohio Valley for resale in Connersville, Indiana, and environs, and (b) the delivery, for a temporary period, of natural gas by Texas Eastern to Ohio Valley for the account of Texas Gas in exchange for the delivery of equivalent volumes of gas by Texas Gas to Texas Eastern.

Texas Eastern also requests permission to abandon pursuant to Section 7(b) of the Natural Gas Act the sale of natural gas to Ohio Valley. The abandonment would be coincident with the commencement of the sale by Texas Gas to Ohio Valley.

Upon the termination of the proposed temporary exchange of gas, Texas Eastern also requests permission to abandon the meter facilities presently used in connection with its sale to Ohio Valley. Upon such termination Texas Gas would render service directly to Ohio Valley from its own pipeline system.

The proposed exchange of natural gas would be made pursuant to an exchange agreement dated June 14, 1961. This agreement, filed on July 16, 1961, by Texas Eastern as its proposed Rate Schedule X-46, is for a period of three years from the date of first delivery and provides that Texas Eastern shall deliver Ohio Valley's gas requirements for Connersville at the existing delivery point in Ripley County, Indiana, for the account of Texas Gas. Texas Gas will in turn deliver equivalent volumes to Texas Eastern at an existing interconnection between the two pipeline systems near Lebanon, Ohio.

Under a tripartite agreement entered into on June 14, 1961, Ohio Valley agreed, within three years, to construct a 15-mile transmission line extending from Texas Gas' facilities in Dearborn County, Indiana, to the terminus of its existing 26-mile pipeline extending from Connersville to Texas Eastern's main line in Ripley County, Indiana. Texas Gas agreed to include facilities in its next system expansion application to provide 6,000 Mcf per day of firm capacity to serve Ohio Valley.

After due notice, an abridged hearing was held on November 30, 1961, on the joint application. When the matter came before us, we issued an order, dated December 14, 1961, remanding the proceeding to the presiding examiner for formal hearing with respect to (1) whether or not the proposal may be discriminatory among customers served by Texas Eastern; and (2) whether or not the public convenience and necessity required approval of the proposal.[1]

It is the order of remand issued December 14, 1961, we are asked to reconsider. We grant the motion for reconsideration. Further, we permit Ohio Valley to intervene in the proceeding.

From the allegations made, under oath, in the joint motion for reconsideration and the petition to intervene it appears that Ohio Valley, for the past several years, has suffered such substantial losses from its Connersville operations that future service in such community at reasonable rates is jeopardized. It further appears that if Ohio Valley obtains its gas supply from Texas Gas rather than Texas Eastern, due to the differential in rates of the two companies, substantial savings in purchased gas cost would be achieved which would redound to the benefit of ultimate consumers.

By letter dated January 8, 1962, to Texas Eastern and Texas Gas, Ohio Valley has agreed to construct its proposed pipeline to take gas directly from Texas Gas within 18 months of receipt of approval of the proposed arrangement by this Commission. Moreover by letter to the Commission dated January 19, 1962, Ohio Valley has agreed "to immediately start the necessary steps for building the pipeline connecting its facilities at Connersville, Indiana, with the pipeline of Texas Gas and to vigorously push construction of said line and, if possible, complete the same before the 1962–1963 heating season."

Troubled though we are by the problem of possible duplication of the pipeline facilities of two natural-gas companies subject to our jurisdiction to render service to a single distribution company, we are of the opinion that the benefits of the proposal before us to ultimate consumers may more than offset the detriments of such proposal. Taking all equitable factors into consideration we feel that we can adequately protect the public interest through our power to condition the certificate we will issue to Texas Gas to sell natural gas to Ohio Valley.

We will grant a certificate of public convenience and necessity to Texas Gas authorizing it to sell natural gas to Ohio Valley, delivery thereof to be made by Texas Eastern, for a maximum period of 18 months from the date of issuance of this order. In the event, however, Ohio Valley has constructed and is ready to place in operation the facilities necessary to take gas directly from Texas Gas within the 18-months period, then Texas Gas may file for appropriate authority to continue the sale directly from its own pipeline. We will also authorize the exchange of gas between Texas Gas and Texas Eastern for a maximum period of 18 months. In the event, however, that Ohio Valley has not constructed within 18 months the pipeline facilities necessary to enable it to take gas directly from Texas Gas, then Ohio Valley, if it desires to continue its Connersville natural gas operations, shall revert to the *status quo* existing as of this time, and shall thereafter be a customer of Texas Eastern.

---

[1] After issuance of the order of remand, a joint petition for leave to intervene was filed on January 2, 1962, by The Manufacturers Light and Heat Company and The Ohio Fuel Gas Company. By letter dated January 16, 1962, these parties indicated that the filing of the joint petition "should not be interpreted as evidence of their belief that a formal hearing is necessary. It is merely a request to participate in a hearing if a hearing is held."

In view of the action we take by this order we will consider the joint petition for leave to intervene to be mooted.

To carry out the intent of the foregoing we shall defer action on the joint application insofar as it relates to the abandonment by Texas Eastern of facilities by means of which it presently renders service to Ohio Valley.

The Commission finds:

(1) The joint motion of Texas Eastern Transmission Corporation and Texas Gas Transmission Corporation filed on January 11, 1962, should be granted as being appropriate in the public interest.

(2) It is appropriate in the public interest to permit Ohio Valley Gas Corporation to intervene in this proceeding.

(3) Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission by its order of October 10, 1947, Docket No. G–880, 6 F.P.C. 148.

(4) Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued March 30, 1949, Docket No. G–859, 8 F.P.C. 190.

(5) The proposed sale and delivery and the proposed exchange of natural gas, as authorized herein, are to be made in interstate commerce and are subject to the jurisdiction of the Commission, and such proposed sale and delivery and such proposed exchange and delivery of natural gas are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) The proposed sale and delivery and the proposed exchange and delivery of natural gas by Texas Eastern Transmission Corporation and Texas Gas Transmission Corporation, as authorized herein, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) The sale of natural gas and the facilities proposed to be abandoned by Texas Eastern Transmission Corporation, fully described in the joint application, as supplemented, are subject to the jurisdiction of the Commission and the abandonment of such sale and of such facilities by Texas Eastern are subject to the requirements of subsection (b) of Section 7 of the Natural Gas Act.

(8) The public interest requires that action on the proposed abandonment of the facilities utilized by Texas Eastern in making delivery of natural gas to Ohio Valley Gas Corporation should be deferred.

(9) Upon acceptance of the terms and conditions of this order, Texas Eastern and Texas Gas will have demonstrated that they are able and willing properly to do the acts and perform the service proposed as authorized and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(10) Public convenience requires that all applicable provisions of the Commission's Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations, should attach to the certificate hereinafter issued and to the exercise of the rights granted thereunder and that the proposed sale and exchange of natural gas authorized shall commence within six months from the date on which this order issues.

(11) The exchange agreement between Texas Eastern and Texas Gas dated June 14, 1961, should be accepted for filing as Texas Eastern's FPC Gas Rate Schedule X–46 to become effective on the date of issuance of this order and to remain effective for a period of 18 months therefrom.

The Commission orders:

(A) The joint motion filed by Texas Eastern and Texas Gas on January 11, 1962, be and it is hereby granted.

(B) Ohio Valley be and it is hereby permitted to become an intervener and party to this proceeding.

(C) A certificate of public convenience and necessity be and the same is hereby issued authorizing: (a) Texas Gas to sell natural gas to Ohio Valley for a period of 18 months from the date of issuance of this order, (b) the delivery of natural gas by Texas Eastern to Ohio Valley for the account of Texas Gas for a period of 18 months from the date of issuance of this order, and (c) the exchange of natural gas between Texas Eastern and Texas Gas for a period of 18 months from the date of issuance of this order, all upon the terms and conditions of this order.

(D) All applicable provisions of the Commission's Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations, shall attach to the issuance of the certificate granted in Paragraph (A) hereof and to the exercise of the rights granted thereunder.

(E) The sale and delivery of natural gas and the exchange and delivery of natural gas as authorized in Paragraph (A) hereof shall commence within six months from the date this order issues.

(F) The exchange agreement between Texas Eastern and Texas Gas dated June 14, 1961, be accepted for filing and made effective as Texas Eastern's FPC Gas Rate Schedule X–46 as of the date this order issues, and remain effective for a period of 18 months therefrom.

(G) Action on the joint application insofar as it relates to the abandonment by Texas Eastern of facilities by means of which service is rendered to Ohio Valley be deferred.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP62–100

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 6, 1962)

On October 19, 1961, Colorado Interstate Gas Company (Applicant), filed in Docket No. CP62–100 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a meter station and appurtenant facilities and the sale of natural gas through said facilities to Plateau Natural Gas Company (Plateau) for resale in Franktown, Douglas County, Colorado, all as more fully set forth in the application.

The proposed facilities will be constructed on Applicant's Amarillo-to-Denver pipeline at a point near Franktown, Douglas County, Colorado. The cost is estimated to be $4,620, which will be financed from funds on hand.

Service will be rendered by Applicant to Plateau under Applicant's existing FPC Gas Rate Schedule SG–1 (First Revised Volume No. 1, Original Sheet Nos. 7 and 8 of Applicant's FPC Gas Tariff).

Estimated annual and peak day requirements for each of the first three years of operation are 5,557 and 56 Mcf, respectively, at 14.73 psia.

There will be no increase in Plateau's contract demand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 30, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the related proposed sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the proposed facilities and to transport and sell natural gas to Plateau Natural Gas Company, as hereinbefore described and as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The construction of the facilities authorized in paragraph (A) above shall be completed and said facilities placed in actual operation within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-37

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 6, 1962)

On August 15, 1961, Northern Natural Gas Company (Applicant) filed in Docket No. CP62-37 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the calendar year 1962 at a total cost not to exceed $3,000,000, with no single project to exceed a cost of $500,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The proposed facilities will be financed from funds on hand and from funds generated through operations.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 30, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation, having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application herein, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof during the calendar year 1962 as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the costs of the facilities so

constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(6) The authorization granted herein should be limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed hereunder should be limited to $3,000,000, with no single project to exceed a cost of $500,000.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a) and (e) of Section 157.20 of said Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Northern Natural Gas Company to construct during the calender year 1962 the proposed facilities hereinbefore described (more fully described in the application filed in this proceeding) and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Northern Natural Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) Applicant shall submit, on or before March 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the cost of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for the facilities constructed hereunder are hereby limited to $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-128

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued February 6, 1962)

On November 22, 1961, as supplemented on December 1, 1961, Northern Natural Gas Company (Applicant) filed in Docket No. CP62-128 an application pursuant

to Section 7(b) of the Natural Gas Act for permission and approval to abandon its Otis, Kansas, Compressor Station, all as more fully set forth in the application, as supplemented.

This 500 H.P. station is no longer used or needed due to the depletion of the Otis gas field in Rush and Barton Counties, Kansas, the source of gas formerly compressed by the Otis Station. The two 250 H.P. units comprising the station are obsolete and can not be used efficiently on Applicant's system in other locations.

The Otis compressor facilities were certificated by the Commission in Docket No. G–667 on May 28, 1946.

The original cost of the subject facilities was $101,911, which has been depreciated by $90,311. Applicant proposes to sell the compressor units for $25,000 and dispose of the remaining facilities as junk.

No abandonment of service will result from the abandonment of the subject facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 30, 1962, respecting the matters involved in and the issues presented by the application, as supplemented herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware Corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity, and an order permitting and approving same should be issued as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Northern Natural Gas Company, of the facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, be and the same is hereby granted.

(B) Applicant shall advise the Commission of the date of the abandonment of said facilities within ten days of the date thereof.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. G-11980

OPINION AND ORDER DETERMINING PRINCIPLES AND METHODS OF ALLOCATION AND RELATED ISSUES

(Issued February 6, 1962)*

Syllabus

1. Since Tennessee operates a fully integrated transmission system providing essentially same type of pipeline service in all zones, with zone boundaries which do not correspond to any actual divisions in system operations or service, Commission finds it obviously impossible to identify the portion of its main-line facilities which was installed or is used specifically for benefit of any individual customer. P. 208.
2. Commission adopts Mcf-mile method (with modifications) for allocation of Tennessee's system-wide transmission costs between existing zones to be applicable for future—unless or until demonstrated that a change is required. Pp. 206; 215.
3. Any allocation method for Tennessee's system should meet following basic requirements: (1) Assign fair share of total system cost of service to each zone; (2) be practical and not so complex as to require long tedious studies, etc., but be one that can be expeditiously applied to facts quickly ascertainable; and (3) results reached should make sense. P. 208.
4. Commission policy of using system-wide average of mainline transmission costs of integrated pipeline as foundation for allocation of costs to zones or classes of customers, results in administrative simplicity; but more importantly the sharing of system costs on system-wide basis is a fairer and more rational concept of allocation than any attempt to guess what it might cost to serve each individual customer separately. P. 208.
5. As between two allocation procedures, both economically defensible, that one should be preferred which minimizes the differential in zone rates; but differences in cost in system as large as Tennessee's should not be ignored since use of average cost method without zone differentials would, in circumstances of this case, result in undue discrimination. P. 209.
6. In determining extent to which modification of average cost method is required, Commission considers load factor, load density and distance of transmission, of which, the latter has most constant and predictable relation to cost. P. 209.
7. Where zones of a pipeline system have no extreme variations in load factors or load density, density factor can, by Mcf-mile method, be applied directly to system-wide costs to provide allocation giving reasonable effect to increase in cost of transmission in each successive zone without disregarding that facilities in each zone are part of integrated system. P. 209.
8. Commission *rejects* zone-by-zone method for Tennessee's system; finding there is no objective formula for determining "actual cost" of serving one or more customers from integrated pipeline, and noting that segregation of facilities contemplated by zone-by-zone method has never been approved as a basis of allocation of transmission costs of integrated system. P. 210.
9. A condition which was part of order issued on limited record in certificate proceeding could not, in the circumstances, predetermine method of allocation to be adopted in future rate case. P. 211.

---

*Designated Commission Opinion No. 352. Initial decision appears on p. 220. Rehearing denied by order issued April 5, 1962, 27 FPC 668. Petition for Review dismissed, *The Manufacturers Light & Heat Company* v. *F.P.C.* (CADC No. 17064). [Unreported]

10. City-gate service found only characteristic of New England zone requiring departure from Mcf-mile method of allocation; since facilities required for such service are readily distinguishable from general system facilities, cost thereof should be assigned to New England zone. P. 212.
11. In adjusting Mcf-mile method with respect to New England zone, Commission employs Docket No. G–5259 revenue levels to apportion fifty-percent of demand and commodity costs to provide reasonable means of insuring long deferred transition to Mcf-mile cost allocation in a gradual and orderly manner without unduly disrupting marketing patterns developed by Tennessee's customers. P. 213.
12. Commission *concludes* it both fair and reasonable to allocate to peaking and storage services costs equal to the total revenues actually realized, such costs to be deducted from system-wide costs before application of allocation method herein approved. P. 213.
13. Commission *rejects* use of average monthly billing demands for allocation of demand responsibility; finding this departure from usual practice of using actual peak period is not adequately supported by the evidence. P. 214.
14. Commission *determines* principles and methods of allocation for Tennessee's system under Section 4(e) of the Natural Gas Act. P. 215.

Harry S. Littman, Jack Werner, and *William C. Braden, Jr.* for Tennessee Gas Transmission Company.

W. O. Crain, G. D. Fiser, C. H. Lewis, Vernon Woods, and *E. J. Frieberg* for United Gas Pipe Line Company.

S. David Freeman for Tennessee Valley Authority.

David Stahl, Charles S. Rhyne and *Herzel H. E. Plaine* for City of Pittsburgh.

Abraham R. Spalter for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SWIDLER, *Chairman:*

This proceeding originated on January 14, 1957, when Tennessee Gas Transmission Company filed tariff rate changes reflecting an aggregate increase of about $24,000,000 in annual revenues. These rates went into effect, subject to refund, on July 14, 1957, and were superseded on May 15, 1959, when further increased rates filed by Tennessee in Docket No. G–17166 became effective. On April 30, 1959, the Commission ordered that the cost of service issues in this proceeding be postponed and that a separate and prior hearing be held on the issues relating to the principles and methods for allocation of costs among the zones and among the classes of service on Tennessee's system. On February 13, 1961, the presiding examiner issued his initial decision on the principles of allocation among zones and certain related issues. Exceptions were filed by the interveners and the staff. Oral argument was heard by the Commission on May 9, 1961, and on September 22, 1961.

The selection of appropriate methods of cost allocation and the explication of the underlying principles by which such methods can be evaluated are among the most important responsibilities of this Commission. Although eighteen years have elapsed since Tennessee was granted its original certificate, this is the first case in which the allocation issues arising out of the complex operation of the Tennessee system have been fully heard and presented to the Commission on a complete record. Since the allocation method is a fundamental part of every pending and future Tennessee rate case, it is imperative that

these basic issues be determined herein. We have been greatly assisted in this difficult task by the comprehensive and penetrating analysis provided by the presiding examiner in his initial decision in this phase of the proceeding. In general, we concur in his well-reasoned presentation of the allocation problems and other issues, and, except to the extent modified by this opinion, we adopt his conclusions.

We note at the outset our agreement with the examiner's rejection of the Consolidated Companies[1] contentions with regard to burden of proof. Since we find that the record, to which all the parties contributed, sufficiently supports our determination of a reasonable method of allocation, it is now immaterial whether the applicant, Tennessee, has sustained its alleged burden of proof on the issue as originally presented. This view enables us to adopt the examiner's summary of the present status and primary purpose of this proceeding:

> In the G–11980 rate filing Tennessee squarely raised the zoning issue. Accordingly, on July 1, 1957, Tennessee filed a motion to dismiss the zone allocation issue in Docket G–5259, contending that the zoning issue should be litigated and resolved once and for all in the instant G–11980 proceeding. All parties agreed to this motion, for the reasons indicated, and the motion was granted by Commission order of September 5, 1957.
>
> It is apparent from the above recital that up to this date the Commission has never previously considered or decided, on the merits, the proper allocation of Tennessee's costs among its zones or the proper zone rate differentials. It is further apparent that the Docket No. G–5259 zone differentials, with some slight modifications, represented basically the zone differentials which were worked out and agreed on by the parties, and accepted by the Commission in 1952 as part of the rate settlement in Docket G–1741; that these zone differentials were thereafter incorporated, with the slight modifications referred to above, in every succeeding Tennessee rate case, because of the desire of the parties to postpone the litigation and final resolution on the merits of this complex and troublesome problem.
>
> In the instant proceeding, however, pursuant to the Commission's order of severance of April 30, 1959, the zoning issue has been fully tried and comprehensively briefed, on the merits. Although the instant Docket No. G–11980, as a result of Tennessee's later rate increase filing in Docket No. G–19983, has now become purely a refund case with respect to the dollar cost-of-service issues, the instant proceeding has nevertheless become the vehicle for final resolution of the zoning question. Whatever allocation method may be here adopted for the allocation of Tennessee's total system costs between its existing zones will be applicable to the Tennessee system for the future—unless and until it may be demonstrated at some later date that a change is required.

Methods of Allocation

Two fundamentally different methods of allocation have been proposed for the Tennessee system, one based on rolled-in system-wide average costs and mileage, the other segregating and assigning to each of the six zones the costs associated with the particular facilities located within the zone. The controversy concerns the allocation of transmission costs, since all parties agree that gas supply and gathering costs should be rolled-in and allocated to volumes on a uniform average basis.

---

[1] Hope Natural Gas Company, The East Ohio Gas Company, The Peoples Natural Gas Company, New York State Natural Gas Corporation, and Lake Shore Pipeline Company.

Tennessee, the New England interveners,[2] and the staff employ the *Mcf-mile method:* the volumes delivered at each point within a particular zone are multiplied by the number of miles from source of supply to such point to derive a total number of Mcf-miles for each zone; rolled-in system-wide transmission costs are allocated to each zone according to the ratio of the individual zone's Mcf-miles to the Mcf-miles of the system as a whole.

The Columbia[3] and Consolidated companies are the principal advocates of the *zone-by-zone method:* the transmission costs associated with the facilities physically located within each zone are assigned to the zone as if it were a separate operating entity which purchases gas from the next upstream zone and sells it to its own customers and to the next downstream zone; the transmission costs assigned to a particular zone (plus its cost of gas "purchased" from the next upstream zone) are allocated to all volumes sold in that zone or delivered to the next downstream zone on a uniform average basis.

Both of these methods classify costs between the demand and commodity functions substantially in accordance with the established *Seaboard* formula. (Opinion No. 225, 11 FPC 43). The Columbia companies did not pursue their opposition to this formula in their exceptions.

The fundamental principles and problems involved in the choice between these two methods are well stated in the following quotation from the examiner's decision:

> At the outset it is important to recognize that there are "pluses" and "minuses" with respect to each of the varying and conflicting zone allocation methods proposed in this case, and that none of these methods are free from problems or difficulties. As realistically noted by Tennessee:
>
> "An argument can be made for a uniform rate for all customers * * * An argument can also be made for different rates for each customer based on the 'cost' incurred in serving each customer. An argument can be made, as Columbia and Consolidated do, for segregating 'costs' within a geographical area. An argument can be made for rates based on mileage. An argument can be made for rates based on historical differentials. An argument can be made for rates based on a combination of mileage and historical factors. Something can be said in favor of each of such methods of allocation or rate-making. The difficulty lies in selecting the method. No one method can lay claim to being the 'right' method * * * the selection of the method of allocation to be used is bottomed on fairness and the exercise of judgment."
>
> The Supreme Court recognized this inherent characteristic of cost allocation problems in *Colorado Interstate Gas Co.* v. *F.P.C.*, 324 U.S. 581 (1945), as follows:
>
> "Allocation of costs is not a matter for the slide rule. It involves judgment on a myriad of facts. It has no claim to an exact science. Hamilton, Cost as a Standard for Price, 4 Law and Cont. Prob. 321. But neither does the separation of properties which are not in fact separable because they function as an integrated whole. (324 U.S. at 589) * * *
>
> "These circumstances illustrate that considerations of fairness, not mere mathematics, govern the allocation of costs." (324 U.S. at 591)
>
> Similarly, the United States Court of Appeals for the Tenth Circuit in a subsequent case involving the same company, *Colorado Interstate Gas. Co.* v. *F.P.C.*, 209 F. 2d 717, at 726 (1953), stated:

[2] Comprising some 25 New England distribution companies and municipalities, which participated jointly in the proceeding.

[3] The Manufacturers Light and Heat Company, The Ohio Fuel Gas Company, and United Fuel Gas Company.

"* * * True, it did say that neither method was entirely satisfactory, but the same could be said with respect to any method which might be proposed. Mathematical exactness in the apportionment of cost is an impossibility. Because a method may have some infirmities does not of itself condemn it as a proper method. It is the duty of the Commission to select that method which in its considered judgment more nearly reaches a just and sound result."

In approaching the problem of determining here which of the proposed allocation methods should be adopted for the Tennessee system, each of the alternative allocation methods has been measured against the following basic requirements:

(1) The method selected should assign a fair share of the total system cost of service to each of the zones.

(2) The method selected should be a practical one. It should not be so complex as to require long, tedious studies involving speculations and assumptions, but rather should be a method which can be expeditiously applied to facts quickly ascertainable.

(3) The results reached, through applying such method, should make sense.

As earlier noted, the threshold question in this proceeding is whether system-wide average costs, on a mileage basis, are to be employed, or whether segregated zone costs should be employed. Despite the numerous arguments and counterarguments advanced here, and the plethora of problems requiring detailed analysis, the ultimate determination to be made comes down to a choice between two basic philosophies or approaches:

(1) The philosophy that the Tennessee system is a single, integrated pipeline system, operated as a single entity, with each part of the system contributing to every other part; that accordingly, although customers closer to the source of supply should pay less than customers located farther away from the source, all customers, as customers of a single, integrated pipeline system, should pay on the basis of average system-wide costs for each mile of transmission.

(2) The conflicting philosophy that costs should be segregated by zones so that the customers in each zone would be treated as if they were customers of separate operating companies. This approach emphasizes the fact that the unit cost of transmission varies in different areas, and insists that an appropriate allocation method must give specific zone by zone effect to such differences in cost.

The examiner's decision also contains a detailed analysis of the two basic allocation methods to which he refers and of the history and characteristics of the Tennessee system. We adopt this analysis and concur in the examiner's findings that Tennessee operates a fully integrated transmission system, that it provides essentially the same type of pipeline service in all of its zones, and that the zone boundaries do not correspond to any actual divisions in system operations or service. With respect to such a system, it is obviously impossible to identify the portion of its main-line facilties which was installed or is used specifically for the benefit of any individual customer. The Tennessee system is a particularly good example of such a system. It has expanded to ten times its original capacity and is now operated in conjunction with storage facilities which, although located in Pennsylvania, affect the costs of pipeline operation in all zones and benefit every customer in an indeterminate amount. In order to reflect the unity of operation and interdependence of service on an integrated pipeline of this type, it has long been Commission policy to use a system-wide average of mainline transmission

costs as the foundation for any allocation of costs to zones or classes of customers.[4] This policy has the advantage of administrative simplicity, but, more important, the sharing of system costs on a system-wide basis is a fairer and more rational concept of allocation than any attempt to guess what it might cost to serve each individual customer separately. Even the zone-by-zone method gives at least partial recognition to this policy by requiring that all costs assigned to a particular zone be averaged among all volumes of gas transported in that zone irrespective of point delivery. For the reasons outlined above, it is our opinion that as between two allocation procedures both economically defensible, that one should be preferred which minimizes the differentials in zone rates.

This is not to say that differences in costs over a system as large as Tennessee's should be completely ignored by adopting the "postage stamp" concept of rate-making. Such use of the average cost method without zone differentials would, in the circumstances of the present case, result in undue discrimination. In other cases of this type, the determination of the extent to which modification of the average cost method is required has been based upon a consideration of the three most significant determinants of the costs of pipeline operations, namely, load factor, load density, and distance of transmission. However, there are certain difficulties inherent in translating differences in operating characteristics into reasonable cost differentials. The cost consequences of each of these factors, considered separately or in combination with the others, are not precisely measurable. Moreover, the process of comparing, evaluating, and giving effect to variations in these factors is itself based on a necessarily arbitrary division of a unified system into areas or zones. Consequently, as was stated earlier in more general terms, the relative weight to be given in each case to one or more of these factors is a matter of judgment on which reasonable and informed men might differ.

Of the three factors to be considered, distance of transmission has the most constant and predictable relation to cost. Thus, where the zones of a pipeline system have no extreme variations in load factor or load density, the distance factor can, by the Mcf-mile method described above, be applied directly to system-wide costs to provide an allocation which gives reasonable effect to the increase in the cost of transmission in each successive zone without disregarding the fact that the facilities in each zone are parts of an integrated system. In the *Northern* case,[5] the substantial differences in the distances of transmission to Northern's customers were considered sufficient to require some modification of the previous allocation of costs on a system-wide average basis. Zones were established, and system-wide transmission costs were allocated to each zone by the Mcf-mile method.[6] Although there were also substantial variations in load factor and in load distribution on the Northern system, it was found that the one tended to offset the other, at least to the extent that the net effects of these factors were not so great as to make the Mcf-mile unreasonable or unfair as a system-wide cost index. The Commission summarized its findings as follows:

> As previously stated, it is a simple economic fact that the delivery cost of natural gas increases in close proportion to the length of the transmission line of any given size. Therefore, unless other circumstances are present which outweigh the importance of the length of transmission required to

[4] See e.g., *Canadian River Gas Company*, 3 FPC 32 (1942), aff'd 142 F. 2d 943, aff'd 324 U.S. 581; *Trunkline Gas Company*, 21 FPC 704 (1959), aff'd 281 F. 2d 42; *El Paso Natural Gas Company*, 22 FPC 260 (1959), rev'd on other grounds 281 F. 2d 567.

[5] *Northern Natural Gas Company*, 14 FPC 11 (1955), aff'd 236 F. 2d 372.

[6] See also *Kansas-Nebraska Natural Gas Company*, 25 FPC 448 (1961).

> effect delivery, the distance factor is the prime determinant of the cost of rendering service. Since in our view of this record there are no such circumstances present to counterbalance the distance factor, we conclude that the distance of transmission required to effect deliveries at the various points of sale by Northern reflects with reasonable accuracy the relative cost of providing service to its customers. (14 FPC at pg. 24)

The Columbia and Consolidated companies urge the Commission to reject the Mcf-mile method in this and all future cases since it does not attempt to determine the "actual" costs of rendering service in each zone. They contend that the zone-by-zone method does reach this result by considering separately the costs arising in each zone. These parties recommend that the long-established system-wide average cost principle be abandoned in favor of the segregation of system facilities into artificial zone units as the primary basis for the allocation of system costs. It appears to us that the zone-by-zone method would give Tennessee's zone boundaries, which were established at state lines largely as a matter of convenience, a significance entirely unwarranted by actual system operations. For the reasons mentioned earlier there is no objective formula for determining the "actual" cost of serving one or more customers from an integrated pipeline system. The zone-by-zone method does not achieve this illusory goal. Instead, it merely assumes that the "actual" unit cost of serving any of the customers located, for example, in Tennessee's Southern zone is equal to the average unit cost of the facilities that happen to be located in that zone. This assumption ignores the fact that the low unit costs of the facilities in the Southern zone are largely attributable to the very large volumes transported through that zone for sale further downstream and to the very high load factor operation of these facilities made possible by the use of storage in conjunction with the main-line facilities downstream. Thus it appears that the zone-by-zone method, by insulating the upstream zones from all costs of downstream main-line facilities, would give the customers in those zones an undue share of the economies realized from the operation of the system as a whole. In a few instances, to meet particular problems and conditions, it has been necessary and appropriate to assign directly the costs of the facilities used for a single customer,[7] but the segregation, contemplated by the zone-by-zone method, of all main-line facilties has never been approved as a basis for the allocation of the transmission costs of an integrated system.[8] Such a method was rejected in the *Northern* case, *supra*, and, in our judgment, is inappropriate for the Tennessee system.

A review of the briefs and exceptions filed in the present proceeding indicates that the principal objection to the Mcf-mile method is, not that it is unreasonable as applied to the first five Tennessee zones, but that it fails adequately to reflect the special characteristics of the last, New England, zone. The evidence of the operating characteristics of the Tennessee system indicates that the differences in load factor are somewhat greater, while the variations in load distribution are substantially less, than those on the Northern system, for which the Mcf-mile method was found appropriate. In the present case, the record shows that very substantial volumes of gas are delivered in each of the Tennessee zones and no one zone has a dominant share of system sales. In our judgment, the variations in load factor or load density in the Tennessee zones do not have such an unbalancing effect on system operations as to make

---

[7] See *Trunkline Gas Company, supra*, note 4.

[8] In the *United Gas* case, cited by the Columbia companies, it was concluded that United's transmission costs could not realistically be allocated on a rolled-in basis for the reason that United's intricate and varied network is not operated as an integrated pipeline system. *United Gas Pipe Line Company*, Docket No. G-9547, 25 FPC 26 (1961).

the Mcf-mile an irrational measure of cost for the system as a whole. On the other hand, it is apparent that the New England zone has somewhat higher cost characteristics than the rest of the system. These considerations do not, in our opinion, warrant the abandonment of the Mcf-mile method for the entire Tennessee system; they narrow the issue to the question whether any special adjustment in this method is required by the characteristics of service to New England.

The New England Zone

The record in the present case contains much comment on what the examiner terms the "unfavorable characteristics" of the New England zone but nothing of a conclusive nature as to their precise effect in the context of the system-wide application of the Mcf-mile method. There is wide disagreement as to the size and importance of differences in these characteristics and no fully adequate method is proposed for translating such differences into appropriate cost differentials. The Columbia companies have suggested that the proper method of allocating costs to New England was decided in 1954 by a condition imposed in the *Northeastern* merger case[9] which required Tennessee to keep separate records of the costs of service in the New England zone. As more fully discussed in the examiner's decision herein, this condition was part of an order issued on a limited record in a certificate proceeding and it could not, in the circumstances, predetermine the method of cost allocation to be adopted in a future rate case.

The principal characteristics which, it is contended, unduly and adversely affect costs in New England are load density, load factor, excess capacity, and city-gate service. With regard to all but the last of these, the various analyses have been based on the 1956 test year data reflected in the staff's cost-of-service, which was used by the parties to illustrate and compare the dollar results of the proposed methods. In selecting a fair and reasonable method of allocation to be applied in years subsequent to 1956 and in the future, some consideration must be given to more recent volumetric data such as that filed in the record in Docket No. G–19983 which relates to Tennessee's deliveries during the twelve months ended July 31, 1959.[10]

With regard to the relative size of the New England load and the type of adjustment by which this factor might properly be reflected, the evidence and the briefs are indefinite. In 1956, 36 million Mcf were delivered in the New England zone, while 59 Million Mcf were delivered in the Central zone. However, by 1959 the New England zone load had increased to 52 million Mcf, while the Central zone load had diminished to 56 million Mcf. It is also relevant to note that according to Tennessee's estimates, recently filed in Docket No. CP60–94, in 1963 the New England zone load will exceed 70 million Mcf as compared with estimated deliveries of 54 million Mcf in the Central zone. In view of this indicated growth of the New England load, an adjustment for load density in that zone does not appear to be necessary.

As to the New England zone load factor, it appears that the staff figure of 48.6 percent is unreasonably low, for purposes of comparison, owing to substantial increases in the annual volumes delivered after the January 1957,

[9] Order issued July 16, 1954, *In the Matters of Tennessee Gas Transmission Company and Northeastern Gas Transmission Company*, Docket Nos. G–2352 and G–2353, authorizing the merger between Tennessee and Northeastern. 13 FPC 631.

[10] Although such data is not a part of the evidence in the present case, it may properly be considered, with some allowance for necessary adjustments, since it is a matter of public record the mathematical accuracy of which is rarely disputed.

three-day peak employed by the staff. The New England interveners contend that if annual volumes were properly related to peak volumes, and if the volumes delivered under the temporary PS–G rate schedule were eliminated from the calculation, the zone load factor would exceed 65 percent in 1956–57, and would be approximately 72 percent in 1958–59, as compared with 73.2 percent for the Southern zone in the later period. The importance of such comparisons has been greatly exaggerated. The lower-than-average New England load factor applies only to the pipeline facilities north of the storage fields. The use of storage enables Tennessee to operate the facilities required for service to New England from storage southwest to source of supply at close to 100 percent load factor. We are of the opinion that the foregoing considerations sufficiently demonstrate that an adjustment based on the New England load factor is not appropriate.

The Columbia companies have given considerable emphasis to the question of excess capacity in New England. As the examiner points out, this is an extremely complex matter, but one on which none of the parties presented a detailed study. Columbia's witness gave 354,000 Mcf as his "impression" of New England's peak day capacity in 1956, but this was reduced to 339,445 Mcf in Columbia's exceptions. The evidence adduced in support of the amended certificate application [11] for the facilities actually constructed in New England in 1951 contains delivery estimates of about 250,000 Mcf per day for normal service, plus 50,000 Mcf for emergency weather conditions in New England, and an additional 30,000 Mcf capacity allowance for emergency interchange of gas between the Northeastern and Algonquin systems. The actual peak deliveries in January 1957 were 205,981 Mcf, which increased to 260,384 Mcf in the winter of 1958–59. The estimate for 1963 is 323,000 Mcf. These figures indicate that the capacity constructed in New England, although delayed in its full utilization, has proved necessary for service in that zone. There has been no showing that the construction of this capacity would have been less expensive at the increased cost levels now prevailing. The record as it stands will not support a finding that such excess capacity as may have existed in the New England zone since 1957 is unreasonable or requires a specific adjustment to the allocation method adopted herein.

From what we have said about relative size of load, load factor, and excess capacity, it is not necessarily to be inferred that if, on a relative basis, the New England load were small, the load factor low, or excess capacity high, the New England consumers should bear the resulting economic burden, for there might be circumstances which would warrant a different result. However, we do not reach this point in our view of the record. In our judgment, the only characteristic of the New England zone which requires a departure from the Mcf-mile method, as a matter of allocation principle applied to the facts of record, is the city-gate service. As pointed out by the Columbia companies, a basic difference between the New England zone and the rest of the Tennessee system lies in the fact that, in the New England zone only, Tennessee renders a city-gate service by means of numerous small-diameter laterals extending from the main-line to the city-gates of the communities served. The diameter of much of the pipe in the New England zone ranges from twelve inches down to three inches, whereas the smallest diameter of pipe anywhere else on the system is sixteen inches. The facilities required for this special type of service are readily distinguishable from general system facilities, and the costs thereof should be assigned to the New England zone. In this connection the following

[11] See order issued March 21, 1951, in *Northeastern Gas Transmission Co.*, Docket No. G–1267, 10 FPC 135.

remarks from a recent decision of the U.S. Court of Appeals for the District of Columbia Circuit are pertinent:

> At some point in every gas distribution facility the general system ends and connective links to the local distributors' own equipment begins. At this point the facility becomes so identified with its function as a part of the local distributor's gas plant that it may be unfair to charge its cost to all of the customers of the utility. *Battle Creek Gas Company* v. *Federal Power Commission*, 281 F. 2d 42, 46 (CADC 1960).

As a basis for calculating the actual dollars of cost to be so allocated, a determination must be made of the portions of the New England system which should be classified as main-line facilities. The map attached to this opinion, as Appendix A, indicates the points beyond which, considering the location and size of the particular lines, and the volumes delivered thereby, the facilities may appropriately be identified as lateral facilities, in the context of the Tennessee system.

The Historical Revenue Pattern

In order to adjust the Mcf-mile method to take account of the "unfavorable characteristics" of the New England zone, the examiner adopted Tennessee's proposal to allocate system costs fifty percent by the Mcf-mile method and fifty percent on the basis of the historical revenue pattern reflected in the Docket No. G–5259 rates. As an adjustment for this purpose, such use of the historical revenue pattern is too broad since it is applied to all zones and is not directly related to the particular operating characteristics of the New England zone. Nevertheless, we are of the opinion that the Docket No. G–5259 revenue levels should be employed to apportion fifty percent of the demand and commodity transmission costs herein for the reason that it will provide a reasonable and practical means of insuring that the long-deferred transition to an Mcf-mile cost allocation will be accomplished in a gradual and orderly manner without unduly disrupting the marketing patterns which have been developed by Tennessee's customers. The G–5259 revenue levels should be used in this same manner in the pending rate proceedings in Docket Nos. G–17166 and G–19983, since this transition will now actually take place during the period involved in the latter case.

Other Issues

Storage and Peaking Services

The examiner analyzes in some detail the special characteristics and basic similarities of the storage service (SS–5) rendered in the New York zone and the peaking service (PS–G) rendered on a temporary basis in the New England zone. He points out the weaknesses of various allocations proposed and adopts (for SS–5) a method based on a segregation of the costs of the facilities used to render the service. While this method may not be erroneous in principle, its application in practice presents the greatest difficulties in attempting to identify the specific portions of Tennessee's storage and pipeline facilities actually used for these services. The complexity of this problem has been increased by the addition in 1957 of the Colden storage facilities to Tennessee's northern line in the New York zone, and no adequate solution is suggested by the evidence. Thus, in the present record, an allocation to these services of costs less than the revenues realized therefrom has not been justified. On the other hand, it appears from the Commission's decisions in Docket Nos. G–10804 [12] and G–11107 [13] that

[12] 19 FPC 568.
[13] 21 FPC 70.

no additional facilities were authorized for these services. Tennessee's witness testified, without contradiction, that the incremental cost of the more expensive service (PS–G) was less than twenty cents per Mcf. It is evident from this that at the rates in effect during this period (90 cents for PS–G and approximately 67 cents for SS–5) these sales would recover a very substantial amount of system costs which would otherwise be borne by regular service. All or a portion of this benefit to the system as a whole might have been lost at higher rates. From these considerations we conclude that it is both fair and reasonable to allocate to these services costs equal to the total revenues actually realized, such costs to be deducted from system-wide costs before application of the allocation methods approved herein.

Demand and Commodity Volumes

As the basis for calculating the Mcf-miles for each zone the examiner and the staff use the 1956 annual volumes related to average deliveries during a three-day peak period occurring in January 1957. Most of the questions raised with regard to adjustments to these volumes are not material since the methods herein approved will be applied, in the first instance, to the locked-in period from July 14, 1957, to May 15, 1959, on the basis of the volumes actually deliverd during the year ending June 30, 1958, and during the year beginning July 1, 1958. Nevertheless, we should note our concurrence in the examiner's conclusion with regard to the contention of the New England interveners that the three-day system peak may give a distorted picture of the customer's actual use of peak capacity in that it may not fully or properly reflect differences in weather conditions in widely separated areas of service. These parties recommend the use of average monthly billing demands for the allocation of demand responsibility. However, no study was presented which satisfactorily demonstrates that a hypothetical peak day delivery equal to the sum of the customers' average billing demands is, in fact, more representative of the design and maximum use of integrated system facilities than the actual system peak. This departure from the usual practice of using an actual peak period for the determination of demand charges is not adequately supported by the evidence herein and should not be adopted.

Allocation of Demand Costs to Seller's Option Service

As more fully described in the examiner's decision, Seller's Option (SO) is an off-peak service rendered by Tennessee in the Eastern, Northern, and New York zones. Under the SO rate schedules, Tennessee has an obligation to deliver, at times of its own choosing, a fixed annual volume of gas, and the buyer must pay for any volumes so tendered, whether taken or not. We agree with the examiner that, since no new facilities have ever been constructed for this service, Tennessee's proposed increase in the demand costs previously allocated to this service is not justified. The historical method of charging SO service with a demand responsibility equal to fifty percent of the demand responsibility of regular (contract demand) service at 100 percent load factor is reasonably related to the operating characteristics of this service and its proportionate use of system facilities. This method provides an appropriate basis for calculating the demand-miles for SO service to be included in the total for the zone in which such service is rendered. The formula also insures that each zone in which SO gas is delivered will have allocated to it the fair share of system demand costs which this service should bear, and it will avoid distorting the amount of cost allocated to other classes of service. However, any SO volumes which, under abnormal circumstances, happen to be delivered during the three-day peak period—at Tennessee's option, it should be emphasized—will be eliminated from the calculation of system demands.

In order to give some general indication of the effects of our determinations, the tables in Appendix B to this opinion set forth an estimate of the zone cost results of the methods and principles of allocation approved herein, as applied to the 1956 test year data. These figures reflect a rough approximation of the effect of the special adjustment adopted for the New England zone, and they are provided for purposes of illustration only.

The Commission orders:

(A) The following findings and conclusions from the presiding examiner's decision herein are adopted and made part of this order:

(1) The Tennessee system is divided into six rate zones, namely, Southern (Zone 1), Central (Zone 2), Eastern (Zone 3), Northern (Zone 4), New York (Zone 5) and New England (Zone 6). The Commission has not previously determined a method by which Tennessee's cost of service should be allocated among its rate zones and classes of service.

(2) Tennessee operates an integrated pipeline system, in which every portion of the system contributes in one way or another to the effectiveness of the entire system, whether directly or by displacement.

(3) Both Columbia and Consolidated advocate a zone-gate (or zone-by-zone) allocation approach whereby each rate zone is treated as if it were a separate operating entity, and involving the segregation of physical property on the basis of zone boundaries. The zone-gate approach is inconsistent with the basic principles upon which Tennessee's integrated system was designed and is operated. In addition, it accentuates the impact upon cost allocation resulting merely from the historical location of the geographical zone boundaries on the Tennessee system. It is also unduly complex.

(5) The Mcf-mile approach, which uses system-wide average costs, and allocates such costs on the basis of mileage, constitutes, in general, a fair and reasonable method for the allocation of costs between zones on the Tennessee system.

(9) The Tennessee method for allocation of costs to Transportation Service, utilizing the mileage from the actual points of receipt of transportation gas to the points of delivery, is reasonable.

(10) The Iroquois complaint that the use of the Pennsylvania-New York state boundary as a dividing line between the Northern and New York Zones is unfair and discriminatory has not been supported in this record.

(B) In allocating demand costs under the Mcf-mile method herein, demand volumes will be measured on the basis of the three-day sustained peak periods (adjusted for any obvious abnormalities) in the two winter seasons of the refund period herein, and not on the basis of average billing demands.

(C) The demand costs for SO service will be based on the number of demand units equal to fifty percent of the CD demand responsibility at 100 percent load factor.

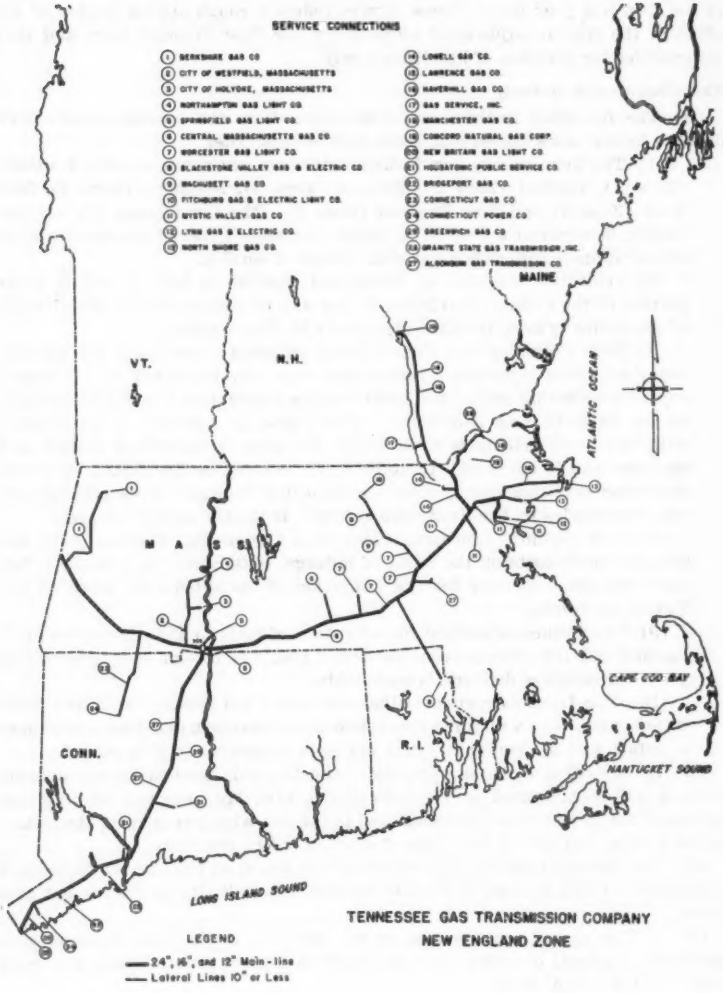
(D) 1. The annual costs related to the facilities in the New England zone classified as lateral facilities shall be deducted from system transmission costs and allocated to that zone;

2. The revenues received from SS–5 and PS–G service shall be deducted from system costs and allocated to those services; and

3. The remaining transmission costs shall be allocated fifty percent by the methods prescribed in paragraphs A(5), A(9), B, and C, and fifty percent on the basis of the Docket No. G–5259 revenue levels.

APPENDIX A

DOCKET NO. G-11980



TENNESSEE GAS TRANSMISSION COMPANY
NEW ENGLAND ZONE

APPENDIX B

Allocation of transmission system costs to zone sales and transportation services, 12 months ended Dec. 31, 1956

	Allocation factors for transmission cost				Allocation of production cost	Allocation of PSG and SS-5 cost	Allocation of cost on New England laterals	Allocation of 50 percent of balance of transportation costs on G-5259 revenue level		Allocation of 50 percent of balance of transportation costs on Mcf-mile basis		Total cost of service
	G-5259 revenue level		Mcf-miles									
	Demand	Delivery	Demand Mcf-miles	Commodity 100 Mcf-miles				Demand	Commodity	Demand	Commodity	
SALES												
Southern Zone	$6,510,958	$4,551,105	237,021	648,584,399	$11,480,429			$3,251,213	$2,272,570	$3,152,448	$2,546,339	$22,702,999
Central Zone	4,676,373	4,939,622	183,994	591,508,164	7,806,570			2,335,122	2,466,574	2,447,173	2,322,258	17,377,697

[1] Mechanical details of the "SO" demand adjustments are shown on Sheet No. 3. Similar adjustments not made for "R" and "E" sales due to small quantities involved during 1956.

[2] (*a*) Sales of SO gas in Eastern Zone in 1956=11,168,426 Mcf.
(*b*) Item (*a*) divided by 732 days=15,257 Mcf.
(*c*) Item (*b*) multiplied by 1150.6 miles=17,555 MMcf-miles.

[3] (*a*) Sales of SO gas in Northern Zone in 1956=5,464,301 Mcf.
(*b*) Item (*a*) divided by 732 days=7,465 Mcf.
(*c*) Item (*b*) multiplied by 1504.8 miles=11,233 MMcf-miles.

[4] (*a*) Sales of SO gas in New York Zone in 1956=8,017,194 Mcf.
(*b*) Item (*b*) divided by 732 days=10,953 Mcf.
(*c*) Item (*b*) multiplied by 1621.8 miles=17,764 MMcf-miles.

[5] Computed as follows:

(*a*) *Allocation bases of PSG sales in New England*

	3-day Peak-Mcf	*Volume-Mcf*	*Dem. MMcf-miles*	*Com. 100 Mcf-miles*
Per FPC Staff Exhibits Nos. 90 and 97A	53,043	633,437	20,293	11,645,160
After removal of mileage on laterals	53,043	633,437	19,916	11,597,330
Adjustment for mileage on laterals	------	-------	377	47,830

Weighted average miles of adjustment on laterals=47,830÷633,437 or 7.55 miles.

(*b*) *Derivation of adjustment to commodity 100 Mcf-miles for volumes of PSG sales utilized herein*

PSG volumes used herein=669,857 Mcf.
Then 669,857 Mcf × 7.55 miles=50,570-100 Mcf miles.

(*c*) *Adjustment to General service sales in New England for removal of mileage on laterals in New England*

	Demand MMcf-miles	*Commodity 100 Mcf-miles*
Total adjustment to combined PSG and general service sales for removal of mileage on laterals	1,682	3,061,090
Less adjustment to PSG sales	377	50,570
Balance for general service sales	1,305	3,010,520

DECISION

UPON A PROCEEDING TO DETERMINE THE PRINCIPLES AND METHODS TO BE APPLIED IN ALLOCATING COSTS AMONG THE ZONES ON THE TENNESSEE SYSTEM, AND AMONG THE CLASSES OF SERVICE WITHIN THE ZONES

(Issued February 13, 1961)

ZWERDLING, *Presiding Examiner:* This initial decision is directed to the determination of the principles and methods to be used to allocate the cost of service of Tennessee Gas Transmission Company (Tennessee) among the six rate zones on the Tennessee system and among the various classes of service. The zone allocation issue represents one phase of the proceeding in the instant Docket No. G–11980, which represents a Section 4(e) rate increase application filed by Tennessee on January 14, 1957, proposing increased rates and charges aggregating approximately $24,077,000 annually. These increased rates went into effect on July 14, 1957, subject to an undertaking to refund any excess charges.

On April 30, 1959, after the hearing in Docket G–11980 had proceeded to the point of completion of the cross-examination of the Tennessee case-in-chief, the Commission, pursuant to a motion filed by the Consolidated Natural Gas System intervenors (Consolidated), issued an order postponing further hearings on the cost of service issues in Docket G–11980, and severing the zone allocation issue for separate and prior hearing. The order directed that hearings go forward "on the issues relating to the principles and methods proposed by the various parties for allocation of costs among the zones on Tennessee's system and among the classes of service within the zones * * *." The Commission further directed that

> * * * as the dollar basis for testing the principles and methods, the parties, without prejudice, may present cost allocation evidence based on any relevant cost of service, but shall also show the effect of restating the results of such principles and methods in terms of the proposed cost of service heretofore served by the Staff upon the parties.[1]

The order explained that:

> It is our view that separate and prior hearing on the issues relating to the principles and methods to be applied toward allocation of costs among the zones on Tennessee's system and among the classes of service within the zones will aid in the disposition of this proceeding and may be of similar aid in disposition of proceedings in Docket G–17166.[2]

Pursuant to the Commission's order of April 30, 1959, hearings were resumed on the zone allocation issue on May 12, 1959 and continued intermittently until the hearing was concluded on December 17, 1959. Testimony and exhibits on the zone allocation issue were presented by Tennessee, the Commission Staff,

---

[1] Order Amending Order Severing Issues, issued May 6, 1959—amending the proviso clause contained in par. (B) of the order issued April 30, 1959.

[2] This docket represents a subsequent Section 4(e) rate increase application filed by Tennessee involving an additional proposed increase in the amount of $19,184,000, which became effective on May 15, 1959 subject to an undertaking to refund any excess charges. No hearing has been scheduled in this case. A third cumulative Section 4(e) rate increase application was filed by Tennessee on October 5, 1959 in Docket No. G–19983, proposing an additional increase in the amount of $26,590,138 annually—which became effective April 5, 1960, subject to undertaking to refund any excess charges. This latter rate proceeding is currently in an advanced stage of hearing. An interim order on rate of return, issued by the Commission on August 9, 1960 in this proceeding has rejected $11,001,825 of this third proposed rate increase, but an appeal taken by Tennessee is presently pending in the 5th Circuit.

the Consolidated Natural Gas System,[3] the Columbia Gas System, Inc. (Columbia),[4] the New England Intervenors (New England),[5] and Iroquois Gas Corporation.[6] All studies were presented on the basis of a test year ending December 31, 1956.

The record on the zone allocation issue consists of approximately 4500 pages of transcript and some 60 exhibits.[7] Final briefs were filed as of April 11, 1960, and the case is now ready for decision.

History and Characteristics of Tennessee Rate Zones

The Tennessee system is divided into six rate zones, namely Southern (Zone 1), Central (Zone 2), Eastern (Zone 3), Northern (Zone 4), New York (Zone 5), and New England (Zone 6). A map showing the boundaries of these zones is attached as Appendix A at the end of this decision.

Tennessee received its initial certificate authority in 1943 to construct and operate a transmission system having an initial capacity of 207,000 Mcf per day and extending some 1265 miles from Nueces County, Texas, to Kenova, West Virginia. (3 FPC 574) On July 22, 1947 the Commission, in connection with its rate investigation in Docket No. G–606, approved a zoning proposal which divided the Tennessee system into three zones: the Southern Zone (covering sales in Mississippi and Tennessee);[8] the Central Zone (covering sales in Kentucky); and the Eastern Zone (covering sales in West Virginia). These zone boundaries, as well as the zone rate differentials, were arrived at by agreement among Tennessee, its customers and the Staff, and the proposal was approved by the Commission on that basis. (6 FPC 114) The Northern and New York Rate Zones were created as a result of the Commission's certificate authorization in 1949, permitting Tennessee to extend its system to Buffalo, New York. (8 FPC 276, 285) In 1950 Tennessee was authorized to extend its pipeline from the Buffalo terminus to the New York-Massachusetts state line, and additional extensive territories were thus added to the New York Zone. At the same time, Northeastern Gas Transmission Company (a wholly-owned subsidiary of Tennessee) was authorized to construct a pipeline connecting with Tennessee at such state line, and to deliver gas into New England. Northeastern thereafter purchased gas from Tennessee at the New York-Massachusetts state line. (9 FPC 271) By order issued July 16, 1954, the Commission authorized a merger between Tennessee and Northeastern. As a result of this merger the New England rate zone was established, with the service area of the merged subsid-

[3] Comprised of Hope Natural Gas Company, The East Ohio Gas Company, The Peoples Natural Gas Company, New York State Natural Gas Corporation, and Lake Shore Pipeline Company.

[4] Includes United Fuel Gas Company, The Manufacturers Light and Heat Company, and The Ohio Fuel Gas Company.

[5] Comprising some 25 New England distribution companies and municipalities, which participated jointly in the proceeding.

[6] In addition, a large number of other intervenors, although not presenting evidence on their own behalf, participated in the hearing and have filed briefs herein.

[7] Since a portion of the testimony on the zoning issue was presented at an earlier stage of the hearing, prior to the Commission's April 30, 1959 order of severance, it may be helpful to note that although the bulk of the testimony on this issue is set forth in Transcript Volumes 47 through 69, the direct testimony of Tennessee witness Davis appears in Volume 2, pages 327–334, Volume 3, pages 354–358, 397–414, 421–427, and Volume 20, pages 2794–2800. The cross-examination of witness Davis with respect to this testimony runs from Volume 29 through 34. Further, while the exhibits on this issue range principally from Exh. 78 through 142B, Tennessee initially presented Exhs. 21 and 22 as its zone allocation exhibits, and subsequently modified them with Exhs. 50 and 51, upon which it now relies.

[8] Subsequently, the area of the Southern Zone was enlarged to include the states of Arkansas and Louisiana.

iary becoming the New England Zone (Docket Nos. G–2352 and G–2353, order affirming Examiner's decision of June 15, 1954, 13 FPC 623).[9]

The characteristics of the various Tennessee rate zones may be summarized as follows:

(1) The Tennessee transmission system carries gas from the sources of supply in Texas, from South Texas to the Louisiana boundary where Southern Zone 1 begins. There are no jurisdictional sales from the main pipeline prior to Zone 1.

(2) In Southern Zone I and Central Zone 2, the gas is transported further from points at or near the sources of supply through multiple and parallel large-diameter lines. The largest part of the volumes transported in these two zones is carried forward to other zones.

(3) In Eastern Zone 3, which is a terminal zone ending in West Virginia, and historically the terminus of the original Tennessee system, the gas moves a relatively short distance, in very large volumes, through 20-inch and 24-inch pipelines, to the system's two largest customers (United Fuel Gas Company and Hope Natural Gas Company) and two other customers, who purchase at approximately 100 percent load factor.

(4) In Northern Zone 4, where nearly half of the gas moving into the zone is sold there, the transportation is characterized by large volumes and the sales by high load factor. Through Ohio and as far as Pittsburgh in Pennsylvania, there are multiple and parallel pipelines of large diameter in this zone. However, at Mercer, Pennsylvania the system divides into only two lines, which are thereafter widely separated, one passing into Northern New York at the Zone 5 boundary and the other crossing the state of Pennsylvania to enter Zone 5 at the Pennsylvania-New Jersey boundary.

(5) New York Zone 5 has one long, principally 24-inch line extending across Northern New York State to the Massachusetts boundary, and one 24'' line extending from the New Jersey-Pennsylvania boundary to the New York-Connecticut boundary.

(6) In New England Zone 6, the load factor is the lowest on the Tennessee system, the transmission lines are of smaller diameter, and the volumes are the smallest in the system for any zone. In addition, there are numerous small laterals. (47:4916–18)

Comparative data with respect to load factor, volume of sales and load distribution for each of the six zones is shown in the following table:[10]

Zone	1956 sales	Gas transported for others	Total	Load distribution [1]	Load factor
	Mcf	*Mcf*	*Mcf*	*Percent*	*Percent*
Southern	87,521,128	----------	87,521,128	13.67	74.9
Central	59,508,915	----------	59,508,915	9.29	88.2
Eastern	218,710,078	13,230,168	231,940,246	36.21	99.2
Northern	99,739,602	55,829,332	155,568,934	24.29	101.0
New York	69,283,350	----------	69,283,350	10.82	91.5
New England	36,648,220	----------	36,648,220	5.72	[2] 48.6
Total	571,411,293	69,059,500	640,470,793	100.00	88.6

[1] Ratio of each zone's sales to total system sales.

[2] The New England Intervenors contend that Staff's figure of 48.6 percent for the New England Zone load factor is unreasonably low, as the result of two alleged errors in the Staff computation, as discussed at length on pages 18–21 of the New England reply brief; that if these two errors were eliminated, the computed load factor would actually be substantially higher than 65 percent. This problem will be referred to again at a later point.

[9] Additional extensive territories were added to both the Northern and New York Zones in 1955.

[10] The data set forth in this table is taken from Staff's Exhibits 90 and 97–A, all as set forth at page 53 of Staff's initial brief.

History and Characteristics of the Tennessee System [11]

Tennessee operates one of the largest natural gas transmission systems in the United States. The original pipeline was constructed in 1944 after a finding by the War Production Board that the Appalachian area was in urgent need of more natural gas for the war effort, and after authorization by the Federal Power Commission.

The original system extended from South Texas to West Virginia as a single pipeline of 1,265 miles. The first full year of operations was 1945. In that year the system designed capacity was 200,000 Mcf, and deliveries amounted to 73,564,200 Mcf. Approximately 95 percent of such sales in 1945 were made to two customers in the Eastern Zone—*i.e.*, United Fuel Gas Company, a Columbia subsidiary, and Hope Natural Gas Company, a Consolidated subsidiary. Tennessee's net plant investment in 1945 was $61,768,800, and compressor stations had a total of 60,000 horsepower installed.

The Tennessee system has grown and expanded constantly since that time. Since 1945 Tennessee has approximately doubled the length of its system, expanded its capacity over ten-fold, and increased the number of customers served from the original two to eighty-two as of 1956.[12] The original pipeline was principally a single 24-inch pipeline, 1,265 miles in length. The present system is 2,140 miles in over-all length, and consists of several lines totaling 9,811 miles. At the end of 1956, design capacity was 1,863,000 Mcf, deliveries totaled 638,923,200 Mcf, net plant investment was $909,326,700, and compressor station horsepower was 579,120.

Until the year 1950, all system expansion took place within the general geographic area of Tennessee's original system. The first extension of facilities beyond the Appalachian area took place late in 1950 upon completion of a 382-mile line from Kentucky to a point near Buffalo, New York. In 1951 this line was extended an additional 297 miles across the state of New York to the Massachusetts state line. Deliveries of gas on a limited scale were initiated in September 1951 to Northeastern Gas Transmission Company, Tennessee's then wholly-owned subsidiary, operating in New England. On September 3, 1954, Tennessee acquired all of the facilities of Northeastern, consisting of 533 miles of pipeline system. In 1955 Tennessee completed a 250-mile extension of its system from the Hebron Storage Field in Northern Pennsylvania to connect near Greenwich, Connecticut with the southern terminus of the New England system. This construction completed a 1,000-mile pipeline loop, integrated with underground storage. The first withdrawals of gas from the Hebron Storage Field also occurred in 1955.

The Tennessee system, as it existed in the test year 1956, originates near the United States-Mexico boundary in South Texas and extends in a northeasterly direction 2,200 miles to Northern New England, representing the nation's longest pipeline system. One of its extensions connects with Canadian facilities, terminating at the Niagara River border north of Buffalo, New York. The Tennessee system traverses fifteen states: Texas, Louisiana, Arkansas, Mississippi, Tennessee, Kentucky, West Virginia, Ohio, Pennsylvania, New Jersey, New York, Massachusetts, Connecticut, Rhode Island, and New Hampshire. From a point near the Rio Grande in South Texas into Northeastern Kentucky, the mainline system consists of two, three, or four parallel pipelines. A fifth pipeline follows the Gulf Coast from South Texas to Louisiana and then approaches the main system until their intersection in Tennessee north of Nashville. From

[11] The data set forth at this point is based primarily upon Exh. No. 33.

[12] Deliveries to Tennessee's original two customers, United Fuel and Hope Natural, in 1956 amounted to 37.6 percent of the total system deliveries.

near the Ohio-Pennsylvania border and extending in an easterly direction, the system forms a 1,000-mile pipeline loop in Pennsylvania, New Jersey, New York, Connecticut and Massachusetts. During the test year, gas obtained from some 400 producers located in Texas and Louisiana, including the offshore producing areas in the Gulf of Mexico, flowed downstream along two widely separated supply routes until it reached Compressor Station No. 87, located at the northern end of the Southern Zone.[13]

Tennessee's underground storage operation received its initial FPC authorization in 1952, and injection of gas into Hebron Storage Field in Northern Pennsylvania was commenced late the following year. Service from underground storage was commenced in 1955. Eventually, Tennessee plans to have four storage fields in operation, all located about three-quarters of the distance downstream on the system. The present indicated peak-day deliverability of Tennessee's storage facilities is on the order of 400,000 Mcf per day.

Tennessee's principal activitity is the wholesale transportation and sale of gas as a fuel. It also engages in diversified activities relating to the production, conversion and transportation of hydrocarbons. It produces and markets liquefiable petroleum gases, produces and refines petroleum, markets gasoline and fuel oils, and has entered the petrochemical field through a half-interest in a Houston plant manufacturing butadiene. A subsidiary, Bay Petroleum Corporation, carries on the refining and petroleum products marketing activities of the company. Another subsidiary, Tennessee Products Pipe Line Company, had under construction during 1956 a fractionating plant to separate liquid hydrocarbons. Tennessee also has two other subsidiaries—The Tennessee Life Insurance Company, which owns the company's headquarters building in Houston, and the Ten Ten Travis Corporation, which operates a 1500-car public parking garage in downtown Houston.

Historic Treatment of the Zoning Problem on the Tennessee System

The posture of the zoning issue, as here presented for disposition, can be better understood if attention is initially directed to the historic facts as to how the problem of zone differentials has been handled on the Tennessee system. (Exh. 69)

(1) This history begins with the very first Tennessee rate increase proceeding, in Docket Nos. G–1741 and G–1764, culminating in a rate increase amounting to $11,320,000 annually, which became effective on December 17, 1951, and which was arrived at through settlement proceedings between the company, Commission Staff, and intervenors. (10 FPC 1608, 11 FPC 687, 737) In that proceeding Tennessee proposed that costs be distributed between its zones on the basis of a "hundred Mcf-mile" allocation method.[14] In the ensuing rate settlement conference several of the Tennessee customer companies objected to the effect of that allocation, and the problem of the zone differentials then became the subject of a special conference. The end result was a compromise agreement with respect to the rates to be established for the different zones, which was thereafter approved by the Commission in an order issued on January 21, 1952.[15] In this order the Commission stated:

---

[13] A third supply trunkline extending southward from Compressor Station No. 87 to the Louisiana area below New Orleans has subsequently been placed in operation.

[14] This method is similar to the Mcf-mile method which will subsequently be discussed at length in the instant decision.

[15] Columbia counsel Rosan in the course of the instant proceeding described what happened in the G–1741 zoning settlement as follows:

> "And then after the dollars were arrived at, there was a conference of all the customers of Tennessee. And there was a lot of pulling and tugging by various zones. And there were slight adjustments made in the rate to arrive at a compromise that everyone would accept." (29 : 3946–47)

Although there were many conflicting views as to allocations and methods of allocation reflecting broad differences in interest of the various utility purchasers in different zones, the conferees reached unanimous agreement respecting rates for the different zones, it being concluded by all, including the staff of the Commission that the rates agreed upon were fair, equitable and within the realm of reasonableness as a whole and as to each zone. (11 FPC 738)

(2) The next succeeding Tennessee rate case was Docket G–2052, in which an increase of approximately $14,000,000 annually was granted as the result of a settlement which became effective July 28, 1953. (12 FPC 1096) The rate increase proposed by Tennessee in this proceeding was based entirely upon the cost of purchased gas, and the technique adopted was to simply add a roughly uniform amount to the existing commodity cost in each zone. Under the settlement, the commodity charges of the contracted demand and general service rates were increased by 3.3 cents per Mfc in the Southern Zone, 3.6 cents in the Central and Eastern Zones, 3.37 cents in the Northern Zone, and 3.38 cents in the New York Zone. (31:4232)

(3) The next Tennessee rate filing was in Docket G–2252, where an increase of $4,768,000 annually became effective March 1, 1954 as the result of a settlement approved by the Commission. Here again the problem of arriving at a definitive resolution of the zone allocation question was passed over in the settlement. In order to avoid controversy, Tennessee merely proposed to add its claimed incremental costs to the existing rates, which had previously been approved in Docket G–2052. Under this settlement, the monthly demand charge in all zones was increased by a uniform 10 cents per Mcf, for the contracted demand and general service rates and the transportation rates. The commodity charge of the contracted demand and general service rates was increased by .55 cents per Mcf in the Southern Zone, .69 cents in the Central and Eastern Zones, .78 cents in the Northern Zone and .97 cents in the New York Zone. (Tr. 4230)

(4) Subsequent to the Commission authorization of the Northeastern merger in July 1954, service to the New England Zone as such commenced in September 1954, under rates which were fixed for that zone effective September 1. (31:4230–31) These New England rates represented simply a continuation of the rates which had been in effect under the Northeastern tariff for sales in the New England area immediately prior to the merger.[10]

(5) The next Tennessee rate case consisted of an unnumbered filing, under which an increase of $1,134,000 annually, relating to an increase in the Texas production tax, was permitted to become effective as of November 18, 1954, without suspension. (31:4250–51) The result was to add a uniform .25 cents per Mcf to the commodity charge for the contracted demand and general service rates in all zones. (31:4230)

(6) The last Tennessee rate proceeding prior to the instant case was Docket G–5259, filed in November 1954, in which Tennessee sought an annual increase in the amount of $8,616,000, based largely upon increases in its cost of purchased gas. Here again, in an effort to avoid litigation, Tennessee proposed to recoup its increased costs in the form of a uniform 1.9 cents per Mcf increase, to be applied to the commodity charge for the contracted demand and general service rate in all zones. (31:4229–30) However, in

[10] The said Northeastern rates, which were applicable to sales in the New England area prior to the merger, reflected the purchased gas cost paid by Northeastern to Tennessee, at the New York Zone rate level, for gas delivered by Tennessee to Northeastern at the New York-New England boundary line, plus an increment for Northeastern's own operating costs and return on plant.

the course of the hearing in that case the New England intervenors raised the zoning issue and presented a complete case-in-chief on that question, under which costs were allocated among zones on the basis of an Mcf-mile method. This New England zoning proposal was strongly opposed in the G–5259 hearing by Consolidated and Columbia. However, by order issued October 6, 1955 in that proceeding, the Commission severed and deferred further consideration of the zoning problem until the dollar cost of service issues should be tried and decided. This cost of service hearing culminated in a Commission order of October 17, 1957 approving an annual increase in revenue of approximately $7,700,000, effective as of December 15, 1954. In the meantime, Tennessee had made a still further rate filing in the instant Docket G–11980, involving a proposed increase of $24,077,000 annually which became effective, subject to refund on July 14, 1957. In the G–11980 rate filing Tennessee squarely raised the zoning issue. Accordingly, on July 1, 1957, Tennessee filed a motion to dismiss the zone allocation issue in Docket G–5259, contending that the zoning issue should be litigated and resolved once and for all in the instant G–11980 proceeding. All parties agreed to this motion, for the reasons indicated, and the motion was granted by Commission order of September 5, 1957.

It is apparent from the above recital that up to this date the Commission has never previously considered or decided, on the merits, the proper allocation of Tennessee's costs among its zones or the proper zone rate differentials. It is further apparent that the Docket No. G–5259 zone differentials, with some slight modifications, represented basically the zone differentials which were worked out and agreed on by the parties, and accepted by the Commission in 1952 as part of the rate settlement in Docket G–1741; that these zone differentials were thereafter incorporated, with the slight modifications referred to above, in every succeeding Tennessee rate case, because of the desire of the parties to postpone the litigation and final resolution on the merits of this complex and troublesome problem.

In the instant proceeding, however, pursuant to the Commission's order of severance of April 30, 1959, the zoning issue has been fully tried and comprehensively briefed, on the merits. Although the instant Docket No. G–11980, as a result of Tennessee's later rate increase filing in Docket No. G–19983, has now become purely a refund case with respect to the dollar cost-of-service issues, the instant proceeding has nevertheless become the vehicle for final resolution of the zoning question. Whatever allocation method may be here adopted for the allocation of Tennessee's total system costs between its existing zones will be applicable to the Tennessee system for the future—unless and until it may be demonstrated at some later date that a change is required.

The Columbia Theory That the Commission Has Already Determined How Costs Should Be Allocated to the New England Zone

Before proceeding any further, it will be appropriate at this point to dispose of a Columbia theory (emphatically developed at pp. 17–22 of its initial brief in this proceeding) which is designed to suggest that the zoning question has already been previously resolved by the Commission and that accordingly nothing remains to be litigated here. Columbia contends that by virtue of an accounting condition originally imposed upon Tennessee by the Commission in the *Northeastern* merger case,[17] and by language referring to that account-

[17] Order issued July 16, 1954, *In the Matters of Tennessee Gas Transmission Company and Northeastern Gas Transmission Company*, Docket Nos. G–2352 and G–2353, authorizing the merger between Tennessee and Northeastern, 13 FPC 623.

ing condition which the Commission included in its Answer to Motion for Stay, filed January 24, 1959 with the Court of Appeals for the District of Columbia in another proceeding, the Commission has finally disposed of the issue as to how costs should be allocated to the New England Zone; that by the use of this language in such other proceedings, the Commission has made it abundantly clear that Tennessee was not to be permitted to roll in the New England Zone costs and to spread them over its entire system, but instead has already determined that costs incurred by Tennessee within the New England Zone must be assigned directely to that zone, together with joint costs applicable thereto. If we were to accept this Columbia contention, we would have to agree that the precise zoning issue which has been litigated at such length in the instant proceeding has already been decided on the merits and is no longer open to controversy. The mere statement of this proposition is sufficient to reject it.

The accounting condition imposed upon Tennessee in the *Northeastern* merger order, *supra*, provided as follows:

> The Applicant[18] shall maintain in conformity with the Uniform System of Accounts, supplemental accounts in scope and form satisfactory to the Commission designed to show separately: (a) the actual expenses and charges which would be involved in any determination of Applicant's cost of service for the New England Zone formerly served by Northeastern, and (b) all applicable expenses and charges properly included in Applicant's system cost of service which would be involved in determinations of allocations thereof between the several zones of service.

It seems perfectly clear that by inserting this accounting condition in the Northeastern merger order the Commission intended merely to insure that all the possibly relevant and useful data which might ultimately be needed to determine which zoning allocation method should be adopted would be available whenever the Commission should decide in some future rate proceeding to finally come to grips with that problem on the merits. The outline set forth immediately above of the steps which have occurred in the historic treatment of the zoning problem on the Tennessee system makes it clear that when the Commission issued its Northeastern merger order of July 16, 1954, it was perfectly aware of the fact that there was still a hotly disputed and unresolved issue on the Tennessee system as to whether costs should be allocated among the various zones under an Mcf-mile method, or under a zone-by-zone approach. The Commission was further aware of the fact that in the early part of 1954, in connection with a Tennessee rate proceeding in Docket No. G–2252, certain customer companies and the Commission staff were requesting Tennessee to include a definitive allocation in its next rate filng; that Tennessee had in fact complied with this request in its next rate increase filing of April 1954, in Docket No. G–2434, but that as a result of the settlement of the latter proceeding the zoning question remained still unresolved. It is inconceivable that under all these circumstances the Commission would have given any serious thought to making a final disposition of this troublesome zone allocation issue in the Northeastern merger case by the simple adoption of the accounting condition referred to above, and in the context of a situation where the zoning issue had not even been litigated in that proceeding.

In this connection, it is important to note that when the Commission subsequently, in the Tennessee rate proceeding in Docket No. G–5259 and in the instant Docket No. G–11980 proceeding, issued interim orders requiring Tennes-

[18] The Applicant was Tennessee.

see to make available to all parties certain described data relating to the New England Zone, based upon the accounting condition in the Northeastern merger case, the Commission was careful to insert a *caveat* making it clear that it did not thereby intend to dispose of the zoning issue on the merits. In the Commission Order Directing the Furnishing of Data, issued in Docket No. G–5259 on November 17, 1955, paragraph (C) of the order provided:

> Nothing contained in this order shall be construed as a determination by the Commission of what relevancy such data may have in the disposition of the issues in this proceeding.

The identical *caveat* was inserted as ordering paragraph (D) in the Commission's Order Denying Appeal, issued November 1, 1957 in the instant Docket No. G–11980. Finally, in its Order Denying Motion for clarification, issued December 31, 1957 in the instant proceeding, the Commission stated:

> For the purposes of this order to Tennessee, it is understood that the cost data and allocation thus presented will not be construed to represent Tennessee's position on cost data or allocation.

In an effort to buttress its theory with respect to the significance of the accounting condition in the Northeastern merger order, Columbia cites certain language which was included in an Answer to Motion for Stay filed by the Commission on January 24, 1959 in the U.S. Court of Appeals for the District of Columbia, in the *Manufacturers Light and Heat Company* case, Docket No. G–15826 (Case No. 14897), involving the lawfulness of a Commission order authorizing Tennessee to provide Peaking Service in the New England Zone during the 1958–59 heating season. In that Answer the Commission referred to a concern expressed by the petitioners in that proceeding that costs properly chargeable to the New England Zone would be improperly loaded by Tennessee on the other zones. The instant Columbia brief quotes and emphasizes a selected statement from that Answer as follows:

> As a matter of fact, the Commission has already taken care to insure that it can avoid doing what petitioners assume it will do. This occurred at the time of the merger with Tennessee of Northeastern Gas Transmission Company, Tennessee's wholly-owned subsidiary which had previously served New England. In approving that merger, the Commission affirmed and adopted the examiner's decision imposing conditions which would enable the Commission in the future to determine and fix costs of service in the New England zone separately notwithstanding the merger * * *.

In order to clearly understand the meaning and significance of this Commission statement, made in its Answer filed with the Court of Appeals, it is important that it be considered *in context* with the language which the Commission used immediately preceding; and immediately following the statement quoted in the Columbia brief. The Commission language quoted in the Columbia brief appears on page 7 of its Answer. At page 5 of the same Answer the Commission stated:

> *If* petitioners' contentions as to the proper method of allocation prevail, the Contract Demand rates in Zones 2, 3, and 4 will be relatively lower than those proposed by Tennessee, and the General Service rates in Zone 6 will be relatively higher. If that results in a rate for the Peak Service of more than the 90 cents per Mcf which Tennessee is now collecting (subject to possible refund), the resulting deficiency in Tennessee's total revenues will be its own fault and will afford no basis whatever for departing from an otherwise proper basis of allocation or for declining to fix rates for each zone and class of service on the basis of cost of service so determined and allocated. [Emphasis supplied.]

At page 12 of the same Answer the Commission stated:

> The analysis already made of petitioner's allegations in support of their claim of aggrievement has shown that those allegations both depend upon the possibility that Tennessee's Contract Demand rates in Zones 2, 3, and 4, under which petitioners make their purchases, may be fixed too high, in order to offset Tennessee's too-low Peak Service rate, and, if so, that the refunds to petitioners will be reduced. *But that can occur, if at all, only by force of a Commission order in the rate proceeding under Section 4(e) of the Gas Act, which is now pending upon increased rates filed by Tennessee, Docket No. G–11980. This being true, the obvious conclusion is that in that proceeding, if anywhere, will petitioners find their remedy. There, where the rates they are to be charged will be fixed, is the proceeding in which, if anywhere, their contentions as to the proper method of allocating total costs of service between zones should be presented.* [Emphasis supplied.]

The full Commission statement, as quoted above, reveals clearly that the Commission was there merely informing the Court of Appeals, in unambiguous language, that the question as to the proper method for allocation of costs between the Tennessee zones was still unresolved on the merits; that this issue would be finally resolved in the instant G–11980 proceeding; that whatever costs the Commission might ultimately determine in Docket G–11980 as the proper costs to be allocated to Zones 2, 3, and 4 would be charged to those zones, *and no more;* and that whatever costs the Commission should determine in the G–11980 proceeding as the proper costs to be allocated to the New England Zone would be charged to that zone, *and no less.*

Definition of the Problem to be Considered on the Merits Here

We therefore proceed now to a consideration of the zone allocation question on its merits. The zone allocation question in its broadest sense necessarily involves a number of subsidiary problems, such as normalization of sales during the test year, classification of costs between demand and commodity elements, and assignment of demand responsibility as between customers. While all of these subsidiary elements raise problems which must be resolved, and which therefore will be considered at length in this decision, the key problem is that of determining a proper and equitable *basic* method for allocating costs among the various zones for the ultimate purpose of determining rates within the zones. In this connection, as will be seen shortly, although five different zone allocation presentations have been made in this case, the critical issue to be resolved here is whether Tennessee's costs are to be allocated on the basis of system-wide average costs (on a mileage basis), or whether segregated zone costs are to be employed.[19]

Although these five allocation presentations differ in various respects, they may properly be grouped for purposes of discussion and comparison into two basic allocation method categories, as follows:

(1) *The Mcf-Mile Method*—advocated by Tennessee, the Commission Staff and the New England intervenors. This was the method adopted and approved by the Commission in the landmark *Northern Natural* zoning case, *In the Matter of Northern Natural Gas Company*, 14 FPC 11, Op. No. 281 (1955), affirmed in

[19] It should be noted at the outset that the controverted issue here relates primarily to the allocation of *transmission* costs. There is no dispute as to the method to be followed for the allocation of *production* costs, including both natural gas production and gathering expenses, and purchased gas costs. All parties agree that such costs should be allocated on a straight volumetric basis.

Interstate Power Company, et al. vs. *Federal Power Commission* (CCA 8, 1956), 236 F. 2d 372. Its rationale is that "unless other circumstances are present which outweigh the importance of the length of transmission required to effect delivery, the distance factor is the prime determinant of the cost of rendering service." (14 FPC 24) Under the Mcf-mile method all of the pipeline's transmission costs are rolled-in on a system-wide basis. Such costs are then, after classification between demand and commodity elements, allocated among zones on the basis of volume (both peak day and annual) and miles of haul. The three variations of the Mcf-mile approach presented in this proceeding are as follows:

(a) The New England intervenors employ the straight Mcf-mile method, without adjustment.

(b) Tennessee allocates half of the transmission costs on a mileage basis, utilizing the Mcf-mile method—and half on the basis of historical factors, utilizing the Docket G–5259 rate levels applied to 1956 deliveries.[20]

(c) The Commission Staff employs the Mcf-mile method. However, the costs thus allocated to the New York and New England Zones are then adjusted upward by utilizing the higher dollar amounts of revenues at the Docket G–5259 rates as the number of dollars to be recovered for those two zones. The differences between the original allocated cost and the revenue level at the G–5259 rates in these two zones are considered as excess revenues to be distributed to the other four zones and to the transportation services as a credit to their allocated cost of service.

2) *The Zone-By-Zone, or Zone-Gate Method*—advocated by Columbia and Consolidated. This is a *segregation of property* approach, which earmarks certain zone costs, but also makes extensive use of certain systemwide factors. It is a combination of a segregation and cumulative cost allocation method, in that it attempts to segregate costs in a particular zone to which are added the cumulatively allocated costs of all *upstream* zones. The two variations of this approach are as follows:

(a) Consolidated employs the straight zone-gate method.

(b) Columbia utilizes a zone-gate, capacity-credit method. Its essential difference from the Consolidated approach lies in the fact that, in classifying fixed costs between demand and commodity, Columbia departs from the Commission's *Atlantic Seaboard* (Op. No. 225) method, and instead allocates all of the fixed costs to demand. It then uses a "capacity credit adjustment" to shift a portion of the fixed costs to "interruptible" sales.

Throughout the briefs submitted by Columbia, Consolidated, and other supporters of the zone-gate allocation method runs the theme, expressed in one form or another, that under the zone allocation pattern which has been in effect on the Tennessee system up to this time a substantial portion of the New England Zone costs have been shifted to the Central and Eastern Zones, in which they operate, and that they have accordingly for years been subsidizing the New England Zone.[21] On the other hand, the New England intervenors contend that under the existing allocation pattern the New England Zone has for years been carrying more than its proper share of the total system costs.

The fact is, of course, that a comparison of the total costs allocated under each of the different allocation methods here proposed can be used to demonstrate that each of the different zones, including the New England Zone, has up to this date been carrying too large or too small a portion of the total

[20] Tennessee employed this method in its instant Docket G–11980 rate filing.

[21] As noted previously, the allocation pattern in effect up to this time has reflected, basically, the zone differentials which were originally agreed to by the parties as a part of the Docket G–1741 rate settlement in 1952.

system costs—depending upon which particular allocation method is here approved. It is thus clear that the conflicting arguments referred to above assume the answer to the very issue which must be decided in this proceeding—*i.e.*, which one of the proposed zone allocation methods is most reasonable and fair for the Tennessee system, and should therefore be adopted here.

The contention that the Central and Eastern Zones have up to now been subsidizing the New England Zone has merit only if we conclude that the correct way to determine the portion of total system costs properly chargeable to each zone is under a method which treats each zone as a separate and independent operating entity, and which therefore employs a segregation of facilities and costs for each separate zone. This contention would not be meaningful, however, if we conclude instead that the Tennessee system should be treated as an integrated entity, with all zones being required to share in both the benefits and the burdens of the entire systemwide operation.

The Consolidated "Burden of Proof" Theory

Consolidated has devoted a major portion of both its initial and reply briefs in this proceeding to a narrow "burden of proof" theory not advanced by any of the other parties. Consolidated contends that as a result of the lapse of time, plus the pendency of the new Tennessee rate increase proceeding in Docket G–19983, any future rate fixing and any determination of the proper zoning method to be adopted for the Tennessee system for the future should take place in the G–19983 proceeding; that the instant G–11980 proceeding should be treated for all purposes, *including zoning*, as merely a refund case for a locked-in period.

In making this contention, Consolidated stresses that by its filing in G–11980 Tennessee has sought to change the G–5259 revenue level basis "which was the basis historically agreed upon by Tennessee and its customers and approved by the Commission, prior to Tennessee's filing" (initial brief, p. 22). It therefore argues that the only zone allocation question which should be decided in the instant proceeding is the narrow question whether, for refund purposes only, Tennessee has sustained its burden of proof in justifying a departure from the existing "historically agreed" G–5259 revenue level basis of allocation, to the 50 percent Mcf-mile and 50 percent historical revenue basis method employed in its G–11980 rate filing. Consolidated contends that this burden could only be sustained by establishing that the existing historically agreed G–5259 zone rate structure is unduly discriminatory or preferential or otherwise unlawful; that this has, in fact, not been satisfactorily established by Tennessee in this proceeding; that accordingly this leaves the G–5259 allocation pattern in force for the purpose of any order to be issued in the instant G–11980 proceeding.

In making this recommendation, Consolidated adheres to its view that its own proposed zone-gate allocation method should be used for *prospective* rate fixing, but concludes that the existing "historically agreed" G–5259 revenue level basis of allocation should be used for refund purposes in the instant case, in order to assure Tennessee of a fair return retroactively. Consolidated notes, in this connection, that if its own proposed zone-gate method were adopted retroactively for refund purposes in the instant proceeding, Tennessee would be left to shoulder a deficiency amounting to $3,400,000, on the basis of the Staff's proposed cost-of-service; that such a deficiency would be caused not by any defect in the zone-gate allocation method, but by the inability of any pipeline company under the Natural Gas Act to raise rates in any zone *retroactively* to compensate for any change in cost allocation for refund purposes.[22]

[22] It may be noted here that, except for the zone-gate allocation method, the use of the G–5259 allocation pattern as here advocated by Consolidated would produce the lowest aggregate cost allocation to Zones 3, 4, and 5, where Consolidated purchases its gas from Tennessee.

The Consolidated "burden of proof" theory, as thus presented, is based upon an approach which gives an air of sanctity to the G–5259 allocation pattern, and which suggests that we are not at liberty *de novo* in this proceeding to determine which of the alternative allocation methods should properly be adopted for the Tennessee system. However, this entire argument, and the foundation upon which it rests, ignores the factual history of the treatment of the zone allocation problem on the Tennessee system, as outlined in some detail at an earlier point in this decision. As there pointed out, the G–5259 allocation pattern represented simply a continuation and reflection (with some minor modifications) of the compromise distribution of costs between zones which was originally worked out by the parties in the G–1741 rate settlement in 1952, and which was carried along, by common consent, through every succeeding Tennessee rate case in order to defer coming to grips on the merits with the troublesome zoning problem.

It is thus clear that the Commission, up to this date, has not previously considered or decided the zone allocation question on its merits—and that the instant G–11980 proceeding has been selected as the case in which this difficult and long-standing controversy would be finally faced up to and resolved once and for all. Consistent with this objective, a tremendous amount of time and effort has been devoted by all parties to the most comprehensive and exhaustive trial and briefing of the zone allocation issue in this case. The adoption of the Consolidated "burden of proof" theory would, of course, have the effect of completely negating this entire objective. It would, in the light of the circumstances outlined above, amount to complete administrative frustration and would be contrary to the public interest. There is nothing in either the law or the facts which compels the Commission to here adopt so self-defeating or limiting a position, and this Consolidated recommendation is accordingly rejected.

Description of the Alternative Zone Allocation Proposals

We turn now to a detailed examination, on the merits, of the different basic zone allocation methods presented by the parties in this proceeding.[23]

(1) *The Mcf-Mile Method*

With respect to the allocation of transmission costs the Staff, the New England intervenors and Tennessee (except for the 50 percent which Tennessee allocated according to the historical revenue pattern) have all employed the Mcf-mile method as adopted by the Commission in the Northern Natural case, Op. No. 281.[24]

The mechanics of the Mcf-mile method, as thus applied, are as follows: The daily demands[25] and annual deliveries for each delivery point were multiplied by the miles of haul to each delivery point to obtain total demand and commodity

[23] Such subsidiary problems as (a) whether demand costs should be allocated on the basis of a three-day peak, or on the basis of average billing demands, and (b) the manner in which costs should be allocated to Seller's Option (SO), Storage (SS–5), Peak (PSG), and Transportation Service, will be considered at a later point.

[24] Underground storage costs were included with transmission costs for the purpose of such Mcf-mile allocation. Unlike the other parties, Staff witness Blair placed *administrative and general expenses* related to the transmission and underground storage functions in a separate "Group C", which he allocated among zones on a straight Mcf demand and volumetric basis, giving no effect to the mileage factor. He explained that, in this regard, he had simply followed the Commission's treatment of this item in Op. No. 281; but that if he were following his own judgment in the matter he would have included those costs in the Mcf-mile allocation.

[25] Based upon average billing demands in the case of Tennessee and the New England intervenors, with imputed demands for the flat rate schedules—whereas Staff based its computation of daily demand upon a three-day peak. This particular controversy will be discussed in detail at a later point.

Mcf-miles for each zone. In the case of *sales* volumes the miles of haul were measured from an average point of receipt of gas, 814 miles southwest of Station 87, to each point of delivery. For volumes transported for others (Transportation Service), miles of haul were measured from the point of actual receipt of gas to each delivery point. The total system-wide costs to be allocated under the Mcf-mile method were classified 50 percent to the demand category and 50 percent to the commodity category. The demand portion of such costs was then divided by the total demand Mcf-miles for the entire system, to obtain the system-wide average cost per demand Mcf-mile. This unit demand cost was then multiplied by the total number of demand Mcf-miles for each zone to obtain the demand cost allocated to each zone or class of service.

The same general procedure was followed with respect to the commodity portion of the costs allocated under the Mcf-mile method. Such commodity costs were divided by the total commodity Mcf-miles to obtain the system-wide average cost per commodity Mcf-mile. This unit commodity cost was then multiplied by the number of commodity Mcf-miles for each zone to obtain the commodity cost allocated to each zone or class of service.

The Mcf-mile method thus applies system-wide average unit costs on a mileage basis, assigning the same cost of transporting an Mcf of gas 100 miles, whether the transportation be in West Virginia, Pennsylvania, New York or Massachusetts. It makes no attempt to separate out and identify with specific zones such items as operating or maintenance expenses, plant investment, taxes, depreciation, or return.

As noted at an earlier point, the New England intervenors employ the straight Mcf-mile method, without adjustment. The Staff, on the other hand, recognizes the existence of a special problem resulting from certain unfavorable characteristics inherent in the New England and New York zones, with respect to load factor, load distribution, and volumes of gas (*i.e.*, pipe size). The Staff method accordingly includes an upward adjustment (which will be discussed at a later point) to the costs allocated to those zones under the straight Mcf-mile method, to reflect and give weight to these factors.

Tennessee employs a combination of both the Mcf-mile method, applied to half of the system-wide transmission costs, and a historical revenue level basis applied to the other 50 percent of transmission costs—thus giving equal weight to distances and historical factors. That part of the allocation based on historical factors utilizes the Docket G–5259 rate level applied to 1956 deliveries, classified between demand and commodity, after eliminating the production cost component from the commodity charge in the sales rate.

The mechanical steps for this portion of the allocation on the basis of historical factors were as follows:

(a) The first step was to compute the annual Mcf demands for each rate zone and for transportation of gas for others. These annual Mcf demands were derived as follows: The sum of the actual monthly billing demands for each of the 12 months of 1956 for rate schedules containing a demand charge, plus the imputed billing demand for sales made under flat rate schedules, was obtained.[28] This sum was divided by 12 to obtain the average billing demand, and the result was multiplied by 365 to derive the annual Mcf demands.

(b) The annual Mcf demands, as thus obtained, were multiplied by the Docket G–5259 unit demand rates in each zone and for each transportation service to obtain the historic demand revenue level.

(c) The production component of the G–5259 commodity rate was deducted from the total commodity rate to arrive at the "delivery" component in such

[28] The imputed demands were predicated on the load factor inherent in each of the flat rate schedules.

rate, representing the transmission costs contained therein. The historic commodity revenue level was then obtained by multiplying the delivery component in the G–5259 commodity rates in the various zones by the actual Mcf of deliveries for such zones in 1956.

(d) Next, the total transmission costs to be allocated on the historical revenue level basis were allocated to demand and delivery in the same relationship or ratios as the total 1956 computed historic demand and delivery revenues bore to the total 1956 computed historic transmission revenues.

(e) The final step consisted of distributing the total thus allocated to delivery among rate zones and to transportation service in the same relationship as the 1956 computed historic delivery revenues had been distributed; and the portion thus allocated to demand was distributed among rate zones and to transportation service in the same relationship as the 1956 computed historic demand revenues had been distributed.

The demand costs obtained under the Mcf-mile method for each zone and class of service were finally added to the demand costs thus obtained on the basis of the historic revenue pattern, to arrive at the total demand cost for each rate zone and class of service. Similarly, the transmission commodity cost derived under the Mcf-mile method for each rate zone and class of service was added to the commodity cost obtained on the basis of the historic revenue pattern, to arrive at the total transmission commodity cost for each rate zone and class of service.

(2) *The Zone-gate Method*

The zone-gate method, advocated by Consolidated and Columbia, is based on the underlying principle that each zone should be treated as a separate operating entity, with the costs segregated by zones. Consolidated witness Learned described this method in his direct testimony as follows:

> A. The best way to determine the actual cost of gas sold in each zone in a system having the characteristics I have just described is to (1) determine the direct costs arising in or prior to the zone nearest the source of supply, (2) determine the system costs allocable to the first zone, (3) allocate the direct costs arising in or prior to the first zone as between sales in that zone and the remaining zones, and (4) follow a similar procedure with each subsequent zone until the terminal zone is reached. This zone-by-zone method of cost determination avoids burdening purchasers of natural gas in zones much closer to the source of supply and requiring only a portion of the use of the pipeline, with any part of the cost of service which is not related to the delivery of gas in zones closer to the source of supply. For example, a customer located in a zone nearer to the source of supply should not contribute to a rate of return on plant which is in no way used to furnish service to the zone nearer to the source. Conversely, any method of averaging direct transmission costs together and spreading them over the system on some basis such as Mcf miles does impose upon the zones nearer to the source of supply a part of the direct cost of serving only the zones more remote from the source of supply in a system having the characteristics of the Tennessee system. (47:4918–9)

Consolidated in this proceeding advocates the adoption of a straight zone-gate method, which it applied as follows:

(a) First, a determination was made of those costs which are directly or actually incurred within the zone nearest to the source of supply—*i.e.*, the Southern Zone.

The direct costs thus found to be "incurred" within the Southern Zone were allocated as between deliveries in that zone and the remaining down-stream

zones. In making this allocation, transmission fixed expenses were first classified 50 percent to demand and 50 percent to commodity, and transmission variable costs were classified as commodity. The direct transmission costs classified as demand were allocated between sales and deliveries made within the Southern Zone and the gas transported beyond that zone in proportion to the average three-day peak.[27] The direct transmission costs classified as commodity were allocated between the sales and deliveries made within the Southern Zone and the gas transported beyond that zone in proportion to annual volumes.

(b) Certain other types of costs were identified as "joint" (system-wide) costs and distributed between all six zones as follows: (1) gas supply and gathering costs, and products extraction costs were classified as commodity costs and allocated among the zones in proportion to the annual volume of gas sold or delivered within each zone; (2) direct underground storage costs were classified as demand costs and allocated among the zones in proportion to the average three-day peak within each zone; (3) administrative and general expense was allocated to each zone essentially in proportion to the supervised expenditures within each zone; (4) distribution operation expenses were allocated in proportion to the number of meters within each zone, and distribution maintenance expenses were allocated in proportion to the gross investment within each zone.

(c) The final step was to combine direct costs allocated to the Southern Zone with that portion of "joint" system-wide costs assigned to that zone, to produce the total cost allocated to that zone under the zone-gate method.

(d) A similar procedure was employed for each subsequent downstream zone until the terminal zone (New England) was reached.

The net result of the zone-gate method is that no zone is made to bear any portion of the costs and burdens of the zones downstream from it. At the same time the New England Zone, as the terminal zone, is charged with an allocated portion of the costs of all upstream zones, but is not allowed to pass on to any of the other zones any portion of the costs "incurred" in its own zone.

Columbia employs the same basic zone-gate approach. However, Columbia applies the method in a much more complicated manner as a result of its adoption of the "capacity-credit" technique as a substitute for the Commission's *Atlantic Seaboard* method for classifying fixed costs between demand and commodity. This capacity-credit technique will be discussed in detail at a later point.

Columbia summarizes its allocation of transmission costs under the basic zone-gate method as follows:

> *Field and Southern* Zone transmission facilities are used jointly to serve all customers in all zones. Mr. Nissel therefore determined the cost of service incurred in such zone and allocated it among all six zones. * * *
>
> *Central Zone* facilities, as well as Station 87 which is between the Southern and Central Zones, are used jointly to provide service to all customers north of Station 87. * * * Transmission plant located in the Central Zone is used to serve all zones except the Southern Zone, which is, therefore, omitted from the allocation of related costs. * * *
>
> *Eastern Zone* facilities and Compressor Station 117 (located between the Central and Eastern Zones) are used exclusively to serve customers in the Eastern Zone. * * * Eastern Zone facilities are not used to provide service to any customers outside the Eastern Zone. * * * Costs incurred in the Eastern Zone are, therefore, charged in full to that zone. * * *
>
> *Northern Zone* facilities are used to deliver gas to numerous delivery points within the zone, as well as to the New York Zone. * * * None of

[27] Consolidated used a three-day peak consisting of December 24, 25, and 26, 1956.

the transmission facilities in the Northern Zone are used to move gas to customers in the Southern, Central, or Eastern Zones. * * * Thus transmission costs incurred in the Northern Zone are the responsibility of customers in that zone and in the New York and New England Zones. Costs are therefore, shared among these three zones. * * *

New York Zone facilities are used exclusively to deliver gas to customers in the New York Zone, and to the New England Zone. * * * Accordingly, the New York Zone and the New England Zone should share transmission costs incurred in the New York Zone. * * *

The New England Zone is in a position comparable to the Eastern Zone in that facilities located therein do not serve any other zone. All transmission costs incurred in the New England Zone should be assigned to that zone. (Columbia initial brief, pp. 27–31)

At the outset it is important to recognize that there are "pluses" and "minuses" with respect to each of the varying and conflicting zone allocation methods proposed in this case, and that none of these methods are free from problems or difficulties. As realistically noted by Tennessee:

An argument can be made for a uniform rate for all customers * * *. An argument can also be made for different rates for each customer based on the "cost" incurred in serving each customer. An argument can be made, as Columbia and Consolidated do, for segregating "costs" within a geographical area. An argument can be made for rates based on mileage. An argument can be made for rates based on historical differentials. An argument can be made for rates based on a combination of mileage and historical factors. Something can be said in favor of each of such methods of allocation or rate-making. The difficulty lies in selecting the method. No one method can lay claim to being the "right" method * * * the selection of the method of allocation to be used is bottomed on fairness and the exercise of judgment. (initial brief, pp. 10–11)

The Supreme Court recognized this inherent characteristic of cost allocation problems in *Colorado Interstate Gas Co.* 3 FPC 32, 324 U.S. 581 (1945), as follows:

Allocation of costs is not a matter for the slide rule. It involves judgment on a myriad of facts. It has no claim to an exact science, Hamilton, Cost as a Standard for Price, 4 Law and Cont. Prob. 321. But neither does the separation of properties which are not in fact separable because they function as an integrated whole. (324 U.S. at 589) * * *

These circumstances illustrate that considerations of fairness, not mere mathematics, govern the allocation of costs. (324 U.S. at 591)

Similarly, the United States Court of Appeals for the Tenth Circuit in a subsequent case involving the same company, *Colorado Interstate Gas Co.* v. *F.P.C.*, 209 F. 2d 717, at 726 (1953), stated:

* * True, it did say that neither method was entirely satisfactory, but the same could be said with respect to any method which might be proposed. Mathematical exactness in the apportionment of cost is an impossibility. Because a method may have some infirmities does not of itself condemn it as a proper method. It is the duty of the Commission to select that method which in its considered judgment more nearly reaches a just and sound result.

In approaching the problem of determining here which of the proposed allocation methods should be adopted for the Tennessee system, each of the alter-

native allocation methods has been measured against the following basic requirements:

(1) The method selected should assign a fair share of the total system cost of service to each of the zones.

(2) The method selected should be a practical one. It should not be so complex as to require long, tedious studies involving speculations and assumptions, but rather should be a method which can be expeditiously applied to facts quickly ascertainable.

(3) The results reached, through applying such method, should make sense.

As earlier noted, the threshold question in this proceeding is whether system-wide average costs, on a mileage basis, are to be employed, or whether segregated zone costs should be employed. Despite the numerous arguments and counterarguments advanced here, and the plethora of problems requiring detailed analysis, the ultimate determination to be made comes down to a choice between two basic philosophies or approaches:

(1) The philosophy that the Tennessee system is a single, integrated pipeline system, operated as a single entity, with each part of the system contributing to every other part; that accordingly, although customers closer to the source of supply should pay less than customers located father away from the source, all customers, as customers of a single, integrated pipeline system, shoulld pay on the basis of average system-wide costs for each mile of transmission.

(2) The conflicting philosophy that costs should be segregated by zones so that the customers in each zone would be treated as if they were customers of separate operating companies. This approach emphasizes the fact that the unit cost of transmission varies in different areas, and insists that an appropriate allocation method must give specific zone by zone effect to such differences in cost.

This zone-gate approach was expressed by Consolidated witness Learned as follows:

> In general, the purpose of an allocation is to determine, as closely as possible, the actual cost incurred for the benefit of each of the zones and the non-jurisdictional customers, *the same as if each zone were a separate company or purchaser*. (47:4914) [Emphasis supplied.]

Similarly, Columbia witness Nissel stated:

> In the cost of service study presented in Exhibit 85 each zone is treated *as a separate operating entity*. (47:5203) [Emphasis supplied.]

Defects in the Zone-Gate Approach

The difficulty with this approach is that it is inconsistent with the basic principles on which Tennessee's integrated system was designed and is actually operated. It is unrealistic to ignore the fact that the entire nature and characteristics of the service which is now available to *all* customers on the Tennessee system, and of the potential service which will be available to them in the future, is intimately tied to, influenced and governed by the nature and characteristics of Tennessee as a single, integrated system—and *not* by the nature and peculiar characteristics of separated and segregated bits and pieces of that system, standing by themselves. Obviously, if the Tennessee system had remained static in the limited form of its original system, which ended in West Virginia (the present Eastern Zone), instead of expanding as it did into other areas and other markets, the nature and characteristics of the service available to the Eastern Zone and to other upstream areas would have had little relation to the facts as we know them today.

The fatal defect in the zone-gate approach is that it is so preoccupied with the "phenomena" occuring within a particular zone (the limits of which, as will be later developed, are arbitrarily established) that it ignores the over-all picture and thus loses the ability to relate the part (*i.e.*, the zone) to the whole (*i.e.*, the system-wide operation). The zone-gate method, in effect, represents a one-way street. It shifts a portion of the costs incurred in upstream zones to the downstream zones—but it fails to shift to such upstream zones any on the downstream zone costs, in spite of the fact that the downstream operations on an integrated system are part of an integrated operation, in which all parts of the system are operated for the mutual benefit of the entire system.

The zone-gate method violates the sound regulatory principle which requires "equal treatment for customers receiving equal service".[28] All customer companies on the Tennessee system are buying a similar service, regardless of the zone in which they happen to be located—*i.e.*, the delivery of a stated volume of natural gas, under certain conditions of take as spelled out in the contract. Yet under the zone-gate method customers in the downstream zones, such as the New England Zone, are penalized not on the basis of any significant differences in the type of service which they seek and purchase from Tennessee, but rather on the basis of fortuitous circumstances over which they had no control—such as the time of construction and the time when the pipe was placed in service,[29] the terrain in which the pipes are laid, the variation in rights of way costs in different areas, the size of the pipes, and many other variations. By contrasts, the Mcf-mile approach avoids placing undue emphasis upon these fortuitous differences, and does not attempt to give undue advantage to any part of the system or group of customer companies merely because, through some quirk of time, terrain, sizing or engineering design, efficiency or executive judgment, it may be argued that the cost to serve that particular area or group is less than that for the remainder of the system.

The service rendered by a natural gas pipeline consists of two basic elements: (a) the supply of gas, and (b) the transportation of gas. All parties to this proceeding are in agreement that gas supply should be considered on an unsegregated basis. Thus, in all of the allocation methods here presented gas supply expenses are allocated in the same manner—averaging the cost of all gas purchased by Tennessee, and charging each customer such average cost. This approach follows the Commission's long-standing general practice to roll-in the cost of gas from all sources for allocation purposes—and to reject the contention that it is necessary or desirable to attempt to determine just what gas goes to each of the several customers and to charge each customer with a gas supply cost based upon the actual cost of that particular block of gas.[30] It would appear that the same considerations which justify the application of the principle of "uniform rates for the same service" to the *gas supply* element of the service rendered by a pipeline apply similarly to the element of *gas transportation.*

The basic principles which should be controlling here are helpfully indicated in *Battle Creek Gas Company* v. *Federal Power Commission*, 281 F. 2d 42 (CADC, 1960). In that case an interstate pipeline, Trunkline Gas Company,

[28] *Battle Creek Gas Company* v. *Federal Power Commission*, 281 F. 2d 42 (CADC, 1960).

[29] Which provides room for cost variations resulting from such factors as inflation, fluctuations in the supply and demand of labor and material, and changes in the art.

[30] See *In the Matter of Panhandle Eastern Pipe Line Company, et al.*, 10 FPC 185, 192 (1951); *In the Matter of Trunkline Gas Company, et al.*, 21 FPC 704, 711 (1959), affirmed in *Battle Creek Gas Company* v. *Federal Power Commission, supra; In the Matter of El Paso Natural Gas Company*, Op. No. 326, 22 FPC 260, 277–78 (1959), and Opinion and Order Denying Rehearing, Op. No. 326–A (Oct. 1959), 22 FPC 659.

applied for a certificate authorizing it to expand its gas purchases in the Gulf of Mexico, to expand its pipeline capacity by increased pumping and partial looping of the pipeline, and to construct new lines from Tuscola, Illinois, to the Michigan-Indiana border near White Pidgeon, Michigan, where 135,000 Mcf per day of the increased gas supply was to be sold to one customer, Consumers Power Company. Trunkline proposed to fix a price for the new gas to be sold to Consumers, sufficient to cover the entire cost of the expansion project on an incremental basis, so that Consumers and its customers would bear the entire cost of the expansion program. The Commission order, however, adopted a method under which all the costs of the expansion program up to Tuscola were "rolled-in" with the other system-wide costs of Trunkline, and were included in the cost basis considered in fixing the rates of *all* of Trunkline's customers—while the costs of the pipeline from Tuscola to the Michigan-Indiana border were treated as incremental costs and charged directly and solely to Consumers.[21] On appeal, intervenor Battle Creek Gas Company contended that the Commission's adoption of the rolled-in cost allocation method put an unfair burden upon it and other customers, who would thus be required to bear the cost of the expanded facilities but would allegedly receive no benefit from them.

The Court of Appeals upheld the Commission's adoption of the rolled-in allocation method, stating:

> There are two basic and potentially divergent methods of allocating new asset costs to be reflected in a utility's rate structure. The first recognizes that a gas pipeline of this sort is not just a collection of discrete pieces and parts, but an integrated system serving all of its customers. Applying this approach the cost of the various assets of the system are collected or "rolled in" to arrive at cost of the entire system which is then pro-rated among all of the customers by one of the several rate-making mechanisms not here involved.
>
> *This method has many apparent advantages and the Commission has repeatedly stated a general preference for it wherever it may equitably be used. It avoids the onerous administrative burden of having to assign a different portion of the cost to each of a large number of customers.* It results, if all other factors be equal, in all customers paying the same price for gas taken from the pipeline at the same point, and recognizes that all customers enjoy the benefits of having the whole gas gathering and pipeline system. (281 F. 2d 46) [Emphasis supplied.]

It is of interest to note that the Court, in the very next paragraph, recognized the basic complaint made here by Columbia and Consolidated against the Mcf-mile method, in the following language:

> *The rolled-in rate method is generally disadvantageous, however, to old customers of an expanding pipeline. The cost of new facilities and new gas historically has risen steadily, and a rolled-in rate requires old customers to pay a higher price and bear part of the cost of an expansion from which they receive little visible increase in service.* But conversely, use of the rolled-in approach ensures that two otherwise similar customers will not pay radically different prices for commingled gas coming from the same pipe, merely because one happens to have been receiving the service longer than the other. *Use of the rolled-in method thus serves the interest of equal treatment for customers receiving equal service.* (281 F. 2d 46) [Emphasis supplied.]

---

[21] *In the Matter of Trunkline Gas Company*, Op. No. 321 (1959), 21 FPC 704.

The Court then concluded:

> In this case the examiner and the Commission, with one Commissioner dissenting, reached the conclusion that the costs of the expansion program representing the purchase of new gas and the improvement of the line up to Tuscola, Illinois, should be rolled in as a systemic cost while the costs of the pipeline from Tuscola to Consumer's facilities on the Michigan-Indiana border should be charged solely to Consumers as an incremental cost.
>
> The Commissioner's decision was based on what we believe to be the proper conclusion that the expanded facilities will form part of an integrated Trunkline system and that the expansion will benefit the entire system.
>
> * * * * * * *
>
> We find that the Commission's basic conclusion that this partial expansion would be part of the integrated gas system was proper, and therefore affirm the use of the rolled-in allocation method. (281 F. 2d 47)

Columbia contends that the determination by the Commission in the above case that costs of the pipeline from Tuscola to the Michigan-Indiana border should be treated as incremental costs, charged directly and solely to Consumers, constitutes support for adoption of the zone-gate method in the instant proceeding. In this connection, Columbia emphasizes the following statement by the Commission in its *Trunkline* decision, *supra:*

> The direct assignment of costs beyond Tuscola reflects the greater distance over which this gas must be transported, and in effect results in the creation of a new zone for Trunkline's sales. (21 FPC 704, 711–12)

This contention is wholly without merit. The controlling fact to be borne in mind here is that the Commission's *Trunkline* decision expressed disapproval of the incremental, segregated facilities approach in clear and strong language, as follows:

> The Commission has consistently rejected allocation methods which would, in effect, assign costs of particular main line facilities to a specific customer.
>
> * * * * * * *
>
> Of the three methods of allocating costs on a rolled-in basis presented by Staff in this proceeding, Staff's recommended Method No. 1 is most appropriate in the circumstances of this case. This method of allocation is consistent with our long-standing policy of utilizing a system-wide approach in costing and pricing firm service for gas delivered and sold from a company's main line facilities, and will best serve the public interest by providing for a fair distribution of costs, commensurate with the benefits to be enjoyed by all of the customers of the Panhandle-Trunkline system. (21 FPC 712–13)

The language relied on by Columbia, *supra*, referred to the Commission's determination that the costs of the pipeline from Tuscola to Consumer's facilities on the Michigan-Indiana border should be given a special incremental treatment, based upon the fact that the admitted purpose of this particular line was to deliver and sell 135,000 Mcf per day of increased gas supply *to one customer*, Consumers Power Company. The rationale for the adoption of an incremental approach as to this particular line was spelled out in the Court of Appeals decision, *supra*, affirming the Commission's action as follows:

> Whatever its virtues, use of a "rolled-in" approach alone is not adequate in all situations, *particularly where some assets are used by the utility solely for the benefit of one customer.* At some point in every gas distribution facility the general system ends and connective links to the local distributors' own equipment begins. At this point the facility becomes so identified with its function as a part of the local distributor's gas plant that it may be unfair to charge its costs to all of the customers of the utility. (281 F. 2d 46–47) [Emphasis supplied.]

No such situation, of course, is involved in the instant Tennessee proceeding.

This Commission, going back to the *Canadian River* case, 3 FPC 32, 61–2 (affirmed by the Supreme Court in *Colorado Interstate Gas Company* v. *F.P.C.*, 324 U.S. 581, 588–90), has consistently refused to adopt a segregated facilities, incremental approach for the purpose of allocating costs of an integrated system, and has been upheld in this by the courts. The zone-gate method, as advocated by Columbia and Consolidated in the instant proceeding, is plainly a segregated facilities, incremental approach, predicated on the premise that the customers of a given zone have a vested interest in certain specific portions of the pipeline—and as such it is plainly objectionable.

As a matter of fact the zone-gate allocation method, together with its basic rationale that the facilities in donwstream zones do not benefit or serve the upstream zones and that accordingly no portion of their cost should be charged to the upstream zones, has already been specifically rejected by the Commission in the landmark *Northern Natural* zoning case, Op. No. 281, *supra*. In that case the major controversy was between Northern Natural and one intervenor group, on the one hand (designated the Opponents), who opposed the establishment of zones and zone differentials on the Northern Natural system, and another intervenor group (designated the Proponents) who together with the Commission Staff urged the establishment of zones. Among the proponents of zoning there was a conflict with respect to the specific zoning methods recommended—with the intervenor proponents advocating the adoption of a zone-by-zone allocation method, whereas the staff proposed the Mcf-mile method. The proponents' zone-by-zone method, which involved the establishment of only two zones on the Northern Natural system, was described by the Commission as follows:

> * * * all costs except transmission costs were allocated on a system-wide basis * * * Costs associated with the operation of the transmission main line facilities in Proponents proposed Zone 1 were likewise allocated by them to all customers, excepting those in the Argus System, on a system-wide basis, *on the theory that these facilities are used for serving all customers.* Costs associated with the branch or lateral lines located in that Zone 1 were assigned solely to the Zone 1 customers. Similarly, all costs associated with transmission plant located in their proposed Zone 2 were assigned by the Proponents solely to that zone, *as they are not considered to be used in any way to provide service to Zone 1.* (14 FPC 28) [Emphasis supplied.]

It is important to note here that Proponents' zone-by-zone method in the *Northern Natural* case thus followed the same rationale as the zone-gate method presented by Columbia and Consolidated in the instant proceeding—*i.e.*, that costs of transmission facilities in upstream zones should be distributed between that zone and all downstream zones, whereas costs of transmission facilities in the terminal downstream zone (Zone 2 under Proponents' plan in the *Northern Natural* case, and the New England Zone in the instant Tennessee case)

should be assigned exclusively to that zone. The Commission rejected this zone-gate approach in the *Northern Natural* case with the following language:

> We do not believe it either sound or reasonable to allocate costs in part on a system-wide basis and in part on the basis of a segregation of certain properties as the Proponents have done. (14 FPC 29)

In addition, the Commission there listed as one of the infirmities of the Proponents' zone-gate method the fact that

> * * * under this plan, Zone 1 sales would assume a relatively small and disproportionate portion of the costs associated with the hundreds of miles of lateral lines on the system. (14 FPC 26)

Thus, although the Proponents' plan there assigned all costs associated with the Zone 1 laterals exclusively to Zone 1 customers, the Commission stressed as a point of criticism the fact that the costs of these laterals alone actually represented a relatively small and disproportionate portion of the costs associated with the hundreds of miles of lateral lines on the entire Northern Natural system, and seemed to feel instead that Zone 1 should bear a fair share of the cost of *all* laterals on the system. The same rationale would appear to indicate even more strongly in the instant Tennessee proceeding that the upstream zones should not be freed completely from bearing any share of the cost of the New England terminal zone facilities.

As already noted previously in this decision, the difficulty with the rationale of the zone-gate method is that it ignores the basic character of the Tennessee system as a single integrated system, in which every portion of the system contributes in one way or another to the effectiveness of the entire system, whether directly or by displacement. The fact that Tennessee operates an integrated pipeline system is beyond dispute, and is conceded by all parties to this proceeding. Tennessee sales and deliveries are distributed all along some 1,650 miles of line out of a system length (measured from the weighted average center of gas supply to the northern terminus near Boston) of approximately 1,940 miles. Gas reaching the northernmost terminus of the system is the same gas which flowed through the southern portion of the system. The location of storage facilities approximately 1,500 miles from the sources of system gas supply determined and had a substantial effect upon the amount of capacity built into the system south of storage, as well as the manner in which such capacity is operated. Moreover, the pipeline facilities have been designed and constructed on a basis which would insure the greatest degree of flexibility and reliability in supplying service to all customers on the system, regardless of their location, and the Tennessee lines are interconnected extensively for that purpose. As will shortly be noted in detail the storage facilities benefit not only those customers in the zones downstream therefrom, but also the upstream zone customers. The fact is that the Tennessee system is not truly susceptible to segregation and division in such a way that one zone on the system would not be dependent upon, or affected by another zone. The cost for service rendered in the first rate zone is affected by each change in the load characteristics in the last rate zone. Similarly, changes in load characteristics in the first rate zone affect the cost of service to each and every other zone on the Tennessee system. This mutual dependability is characteristic of an integrated system such as Tennessee. (68:8928–29)

The failure of the zone-gate method to recognize this basic characteristic of Tennessee's integrated system is sharply illustrated by its treatment of the transmission costs related to underground storage. Columbia and Consolidated agree that Tennessee's storage facilities benefit *all* zones either directly or by displacement. As stated by Columbia witness Nissel:

> The underground storage fulfills functionally the role of providing capacity in addition to the flow capacity of the system as and when the demand on the system exceeds the flow capacity of your system. Direct or by displacement, underground storage is useful to customers of any zone on the system. (52:6030)

And the Columbia initial brief states:

> There is no disagreement among the parties to this proceeding that underground storage is used to increase Tennessee's total system capacity and benefits all customers. (p. 31)

Nevertheless, although under the zone-gate method the cost of service associated with *storage facilities*, as such, is treated on a system-wide rolled-in basis, that method does not allocate on a system-wide basis the cost of service related to that portion of the *transmission facilities* which is required in connection with storage operations. (57:7500; 68:8929–30) Admittedly, the presence of storage facilities on the Tennessee system reduces the requirements for main line capacity between supply and storage, from system peak-day to average-day requirements. (21:2873–81) Accordingly, it is clear that if there were no storage, additional pipe and facilities would be required in the Southern Zone, for example, in order to make it possible to handle system peak rather than average day requirements—thus increasing the costs allocable to the Southern Zone. However, although the availability of storage thus reduces mainline costs and thereby benefits the upstream zones, the zone-gate method fails to allocate to the upstream zones any of the direct and indirect costs of downstream facilities which are used to carry the gas into storage—such as the cost of fuel used in downstream zones to carry gas to the storage fields, compressor station maintenance, depreciation on the facilities, return, etc. (52:6038; 57:7500; 68:8929–30) To this extent, therefore, the upstream zones under the zone-gate method receive a service from such transmission facilities for which they are required to make no contribution to cost.

Since underground storage became available in 1955, it has no longer been necessary for Tennessee to provide pipeline capacity equal to the total peak-day requirements of its customers. Instead, the pipeline capacity required *from the source of gas supply to storage*, and the facilities designed therefor, are limited to the annual average daily requirements of the General Service customers, inasmuch as the storage fields provide, either directly or by displacement, the daily requirements in excess of their annual average day needs. The Tennessee system is designed, however, to provide full contract demand volumes for its Contract Demand customers from source of gas supply to point of delivery. (67:8813–14) It is important to observe, in this connection, that the New England Zone consists entirely of General Service customers. Under the zone-gate allocation method, the demand costs of the facilities physically located in an upstream zone (such as the Southern Zone) are distributed between that zone and all downstream zones, including the New England Zone, on the basis of the relative ratios of peak-day use made by each zone. Thus, the New England Zone is charged with demand costs based on maximum-day usage, and no credit is given to that zone to reflect the fact that capacity equal only to its average daily requirements has been constructed from source of supply to storage. The result is that a zone such as New England which consists entirely of General Service customers, is allocated a greater share of demand costs than appears to be appropriate if facilities are to be segregated for allocation purposes, as the zone-gate method purports to do. It is, of course, true that billing demands or average peak-day demands are also used

under the Mcf-mile method to allocate demand costs between zones, and to this extent a similar situation pertains to a limited degree under that method as well. However, since the Mcf-mile method utilizes system *average* costs, this has the effect of rolling in or offsetting individual advantages and disadvantages, thereby minimizing the effect of any such situation under the Mcf-mile method. The situation cannot be viewed so charitably, however, with respect to the zone-gate method, since the entire rationale and justification for that method is that it purportedly determines and assigns "*actual* costs" to each zone by the segregation of facilities.

Another illustration of the failure of the zone-gate method to recognize and reflect the mutual dependence between zones is found in the situation involving the use of transmission facilities in the New England Zone to deliver gas into the New York Zone in order to maximize injections of gas into underground storage. Since the zone-gate method assigns the entire cost of service related to New England facilities against the New England customers alone, none of the upstream zones are charged for any part of the New England facilities which are thus actually used indirectly for storage injection. Tennessee witness Rogers [32] testified that in 1955 the New England facilities were used for delivering gas into the New York area a total of 45 days from November 3 to December 17, 1955. In 1956, gas was moved into the New York City area through New England facilities on five days during the month of November.[33] In 1957, New England facilities were used to deliver gas into the New York area on 74 days during the period from May 23, 1957 through October 24, 1957. In 1958, gas was delivered into the New York City area from New England on 90 days during the period from April 19, 1958 through October 23, 1958. Through the end of August, 1959, New England facilities were used to move gas into the New York City area on approximately 78 days, and deliveries were also made in this manner in September, 1959. From 1956 through 1959, making deliveries to the New York City area in this manner permitted the maximum use of the line from Station 219 to the Hebron storage field for the purpose of storage injections. The availability of the two lines into New England thus provides more flexibility in operations and better utilization of storage than would otherwise be the case, as well as providing an alternate route to the New York Zone in case of emergency. (67:8804)

Columbia contends that this evidence as to the use of the New England facilities to move gas into the New York area, presented as part of the Tennessee rebuttal case, represented "an afterthought designed solely to attack the zone-by-zone approach". However, the evidence is clear that the facilities were actually designed with such purpose in mind, and that Tennessee publicized its intent to operate the facilities in that manner as far back as 1954. (Exh. 135; 67:8825–9) In addition, practically all of Tennessee's compressor stations on the Tennessee system can pump gas either north or south. (67:8872–3)

Columbia directed a great deal of attention, in its cross-examination of witness Rogers and in its initial brief (pp. 30–31), to an effort to raise doubts as to the significance of any use of New England facilities for this purpose. It contends that any such use, if any, was *de minimis* and that facilities in the New England Zone in fact do not serve any other zone. In making this point, Columbia suggests that witness Rogers' rebuttal testimony on this subject was actually in

[32] Tennessee Director of Planning, whose duties consist chiefly of supervising and directing the planning and developing of new projects and pipe line expansion programs, including the preparation and presentation of engineering design data for FPC applications.

[33] Rogers explained this minimum usage in 1956 as follows: "The main reason for this minimum usage was that we did not have much gas available for injection into storage in 1956, due to the high load factor operation of our customers." (67:8805)

conflict with his earlier testimony in this proceeding. It is true that during the course of a brief cross-examination on this subject during the Tennessee case-in-chief at a hearing session in September, 1957, Rogers was asked whether *during the test period 1956* any gas actually passed through the northern line down through New England into the New York area, and he replied, "In the calendar year, I don't believe that any did." (21:2888) At the same time, however he also testified that

> * * * we have at times passed gas into New York City area, for instance, through the northern loop * * * by northern loop, I mean through the line that extends from Mercer north to Buffalo and then on into Massachusetts. We have made deliveries into the New York City area through that line and further reduced the amount of gas going into the Hebron to Greenwich line.
>
> * * * * * * *
>
> As I mentioned, we at times have transported gas into the New York City area through the use of that line * * *. (21:2887)

During his rebuttal presentation at a hearing session in December, 1959 Rogers described in detail the full use made of New England facilities to maximize injections of gas into underground storage, as outlined above—including the moving of gas into the New York City area through New England facilities on five days during the month of November, 1956. When asked to reconcile this with his earlier testimony in 1957 that he did not believe that any gas had moved from New England into the New York area during the calendar year 1956, Rogers replied:

> Mr. Jones, I see the records of the operations of the entire system and unless for some particular reason certain figures are brought to my attention, they are just a mass of figures. I at this time did not recall this particular operation. After all, there were only five days in which we did transport gas to New York City. (67:8851)

This explanation appears to be entirely reasonable, and the point does not merit further attention.

The Columbia brief also suggests that witness Rogers' rebuttal testimony was in conflict with prior representations on this subject allegedly made by Tennessee personnel to Consolidated witness Learned, during the course of an inspection trip over the Tennessee system in the early part of October, 1957. This contention rests upon a statement made by Consolidated witness Learned during the course of his direct testimony, to the effect that his investigations had disclosed only one instance where gas was delivered backward from the New England to the New York Zone, and that this instance had occurred prior to the test year 1956. (47:4957) During subsequent cross-examination, it developed that Learned's conclusion was based upon a single conversation with Tennessee's chief dispatcher in the early part of October 1957; that in the course of this conversation Learned had inquired solely about the instance prior to 1956 "because we knew of that, but we didn't know of any other" (56:7464). Although Learned further testified that the chief dispatcher "indicated that there had been but one instance up to that time", he was not precise as to what period that alleged single instance covered, stating: "It was prior, I think, to the test year 1956, that is the way I understood it." When asked whether he had inquired about any such use of the line *subsequent* to 1956, Learned replied:

> A. He didn't indicate when we were there that there had been any operations of that character in 1957.

Q. Did you ask about it?
A. I didn't ask specifically * * *. (56:7465–66)

It is of interest to note that Learned thus made no specific inquiry as to such use of the line in the year 1957, and under all the circumstances it seems quite likely that the Tennessee dispatcher at the time of this visit understood Learned as being interested only in the test year 1956.

During a lengthly cross-examination of Tennessee witness Rogers, directed exclusively to his testimony with regard to the *November, 1956* movement of gas from New England into the New York area, and in an argument developed in its initial brief on the basis of that interrogation, Columbia attempted to raise a number of suggested *possibilities* of error which conceivably *might* have occurred in the measurements made on the Tennessee system from time to time in the normal course of its operations during 1956—these measurements being the basis for Rogers' conclusion that gas moved into the New York City area through New England facilities on five days during the month of *November, 1956*, averaging 5,000 Mcf per day. (67:8839–49; initial brief, pp. 30–31) No showing was made, however, that any such errors *did* occur. Furthermore, if we are to speculate that errors *may* have occurred from time to time in a given direction, it is equally reasonable to speculate that errors may similarly have occurred in an opposite direction, providing a counter-balancing effect.

In this connection, Columbia states that Rogers agreed

> * * * that there could have been an error of one per cent in the pressure computation; (T. 8845) and that all things considered gas may have actually flowed from New York into Connecticut on the days in question instead of vice versa as he had testified. (T. 8846)

However, an examination of this testimony makes it clear that Rogers stressed that such an error could only have produced a result of this character in the case of the "very small delivery volume days" which occurred in November, 1956, averaging only 5,000 Mcf per day. He stated:

> * * * I don't believe that there would be enough pressure change to bring about that situation in a day, such as August of 1958, where we had 60,000 passing into New York. (67:8846)

This, of course, represents a most important qualification since the volumes involved were much higher than 5,000 Mcf per day in the years 1955, 1957, 1958 and 1959.

Columbia further contends that Rogers testified that if per chance gas did move from Connecticut to New York in the manner alleged it may have resulted not from any plan to so move the gas but rather from Tennessee's decision to maintain a certain pressure at some location in New York or Pennsylvania for an entirely different purpose. However, an examination of the record (67:8857–59) makes it perfectly clear that Rogers expressed his agreement with this *possibility* only in connection with the very small volume movements of this character which took place during the year 1956. He made no such statement with respect to the large-volume movements which occurred in the later years.

It is to be noted that throughout this entire discussion Columbia limits its attention exclusively to the matter of the movement of gas through the New England facilities into the New York area during the test year 1956. However, this narrow and artificial approach is not helpful or realistic in the light of the problem to be resolved here—the determination of a fair and reasonable method of allocation to be applied to the Tennessee system for the future. That decision should not be based upon a narrow consideration of the extent to which the

New England facilities were used in a manner beneficial to the upstream zones in the test year 1956 alone, but should involve a broad consideration of the entire characteristics and potentialities of the New England operation as a part of Tennessee's integrated system. When viewed in that light, the use made of the New England facilities in more recent years becomes material and significant.

Columbia finally contends that even if the New England facilities were truly used for the purpose of transporting gas into the New York Zone in the manner described by witness Rogers, any such use would have been in violation of the limited terms of the authorization granted by the Commission to Tennessee's wholly-owned subsidiary, Northeastern, authorizing its original construction of a pipeline system in New England and its sale of gas to specified retail companies in New England for resale; that any such use of the New England facilities as described by Rogers would therefore have constituted an unlawful operation, and costs should not be allocated in this proceeding on the basis of an unlawful operation. This Columbia argument is bottomed exclusively upon the fact that in an order issued on March 21, 1951 in Docket No. G–1267 (Op. No. 210, 10 FPC 135), wherein the Commission authorized Northeastern "to substitute 144 miles of 24-inch pipe for the same length of 20-inch now authorized, and to substitute larger sizes of pipe in five of the authorized lateral lines", the following condition was included:

> (a) The facilities authorized herein shall be used only as proposed by applicant, namely: (i) to provide natural gas service to the customers Northeastern is presently authorized to serve by opinion 9 FPC 271 and accompanying order issued November 8, 1950; (ii) to meet emergency demands which may arise by reason of emergency interchange of natural gas between Northeastern and any other natural gas transmission company or companies in New England; and (iii) to provide natural gas service in the state of Massachusetts north of Northeastern's presently authorized facilities, and in the states of Maine, New Hampshire, and Vermont, in which areas Northeastern has stated herein that it intends to provide such service; and, for such purposes, only as authorized by order of this Commission.

An examination of Opinion No. 210 itself reveals that the quoted condition there imposed upon Northeastern had no conceivable connection with the problem involved in the instant proceeding, and that the Columbia argument is not entitled to serious consideration. The quoted conditions, of course, had its origin in the fact that originally Northeastern had been locked in a competitive struggle with another pipeline company, Algonquin Gas Transmission Co. (Algonquin), for authorization to serve the New England area. This problem had been resolved by the Commission in its Opinion No. 202 issued November 4, 1950 (Docket No. G–124S, *et al.*, 9 FPC 271), by authorizing Northeastern to serve certain specified companies in the New England area and authorizing Algonquin to serve the remaining New England companies. Subsequently in Docket No. G–1267 Northeastern had applied for authority to substitute 144 miles of 24-inch pipe for the same length of 20-inch pipe already authorized, and to substitute larger sizes of pipe in five of the authorized lateral lines. Algonquin intervened and filed a motion to dismiss. In its Opinion No. 210 granting the requested authority to Northeastern, the Commission stated that the previous grant of limited certificates to both Northeastern and Algonquin had

> * * * removed any competition which might otherwise have existed between Algonquin and Northeastern, unless the additional capacity to be made available through the substitution now proposed by Northeastern

might be used by it as a basis for future requests for authorization to serve markets Algonquin is now authorized to serve.

However, Northeastern * * * had made it clear on this record that this additional capacity is intended for other purposes. Further, conditions attached to our certificate issued herein limit the use to which the additional capacity may be put * * *. (10 FPC 142)

* * * * * * *

Nor do we by our action here authorize Northeastern to construct pipeline capacity for the purpose of service by it to those markets which have been denied to it by our opinion 9 FPC 271 and accompanying order issued November 8, 1950, and by our opinion 10 FPC 35 and accompanying order issued February 27, 1951, wherein a certificate of public convenience and necessity was granted to Algonquin. (10 FPC 140)

* * * * * * *

Under the circumstances disclosed by the record before us, it is just and reasonable and the public interest requires that any additional capacity which may be available on the Northeastern system, as presently authorized, through the substitution of larger sizes of pipe as proposed, shall be used only for the purposes which Northeastern states it intends to use such additional capacity. (10 FPC 141)

The above language makes it crystal clear that the quoted condition laid down by the Commission to Northeastern in Opinion No. 210 was intended only to insure that Northeastern would not encroach upon New England territory which had been certificated to Algonquin and denied to Northeastern in the earlier competitive proceeding. It obviously has no conceivable connection with the matter of Tennessee's current use of its own New England facilities to move gas into the New York area.

The common sense of the situation is that since the Commission's merger order of July 16, 1954, authorizing Tennessee to acquire and operate the certificated system of Northeastern, the latter company's facilities and operations were merged into and became an integral part of Tennessee's integrated system, and became available for use as any other facilities on that entire system—*i.e.*, in any way necessary or desirable for service to all customers on the entire Tennessee system, as expanded by the merger, and throughout all areas which both Tennessee and Northeastern were previously authorized to serve.

Another major defect in the zone-gate method lies in its accentuation of the impact upon cost allocation resulting merely from the historical location of geographical zone boundaries on the Tennessee system. It is to be noted at the outset, in this connection, that none of the parties have proposed any general re-examination in this proceeding of the existing zone boundaries on the Tennessee system, for the purpose of determining whether they are proper and appropriate, or whether they should be changed.[24] Accordingly, the only issue being here determined is the method to be adopted for the allocation of total system costs among the *existing* zones on the Tennessee system. Nevertheless, the problem of the location of the zone boundaries *is* inherently involved in the matter of zone allocation, in a manner which will presently be developed.

It is important to recognize that the zone lines on the Tennessee system were established historically as a matter of convenience in administering rates, rather than with a view to cost allocation. They were admittedly not scientifically

[24] Intervenor Iroquois Gas Corporation complains of the existing zone boundary between the Northern and New York Zones, but presented no proposal for a general re-examination of existing zone boundaries. The Iroquois contention will be discussed at a later point.

established as proper zones for the purposes of allocating costs on a zone-gate basis. As earlier noted, the underlying philosophy of the zone-gate method is to treat each different zone as if it were a separate corporate entity, with the customers in each zone being treated as if they were customers of separate operating companies. There is no reason to assume, however, that if service to the various customer areas on the Tennessee system had in fact been developed originally on the basis of separate corporate entities, they would have been organized on the basis of such geographical boundaries as those reflected by the current zones on the Tennessee system. Nor is there any reason to assume that the Commission, if it had in fact decided to adopt the zone-gate method when the Tennessee system was first zoned, would have found the existing zone boundaries suited to and appropriate for use in connection with that particular allocation method.

The importance of this problem may be indicated by referring to the Eastern Zone. By mere fortuity the Eastern Zone, in the historical development of the zones, became the smallest zone on the Tennessee system, with a relatively small amount of plant and facilities located therein, but with large volumes of gas sales. By contrast, the Northern Zone became a larger zone, containing a considerably larger amount of plant. Thus, there is only one compressor station in the Eastern Zone, but five in the Northern Zone. As of the end of 1956, there were 1,165 miles of pipe in the Northern Zone, but only 176 miles of pipe in the Eastern Zone. Under any cost allocation method, this difference in zone sizes gives the Eastern Zone, where Columbia and Consolidated make most of their purchases from Tennessee, a distinct benefit or advantage. Under the zone-gate method, however, this advantage is aggravated. Under that method, a customer located at the beginning of a large zone is charged with a proportionate part of the cost of service associated with *all* the facilities located in that zone, even though, as is the case in the Northern Zone, some of those facilities are located some 500 miles beyond the point of delivery of gas to the first customer in the zone. On the other hand, a customer located at the beginning of a small zone is charged with a proportionate part of a much smaller cost of service. (56 : 7443–4)

It is, of course, true that the costs allocated to the various customer companies will similarly vary, to some extent, depending upon where the zone boundaries are located, even under the Mcf-mile allocation method. However, the ultimate impact of the geographic location of the zone boundaries is far less significant under the Mcf-mile method, where the use of system-wide average costs itself provides a blending process, averaging out the various advantages and disadvantages which flow from the use of zone boundaries in designing rates. The zone-gate method, on the other hand, *accentuates* the favorable and unfavorable situations. It is concluded that any decision in the instant proceeding will be more soundly based and will have more lasting value, to the extent that it tends to *diminish* rather than to accentuate the importance of the geographical zone boundaries. Although the Mcf-mile method cannot entirely eliminate this inherent zone boundary problem, it can and does reduce the resulting inequities to a minimum by assuring as equitable and uniform treatment as possible to all customers, regardless of their geographical location.

Another inherent weakness in the zone-gate allocation method lies in its complexity and in the great possibility for hidden error which is inherent therein. That the method is in fact unusually complex is evident from an examination of the extensive exhibits employed in its presentation. This was further demonstrated by the great time and effort required to correct a single error in Consolidated's Exh. No. 78, which was disclosed in the course of cross-examination of Consolidated witness Chaney. Chaney there concluded that he

had erred in assigning Compressor Stations 87 and 114 to the Southern Zone and the Central Zone, respectively. His further investigation and consideration of this problem, and the subsequent correction of the exhibit to reflect the shifting of Station 87 to the Central Zone and Station 114 to the Eastern Zone, became a major enterprise which is illustrative of the inherent complexity of the zone-gate method. (57:7495, 7498; 59:7726; 62:8059; Supp. No. 5 to Exh. 117).

In addition, the fact is that much of the basic data required under the zone-gate method in order to establish the costs alleged to be incurred within each zone had to be developed from innumerable preliminary allocations, and these allocations themselves were necessarily based on judgment factors. (Exh. 78 and 79; 58:7594–7613) By contrast, the Mcf mile method, as adopted and approved by the Commission in the *Northern Natural* case, Op. No. 281, *supra*, is basically simple, and is applied directly to the system-wide cost of service, without the necessity for numerous preliminary allocations. It entails a minimum of effort, and its results can readily be checked for accuracy.

The Courts have generally supported the Commission's efforts to develop methods and techniques which do not unnecessarily impose onerous administrative burdens, and which are practical or feasible from the management and regulatory point of view. For example, in the Court of Appeals decision affirming Op. No. 281, *Interstate Power Company et al.*, v. *Federal Power Commission*, *supra*, the Court quoted the Commission's statement that:

> In theory, the ideal non-discriminatory and non-preferential rate structure would be one designed to assess each point of sale and delivery with the total of the various cost components incurred in the rendering of service to each point. But any attempt to arrive at such perfection would not only be delusory * * * but also impracticable and infeasible from both the management and regulatory point of view. In the circumstances of this case the only practical and reasonable approach to an equitable solution is the establishment of service zones with rate differentials. * * * (236 F. 2d 384)

The Court then stated:

> In effect much of the argument of petitioners here constitutes attack upon this conclusion of the Commission. It is contended that the Commission should have had more data respecting the comparative costs of transmission to all the different areas and points of delivery in the system, *but we think The Commission's declaration as to what was practical or feasible from the management and regulatory point of view is entitled to weight and may not be disregarded.* (236 F. 2d 384, footnote 4) [Emphasis supplied.]

Similarly, in *State Corporation Commission of Kansas* v. *F.P.C.*, 206 F. 2d 690, the Commission had allocated transmission general expenses to demand and commodity on the basis of the same ratios developed from all other supervised expenditures. The petitioner contended, however, that the various items of administrative and general expenses were actually not homogeneous but covered a variety of items, and that accordingly separate consideration should have been given to the various items entering into the whole amount. The Court stated, however:

> It may well be that the Petitioners method would be more accurate, but it is proper for the Commission, which is charged with the administration of the Natural Gas Act, to consider the practical effect of more detailed studies in this regard. (206 F. 2d 711)

Similarly, in the recent Court of Appeals decision in *Battle Creek Gas Company* v. *F.P.C.*, *supra*, the Court in referring to the rolled-in systemic approach as distinguished from the segregated cost approach stated:

> This method has many apparent advantages and the Commission has repeatedly stated a general preference for it wherever it may equitably be used. *It avoids the onerous administrative burden of having to assign a different portion of the cost to each of a large number of customers.* (281 F. 2d 46) [Emphasis supplied.]

It is of interest to note that during the closing stages of the hearing, long after all of the different zoning presentations had been fully presented and cross-examined, and after each of the parties had been provided with an opportunity to distribute further evidence rebutting any of the other zoning proposals, Consolidated made a belated offer of a new and still further allocation method, described as a "pipesize-mile" (or inch-mile) method of allocation (Exh. 118) In essence, this last-minute proposal represented an effort by Consolidated to get around the criticism directed to the complexity of the zone-gate method, and indicated its own qualms as to the complexity and cumbersomeness of that method. The Presiding Examiner's ruling excluding this last-minute effort to introduce a totally new allocation proposal was affirmed on appeal, by the Commission's order of December 10, 1959. It appears that the "pipesize-mile" method, as thus proposed by Consolidated, would have allocated $1,600,000 more to the Eastern Zone than is allocated under Consolidated's zone-gate method—which latter method already allocates $1,300,000 more to that zone than under Columbia's capacity-credit method. It is thus understandable that Columbia has shown no enthusiasm for this last-minute Consolidated proposal.

The Columbia Capacity-Credit Method

We now turn to a detailed discussion of the Columbia zone-gate, capacity-credit allocation method. As earlier noted, Columbia applies the zone-gate method in a peculiarly complicated manner, as a result of its adoption of the "capacity-credit" technique as a substitute for the Commission's *Atlantic Seaboard* method (Op. No. 225, 11 FPC 43), for classifying fixed costs between demand and commodity. Unlike the other parties to this proceeding, Columbia rejects the Commission's long-established Atlantic Seaboard method under which fixed costs are assigned 50% to the capacity (or demand) function and 50% to the volume (or commodity) function. It instead assigns 100% of fixed costs to the capacity function, but then proceeds to use the complicated "capacity-credit" method for the purpose of assigning *some* portion of fixed costs to interruptible deliveries. The Columbia presentation thus weaves the extremely complicated capacity-credit technique into and on top of the already unduly complex basic zone-gate method in a monstrously complicated and involved mathematical exercise. The end result is that substantially more costs are classified to the demand function and less to the commodity function than would be the case under the long-established *Atlantic Seaboard* method—*i.e.*, more than 90% of transmission costs are thus classified in the demand component—thus effecting a material shifting of costs from high load factor customers, such as Columbia, to low load factor customers. Its final effect is to produce an allocation of almost $1,300,000 less cost to the Eastern Zone, where Columbia purchases most of its gas, than under the *Atlantic Seaboard* formula. (Exhs. 109–110.)

The entire rationale for Columbia's use of the capacity-credit method rests upon the proposition, advanced at length in the testimony of its allocation witness Nissel and in its briefs, that the Commission's long-established *Atlantic Seaboard* method is arbitrary and improper and should be discarded—or, in any

event, should not be applied in this case on the ground that the Tennessee system is allegedly characterized by entirely different operating facts than those which were involved in the *Atlantic Seaboard* case. In discarding the *Atlantic Seaboard* method, Columbia's witness Nissel concluded that some other method must be devised to make interruptible sales bear some portion of fixed costs, and he adopted the capacity credit method as the answer to this problem. Nissel described the capacity-credit method as one under which firm customers are charged with the cost responsibility for capacity used by them, as well as for the unused capacity which they create, less a credit amounting to the net charges made to interruptible customers. Interruptible customers, on the other hand, are charged for capacity used by them, less a credit for curtailments which they sustain in vacating capacity for firm customers. (47:5230–1) Interruptible customers are thus required to make *some* contribution to fixed costs.

The Columbia attack on the *Atlantic Seaboard* classification method rests largely upon the following thesis:

> * * * it has adopted a fiction, namely 50 percent of fixed costs will, for the purposes of classification and allocation, be considered as variable costs. By abandoning a factual analysis of cost behavior and substituting an arbitrary fiction contrary to the facts, the Commission has deprived itself of a valid foundation upon which to exercise an informed judgment when making an allocation. (p. 71 of initial brief.)

The suggestion that under the *Atlantic Seaboard* method fixed costs are arbitrarily, and by a fiction, considered and treated as variable costs does not constitute an accurate characterization of the *Atlantic Seaboard* decision, and it introduces a great deal of unnecessary confusion. The fact is that in the *Atlantic Seaboard* case the Commission continued to characterize fixed expenses as such, and made no effort whatsoever to describe them as anything else. However, the Commission concluded that 50 percent of such fixed expenses (or capacity-costs) should fairly and properly be allocated to and borne by the commodity (or volume) function, as distinguished from the capacity or demand function. This conclusion was reached, after careful analysis, on the ground that the capital outlay for pipeline facilities is made and justified not only for service on the peak days but for service throughout the year; that accordingly both capacity and volume are to be regarded as cost factors or "incidences" in respect to the capital outlay for a pipeline project. The issue to which the Commission addressed itself in the *Atlantic Seaboard* case was not whether admittedly fixed costs should be considered as variable costs, but rather whether the admitted fixed charges *must* be charged 100 percent to the demand or capacity function, with the volume function not being required to bear any portion of any such fixed costs. The Commission stated:

> In this present case, applicants, generally speaking, allocated fixed costs or expenses, except return on investment and related income taxes, to the capacity, or demand function. * * * The staff, on the other hand, apportioned all fixed costs or expenses equally between demand and volume. * * *
>
> * * * * * * *
>
> Both capacity and annual use are important considerations in the conception of the project and in the issuance of certificates of public convenience and necessity. Both capacity and volume, therefore, are what are known as cost factors or incidences in respect to the capital outlay for a pipeline project. It follows that reasonably accurate results can be achieved only by allocating the fixed expenses flowing from the capital outlay to both operating functions, viz, capacity and volume. (11 FPC 54)

* * * * * * *

> To reiterate—and emphasize—fixed costs or expenses are incurred for both peak use and annual use in respect to both demand and volumetric functions. They are important cost factors in respect to both services. To achieve a reasonable equitable result—they must be apportioned to both services. (11 FPC 55).

The second major argument made by Columbia is that the *Atlantic Seaboard* method should not be applied in the instant case in any event, on the ground that the Tennessee system is allegedly characterized by entirely different operating facts than those which were involved in the *Atlantic Seaboard* case. In this connection, Columbia contends that the Commission adopted the *Atlantic Seaboard* method because it had concluded that its previous method of allocating demand costs "achieved an inequitable result because it did not charge any fixed or capacity-cost *to interruptible customers cut off on the peak day*" (initial brief, p. 70); that the controlling consideration which led the Commission to adopt the *Atlantic Seaboard* method was its desire to classify costs in such a way as to assign some portion of capacity-costs to interruptible business; that the percentage of interruptible sales on the Tennessee system, however, is very low, amounting to only 4.3 percent of total sales in the test year, and that the Tennessee system accordingly does not involve in any significant way the basic problem which the *Atlantic Seaboard* method was designed to handle. (Reply brief, p. 43.)

Here again, Columbia has misread the intent and significance of the Commission's *Atlantic Seaboard* decision. The fact is that the Commission was not there concerned merely with the narrow problem as to how a fair share of fixed costs could be charged "to *interruptible* customers cut off on the peak day." Rather, the Commission was concerned with the much broader problem as to how fixed or capacity-costs could be apportioned *to both peak use and annual use.* The Commission stated:

> A pipeline would not normally be built to supply peak service, that is to say, service on the peak days only. We know from our administration of section 7 of the Natural Gas Act, which involves the issuance of certificates of public convenience and necessity, that pipelines are built to supply service not only on the few peak days but on all days throughout the year. In proving the economic feasibility of the project in certificate proceedings, reliance is placed upon the annual as well as the peak deliveries. Stated another way, the capital outlay for the pipeline facility is made—and justified—not only for service on the peak days but for service throughout the year. Both capacity and annual use are important considerations in the conception of the project and in the issuance of certificates of public convenience and necessity. Both capacity and volume, therefore, are what are known as cost factors or incidences in respect to the capital outlay for a pipeline project. It follows that reasonably accurate results can be achieved only by allocating the fixed expenses flowing from the capital outlay to both operating functions, viz, capacity and volume. (11 FPC 54).

It is thus important to bear in mind here that the purpose of the *Atlantic Seaboard* method was to achieve a proper allocation of fixed costs *to all off-peak service*, and not merely to interruptible service. It is clear that the Commission's reference in the *Atlantic Seaboard* decision to interruptible service, which is so emphasized here by Columbia, was made only by way of illustration. After discussing the broader problem in the language quoted above, the Commission there stated:

> The soundness of the foregoing conclusion will be made clear by a *simple illustration.* If fixed expenses are assigned wholly to the demand or capacity function, then gas service which is interrupted on peak days will not share in any of the fixed costs. (11 FPC 55). [Emphasis supplied.]

The point made above is a most important one to bear in mind in connection with the Tennessee system. Here, although interruptible sales represented only 4.3 percent of total sales in the test year, there are firm customers such as Columbia in the Eastern Zone, whose takes are not interruptible and cannot be curtailed during the peak period, but who nevertheless take very large volumes of *off-peak* gas. As pointed out above, the controlling objective of the *Atlantic Seaboard* decision was to compel such large volume users to bear some portion of fixed costs related to their *annual use.* It accordingly is clear that the fact that Tennessee has only a small percentage of interruptible sales is totally irrelevant here.

As a matter of fact, Columbia itself in the very course of its argument on this subject observes in a footnote that "as a matter of fact the Seaboard System had no interruptible customers." (Reply brief, p. 43). Under these circumstances, it is difficult to see how it can seriously be contended that the Commission in adopting the *Atlantic Seaboard* method was directing itself merely to the narrow "interruptible service" problem.

In connection with its contention that the Tennessee system is characterized by entirely different operating facts than those which were involved in the *Atlantic Seaboard* case, Columbia emphasizes that the Tennessee system provides a wide variety of types of service (a factor allegedly not present in the Seaboard case), and that the Tennessee system is marked by wide variations in load factor between zones. Columbia stresses, in this connection, that Tennessee provides firm but very low load factor services to certain customers (particularly the New England Zone), thereby requiring substantial capacity which was used solely to meet winter peak requirements; that if the *Atlantic Seaboard* method is employed here, such low load factor customers will not be charged with an adequate portion of capacity costs connected with rendering such service, and thus a substantial part of such capacity costs incurred for the low load factor customers would be shifted to and paid by high load factor customers, such as Columbia. In this connection, Columbia states:

> * * * the high-load-factor Columbia Companies have invested approximately 118 million dollars in underground storage facilities to enable them to maintain high load factor purchases of southwest gas to meet low load factor market requirements. * * * Columbia Companies and their wholesale customers also have invested many millions of dollars in peak shaving facilities for the same purpose. The Atlantic Seaboard formula would shift the benefits of these enormous investments, and the related costs of many millions of dollars per year to other customers of Tennessee, who do not share in the costs which make these high load factors possible. (Initial brief, p. 78).

The fact is, however, that these identical objections were fully considered and rejected by the Commission in the *Atlantic Seaboard* case, and in the relatively recent *El Paso* case (Op. No. 326, August 1959, 22 FPC 260). The argument here made by Columbia was answered by the Commission in clear and unequivocal language in its *Atlantic Seaboard* decision, as follows:

> It is our opinion that these significant cost factors should be weighted equally, that is to say, 50 percent should be assigned to demand and 50 percent to commodity. In this manner all gas transported by the pipeline

will share in all of the various kinds of expenses incurred to transport the gas. Gas which is associated with delivery on the peak day or a group of peak days will share in the total expenses including the total of the fixed charges. That gas which is not associated with deliveries on the peak day or group of peak days will not share in 50 percent of the fixed costs. This solution recognizes the principle that costs associated with peak service are higher than those which are associated with interruptible or off-peak service. In our opinion it reasonably assigns these heavier costs to the service associated with peak deliveries. By the same token, while relieving off-peak service from sharing in 50 percent of the fixed expenses, it, nevertheless, assigns to that service some of all of the costs incurred to construct and operate the pipeline. (11 FPC 56).

In the El Paso case, *In the Matter of El Paso Natural Gas Company*, 22 FPC 260 (Op. No. 326, August 10, 1959), the Commission stated:

> The Southern California Companies and P. G. & E. except to the use of the *Seaboard* formula for the classification of costs in this proceeding and to the assignment of all production costs, including fixed costs, to the commodity component. They argue that the facts of El Paso's and Atlantic Seaboard's operations differ significantly, in that the California market comprises 80.5% of El Paso's sales at almost 100% load factor, whereas Atlantic Seaboard's principal customers all had low load factors and substantial interruptible sales apart from physical differences between the systems. P. G. & E. argues at some length that, because the California customers take at 100% load factor and the other customers take at a much lower load factor, the California customers are paying more than their share of the capacity costs.
>
> In our opinion, the *Seaboard* formula, although not to be followed rigidly in all cases, is a rule of general application, whose virtue is to require that the volume of gas sold will pay part of the capacity costs. *It may be true, as P. G. & E. points out, that a high load factor customer will pay more of the capacity costs than a lower load factor customer of the same demand; but the high load factor customer is obtaining greater service from the pipeline and property can be required to bear a larger proportion of the capacity costs.* (22 FPC 279) [Emphasis supplied.]

The instant Columbia argument was rejected even more strongly, and in greater detail, in the Commission's Opinion and Order Denying Rehearing and Granting Stay in the *El Paso case*, Op. No. 326–A, 22 FPC 659 (Oct. 8, 1959), as follows:

> The Southern California Companies object to the application of the *Seaboard* formula of classification to El Paso. In Opinion No. 326 we have discussed this matter and have concluded that the *Seaboard* formula is a rule of general application by which the volume of gas sold is required to pay part of the capacity costs. The Southern California Companies argue that the high load factor customers, such as the California customers, make greater use of the capacity provided for them and are penalized by requiring them to pay part of the costs incurred for the less efficient users of the capacity. However, this conclusion assumes the invalidity of the *Seaboard* formula. *We think that the heavy users of the facilities should bear a greater share of the capacity costs than the light users.* Of course, the higher the load factor, the lesser the unit cost to the purchaser of gas. The Southern California Companies contend that El Paso's California customers have provided their high load factor through a combination of

sales to interruptible customers and underground storage, and that if costs are improperly placed in the commodity category underground storage development will be discouraged, and it will be increasingly difficult to sell industrial gas. But we are of the opinion that to treat all customers equitably something akin to the *Seaboard* formula is necessary, and to depart from the *Seaboard* formula is to place a greater burden on the domestic and commercial low-load factor customers, who should not have to bear the costs of serving the industrial customers unless absolutely necessary to assure the economic feasibility of the pipeline. (22 FPC 665) [Emphasis supplied.]

We note, in conclusion, that the Commission has consistently followed the *Atlantic Seaboard* classification method since it was first adopted in 1952, and has consistently rejected all attempts to persuade it to depart from that method. In addition, the Commission has been upheld in this position by the courts. For example, in *State Corporation Commission of Kansas* v. *F.P.C.*, 206 F. 2d 690 (1953), the same type of basic attack on the *Atlantic Seaboard* method as that pressed here by Columbia was rejected by the court as follows:

> Basic to Northern's general position is its contention that "once the character of the cost is determined [that is, whether the cost is fixed or variable], the realm of judgment is passed and the demand-commodity formula requires that fixed costs be allocated to demand and volumetric costs be allocated to commodity."
>
> Concededly, the Commission did not so apportion the fixed costs. Instead, for example, the Commission assigned the item of depreciation (a fixed cost) 50% to the demand component and 50% to the commodity component. * * * It refers for such reasons to its opinion in Atlantic Seaboard Corporation, Opinion No. 225 * * *.
>
> * * * * * * *
>
> In general then, Northern's contention that use of the demand-commodity method in the manner it was used herein was erroneous as a matter of law, is rejected.
>
> * * * * * * *
>
> * * * we have rejected Northern's contention that a fixed charge *must* be allocated entirely to demand * * *. (206 F. 2d 709–711)

Where a principle such as the *Atlantic Seaboard* method of cost classification has so long been established and accepted as a traditional part of the Commission's method in pipeline rate proceedings, and where the industry has for so many years been operating on that basis, a heavy burden is imposed upon any party who seeks to have that method rejected at this late date. It is concluded that that burden has not here satisfactorily been met by Columbia. It is of interest to note, in this connection, the view expressed on this subject by Consolidated zone-gate witness Learned, who testified as follows:

> I am in agreement with the *Atlantic Seaboard* principle that requires fixed costs to be split on some basis between the demand and commodity component. And I recognize that the amount of the split, as distinguished from the principle, may be varied in accordance with the facts of a particular case. But I regard the 50–50 split of fixed costs between demand and commodity, which the Commission adopted as a judgment figure in the Atlantic Seaboard case, as a reasonable split here in the absence of the kind of detailed study which would be required to establish a different apportionment of fixed costs as between demand and commodity.

The proposed testimony of Columbia does not contain such a detailed study as would be required to establish a different apportionment of fixed cost as between demand and commodity from the Commission's 50-50 judgment split which it used in the Atlantic Seaboard case, and which I have used in my zone-by-zone cost exhibit. (47:4968-69).

Since it is concluded here that the *Atlantic Seaboard* classification method should not be discarded for the purpose of this proceeding, the entire justification and basis for the application of Columbia's capacity credit method is eliminated. In addition, however, the capacity credit method as here proposed by Columbia contains inherent defects which militate against giving it serious consideration in this proceedng.

As noted above, the capacity credit method as presented by Columbia witness Nissel involves basically two steps: (1) a determination of the capacity to be charged to firm customers, and (2) a determination of the capacity charge to interruptible customers, which in turn is credited to firm customers. The interruptible customers, whose capacity costs were thus determined under this second step, consist of the SO (Sellers Option) customers and the TS (Temporary Service) customers, and these interruptible sales, as already noted, amounted to only 4.3 percent of the total sales of the Tennessee system for the test year. (Tr. 7036).

Nissel's detailed explanation of his capacity credit method appears in his direct testimony at 47:5233-52. In describing how he derived the capacity costs to be charged to interruptible customers (which in turn are then credited to firm customers), Nissell set up an illustrative, hypothetical situation involving an interruptible customer whose annual deliveries amounted to 3,285,000 Mcf, whose daily requirements amount to 15,000 Mcf per day, and who is curtailed 146 days. This customer vacates 9,000 Mcf per day during 146 days for the priority use of firm customers, and he is therefore given a curtailment credit for 146 times 9,000 Mcf per day, or 1,314,000 Mcf. The capacity charge to this interruptible customer is then based not upon the total annual volume of 3,285,000 Mcf actually delivered to him, but rather on such total volume minus the curtailment credit of 1,314,000 Mcf—or 1,971,000 Mcf. The net effect is that this interruptible customer is charged with a capacity cost representing that of a firm customer with 100% load factor, but applied only to 60 percent of the total annual volumes delivered to him (*i.e.*, 100 percent of actual annual deliveries, minus the 40 percent curtailment suffered by him). Another way to state this, while obtaining the same final result, is that this interruptible customer is charged for the entire annual volume of 3,285,000 Mcf actually delivered, but on the basis of only 60 percent of the capacity charge applicable to a firm customer with 100 percent load factor. (53:7063, 7065).

The capacity charge of 1,971,000 Mcf thus derived for the interruptible customer is then credited to firm customers A, B, and C in Nissel's hypothetical illustration in proportion to the "unused capacity" created by each of them. This is on the theory that interruptible deliveries are made possible only to the extent that unused capacity is created by firm customers. (47:5237).

Nissel set forth a numerical example of this hypothetical illustration on Schedule 11, page 21 of Exhibit 85. The maximum demands of the three firm loads A, B, and C, amounting to 20,000, 50,000, and 30,000 Mcf per day, respectively, were there entered in Column (2), Lines 1, 2, and 3 of that Schedule. These three loads were charged for capacity in proportion to their maximum demands, and they were therefore charged with responsibility for "*total available capacity*" during the year amounting to 365 times maximum demand, as entered in Column (3). Used capacity, or actual deliveries, were then entered in Column (4), including a used capacity of 3,285,000 Mcf for the interruptible load.

The *used capacity* of loads B and C were deducted from *total available capacity*, to obtain the "*unused capacity*" figures set forth in Column (5).[35] As noted above, based upon the interruptible customer's curtailment credit of 1,314,000 Mcf, a capacity charge of 1,971,000 Mcf was derived for him, as set forth in Column (7), Line 5. That capacity charge was then entered in Column (6) headed "Capacity Credit," at Line 4—to be used as a credit to the firm loads, and to be shared between loads B and C in proportion to their "*unused capacity*" as shown in Column (5). The capacity charge set forth in Column (7) equals *used capacity* (Column 4), plus *unused capacity* (Column 5), less the applicable *capacity credit* (Column 6). The capacity charges thus derived in Column (7) are then translated into percentages of the total capacity charge of 36,500,000 Mcf (shown in line 6)—and these percentages are entered in Column (8) under the heading "Capacity Responsibilities." The net result, under this illustration, is that load A, representing a 100 percent load factor customer, was charged with the capacity cost for the full 20,000 Mcf per day which it uses on the peak-day and throughout the whole year. Load B, with a peak-day requirement of 50,000 Mcf per day, is charged for only 47,850 Mcf per day, as a result of its capacity credit; and similarly, load C, with a peak-day requirement of 30,000 Mcf, is charged for only 26,750 Mcf per day. The balance of the capacity cost of 5,400 Mcf per day is charged to the interruptible load for the off-peak use of capacity.

The illustrative example as thus presented is not, of itself, impossibly difficult to grasp. However, when this capacity credit technique is woven into and applied as an indivisible part of the already complicated zone-gate procedure, it becomes a monstrously complicated and involved mathematical exercise. Columbia's witness Nissel's attempts to explain it even on direct examination, where he was not subject to interruption, involved a tremendous amount of painstaking effort, requiring lengthy testimony and the use of complicated exhibit tables and charts. The attempts to explore and clarify the workings of the method in the course of cross-examination plunged both the parties and the Presiding Examiner into a seemingly endless and bewildering maze. Even with the benefit of the detailed briefs filed since the conclusion of the hearing the complexities of the method have been such as to require the expenditure of a tremendous amount of time and energy on the part of the Presiding Examiner in order to obtain a clear understanding and a correct picture as to the manner in which the method works. It is concluded that it is not practicable, from an administrative standpoint, to give serious consideration to a method or technique which is so unusually time-consuming and which involves such burdensome complexities.

In addition to its unusual complexity, the Columbia capacity credit method also suffers from certain other inherent defects. Consolidated zone-gate witness Learned succinctly characterized these defects as follows: 1) that the capacity credit method bases an allocation of capacity responsibility upon non-coincidental peak demands;[36] 2) that it makes the assumption that only *interruptible* deliveries use the vacated capacity on a pipeline as indicated by a non-coincidental demand determination. (47 : 4964–70.)

Learned noted, in this connection, that the capacity credit method determines the capacity responsibilities for the firm customers based upon "average billing

[35] Since Load A represented a 100 percent load factor customer, no unused capacity is shown for him.

[36] A coincidental peak demand would represent the total deliveries on the single day when the system made its maximum deliveries for a given period. A non-coincidental peak demand would involve taking the maximum day delivery to each customer during a given *peak period*, and combining them into one aggregate total, even though that aggregate combined total could *not* physically have been delivered by the system on any given day, in view of its total physical capacity.

demands or equivalents;" that the average demands for the Contract Demand (CD), General Service (G), and Transportation (T) customers are the annual billing demands developed by Tennessee's witness Davis, divided by 12, and these annual billing demands are based upon non-coincidental peak-day deliveries; that this method of determining peak-day responsibility based upon "average billing demands or equivalents" can best be classified as an estimated non-coincidental peak-time requirement. He stated:

> I do not consider it proper to base an allocation of demand cost of service on a non-coincidental basis for the reason that a non-coincidental capacity determination exceeds the experienced maximum utilization of the facilities and, as such, is not representative of the use of the facilities at a time of peak requirement. (47:4965.)

With respect to the second inherent defect, Learned noted that the capacity credit method purports to charge to the firm customers the responsibility for "total available capacity" (representing capacity used by them, plus the unused capacity they create), less a credit amount for the capacity used by the *interruptible* customers when not required by the firm customers. However, he pointed out that:

> This concept has overlooked the fact that it is possible through *diversity* of *firm* loads to operate a pipeline system at close to 100% load factor and thereby have no unused capacity available for *interruptible* service. (47:4966: emphasis supplied.)

He illustrated this by using the hypothetical example of a pipeline with only two *firm* load customers, A and B. In this example, on January 1, customer A took 100 units of gas, and customer B took only 50 units, with total deliveries through the pipeline on that day representing 150 units. On January 2 the situation was reversed, and customer A took only 50 units of gas while customer B took 100 units, with total deliveries again amounting to 150 units. On the remaining days of the year both customers A and B took 75 units each, thereby insuring a 100 percent load factor operating condition for the pipeline. In this example, the non-coincidental peak demand under the capacity credit method would consist of 100 units for customer A, and 100 units for customer B, for a total of 200 units. The "*total available capacity*" under the capacity credit method would therefore represent 200 units times 366 (the number of days in the test year 1956), or 73,200 units. The "*used capacity*" would represent 150 units times 366, or 54,900 units. The indicated "*unused capacity*" available for interruptible customers (*i.e.*, "total available capacity," minus the "used capacity") would be 73,200 units minus 54,900 units, or 18,300 units—despite the fact that the pipeline actually operated at 100 percent load factor, and in fact had no unused capacity available for interruptible deliveries.

The net result in the hypothetical situation illustrated above is that we have a peak day on which the vacated capacity thus made available by customer A, which would be classified as "unused capacity" under the capacity credit method, was actually used not for interruptible deliveries, but for firm customer B—and there was actually no unused capacity available for interruptible deliveries. Nevertheless, the capacity charge to firm customer A would represent (a) used capacity (*i.e.*, actual deliveries), plus (b) a fictitious *unused capacity* figure based on non-coincidental peak demands. Customer A would not receive any capacity credit as a result of firm customer B's use of the vacated capacity thus made available, since Nissel's capacity credit applies only where unused capacity is used by *interruptible* customers (SO and TS service). The same situation

would apply to firm customer B, in connection with customer A's use of the vacated capacity made available by B on a peak day.[37]

As Learned stated in conclusion:

> The capacity credit method of allocation has the effect of overcharging those customers with a poor load factor and/or those customers whose peak-time requirements are different from the system peak-time requirements.
>
> I do not consider it proper to base an allocation of cost of service upon a premise that penalizes a zone with customer diversity or a zone which does not contribute to the system peak in the same magnitude as indicated by their non-coincidental peak-time deliveries. (47:4970.)

Tennessee, in making much the same criticism of the capacity credit method, has correctly characterized it as dealing in "fictitious or phantom unused capacity." (Reply brief, pp. 17–18.) Tennessee emphasizes the fact that this basic error on the part of Columbia's witness Nissel resulted from the latter's failure to give weight to the manner in which Tennessee's system has been constructed since the advent of storage. As noted in detail at an earlier point, the capacity built into the Tennessee system from the source of gas supply up to the storage reservoir is equal only to the *average* daily requirements (or annual average day demands) of the General Service customers, whereas the capacity north of storage is based upon the peak daily requirements of the customers. The difference between such average daily demands and peak demands is met by withdrawals from storage. (53:7093; 67:8813–14.)

During the cross-examination of Columbia's witness Nissel, it was developed that his term "Total Available Capacity" (Exh. 85, Sched. 12, Col. 3), which constitutes the basis for his computation of the capacity charge to the firm customers, admittedly does *not* represent capacity which was available and could physically be met by the Tennessee system on each and every day of the year. (53:7092): Instead, Nissel conceded that it might more accurately be designated as "paid for capacity on an annual basis," or "*billed* annual firm capacity." He further admitted that the classification "unused capacity" in Column (5) could more accurately be changed to "paid but not used capacity," or "billed off-peak capacity." (53:7109.)

The entire situation was summed up in the following colloquy with Nissel:

> PRESIDING EXAMINER: Would it be correct to say that with regard to the figures in Column (5), that another way to state it would be to say that the figures in the column represent a volume which the customer paid for but actually did not use, but this does not mean necessarily that if he had wanted to use it that all of that capacity would have been available for him to use, based on Tennessee's system capacity?
>
> THE WITNESS: That is a correct statement, Mr. Examiner. (54:7134).

The net result of Nissel's use of billed demands derived from maximum day usage multiplied by 366, would appear to be that a General Service customer, for whom facilities are not built to storage on the basis of maximum requirements but rather on the basis of average daily requirements, is charged with "unused capacity" which does not exist. Stating this another way, the amount of "unused capacity" computed by Nissel would appear to represent a purely theoretical figure, which could not actually occur on the basis of the facilities physically in place on the Tennessee System as it existed during the test year. As stated in the Tennessee reply brief (p. 18),

---

[37] To state this another way, firm customers A and B would be charged with *"unused capacity,"* even though the pipeline actually operated at 100% load factor and had no unused capacity available for interruptible deliveries.

> Since General Service customers are *billed* on the basis of *peak* demands, but capacity is *installed* for them up to storage on the basis of their annual *average* day demands, it is obvious that Tennessee could not serve all of its customers if they all took gas at a 100 percent load factor. . . . Billed capacity is one thing. Actual capacity is quite another thing.

Still another basic defect in the capacity credit method lies in the fact that it provides a credit to firm customers only in cases where the off-peak capacity created by the latter was used for sales to interruptible customers. (52:7038). As a result, no credit is provided to firm customers who, by reason of their load characteristics, generate the off-peak capacity which is used for storage injections. (52:7038, 7051). This inequity is particularly serious in the case of a system, such as Tennessee, which has large underground storage facilities.

The Mcf-Mile Approach

We now turn to a consideration of the Mcf-mile allocation method, which is advocated in this proceeding by Tennessee, the Commission Staff and the New England intervenors.[39] In its landmark *Northern Natural* decision, Op. No. 281, adopting and approving the Mcf-mile method, the Commission stated:

> * * * it is a simple economic fact that the delivery cost of natural gas increases in close proportion to the length of the transmission line of any given size. Therefore, unless other circumstance are present which outweigh the importance of the length of transmission required to effect delivery, the distance factor is the prime determinant of the cost of rendering service. Since in our view of this record there are no such circumstances present to counter-balance the distance factor, we conclude that the distance of transmission required to effect deliveries at the various points of sale by Northern reflects with reasonable accuracy the relative cost of providing service to its customers. * * * (14 FPC 24)
>
> * * * * * * *
>
> * * * we find that there is no such concentration of sales in a single area of the system as would countervail against the arguments of the Proponents and the Staff that the distance of transmission—the mileage of haul—is the primary and controlling factor in the determination of the basic issue here. (14 FPC 22–23)

Columbia contends, however, that the Mcf-mile allocation method was actually regarded as acceptable by the Commission in the *Northern Natural* case only because it there happened to produce a result almost identical to that arrived at under the zone-by-zone (or zone-gate) method presented by the Proponents of zoning: that this similarity in results established that the Mcf-mile method in that case *was* an accurate measure of costs, and this alone made it acceptable. The difficulty with this theory is that the Commission in the *Northern Natural* case, as noted at an earlier point in this decision, expressly rejected the zone-by-zone (or zone-gate) method as being neither sound nor reasonable, on the basis of certain inherent defects which it found in that method itself. Since the Commission thus expressly characterized the zone-gate method as an unacceptable measuring stick, it is difficult to see how it can seriously be contended here that the standard or criterion which made the Mcf-mile method acceptable to the Commission in the *Northern Natural* case was the fact that it produced a result almost identical to that under the discredited zone-gate method. The instant Columbia argument, if drawn to its logical conclusion, would seem to suggest that the Mcf-mile method of allocation could never be

[39] The modifications to the straight Mcf-mile method here proposed by Tennessee and the Staff will be discussed in detail at a later point.

used by the Commission for an allocation of cost among zones on any pipeline system unless the Commission first applied the zone-gate method and found that the costs allocated under both methods were approximately the same. This, of course, would represent another way of saying that the zone-gate method is mandatory under the Natural Gas Act—and that, of course, is plainly not the case.

Columbia further contends that under the mechanics of the Mcf-mile method, if there are no deliveries there is no allocation of cost, irrespective of the size and cost of installed plant (initial brief, p. 43)—*i.e.*,

> * * * it is undisputed that if no gas were transported through a particular facility, no costs would be assigned to such facility. (initial brief, p. 61)

Columbia argues that this illustrates that under the Mcf-mile approach the transmission costs assigned to a given zone depend not upon the transmission costs associated *with the facilities* in that zone, but rather upon the physical volumes of gas transported by such facilities; that the result is to penalize customers in zones where facilities are used at or near maximum efficiency, by assigning to them a part of the cost of facilities in other zones used at a small percentage of maximum efficiency, thus subsidizing the inefficient user of capacity.

This argument, of course, represents a basic attack on the merits of the Mcf-mile approach as such, as applied to any pipeline system, and would have been equally applicable to the use of the Mcf-mile method in the Northern Natural case, Op. No. 281. The Commission there noted and took into consideration the fact that Northern Natural did not represent a uniformly efficient system, in that the annual load factor of estimated 1954 sales in Minnesota (the northernmost part of the Northern Natural system) was lower than the system average for jurisdictional sales, and was in fact the lowest of any state served by that system. (Op. No. 281, p. 19) Yet, although the Commission there recognized the importance of load factor, it did not regard or treat this factor as providing a justification for rejecting the Mcf-mile averaging method.

The basic answer to the instant Columbia contention is that a pipeline company installs facilities for the purpose of rendering a service, and that accordingly costs should be allocated to the *service* rather than to the facilities. The service rendered by Tennessee to its customers is the delivery of specified volumes of gas, over a distance of a certain number of miles. Accordingly, under the Mcf-mile method costs are distributed in such a way as to reflect and give weight to (a) distance, plus (b) the use made of the facilties, measured by peak-day and annual volumes. The Columbia argument indicates a preoccupation with the *facilities*, and an insistence on associating costs with facilities rather than with the service rendered thereon. This viewpoint is, of course, consistent with the zone-gate method, which is basically a segregation of facilities approach, but that approach has been here rejected.

Apart from the above, the Columbia statement that "if no gas were transported through a particular facility, no costs would be assigned to such facility" is rather misleading. The fact is that in such a hypothetical situation the costs relating to that particular facility would admittedly be included in the total Tennessee costs to be allocated among zones. However, since there would be no volume factor associated with such facilities, for use in connection with the Mcf-mile equation, the net result would merely be that these facilities would play no role and would not be used *in computing the allocation ratio* The fact is, however, that in such a hypothetical situation a similar

result would be encountered under the zone-gate method as well. For example, if no gas were transported over a given facility located in the Central Zone, this particular facility would play no role and would not be used in computing the allocation ratio to determine what portion of its cost should be allocated on to the downstream zones. The allocation ratio would be based on the relative peak-day and annual deliveries in the Central Zone, as compared with that for the downstream zones, and under these hypothetical circumstances this particular facility would supply no peak-day or annual deliveries for use in constructing such allocation ratio.

In an effort to demonstrate that the Mcf-mile method is arbitrary and capricious, Columbia has developed and presented here a number of comparative data computations. For example, Columbia contends that the Mcf-mile method is demonstrably unfair to the Eastern Zone and unduly favorable to the New England Zone, as indicated by the fact that total costs allocated to the New England Zone under that method constitute only one-fourth of the cost allocated to the Eastern Zone, despite the fact that investment in the New England Zone was two-and-one-half times, and the pipeline miles even three times, the respective figures in the Eastern Zone. (initial brief, pp. 48 and 49) This comparison is regarded as meaningless, since it completely ignores the relative *volumes* of deliveries in the two zones—this being, as just previously noted, an important factor in allocating costs on the basis of service rendered. Thus, Eastern Zone deliveries in 1956 were 231,938,604 Mcf (Exh. 83, Schedule 5, Column 2, Line 18), which is approximately 6⅓ times the New England deliveries of 36,648,242 Mcf. (Exh. 83, Schedule 6, Column 2, Line 22)

Furthermore, this Columbia complaint is part and parcel of its segregated facilities, incremental approach, predicated on the premise that the customers of a given zone have a vested interest in certain specific portions of the pipeline. That approach has been here rejected on the ground that the Tennessee system is an integrated system, with each part of the system, whether directly or by displacement, contributing to every other part; that all customers should accordingly be charged on the basis of average system-wide costs for each mile of transmission. Under this approach it is not relevant or meaningful to compare the number of miles of pipeline or the average original cost of facilities which happen to fall within one zone as compared with another.

In the same connection, it is important to recognize that the number of miles of pipeline found in a given zone is not necessarily determined by, nor does it necessarily measure the service rendered to the customers in such zone. It results, rather, merely from the manner in which the zone boundaries happened to be set up on the Tennessee system, and represents simply the number of miles which it takes for the pipeline to run from the point where it enters the zone on the upstream side, to the point where it leaves the zone on the downstream side, on its way north to the other zones. For example, the Southern Zone happens to be a long zone running through the states of Louisiana, Mississippi, and Tennessee, and accordingly the number of miles of pipeline in that zone is relatively high. By contrast the Eastern Zone, for historical reasons, became an unsually small zone with a relatively low number of miles of pipeline. This historical fact, however, has no bearing whatsoever upon the relative *service* rendered by the Tennessee system to the Eastern Zone, as compared with other zones.

In a further effort to demonstrate that the Mcf-mile method produces arbitrary and inequitable results, Columbia presented Exh. 122 purporting to show the cost allocated to the New England Zone by the Staff in its Exh. 90 "because of the MMcf-miles within that zone", allegedly amounting to only

$1,253,292, and comparing this figure with the cost "actually incurred" within such zone as shown on Tennessee's Exh. 77, amounting to $5,628,567. In addition, Columbia presented Exh. 125, purporting to show that the differential between the New York Zone rates and the New England Zone rates developed from the costs allocated to those zones under the various Mcf-mile presentations would fall far short of the costs "actually incurred" within the New England Zone, as computed in Exh. 77. (initial brief, pp. 50–52)

Since both of these Columbia comparisons are based upon the purported costs "actually incurred" within the New England Zone as developed in Exh. 77, it is important to understand the background as to how Exh. 77 happened to be prepared and presented in this proceeding. During the early stages of the instant hearing the Presiding Examiner, pursuant to a request by counsel for Consolidated, directed that Tennessee make available to all parties data showing:

> (1) The actual direct expenses, plant and related reserves, and all other charges and credits which would be involved in any determination of Tennessee Gas Transmission Company's cost of service for the calendar year 1956, for the New England Zone formerly served by Northeastern Gas Transmission Company, and (2) an allocation of the indirect expenses, plant and related reserves, and all other charges and credits properly includible in Tennessee Gas Transmission Company's system cost of service for the calendar year 1956 between the New England Zone and the remainder of the system, together with a comprehensive explanation of the principles and methods used in such allocation.

This requirement was based upon and patterned after the accounting condition originally imposed upon Tennessee in the *Northeastern* merger case, *supra*. By orders issued November 1 and December 31, 1957 the Commission affirmed this ruling, on the ground that such information would enable the Commission and all parties to test the accuracy and validity of such allocations as might finally be sponsored by Tennessee or any intervenor in this proceeding. However, the order of December 31 expressly stated:

> For the purposes of this order to Tennessee, it is understood that the cost data and allocation thus presented will not be construed to represent Tennessee's position on cost data or allocation.

In compliance with this order, but under protest, Tennessee prepared and presented Exh. 77, consisting of a segregation of New England direct costs, together with a system-wide allocation of costs up to the New England Zone. (36: 4690–4702) Tennessee witness Davis, who presented Exh. 77, testified that in his opinion the method of allocation there employed was not appropriate for a determination of costs assignable to the New England Zone for rate-making purposes.

It must be borne in mind that Tennessee was asked to provide the Exh. 77 study at an early stage of this proceeding, at a time when the basic question had not yet been resolved as to whether Tennessee's costs should be allocated between zones under an averaging method, or whether instead any one or all of the Tennessee zones should be considered and treated as a separate entity. Since it has now been concluded that the segregation of property approach should *not* be used for an allocation of costs between zones on the Tennessee system, the Exh. 77 study, which does employ a segregation of property approach with respect to those costs identifiable as relating directly to operations within the New England Zone, becomes meaningless. It is quite clear that the Exh. 77 study suffers from some of the same defects as those already outlined

above with respect to the pure zone-gate method. Thus, it does not allocate to other zones any portion of the costs pertaining to the New England facilities used or usable for maximizing storage injections, it does not in any way reflect or give weight to the fact that average-day, rather than maximum-day, pipeline capacity was installed upstream from storage for New England customers. It requires New England to share in all the costs of upstream zones on a rolled-in basis, but not vice versa. Finally, it treats the New England Zone *per se* on an incremental basis, while the remainder of the system is treated on a rolled-in basis—an approach which the Commission characterized as unsound in the *Northern Natural* case, Op. No. 281, as follows:

> We do not believe it either sound or reasonable to allocate costs in part on a system-wide basis and in part on the basis of a segregation of certain properties as the proponents have done. (14 FPC 29)

In view of the conclusions arrived at above with respect to Exh. 77 it is concluded that any studies designed to show alleged inequities and arbitrary results flowing from the Mcf-mile method, by comparing various data with costs "actually" incurred within the New England Zone, as derived under Exh. 77, are without value here.

In one of its basic criticisms of the Mcf-mile approach, Columbia contends that the allocation method here adopted must be one which reflects as accurately as possible "the actual cost" incurred in serving the customers in each zone; that, unlike the Northern Natural system, there is a great variation in average unit costs per Mcf-mile among the different zones on the Tennessee system, caused by a great number of factors such as variations in pipe size, differences in load factor, and the like; that the Mcf-mile method, which uses an averaging approach, fails to reflect or account for such differences and therefore does not reflect "actual cost" incurred for each zone; that the zone-gate method is the only allocation method which does result in the determination of the "actual costs" for each zone, and accordingly the zone-gate method is the only one providing the Commission with an objective standard against which to judge whether the rates filed by Tennessee for each zone are in fact fair and reasonable.

The basic answer to this contention lies in the controlling philosophy developed at an earlier point in this decision—*i.e.*, that although it is recognized that unit costs of transmission in one area may be different from those in another, the overriding consideration here is that Tennessee constitutes a single, integrated pipeline system, with each part of the system contributing to every other part; that accordingly costs should be averaged among all zones, and all customers should pay on the basis of average system-wide costs for each mile of transmission.

In addition, it should be noted that this Columbia thesis rests upon a shaky assumption in that the zone-gate method itself does not in fact really determine for and allocate to each zone the "actual costs" incurred to provide service therein. There are numerous situations arising under the zone-gate method where the costs of a particular facility are charged to a given zone, not because of or on the basis of the extent to which such facility is actually used for service to such zone, but merely because the geographical location of the boundary line resulted in the facility falling within the zone in question. This is particularly true with respect to the cost of service associated with property located near the downstream boundary of each zone. The problem is well illustrated by reference to Compressor Station No. 200, which is located at the downstream end of the Central Zone. Although only a very small amount

of gas compressed by Station No. 200 is actually delivered in the Central Zone, the cost of service associated with that station is allocated to all customers in that zone as if it in fact compressed gas for all customers in the zone. (68:8932–3)[39] Under the zone-gate method, solely for the historical reason that this compressor station happens to fall within the artificially prescribed boundaries for the Central Zone, the costs associated with that station are distributed between that zone and all downstream zones on the basis of their relative ratios of peak-day and annual deliveries. This allocation is thus based upon the total volumes of gas delivered to the Central Zone on the peak-day, and annually, and has no relationship whatsoever to the contribution which Compressor Station No. 200 makes to the service rendered to that zone. On the other hand, if the boundary line of the Eastern Zone had instead been fixed at a point south of Compressor Station No. 200, so that this station fell within the Eastern Zone rather than the Central Zone, it is clear that under the zone-gate method none of the costs associated with that station would have been assigned to the Central Zone. This variation between actual use and the ratio of cost assigned under the zone-gate method is not peculiar to compressor stations. The same type of variation exists with respect to all transmission facilities within a rate zone. For example, although the actual use of transmission mains for deliveries in the zone in which they are located declines as the gas moves downstream, the cost of service related to such mains is allocated on the basis of a zone-wide allocation ratio. (68:8934)

It is, of course, true that similar results may occur under the Mcf-mile method as a result of the averaging process within the zone, which is also inherent in that method. However, the effect of such situations is minimized and counterbalanced to some extent, under the Mcf-mile approach in view of its use of system *average* costs. The situation cannot be viewed so charitably, however, with respect to the zone-gate method since the basic virtue claimed for that method is that it allegedly determines for and allocates to each zone the "actual costs" incurred to provide service therein. The situations discussed above illustrate the fallacy of the proposition advanced by the zone-gate proponents that their method "assured that costs incurred in any part of the system are borne by those customers who are responsible for such costs." (47:5203) In view of the fallacy of this basic assumption, it is difficult to see the justification for adopting a method as complicated as the zone-gate approach, with all its related problems, in preference to the more simple and direct Mcf-mile method.

Entirely apart from the above, the basic assumption by the proponents of the zone-gate method that it does result in the determination of "actual costs" for each zone claims too much. Both Columbia and Consolidated here purport to find as a "fact" the "actual cost incurred" within each zone. It is obvious, however, that any such finding under the zone-gate method is not a "fact" but merely a conclusion inferred from and depending upon numerous allocations, including allocations on a system-wide average basis of substantial system-wide costs (treated as "joint" costs), relating to cost of purchased gas, storage costs, and administrative and general expense. In addition, under the zone-gate method a uniform depreciation rate, a uniform rate of return and a uniform income tax cost are assumed for each of the six zones on the Tennessee system, without any attempt to arrive at separate and distinct factors for each zone as if it were in fact a separate operating entity.

---

[39] The only condition precedent to such a situation is that there be a single customer within that zone between such facilities and the downstream zone boundary. (55:7298–7303)

Columbia and Consolidated Contention That Mcf-Mile Method Should Not Be Adopted for Tennessee System in View of Unfavorable New England Zone Characteristics

Although the Mcf-mile method, as here advocated by the New England intervenors, and by the Staff and Tennessee in modified form, results in higher rates to the terminal New England Zone than to any other zone, because of the great weight given to the factor of distance, Columbia and Consolidated contend that this is not enough; that the factor of distance alone was properly regarded as controlling on the Northern Natural system in Op. No. 281 because the factors such as load distribution, load factor and pipe size were allegedly highly uniform on that system, and accordingly no other circumstances were there present which outweighed the importance of the length of haul; that on the Tennessee system, however, there is a great variation between zones with respect to such factors, and *particularly with respect to the New England Zone;* that distance alone thus is not the controlling consideration on the Tennessee system, but an allocation method must instead be adopted which gives adequate weight to the unfavorable load distribution, load factor and pipe size characteristics of the New England Zone, and which accordingly allocates to that zone a substantially higher percentage of costs than would be allocated under the Mcf-mile method.

It will be seen that this argument is basically an attack on the New England Zone. Columbia stresses the following as unfavorable characteristics of the New England Zone, which must be given controlling effect here:

(1) *Pipe Size.* It is emphasized that there is a wide variation in pipe size, particularly resulting from the fact that the service rendered in New England is allegedly a lateral-type service. While the diameter of only 17 percent of Tennessee's total transmission pipelines is under 20 inches, in the New England Zone 74 percent is under 20 inches, with 50 percent of the pipe having a diameter of 10 inches or less. (Exh. 83, p. 8; appendix to initial brief, Tab C)

(2) *Load Factor.* It is further stressed that there are wide variations of load factor among the various zones; that the total system load factor averages 87.2 percent, load factor in the Eastern Zone was 99 percent, and load factor in the Northern Zone (due to interruptible sales) was approximately 106 percent—whereas the load factor in the New England Zone was only 48.6 percent. (48: 5621; Exh. 97A, p. 13)

(3) *Excess Capacity.* It is contended that there was substantial excess capacity in the New England Zone during the test year.

Columbia contends that the cumulative effect of these factors is that unit costs vary substantially from zone to zone on the Tennessee system, and that unit costs are substantially higher in the New England Zone than in any other zone on the entire system. (initial brief, pp. 8–10, 24)

We now turn to a detailed consideration of these particular unfavorable characteristics of the New England Zone, as stressed here by Columbia.

(1) *Pipe Size*

The New England system, previously owned by Northeastern, consists primarily of a 24-inch pipeline approximately 139 miles in length, extending across the state of Massachusetts, a 16-inch line approximately 112 miles long, extending from Tennessee's facilities at the Connecticut-New York state line near Greenwich, Connecticut, to such 24-inch line near Springfield, Massachusetts, and numerous laterals in Connecticut, Massachusetts, Rhode Island, and New Hampshire, ranging in diameter from sixteen inches down to three inches.

Columbia contends that these laterals are used to deliver gas to city-gate measuring stations of Tennessee's New England distribution customers, a service allegedly not rendered in any other zone; that customers in each of Tennessee's

other zones were required to construct pipelines from their distribution systems or from other facilities to delivery points on Tennessee's main pipelines; that this different operation in the New England Zone resulted from the fact that the New England system was originally designed by Northeastern to provide a semi-distribution service. (initial brief, p. 29) The suggestion that customers in each of Tennessee's other zones have been compelled to assume more substantial burdens than those in the New England Zone in order to take gas from the Tennessee pipeline has not been satisfactorily developed in this record, and is strongly disputed by the New England intervenors. However, this point is not regarded as material since none of the parties, in any event, dispute the basic fact that a larger percentage of Tennessee's pipeline mileage in the New England Zone consists of small diameter pipe than is true for the Tennessee system as a whole.

This isolated fact in itself, however, is not regarded as controlling or determinative here. In the first place, in considering the extent to which the presence of the higher-unit-cost, small diameter pipe should be given weight in connection with the allocation of costs between zones, the critical consideration should not be the mere *physical location* of the small and large diameter pipe. The fact is that the large diameter lines in the upstream zones are not required merely for deliveries in those zones, but are used to transport gas from the major sources of supply into the entire system, including the New England Zone. In other words, those lines find their justification in the volumes which must pass through such pipe destined for all downstream markets, including the New England Zone. Under these circumstances, it would not be realistic or fair to take the position that credit for the low-unit-cost characteristics of transmission over the large diameter pipe should go only to the upstream zones, and that the New England Zone should not be credited with any of those benefits or advantages.

As Tennessee witness Davis testified:

> Q. Suppose the transmission system consists of pipes of different sizes in various zones. Will the actual cost of transmission in such system vary from zone to zone with the size of pipe used?
>
> A. It isn't quite that simple, Mr. Rosan, for the reason that as gas goes through one zone with a certain diameter of pipe, the gas in the pipe in that zone is destined to customers in the zone in which that pipe is located, *as well as to customers in zones beyond.*
>
> * * * * * * *
>
> A. Yes, sir; unit cost of gas transmission through larger pipe is less than the unit cost of gas transmission through smaller pipe. That doesn't mean that you can suis sponte just allocate the large pipe to one zone and the small to another. (29:3978–79) [Emphasis supplied.]

In addition, New England intervenor witness Tippy contended that the Columbia comparison of relative percentages of haul *within* a zone through smaller diameter pipe do not constitute a meaningful comparison for cost allocation purposes. He stated:

> * * * the cost of delivering gas to a particular group of customers on a pipeline system, to the extent that it depends on pipe size, depends not on the pipe size existing only within the zone in which those customers are located, but on the pipe sizes all the way from the source of gas supply to the customer's delivery point. (62:8169)

Based on this theory, Tippy prepared his own comparative study (Exh. 120) showing the extent to which service is rendered in the New England Zone over pipe under ten inches, with similar comparative figures for the Northern Natural

zones which were the subject of Op. No. 281. This Tippy study differs from Columbia's comparative data with regard to small-diameter pipe in two important respects:

(a) Exh. 120 compares not merely the mileages of different sizes of pipe, but also reflects and combines the *volumes* of gas delivered over such mileages. It develops "Average Miles of Haul" over pipe under 10 inches, and pipe 10 inches and over—but such "average miles of haul" actually represent

> * * * a weighted average mileage of haul which is the result of taking the MMcf miles hauled through these different sizes under 10-inch and over 10-inch and dividing them by the volumes delivered in the zone.[40] (63:8284)

And the comparative percentage figures finally derived are based upon the MMcf miles through small diameter pipe, in relation to the total MMcf miles over all sizes of pipe. (63:8281)

(b) In addition, Exh. 120 reflects *not* the comparative MMcf mile data *within* the relevant zones, but rather the MMcf mileages all the way from source of supply to customers' delivery points.

Following this procedure, Tippy found that the "average miles of haul", as thus defined, through pipe under 10 inches for the New England Zone was 6.57 miles, or 0.36% of "average miles of haul" for that zone over all sizes of pipe. With respect to the Northern Natural system, using the same procedure, he found "average miles of haul" through pipe under 10 inches for Zone 1 at 8.47 miles or 2.14%, for Zone 2 at 6.76 miles or 1.24%, and for Zone 3 at 2.24 miles or 0.29%. From this he concluded that in both the Northern Natural system and the Tennessee system the percentage of the total haul through pipe under 10 inches in diameter was very small; that the average haul for New England Zone deliveries through pipe under 10 inches was comparable in mileage with Northern Natural's Zone 2, and as to per cent of total haul was comparable with Northern Natural's Zone 3. Tippy then concluded:

> Consequently, even if we assume that the unit cost through this smaller pipe is substantially more than the unit cost through the larger pipe, the length of haul through the smaller pipe is so small as to be without significance in determining the method of cost allocation which is appropriate * * *. I conclude further that the attempt to distinguish the Tennessee system from Northern Natural with respect to its suitability for application of the Mcf-mile method on the basis of pipe size, is invalid and misleading. (62:8171)

Columbia contends that witness Tippy's Exh. 120 comparison is meaningless on the ground that it merely reflects the *amount* of gas transported through small diameter pipe, and does not reflect the miles of pipe or the costs related thereto (reply brief, p. 33). In weighing this objection, it is important to bear in mind that our real objective here is to determine whether the small-diameter pipe situation in the New England Zone represents such a significant and controlling factor as to outlaw the use of anything other than a zone-gate allocation method for the Tennessee system. Our primary interest in pipe size here lies in the extent to which it affects the cost of delivering gas in the New England Zone, as compared with that for the other zones. But the true picture of the cost for delivering gas in the New England Zone is obtained only by directing our attention to the total mileage of pipe used to carry gas *from the source of supply* to New England delivery points. Accordingly, in order to keep this problem in balance and to avoid distortion, we must consider the small-diameter pipe which is physically located in the New England Zone only in

[40] *I.e.*, by the total volumes delivered in that zone over all sizes of pipe.

terms of the weight it plays in the total miles of haul from the source of supply to the New England delivery points. Furthermore, for similar reasons, a balanced picture can be obtained only by considering and giving weight to the *amount* of gas transported through small-diameter pipe in the New England Zone, and not by directing our attention merely to the *miles* of small-diameter pipe in that zone, viewed in a vacuum.

The admitted fact that a larger percentage of Tennessee's pipeline mileage in the New England Zone consists of small diameter pipe than is true for the Tennessee system as a whole, constitutes an unfavorable characteristic of the New England zone which should be taken into account and adjusted for in some appropriate manner. However, under all the circumstances outlined above, it is concluded that the mere physical presence of such small-diameter pipe in the New England Zone is not so significant or controlling as to outlaw the use of an Mcf-mile allocation approach for the Tennessee system.

(2) *Load Factor*

As noted at an earlier point, the Staff derived a load factor of 48.6 percent for the New England Zone, by relating the deliveries to that zone during the Staff's selected three-day peak of January 16, 17 and 18, 1957 to annual deliveries to the New England Zone during the test year 1956. (Exh. 97A, Sched. 5, Sheet 1, Column 6) This low load factor for the New England Zone compares with a total Tennessee system load factor averaging 87.2 percent—a comparison which is of interest here since it is axiomatic that, all other factors being equal, the lower the load factor the higher the unit cost of service.

The New England intervenors contend that the Staff's derived load factor of 48.6 precent for the New England Zone is unreasonably low, as the result of two alleged errors in the Staff computation which are discussed at length in the New England reply brief. (pp. 18–21) It is contended, first, that in calculating the New England Zone load factor the 1957 three-day peak used by Staff should not have been related to 1956 annual volumes, but instead should have been related "to those annual volumes which will result, or flow from, the establishment of such peak." It is further contended that in making this load factor computation the Staff erroneously included in the peak-day volumes PS–G gas which was sold at that time merely as a temporary, incremental service; that the Commission, subsequent to the test year, denied Tennessee the authority to render such Peak Srevice on a permanent basis;[41] that accordingly the load factor in the New England Zone will not in the future be adversely affected by non-existent Peak Service sales. The New England intervenors contend that if corrections were made for these two alleged errors, the load factor derived for the New England Zone would be "substantially higher than 65 percent".

It will not be necessary here to resolve these contentions as to the precise level of the load factor in the New England Zone, since it is concluded that the load factor of that zone under *any* method of computation is admittedly substantially lower than that of the other zones on the Tennessee system.

Both the New England intervenors and Tennessee take the position that the problem of low load factor in the New England Zone is adequately accounted for under the Mcf-mile approach, by virtue of the fact that Tennessee gas is sold under a two-part demand-commodity type of rate schedule, which allegedly compensates the high load factor customers (Tennessee initial brief, p. 35; reply brief, p. 9). This view reflects a thought similar to that expressed by the Commission in its Opinion and Order Denying Rehearing, *In the Matter of El Paso Natural Gas Company*, Op. No. 326–A (22 FPC 659, October 8, 1959). In

[41] Commission order issued January 28, 1959, *In the Matter of Tennessee Gas Transmission Co., et al.*, Docket No. G–11107, *et al.*, 21 FPC 70.

that case the Southern California intervenors objected to the Commission's application of the Atlantic Seaboard classification formula to El Paso, arguing that the high load factor customers, such as the California customers, made greater use of the capacity provided for them and were penalized by requiring them to pay part of the costs incurred for the less efficient users of the capacity. The Commission rejected this argument, stating:

> We think that the heavy users of the facilities should bear a greater share of the capacity costs than the light users. *Of course, the higher the load factor, the lesser the unit cost to the purchaser of gas.* (22 FPC 665) [Emphasis supplied.]

It is concluded here that the relatively low load factor of the New England Zone does constitute an unfavorable characteristic which should be taken into account and adjusted for in some limited manner. However, it is not regarded as so significant and controlling as to outlaw the use of an Mcf-mile approach in this proceeding. In this connection, it is relevant to point out that in the *Northern Natural* case, Op. No. 281, where the Mcf-mile method was adopted, the Commission's order decreased the amount of the zone rate differentials resulting from a strict application of that method in such a way as to substantially benefit the terminal zone (Northern Natural Zone 3). This was in spite of the fact that the load factor in the state of Minnesota (where over 80 percent of the jurisdictional sales in the terminal zone were made) was the lowest on the Northern Natural system. Under the circumstances, it seems obvious that the Commission in that case did not regard the element of unfavorable load factor as presenting a controlling or key problem which should be permitted to dominate the disposition of the allocation question.

It is also o finterest, in connection with this problem, to observe the manner in which the Commission viewed the load factor problem in the Tennessee peaking service case, Docket No. G–11107, *supra*. In its order issued January 28, 1959 in that proceeding, the Commission rejected the Tennessee request for permanent authorization of its Peaking Service, and directed that Tennessee include as a part of its next major certificate application a firm proposal for the full incorporation of its underground storage facilities in the overall operation of its pipeline system, and the rendition of its services on a fixed and certain basis in a manner which would secure the maximum benefits of the storage equitably to all its customers. The Commission then stated:

> We think that this would possibly entail, with respect to Tennessee's Peak Service, the development of a storage service generally comparable to that Tennessee presently renders in New York.
>
> * * * * * * *
>
> Of course, the rates, terms and conditions of this service would have to be designed by Tennessee responsive to the New England market. While the rates should be fair and nondiscriminatory, they should be sufficiently low to assure the availability of the service in helping to meet the needs heretofore met by the Peak Service denied by this order. *Further, it appears that Consolidated Edison Company of New York, Inc., and other companies in the New York zone now purchase gas from Tennessee at virtually 100 percent load factor to be stored for subsequent withdrawal when needed. Because their operations are varied and extensive, sales at this load factor do not unduly burden such companies. However, many of the New England companies with less extensive and diverse operations could not feasibly take gas on a comparable load factor. The rates and service devised by Tennessee in accordance herewith should allow for such material differences in operating conditions.* (21 FPC 81) [Emphasis supplied.]

Thus, the Commission clearly expressed the view that the New England load factor problem should simply be recognized as one of the facts of life, to be allowed for in designing rates for the New England Zone, rather than treating it as the basis for imposing severe penalties, rate-wise, upon that zone.

(3) *Excess Capacity*

Columbia stresses, as one of the particularly unfavorable factors in the New England Zone operation, that there was an unusual amount of excess capacity in that zone during the test year 1956. This contention is based entirely upon certain testimony presented by its witness Nissel, who rested his conclusions exclusively upon a study of certain testimony given in a Northeastern certificate proceeding, Docket No. G–1267, on January 29, 1951, prior to the Northeastern merger case.[42] The testimony in question related to the design and planned capacity of the proposed Northeastern laterals in the New England Zone, plus an inference contained therein as to the "corresponding reserve capacity" which would be produced in the main body of that system by the 24-inch transmission line for which certification was there sought. Using this 1951 testimony as his point of departure, and comparing it with the maximum daily volume of 177,000 Mcf actually delivered in the New England Zone in the test year 1956, Nissel concluded that "If the market had been there, and all the plant had been used fully", (52:6057) he thought that Tennessee "*might* have been able to deliver" more than twice this latter volume, or over 354,000 Mcf per day. He therefore concluded that the New England Zone had more than 50 percent of excess capacity in the test year.

Nissel admitted, however, that he had not himself made any capacity studies, other than these particular comparisons. (52:6056) He further qualified his conclusion as follows:

> A. * * * I haven't made a computation, mind you, but from all the information in front of me——
>
> Q. With the facilities existing in 1956?
>
> A. I don't think that this is impossible, no.
>
> Q. Do you know whether this could have been done?
>
> A. I just said, Mr. Werner, that I didn't make a flow computation. * * *
>
> * * * * * * *
>
> A. * * * It is my understanding—my understanding is probably going a little too far—*it is my impression* that for a period equivalent to the period in which they delivered 177,000, that system *might* have been capable of delivering twice that much, yes. (52:6057–58) [Emphasis supplied.]

To add to the confusion on this subject, New England witness Tippy testified that in his opinion there was excess capacity *virtually all through Tennessee's system* during the test year—this conclusion being based upon his study of the flow diagrams presented in an earlier Tennessee certificate case, Docket No. G–9448, involving additional facilities which were completed and put in service in October, 1956. (50:5855–56) Tippy further testified that on a system like Tennessee's, which is constantly expanding, the existence of excess capacity in varying amounts on the system at almost any time is the rule rather than the exception. (62:8156) Based on this testimony, the New England intervenors draw a conclusion quite the reverse from that stressed by Columbia, *supra*. They start with the assumption, based upon the Tippy testimony, that there was excess capacity all along the Tennessee system during the test year. Based

[42] Docket No. G–1267 was the proceeding where Northeastern sought authorization to substitute 144 miles of 24-inch pipe for the same length previously authorized, and to substitute larger sizes of pipe in five of the previously authorized lateral lines.

upon this assumption, they contend that under the zone-gate method the New England Zone is charged with a percentage of the costs associated with excess capacity *in the upstream zones*, without regard to the purpose for which such upstream facilities may have been constructed—*i.e.*, even though, by way of a suggested hypothetical example, it might be clear that such excess capacity resulted solely from Tennessee's effort to provide service to an upstream customer. (New England initial brief, pp. 22–23)

The totally unsatisfactory state of the evidence in the instant record with regard to the question of excess capacity in the New England Zone, and in any other part of the Tennessee system, becomes clearly evident when reference is made to the really exhaustive study which was made of the excess capacity issue in an earlier Tennessee certificate case, Docket No. G–5259. That study made it clear that we have here no simple problem which can satisfactorily be resolved by the type of elementary calculations and comparisons which Columbia witness Nissel presented on this subject in the instant proceeding. In the initial decision issued by this Presiding Examiner in Docket No. G–5259, it was concluded that no reliable conclusions could be reached on the subject of the existence of excess capacity on the Tennessee system in the absence of a careful and exhaustive Commission study of that system and its operations, directed expressly to that specific problem, and that the comprehensive presentation made by the parties in that proceeding did not meet this standard. It seems obvious, therefore, that it would be improper in the instant proceeding, where no real excess capacity study of any type has been presented, to draw any conclusions as to the existence of substantial excess capacity during the test year in the New England Zone as compared with other zones (as contended for by Columbia), or to draw any conclusions as to the existence of excess capacity throughout the Tennessee system (as contended for by the New England intervenors).

It is concluded here that the specific relatively unfavorable characteristics of the New England Zone operation outlined above should not be ignored, and that some limited type of adjustment should accordingly be made to the straight Mcf-mile allocation approach in this proceeding, so that the costs allocated to the New England Zone will reflect in some limited manner the excess costs reasonably attributable to those peculiar characteristics. It is further concluded, however, that the zone-gate method, as here presented by Columbia and Consolidated, over-corrects for the New England Zone situation and goes far beyond this proper objective. The views strongly expressed by the Commission in its order issued January 28, 1959 in the Tennessee peaking service case, Docket No. G–11107, are of the greatest interest and significance in this connection. Although that decision dealt with a Tennessee request for permanent authorization of its Peaking Service, the Commission language quoted below expressed a basic policy and point of view which cannot reasonably be reconciled with the rationale of the zone-gate approach as presented in the instant proceeding. The Commission stated, in its G–11107 decision:

> Although we here deny permanent authority for the presently proposed Peak Service, we may properly consider whether some other service can be made available by Tennessee to meet the special natural-gas needs of the public in New England, and what substitute service should be made available on an interim basis. The purpose, among others, of this Peak Service has been to develop an increased market for natural gas in this region. This is a sound and realistic purpose. *It is vitally necessary to the financial stability and operating efficiency of the entire system that the loads on this farthest extension of Tennessee's system be built up and maintained.*

Clearly, the best interests of all of Tennessee's customers are best served if the considerable investment required to bring gas several thousands of miles into the Northeastern United States is supported by those customers who also benefit from it. But without the loads, these customers will never be able to support it. It is in the public interest, moreover, to secure the benefits of natural-gas service to this fuel-hungry region of the country, if it can be done on a reasonable and economic basis, just as is true in the case of other sections similarly handicapped by a lack of native fuel resources. (21 FPC 79)

* * * * * * *

We think that this would possibly entail, with respect to Tennessee's Peak Service, the development of a storage service generally comparable to that Tennessee presently renders in New York.

* * * * * * *

Of course, the rates, terms and conditions of this service would have to be designed by Tennessee responsive to the New England market. *While the rates should be fair and nondiscriminatory, they* should be sufficiently low to assure the availability of the service in helping to meet the needs heretofore met by the Peak Service denied by this order. Further, it appears that Consolidated Edison Company of New York, Inc., and other companies in the New York zone now purchase gas from Tennessee at virtually 100 percent load factor to be stored for subsequent withdrawal when needed. Because their operations are varied and extensive, sales at this load factor do not unduly burden such companies. However, many of the New England companies with less extensive and diverse operations could not feasibly take gas on a comparable load factor. *The rates and service devised by Tennessee in accordance herewith should allow for such material differences in operating conditions.* (21 FPC 81)

It is concluded that the adoption of the Columbia and Consolidated zone-gate approach, which imposes severe penalties, rate-wise, upon the New England Zone, would be inconsistent with the philosophy thus expressed by the Commission in the Tennessee peaking service case. It is further concluded that the adoption of an Mcf-mile approach, adjusted in some reasonable and limited manner to account for the unfavorable New England Zone characteristics discussed above, but exercising some reasonable restraint as to the burden to be imposed upon that zone, would be entirely consistent with the Commission viewpoint expressed above.

Two different types of proposals have been presented in this proceeding for such an adjustment to the straight Mcf-mile approach—one by the Commission Staff, the other by Tennessee. The Tennessee method allocates $739,598 less to the New England Zone and $568,831 less to the Eastern Zone than the Staff method. Both methods allocate substantially less to the New England Zone and substantially more to the Eastern Zone than the zone-gate methods advocated by Columbia and Consolidated.[43]

The Staff's Adjustment to Mcf-Mile Allocation to Reflect Unfavorable New England Zone Characteristics

Applying its Mcf-mile method, the Staff initially derived allocated costs for the New England Zone which were $1,546,779 less than the test year revenues

[43] The Tennessee method allocates approximately $4.5 million less to the New England Zone and almost $6 million more to the Eastern Zone than the Columbia method; and $2.3 million less to the New England Zone, plus $3.8 million more to the Eastern Zone than the Consolidated method.

received from that zone at the Docket G–5259 rates. Similarly, the allocated costs derived for the New York Zone were $768,192 less than the revenue levels for that zone under the G–5259 rates. Thereafter, in preparing the Staff's rate exhibit, Exhibit 97–A, Staff witness Drescher, instead of using the allocated costs for these two zones, used the higher dollar amounts of revenues at the G–5259 rates as the number of dollars to be recovered by the proposed rates for those zones. At the same time, the difference between the initial allocated costs and such G–5259 levels for the New England and New York Zones was distributed to the remaining four zones, and to the transportation services, as a credit to their allocated cost of service. (Exh. 97–A, Schedule No. 4, Sheet 1, and Schedule No. 5, Sheet 1; 47:5450–51.)

Drescher's initial explanation of the rationale for the above adjustment, given in the course of his direct testimony on May 12, 1959, was as follows:

> Q. Why did you use the revenue levels at Docket No. G–5259 rates as the basis for rates in the New York and New England Zones rather than the allocated costs?
>
> A. The Commission's order issued October 17, 1957, in Docket No. G–5259, determined Tennessee's cost of service and prescribed rates, based upon such costs, as "* * * the just and reasonable rates * * *." In this proceeding under Docket No. G–11980, the staff's exhibits show that an overall deficiency in revenues exists.
>
> In view of the Commission's prior action, and since it appears that the company is now in need of additional overall revenues, it is my opinion that as a matter of practical rate making it would be better to work with the net deficiency in revenues and make it up in the rates for the sales and transportation services which, according to the cost allocation exhibit, caused the deficiency. (47:5451–52)

Drescher's next explanation of the above adjustment took place a few days later during the course of cross-examination by counsel for the New England intervenors. The latter inquired as to whether Drescher had any basis beyond the Commission's G–5259 order which he felt impelled him to establish rates for the New York and New England Zones at levels higher than the costs which had originally been allocated by the Staff to those two zones. Drescher replied:

> A. Well, with respect to the New England Zone, I believe that the dollars of cost which are reflected in the cost allocation do not represent the level of cost which I would use for rate making purposes primarily due to the fact that they do not reflect an adjustment, I think, that is proper due to the *low load factor* in New England.
>
> There was idle capacity in New England, stemming from low load factor. (50:5778) [Emphasis supplied.]

He stated that an adjustment should be made for such idle capacity, since it had the effect of increasing the cost of providing service to the customers in the New England Zone. (59:5771) Drescher then explained that he had made "a rough study and * * * a rough adjustment" for this load factor situation in the New England Zone, amounting to $1,018,774. (50:5778; 59:7836) He further explained that this single adjustment had the effect of raising the allocated cost level for the New England Zone to a point in between the cost figure initially allocated to that zone and the higher G–5259 rate level; that, for the reasons outlined in his original direct testimony, he concluded that it was

> * * * not appropriate in my opinion to prescribe a rate reduction in two areas of a system at a time when you are prescribing a rate increase elsewhere and the company is in general need, or the company has an over-all general deficiency * * * (50:5779)

that accordingly in order to avoid this result, he used the G–5259 revenue levels as the basis for "the so-called rate making" in the New England and New York Zones.

The third stage in witness Drescher's explanation of the above adjustment occurred at a still later hearing session during the course of his cross-examination by Columbia counsel. At this point, he repeated his previous explanation with regard to the necessity of an adjustment to reflect the idle capacity stemming from the low load factor in the New England Zone. (59:5771) However, in response to a question by the Presiding Examiner as to whether, as a result of this single adjustment, the rates derived by him for the New York and New England Zones would in fact match the costs as allocated to those zones, Drescher replied:

> Well, essentially that is right. But I have to add something to it in order to make that about 100 percent correct. (59:7774)

He then proceeded, for the very first time, to explain that in addition to his $1,018,774 load factor adjustment for the New England Zone, he had also added a 3 percent adjustment for the New York Zone amounting to $768,192, and a 3 percent adjustment for the New England Zone amounting to $527,991, for the purpose of reflecting two other elements which the Commission in the *Northern Natural* zoning case, Op. No. 281, had discussed as elements affecting the cost of hauling gas—*i.e.*,

> The first one is the load distribution, that is, how is the load concentrated. And the second one is the volume of gas in the various markets of Tennessee because for any given length of pipeline, the larger the line, the lower the unit cost of gas, and the larger the quantity or volume of gas which you sell, it would mean that you would have a larger diameter pipe, which would result in lower over-all unit cost of gas. (59:7775–76)

He stated:

> * * * what I did was to assume that three percent would be a reasonable level to use to reflect these two other elements. (59:7775)

However, he added:

> But basically to me the element of distance is the primary element which is to be considered. (59:7776)

In Drescher's final capitulation, he explained that he had started out with the Staff's original allocated cost figure of $17,807,235, allocated to the New England Zone under the straight Mcf-mile method; that he had then added his first adjustment, for load factor, amounting to $1,018,774, producing a total of $18,826,009; that he had further added to this "a judgment adjustment * * * which brings it up to the revenue levels at 5259 rates." (59:7832) In response to further interrogation by the Presiding Examiner, Drescher then made the following further explanation:

> Now, it is true that, with respect to the adjustments other than the adjustment for the idle capacity stemming from low load factor, I had to use a judgment there, because I know of no method by which you can sit down and calculate in dollars and cents the quantity of dollars to be added to

the demand-mile commodity mile type of allocation in order to reflect the two factors.

* * * * * * *

THE WITNESS: It was a judgment, I backed into it, knowing what the figure was, I had the figure for the New England Zone with the adjustment for load factor, I knew what the revenue levels were at the 5259 rates, the difference was approximately a half million dollars, and it appeared to me, based upon judgment, that that represented a reasonable level, three percent is what the figure is, a reasonable level to attribute to that particular adjustment. (59:7833)

* * * * * * *

As I said, I simply do not know how to sit down and calculate in terms of dollars and cents the adjustment for two of the items, it has to be judgment, there is no way I know of—maybe a different engineer could do it, but I do not know how to do it. (59:7835)

A mere recital of the above difficulties, so frankly described by the Staff witness, is sufficient to indicate the unsatisfactory basis for these particular adjustments as calculated by the Staff. No showing whatsoever was made in the record as to the *method* used by witness Drescher to compute his adjustment in the amount of $1,018,774, based on the New England load factor situation. It is true that Drescher explained that he did have some work papers relating to this particular adjustment (50:5779–80), and at a later point he testified that his adjusted figure "is in a work paper distributed about ten days ago." (59:7826) The Staff brief makes a point of the fact that "This study was furnished to the parties and was not challenged by them." (initial brief, p. 29) However, if the Staff wishes to rely upon the load factor adjustment described above, the burden was on the Staff to explain and support, on the record, the method used for the derivation of that adjustment. In view of the total absence of such a showing by the Staff, there was nothing in the record for the parties to challenge, and we are left without any basis for understanding or evaluating the manner in which the Staff calculated this particular adjustment. It should further be noted that the New England intervenors did, in any event, vigorously challenge and disagree with the end result of this Staff calculation.

With respect to Drescher's second adjustment to reflect the elements of load distribution and volume of gas sold, the Staff witness admittedly found it impossible to calculate any measured amount for these adjustments, but instead simply assigned to them the additional dollars still required to bring the costs allocated to the New England and New York Zones up to the level of the G–5259 revenues for those zones. In this connection, it is of interest to note that the adjustment used by Drescher for the elements of load distribution and volume represented an identical, flat 3 percent adjustment in the case of both zones—despite the fact that load distribution and volume of sales for the New York Zone were considerably higher than for the New England Zone, and despite the fact that the small-diameter pipe factor which is characteristic of the New England Zone is not applicable to the New York Zone. It is also of interest to note that although load distribution and volume of sales for the New York Zone in the test year were *higher* than in the Central Zone, Drescher proposed no such adjustment for the Central Zone.

Under all these circumstances, it seems clear that the controlling factor determining the dollar level of the adjustments made by the Staff to the New England and New York Zones for the elements of load factor, load distribution, and volume of sales, was the Staff's determination that the costs initially allocated to those two zones should be raised to the G–5259 revenue levels. The Staff's

rationalization for this position was that Tennessee appeared to have an over-all general deficiency; that, without the adjustments referred to above, the Staff would have been in the position of recommending a rate reduction for the New England and New York Zones, while at the same time recommending a rate increase for the remaining four zones, and this was regarded as inappropriate. This rationale, however, is *not* persuasive. In the first place, it should be noted that the trial and determination of the dollar cost of service issues in the instant G–11980 proceeding has been deferred, by Commission order, to a later stage; that until such determination is made, there is no way to estimate whether the failure to make an adjustment in the amounts here proposed by the Staff would actually result in a rate *reduction* for the New England and New York Zones. Furthermore, the basic problem before us here is to determine which allocation method should be approved as the most reasonable and appropriate for the Tennessee system, in order to comply with the requirement of the Natural Gas Act that all rates and charges must be "just and reasonable", and that such rates and charges must not be "unduly discriminatory and preferential". (Secs. 4(a) and 5(a)) It is difficult to see how the hypothetical problem here envisaged by the Staff can properly be converted into a measuring-stick for the meeting of these criteria under the Natural Gas Act.

The Tennessee 50–50 Method

As noted above, the frank and revealing testimony by Staff witness Drescher indicates clearly how inherently difficult it is to attempt to calculate or measure the dollar level of adjustment which would be appropriate to reflect the unfavorable characteristics of the New England Zone. Under these circumstances, it seems particularly desirable that this problem should be resolved in a way which gives some recognition to the historical allocation pattern which has been in effect on the Tennessee system since the Docket G–1741 zoning settlement of 1952. It is accordingly concluded that the Tennessee allocation method, under which 50 percent of transmission costs are allocated on a mileage basis and 50 percent on the basis of historical revenue factors, represents the most satisfactory proposal for the resolution of this problem. It is further concluded that the Tennessee method effectively accomplishes the objective outlined above—*i.e.*, the adoption of an Mcf-mile approach, adjusted in some reasonable and limited manner to account for the unfavorable New England Zone characteristics, but exercising some reasonable restraint as to the burden to be imposed upon that zone.

In the first place, to the extent that 50 percent of the transmission costs under the Tennessee method are allocated under the historical G–5259 revenue pattern, which itself reflected a compromise split between the results flowing from the application of the straight Mcf-mile method and those under the zone-by-zone approach, the effect is to impose some penalty upon the New England Zone, as a rough factor giving recognition to the unfavorable characteristics referred to above. The penalty, however, is not as serious as that resulting under the Staff method. At the same time, it is of interest to note that the Tennessee method similarly allocates a lower cost than the Staff method to the Eastern Zone, which is the main source of supply for Columbia and Consolidated, advocates of the zone-gate method in this proceeding.

In addition, as noted above, there is something to be said in favor of the recognition which the Tennessee method gives to some extent, to the historical allocation pattern which has now been in effect on the Tennessee system since 1952. It is of interest to note, in this connection, that in the *Northern Natural* zoning case, Op. No. 281, the Commission in finally setting the zone *rates* made some modification from the precise result obtained by application of the Mcf-

mile method, in the direction of decreasing the amount of the zone rate differentials thus derived. The Commission exercised its discretion to make this modification in the *Northern Natural* case because of its desire to soften the impact of the departure from the historical rate patterns on that system. The dissenting opinion in that case stated:

> We recognize, furthermore, that, when departures from historical rate patterns are to be made, some softening of the impact may be appropriate.

Similarly, in the instant proceeding it appears that rates have now been collected over the entire Tennessee system for a period of eight years on the basis of the historical allocation pattern arrived at in the G–1741 zoning settlement of 1952; that Tennessee has expanded substantially, and its customers have grown and made large investments under such historic zone rate differentials, which have not varied significantly over the years. Under these circumstances, it is concluded that it makes sense to reflect that historical allocation pattern to some extent in the zone allocation levels which are now to be fixed for the future for the Tennessee system. It is important to bear in mind here that the Staff adjustments, described above, do *not* reflect or give weight to the historic rate *differentials*, or the historic *relationship* of zone rates on the Tennessee system. They simply charge to the New England and New York Zones the G–5259 revenue levels for those two zones. Under the Tennessee method, however, 50% of the transmission costs *are* allocated in such a way as to reflect and give weight to the historic rate *differentials* on the *entire* Tennessee system, as they existed under the G–5259 revenues.

The Tennessee allocation method will accordingly be adopted here, subject to certain modifications which will be dealt with at a later point.

At this point it will be of interest to set forth a tabulation showing the comparative costs allocated to each zone under each of the allocation methods presented in this proceeding. This will indicate at a glance the practical effect of the adoption of the Tennessee allocation method, as distinguished from the other suggested methods."[44]

[44] The data shown on this table is summarized from Tennessee Exh. 139. Costs allocated to each zone are based on Staff's total system cost of service, Exh. 92—pursuant to the Commission's order of May 6, 1959 requiring that all allocation studies should be presented, for the purpose of convenience, "in terms of the proposed cost of service heretofore served by the Staff upon the parties". It should be borne in mind, however, that non-zoning cost-of-service issues will not be determined until a later stage of the instant G–11980 proceeding, and accordingly no conclusions are here being drawn as to the merits of the Staff's total system cost of service.

	Columbia Interveners (Exh. 109)	Consolidated Interveners (Exh. 117)	New England Interveners (Exh. 101)	Staff (Exh. 97)	Tennessee (Exh. 116)[1]
Sales:					
Southern Zone 1	$23,014,151	$22,131,880	$23,182,434	$23,142,175	$22,683,241
Central Zone 2	17,067,755	16,891,574	17,533,137	17,361,176	17,461,793

[1] As will be developed at a later point, four modifications are being made in this decision to the Tennessee Exh. 116 cost allocation study—(a) the use of the staff's 3-day peak, instead of Tennessee's annual Mcf demands, in connection with the Mcf-mile allocation; (b) the rejection of the Tennessee proposal to switch from a 50% to a 75% factor in the design of its rate for the Seller's Option (SO) service; (c) the treatment of PSG service on a simple, crediting-out basis, as recommended in the Tennessee briefs, instead of under the method employed in Tennessee Exh. 116; and (d) the allocation of costs to the SS-5 service under the Exh. 65 segregation of facilities method, as recommended in the Tennessee briefs, instead of under the Exh. 116 method. These changes are not reflected in the allocated costs shown for the Tennessee method in the above tabulation, since those figures are obtained from Tennessee Exh. 116. Appendix Table B, set forth at the end of this decision, represents a recomputation of Tennessee's Exh. 116 in such a way as to reflect these changes or modifications, and it indicates the results which flow from these adjustments to the Tennessee allocation. It is to be borne in mind, however, that the computation with respect to the SS-5 service on Appendix Table B of necessity represents merely a short-hand, rough treatment, as explained in a footnote to the Appendix Table. Appendix Table C repeats the above tabulation of comparative allocated costs, substituting in the last column the adjusted costs allocated to each zone under the Tennessee method as here modified. These adjusted costs are taken from Appendix Table B.

We now turn to a discussion of certain subsidiary issues raised in this proceeding.

Transportation Service

One of the subsidiary issues raised here involves the allocation of transmission costs to transportation service. In rendering this service, under its Rate Schedules T-1, T-2, T-3, and T-4, Tennessee acts merely as a carrier, receiving gas owned by the customer at a specified location, and transporting it for the customer's account to a specified delivery point. As already noted above, in applying the Mcf mile allocation method to gas *sales*, Tennessee (as well as the Staff and the New England intervenors) determined and used the distance from the *average point of receipt* of its system gas supply to each point of delivery. However, with respect to *transportation gas* Tennessee (as well as the Staff and the New England intervenors) computed the mileage from the *actual point at which the gas was received* for the account of the particular transportation customer.

Columbia contends that this was improper; that it in effect creates four new zones for transportation deliveries, and disregards the fact that the transportation gas is commingled in the Tennessee pipeline and becomes a part of Tennessee's common gas supply. Columbia further argues that so long as zones exist on a pipeline, *all firm deliveries* within each zone should be treated alike in the allocation of transmission costs; that, accordingly, if deliveries of transportation gas take place in a particular zone, such deliveries should take that same zone rate (less the production component). This is, in fact, the manner in which transportation service is handled under Columbia's own zone-gate method.

Although it is, of course, true that gas picked up by Tennessee for delivery under a Transportation Service schedule may be physically commingled with gas owned by Tennessee itself, the Columbia argument overlooks the fact that the transportation service rendered by Tennessee, for which it is to be compensated, consists of the receipt of the customer's gas at a specified point and the delivery of the same volume of gas to the customer at a designated delivery point a certain number of miles away. In one way or another, whether directly or by displacement, Tennessee is required to haul the volume of gas contracted for, the relevant number of miles.

The unsoundness of the Columbia position becomes immediately evident if we consider a currently existing situation in which gas is transported for Tennessee by Transcontinental Gas Pipe Line Corporation for delivery to Public Service Electric and Gas Company, a Tennessee customer. Such gas is received by Transcontinental in New Jersey, and after a relatively short haul is redelivered in the same state. Under the Columbia theory, if the situation were reversed and Tennessee were in fact rendering such transportation service for Transcontinental, Tennessee would be required to charge for such transportation service the high New York Zone rate (less the production component), which would thus be based not upon the actual miles of haul under the transportation service contract, but rather upon mileage measured all the way from the average point of receipt of Tennessee's system gas supply to the New York Zone delivery points.

Such a position seems quite unreasonable, and it is here rejected.

The Iroquois Zone Boundary Complaint

Intervener, Iroquois Gas Corporation which takes most of its CD (contract demand) deliveries from Tennessee south of Buffalo, New York, at a point approximately 68 miles from the Pennsylvania-New York state line, complains that the use of the Pennsylvania-New York state boundary as a dividing line between the Northern and New York rate zones is unfair and discriminatory. Because of its location in the New York Zone, Iroquois is required to pay the New York Zone rate, involving a differential of 5.9¢ per Mcf above the current effective Tennessee rates for the Northern Zone. Iroquois complains that other New York Zone customers, located 300 miles downstream from Iroquois, are eligible for the same New York Zone rate, and that customers over 200 miles east of Iroquois, who happen to have their connections with Tennessee in the state of Pennsylvania, are eligible to buy gas at the lower Northern Zone rates.

Iroquois contends that the fairness of zone boundaries is as much a part of the zoning issue as the allocation of cost of service between accepted zones; that a rate differential predicated on an inequitable zone boundary is *ipso facto* discriminatory; that "a fair zone boundary would be located no farther west than a point immediately to the east of the junction of Tennessee's line with its Niagara spur, and might well be located as far east as Tennessee's proposed Station 237". The effect of such a zone boundary change, of course, would be to remove Iroquois from the New York Zone, and to make the lower Northern Zone rates applicable to the Iroquois purchases from Tennessee.

This Iroquois contention that it should pay the Northern Zone rate because it is near the Northern Zone, ignores the existence of zone boundaries and amounts to a claim of preferential treatment for a single customer within the New York Zone. The entire argument, of course, is basically an attack upon the use of a zoning system *per se*. Under the Mcf-mile method in general (and under any zoning system at all) one of the inherent characteristics is the necessity for the use of some averaging process under which costs are averaged for all customers in a given classification within a given zone. This averaging proc-

ess could only be avoided by assessing each individual point of sale and delivery with the total of the various cost components incurred in the rendering of service to that point. However, the Commission has held in the *Northern Natural* case, Op. No. 281, that

> * * * any attempt to arrive at such perfection would be not only delusory, but also impracticable and infeasible from both the management and regulatory point of view. (14 FPC 24–25)

Accordingly, so long as a method is employed involving the establishment of service zones, with rate differentials for each zone, there are bound to be situations of the very type emphasized by Iroquois. The New England interveners have realistically characterized this situation as follows:

> Obviously zone boundaries are merely lines, arbitrarily drawn for the sake of convenience, which separate an otherwise integrated pipeline operation into segments for purposes of rate design and administration. Although certain inequities might be eliminated by a realignment of Tennessee's present zone boundaries, no practical way has yet been devised to avoid completely the problems inherent in the zone boundary itself. A customer just a short distance downstream from a zone boundary can never be convinced that the boundary is properly located. * * * The Mcf-mile method cannot eliminate this inherent zone boundary problem but it can, and does, reduce the resulting inequities to a minimum by assuring as equitable and uniform treatment as is possible to all customers regardless of geographical location. (initial brief, p. 11)

It is noted that in spite of Iroquois' above complaint with respect to the existing zone boundaries, it did not in this proceeding present any proposal for a different set of zone boundaries. The fact is that none of the parties presented any such proposal, and the entire case was tried on the assumption that the only issue presented was as to the method to be adopted for the allocation of costs between the *existing* zones on the Tennessee system. This was made clear in the following colloquy at the hearing:

> PRESIDING EXAMINER: * * * I think it would be correct to state that not a single one of the parties in this proceeding has presented any proposal or recommendation whatsoever that the existing zone boundaries on the Tennessee system should be changed. I see Mr. Holland rising.
>
> Are you questioning the accuracy of my statement?
>
> Mr. HOLLAND:[45] No, not in this sense, Mr. Examiner. Our witness has not proposed change, but he has testimony in the record to indicate that the existing boundary between the Northern and New York Zones is inequitable.
>
> PRESIDING EXAMINER: But he does not suggest any change?
>
> Mr. HOLLAND: He is not specifically proposing a change. We do not have the burden of proof in this case, Tennessee does. And I think that any intervener is entitled to object to a particular zone boundary as being inequitable without having to suggest a specific alternative. I am sure that Mr. Nichols would be willing to do so, but I don't concede that that is our burden.
>
> PRESIDING EXAMINER: I don't want to get into a discussion here about burden of proof, but I don't think any of the parties, including Iroquois, expect the Examiner and the Commission, after reading some testimony

[45] Counsel for Iroquois.

suggesting that a certain zone boundary is inequitable, and the testimony which stops there, I don't think you expect the Examiner and the Commission to work out some new zone boundaries on the basis of a record which contains no evidence and no assistance for the Examiner and the Commission in making an allocation based on such new zone boundaries. So I won't have any difficulty with that, Mr. Holland.

But I go back to my previous statement, that none of the parties here has recommended any change in the existing zone boundaries. I am not interested in discussing why they have not done so. I think that one of the explanations is that it seems to have been generally assumed that the purpose of this proceeding was to determine the method under which Tennessee's costs should be allocated between the existing zones on the Tennessee system.

Now, if one of the parties had come in here and made a major presentation suggesting that the existing zone setup is wrong, and that it is not enough to talk about how we are going to allocate the costs between the existing zones, but we really ought to make a major restudy here of the whole problem of the existing zone boundaries on the Tennessee system, I am not suggesting that I would have concluded that it would be improper to go into that in this proceeding. But that is not the posture of this proceeding. (57:7516–18)

Iroquois contends that the testimony of its witness showed that "as a matter of economic history and of current gas usage that area in and around Buffalo which is served by Iroquois belongs with such other metropolitan districts along the northern fringe of the Appalachian fields as Cleveland, Pittsburgh and Erie." On the basis of this meager testimony, plus a vague reference to the general mass of data in the entire record with regard to "mileage, the location of spurs, customer connections and compressor stations and the volume of gas taken at each connection (Ex. 90, tables and map)",[46] plus a reference to "the economic history of the Buffalo region" given by its witness, Iroquois now contends that the existing zone boundary between the Northern and New York zones should be moved to a different point, as described above. In making this proposal, Iroquois expresses no view as to whether fairness would require a change in any of the other existing zone boundaries, taking the position that the burden of resolving any such broader problems does not rest upon itself.

It is concluded that it would not be fair or reasonable, where the existing zone boundaries have been so long established on the Tennessee system, to give serious consideration to such a proposal for a mere fragmented change in one of the zone boundaries. This is particularly true under the current circumstances where the problem has been here presented in such a superficial way, without directing any attention to the impact or significance of such a fragmentary change in relation to other operations on the Tennessee system, or in relation to the entire problem of allocating Tennessee's system-wide costs between all zones on its system. It is concluded that if any serious attention is to be focused on the matter of whether the existing zone boundaries on the Tennessee system are unreasonable or inequitable and should therefore be changed, such an inquiry will have to be made on the basis of a much more serious and comprehensive study of the broad problem than that provided by Iroquois in the instant proceeding.

[46] None of this data was presented in relation to or with a view to considering any possible change in the existing Tennessee zone boundaries.

Selection of Basis for Allocating Demand Costs—Three-Day Peak v. Billing Demands

This issue arises in connection with the allocation of demand costs between zones under both the Mcf-mile method and the zone-gate method. Under the Mcf-mile method, the allocation ratios for each zone are constructed on the basis of mileage to delivery points within the zone, times the demand volumes delivered therein. The question presented here is whether such demand volumes should be measured on the basis of deliveries during a three-day peak period, or on the basis of average billing demands. Similarly under the zone-gate method, in determining how demand costs "incurred" in a given zone should be distributed between that zone and the downstream zones, the allocation is made on the basis of the relative demand volumes delivered in each of such zones. Accordingly, the question again arises as to how such demand volumes should be measured.

Essentially, two bases for allocating demand costs have been proposed in this proceeding:

(1) The Staff and Consolidated advocate the use of the average of a 3-day peak period, although they differ as to the particular 3-day peak period to be employed. The Staff uses the average of the 3-day system sustained peak period for the winter of 1956–57, which occurred on January 16, 17, and 18, 1957—outside of the test period. (47:5376, 5381; Exh. 90, Sch. 1). Consolidated, on the other hand, uses the average of a 3-day system sustained peak which occurred on December 24, 25, and 26, 1956, inside the test period. (47:4978; Exh. 78, Sec. IV—15, *et seq.*). Although Columbia advocates the use of billing demands, rather than peak days, it contends that, in the event a 3-day peak should be adopted in this proceeding, "the January 16–18 peak should be used because it more accurately reflects the market requirements for which capacity was provided during the test year." (Initial brief, p. 93).

(2) Tennessee, the New England intervenors and Columbia advocate the use of test year average monthly billing demands. (47:5240, 5321–2; 68:8949). In the case of general service customers, the monthly billing demand represents the maximum delivery to such customers on any one day during the particular month and the previous eleven months. In the case of contract demand customers, the monthly billing demand represents Tennessee's contract obligation to such customer. (Item C). For service under flat rate schedules, a billing demand was imputed based upon the load factor inherent in such rate schedules.

Tennessee contends that the use of the average of the monthly billing demands is more realistic and appropriate for this purpose than employing the average of a 3-day peak period. It is contended that the billing demand method avoids incorrect results and distortions obtained by use of the 3-day peak period when a system is expanding during the test period. Tennessee contends, in this connection, that irrespective of which particular 3-day period is selected in this case, it produces incorrect results because during the test year Tennessee was expanding its system, with substantial facilities (authorized in Docket No. G–9448) being placed in service in the late fall of 1956. It is argued that although these facilities were actually in service for less than ¼ of the test period, the use of any 3-day peak occurring after such facilities were installed results in the allocation of annual demand costs as if those facilities had been in service for the entire period. It is further contended that the claimed distortion is particularly serious where the allocation is made on the basis of a peak period occurring outside the test period, immedi-

ately after the installation of substantial additional facilities. Tennessee witness Davis stated, in this connection, that it is inconsistent to compute a rate base for the test year on the basis of monthly averages of plant investment during the year, and to allocate demand costs on the basis of a 3-day peak period occurring at the end of the year or after the test period, when substantial additional facilities were installed. (68:8950–3). It is insisted that the use of billing demands, on the other hand, more properly reflects the growth of demands during the test year, and that this is accordingly consistent with the determination of the rate base which similarly reflects the growth of capacity during the year.

Although the Staff advocates the use of a 3-day peak method in this case, little attention is devoted to this particular issue in the Staff briefs. Its only discussion of the problem consists of six lines on page 32 of Staff's initial brief, as follows:

> Further, in respect of Tennessee's use of billing demands, the Staff would note that it is not aware of any rate case in recent years where the Commission has determined demand responsibility on a basis other than actual peak demands. In addition, the use of imputed demands for allocation of demand costs may in other instances effectuate a predetermination of the number of dollars to be allocated to a zone.[47]

The Staff position on this question was, however, developed in the testimony of its witness Blair. In explaining his reasons for employing the average of the 3-day system sustained peak period of January 16–18 1957, Blair testified:

> A. It was my belief that the peak selected for allocating demand cost should be the highest peak reached during the winter season at the end of the test year. When the test year is a calendar year such as is the situation in this present case, Docket G–11980, in which the test year is the calendar year 1956, I believe that the proper peak for allocating the demand costs for this test year is the highest peak attained on the transmission system during the winter at the end of that year, which happened on those three days that you mentioned in January of 1957. (49:5665–66).

Blair explained his rationale for using the highest peak in the winter season as follows:

> But I would like to point out that one of the reasons for using the highest peak in the winter season is to avoid giving customers who have poor load factors favorable treatment to which they are not entitled—I mean, if a lower peak is selected for allocating demand cost such as a peak during the month of December, which is generally a warmer month than January or February, the full peak of the low load factor customers taking large quantities of gas during cold weather as against the relatively small volumes which they take during the year on an average basis would not be properly reflected.
>
> If a warm period is selected for the peak instead of the real, genuine highest peak of the winter, the low load factor customers are not assessed a proper share of the demand costs. (49:5668–9).

In applying his 3-day peak method, Staff witness Blair made certain adjustments to the deliveries actually experienced during the peak period in order to meet the following objectives:

---

[47] This latter reference is to Tennessee's use of an imputed billing demand for sales made under the flat rate schedules.

> * * * to eliminate any sales during the three-day peak in January which were caused or generated by additional quantities which became effective in service agreements after the end of 1956.
>
> I also attempted to adjust the 3-day peak deliveries for any emergency conditions or obvious abnormalties which occurred during the 3-day period. (49:5657).

Consistent with this standard, Blair made a number of downward adjustments to the January 16–18 3-day peak delivery figures in Sched. No. 4 of his Exhibit 90 (explained in Sheets 11–18 of Sched. 4). In addition, for similar reasons, Staff Exhibit 97–A made two further adjustments—the Niagara transportation service adjustment and the Northern Zone Rate Sched. PSG–4 adjustment, which will be referred to shortly and which are discussed in detail at pp. 25–27 of Staff's initial brief. The basic criteria which governed the Staff in making all of these adjustments were described by Blair as follows:

> * * * to bring the allocation of demand cost and the allocation of commodity cost into reasonable relationship one to another, and closer to the relationship which would exist under more normal conditions. (49:5715).
>
> * * * * * * *
>
> * * * since the cost which we were developing was to be used as a basis for designing rates for use in the future, it appeared that the costs which we developed should be adjusted to reflect something reasonably close to expected normal operations in the future. (49:5713).
>
> * * * * * * *
>
> PRESIDING EXAMINER: In other words, what you are reaching for is what you would regard as a more representative relationship, more representative of what would pertain for the future as between peak volume and annual volume?
>
> The WITNESS: That is correct. We always have these adjustments which need to be made in rate cases, nearly always we have them. (49:5714).

As to the technique employed to accomplish this objective, Blair explained:

> * * * we have a choice of two methods of making the adjustment. One would be to normalize the sales during the test year, and the other one is to adjust downward the peak which is used for allocating demand cost. And it appears to me that the most practical method would be to adjust downward the peak used for allocating demand costs. (49:5712).

The Niagara transportation service adjustment, referred to above (made in Exhibit 97–A, Sched. No. 5, Sheet 2) involved a downward adjustment to the peak demand responsibilities for the T–2 transportation service to Niagara. Staff Exhibit 90 (Sched. 1, Column 5, Line 12) showed an actual 3-day peak of 68,537 Mcf for Rate Schedule T–2, Niagara Gas Transmission, Ltd. In Exhibit 97–A, Sched. 5, this actual peak figure was reduced to 40,000 Mcf. Blair explained that this Niagara transportation service was in a period of development during the test year, and that this represented an abnormal situation which would possibly not exist in the future; that accordingly the use of the actual, high 3-day peak for the January, 1957, peak period would have resulted in an excessive allocation of demand cost to that service, as compared to the allocation of commodity costs to the same service; that a downward adjustment to peak period deliveries was therefore made in order to bring the allocation of demand costs into a more reasonable relationship with the allocation of commodity costs, in order "to reflect operations which

would be more near normal or what might be expected to be normal in the future." (49:5705). He regarded this adjustment as similiar to the adjustment made in the situations involving a post-test year increase in the maximum daily quantity, resulting from the execution of a new service agreement.

It is thus clear that the Staff applied the 3-day peak method in a liberal and flexible manner, making a genuine effort to avoid the introduction or reflection of any distorted or abnormal situations. Tennessee, however, contends that the Staff adjustments do not go far enough, and that distortions can only be satisfactorily avoided by the use of average billing demands.

It is concluded that the Tennessee position on this issue has been completely answered and clearly disposed of by the Commission in its *El Paso* decision, Op. No. 326 and 326-A, *supra*. One of the controverted issues dealt with by the Commission in the *El Paso* rate proceeding was the selection of the peak period to be used for the allocation of demand costs between jurisdictional and non-jurisdictional sales. Although the test year employed in that case was the calendar year 1955, the Commission made its allocation on the basis of a Feb. 8–10, 1956, peak period, stating:

> In allocating demand costs, the presiding examiner approved El Paso's using the average of deliveries on February 1, 2, and 3, 1956, for the Texas, New Mexico, and Arizona customers, and the month's highest contract billing in the test period December 1955, for the California customers, rather than the coincident maximum use of El Paso's facilities measured by the actual peak deliveries on its system on February 8, 9, and 10, 1956, employed by the Staff. The use of the February 1, 2, and 3 peak is justified, in the Presiding Examiner's view, by the fact that sales to utility customers in Texas, New Mexico, and Arizona were substantially greater in this period, as well as by the fact that the higher priority utility sales were greater relative to industrial sales in the February 1, 2, and 3 period than in the February 8, 9, and 10 period. The presiding examiner said that he selected the December 1955, period for the Southern California customers because he thought deliveries to these companies were at a nearly 100% load factor, and the evidence would not support the use of the February peak-days, which produced a load factor for them of less than 100%.
>
> Staff counsel excepted to the presiding examiner's selection of peak days in allocating demand costs, *contending that the period to be utilized should include the actual system peak deliveries to all customers during the 1955–1956 heating season*, on February 8, 9, and 10, 1956, and averaging 2,167,188 Mcf; as contrasted to the presiding examiner's peak period, which represented average deliveries of only 2,022,751 Mcf on the system. Staff counsel argues that failure to utilize actual deliveries and allocate on the basis of maximum system demands permits some customers to escape without payment of demand costs properly allocable to them. Staff counsel contends further that the Commission rejected a similar dilution of maximum use for purposes of allocation in the Northern Natural case, 11 F.P.C. 123, 136–137, and that employment of selective peak periods violates fundamental allocation procedures and would unduly favor the California Companies. Southern Union Gas Company and the New Mexico Commission made similar contentions. We cannot adopt the presiding examiner's view on this point. To select a peak-day for one group of customers and another peak day for another group of customers is arbitrarily artificial and perhaps discriminatory. *To fairly allocate costs among various groups of customers taking at various load factors and under various conditions, it is*

essential to choose a maximum coincidental peak and apply it to all the customers. (22 FPC 260, at 279–280). [Emphasis supplied.]

Subsequently, in its order denying rehearing, Op. No. 326–A, the Commission disposed of this problem in even stronger and more compelling language, as follows:

> As we stated in Opinion No. 326, we chose the February 8–10, 1956 period because it represented the highest demand on El Paso's entire system for the 1955–1956 heating season. * * * What is significant as an equitable basis for allocating demand costs is the amount of gas each customer takes when the whole system is making maximum deliveries. This will determine the responsibility most clearly for El Paso's installed facilities as they are represented by demand costs. *In our view it is also immaterial that increased deliveries during the February 8–10 period were the result of an order allowing revised tariff sheets and service agreements to take effect or that the peak may have reflected compressor station capacity put in service in December of 1955.* The customers were making use of El Paso's facilities in proportion to their actual takes of gas during the peak period.
>
> * * * * * * *
>
> * * * Since as we have previously indicated this case was tried on the basis of establishing rates *prospectively*, it was necessary to go beyond the test year to reach the system peak for the winter heating season so as to arrive at rates representative of actual conditions just as we went beyond the test year to take into account certain wage increases. (22 FPC 666.)

In the *El Paso* case, *supra*, in explaining its selection and use of a 3-day peak period beyond the end of the test year the Commission stressed the fact that the purpose of that proceeding was to establish rates *prospectively*. Similarly, in the instant Tennessee case the task before the Commission is to determine which method should be adopted to allocate costs between zones on the Tennessee system *for the future*, and this will determine the resultant rate differentials which will be prescribed for each of the Tennessee zones for the future. Accordingly, it seems clear that the criteria laid down by the Commission in the *El Paso* case are equally applicable here; that our allocation of demand costs in this proceeding should therefore reflect the relative demand requirements between the zones at the time when the whole Tennessee system is making maximum deliveries; that the period of maximum deliveries is the 3-day period representing the highest demand on the system for the winter heating season commencing in the test year; that the Staff's 3-day peak period of January 16–18, 1957, meets this requirement. It is of interest to note that Tennessee witness Rogers testified in this connection:

> A. The January three-day sustained peak is more representative of the entire winter season which was accomplished with the facilities that existed in the year 1956, or at the end of 1956.
>
> Q. Taking into account what you stated, that your peak is apt to occur in January rather than in December?
>
> A. Yes, sir. (24:3266)

Tennessee itself notes in its initial brief (p. 46) "that the Commission has on numerous occasions in the past adopted the use of a 3-day peak in allocating demand costs," and notes further that the Commission recently adopted a 3-day peak *outside the test year* for the allocation of demand costs on the El Paso system. However, Tennessee attempts to distinguish such other cases on two grounds: (1) that the major problem in those cases was the allocation of

demand costs between jurisdictional and non-jurisdictional sales and transportation; (2) that in almost all instances the issue involved was the selection of one peak period over another, rather than the issue here presented of a 3-day peak vs. average billing demands.

The fact that the other cases cited involved an allocation of demand costs between jurisdictional and non-jurisdictional sales, and not an allocation of costs between zones, is a distinction without a difference, and has no real relevance to the problem we are here considering. The fact is that the same arguments and considerations advanced by Tennessee against the use of a three-day peak period in the instant proceeding were equally applicable to the problem of allocating demand costs between jurisdictional and non-jurisdictional sales in the *El Paso* case, *supra*, and were there rejected for reasons which are equally persuasive here. Further, it is of particular interest to note that in the *Northern Natural* zoning case, Op. No. 281, where the Commission adopted the Mcf-mile method for the allocation of costs between zones, demand miles were derived by multiplying *peak-day* volumes times mileage, as proposed by the Staff. The Commission stated:

> Transmission demand miles were computed by multiplying the mileage thus obtained for each delivery point by the three-day system peak average sales at each such point. (14 FPC 28).

The second claimed distinction in the cited cases is equally irrelevant. If anything, the fact stressed by Tennessee that in almost all the cited cases the issue raised was not the adoption of a 3-day peak vs. average billing demands, but merely which particular peak period should be selected, would seem merely to reflect the understanding by the parties that the Commission, as a matter of principle, is committed to the use of the three-day peak method in the absence of compelling circumstances to the contrary.

The Commission's decision in the *Alabama-Tennessee Natural Gas Company* case, Op. No. 226 (11 FPC 75), cited by Tennessee as supporting its position, clearly represented just such an exceptional situation. The Commission there stated:

> Where we have found a demand-commodity allocation appropriate, demand costs have been allocated on the basis of usage of the capacity of the system as measured by various peak period deliveries from such system. In the present proceeding, however, the company's witness and the Commission's staff witness on cost allocation agree that peak day or sustained peak usage for the test period under consideration would not be a proper basis for allocation of demand costs; the reasons being the developmental nature of the company's operations and the large amount of excess capacity on its system. * * *
>
> In short, the problem of allocating costs on this system is different from that with which we are faced generally.
>
> * * * * * * *
>
> We find on the facts of this case, that it is not appropriate to allocate any of the costs on a peak period demand basis, because of the relative insignificance of the peak loads on the company's system at this time. (11 FPC 84).

Because of the special and exceptional circumstances there noted, the Commission proceeded to make the allocation on the basis of the usage of system facilities for the test period as measured by the sum of the day-to-day deliveries, characterized as a volumetric basis. (11 FPC 82). However, it is of equal

importance to note that, in so doing, the Commission rejected a billing demand method proposed by the company, stating:

> The "Billing demand units" method of allocation proposed by the company's witnesses is inherently defective. (11 FPC 85).

No such exceptional or abnormal situation as that described in the *Alabama-Tennessee* case exists with respect to the Tennessee system in the instant proceeding.

It may finally be noted that a special problem is raised by Columbia (Initial brief, p. 89) with reference to the application of the three-day peak method in the instant proceeding. This problem relates to the fact that the Staff, in computing capacity responsibility on the basis of its three-day peak of January 16–18, 1957, included and reflected deliveries of 31,692 Mcf per day which were made by Tennessee to United Fuel Gas Company (a Columbia subsidiary) during this peak period under the Seller's Option (SO) rate schedule. Columbia contends that Tennessee elected to make these particular SO deliveries during a peak period as a matter of its own convenience, because certain of its customers were not taking their full contract quantities during such days; that United Fuel had no choice in this matter, since deliveries under the SO rate schedule are at the option of the seller; that Tennessee actually did not provide capacity for making such SO deliveries on the peak day; that accordingly, in the event the three-day peak method should be adopted here, such interruptible SO deliveries should be excluded in the computation of the three-day peak.

It is concluded that the Columbia contention must be rejected in view of the basic principle laid down by the Commission in the *El Paso* case, *supra*, that:

> To fairly allocate costs among various groups of customers taking at various load factors and under various conditions, it is essential to choose a maximum coincidental peak *and apply it to all the customers*." (Op. No. 326; 22 FPC 280; emphasis supplied).
>
> * * * * * * *
>
> What is significant as an equitable basis for allocating demand costs is the amount of gas each customer takes when the whole system is making maximum deliveries. * * * The customers were making use of El Paso's facilities *in proportion to their actual takes* of gas during the peak period. (Op. No. 326–A; 22 FPC 666) [Emphasis supplied.]

In the instant Tennessee case, the controlling fact is that whatever SO gas was actually delivered to United Fuel by Tennessee during the peak period was, of course, delivered over capacity in being, and United Fuel made use of Tennessee facilities in proportion to its actual takes of gas from Tennessee during that period, including its takes of SO gas.

It may further be noted that the problem here raised by Columbia is, in any event, no longer particularly significant in view of the fact that United Fuel in May 1959 converted from SO gas to firm gas purchases and is therefore no longer purchasing SO gas from Tennessee.[45] The sole impact of this issue would therefore lie in determining the proper level to be fixed for the SO rates from the beginning of the refund period on July 14, 1957, until United Fuel discontinued its purchase of SO gas in May, 1959. Columbia made no effort to indicate how the three-day peak method would be here applied in the event its position should be adopted with respect to the peak period SO deliveries to United Fuel, nor did Columbia present any calculation or estimate as to what dollar difference would result from making such an adjustment with respect to the limited period from July 14, 1957, until May, 1959. It may reasonably be assumed, however, that

[45] The facts in this connection will be developed in detail at a later point.

since the question here raised by Columbia relates only to a daily volume of 31,692 Mcf and is applicable only to a limited period, the dollar difference would in any event not be significant. Under these circumstances, the matter does not merit any more extended consideration in this decision.

Allocation of Costs to Storage Service (SS–5)

The problem here presented relates to the method to be adopted for the allocation of costs to the Tennessee Storage Service (SS–5), which is rendered solely in the New York Zone. Tennessee commenced rendering this service to Public Service Electric & Gas Company in November, 1956, under certificate authorization in Docket No. G–10804 (19 FPC 568). Subsequent to the test year, in Docket G–11107, Tennessee was authorized to render storage service to Brooklyn Union Gas Company and Long Island Lighting Company (21 FPC 70).

Although the total volumes (749,836 Mcf of annual deliveries) and revenue ($388,452) for the test year represent a relatively small proportion of the total delivery volumes and revenues for the New York Zone, a great deal of effort and time was devoted by the parties to this issue, both during the hearing and in the briefs. Despite all this effort, however, the parties have finally left the problem in a most unsatisfactory posture, as will be developed at length hereafter.

SS–5 gas is available only to a customer who also purchases gas from Tennessee under the CD–5 (Contract Demand) rate schedule (49:5751). The quantity of gas taken under the SS–5 rate schedule is specifically required to be cut-back from the customer's CD takes, since the Storage Service agreement provides that gas will be made available for storage by the reduction in Contract Demand deliveries to the Storage Service customer during the summer months. (Item C; 67: 8806–7) Tennessee is obligated to redeliver during the winter months an equivalent volume of gas at a specified maximum daily rate during a specified winter period, and the total annual volume which Tennessee is thus obligated to deliver under both the CD and SS–5 rate schedules cannot exceed the annual volume which Tennessee is obligated to deliver under the Contract Demand rate schedule. (68:8946) The SS–5 service accordingly simply represents the storing of a portion of the CD customer's gas in the summer for delivery during the following winter. Under the circumstances, since the SS–5 service is thus rendered from storage or by displacement because of the availability of storage (49:5750, 5758; 60:7858, 7882–3) it is not necessary for Tennessee to provide any additional pipeline capacity from the source of gas supply to the storage area in order to render this service. (67:8806–7) Tennessee does, however, provide additional pipeline capacity equal to the daily volume contracted for under the SS–5 rate schedule from the storage fields to the customer's delivery point, in order to deliver SS–5 volumes in the winter months in addition to the CD–5 volumes. (67:8807–8808)

Despite the facts with regard to the Storage Service, as outlined above, Columbia witness Nissel allocated costs to that service in exactly the same manner as to the CD–5 service—giving no consideration to the difference in the character of Storage Service as compared with Contract Demand service. He gave no recognition to the fact that no facilities are required for Storage Service from the source of gas supply to storage, or to the fact that the total annual volume which Tennessee is obligated to deliver under both the Contract Demand and SS–5 rate schedules cannot exceed the annual volume which Tennessee is obligated to deliver under the Contract Demand rate schedule alone. Similarly, Consolidated allocation witness Learned allocated cost to all deliveries in the New York Zone, including Storage Service, on the basis of the 3-day average peak and annual volumes without giving any consideration to the difference in

the character of storage service as compared with Contract Demand service—and his allocation thus, in effect, assigned the same cost to Storage Service as is assigned to Contract Demand service. (68:8944)

This approach, which assigns to Storage Service pipeline capacity from source of gas supply to the storage field, in addition to the capacity required for Contract Demand service, can only result in a duplicate charge for such capacity to the SS–5 customers. Staff witness Drescher correctly characterized this situation as follows:

> I am taking the position that the peaking capacity is complementary to the firm capacity purchased under a different rate schedule, and that in computing the dollars of cost which the customer is to pay you have to take into consideration what it is that he is being charged with in the way of costs under the firm rate as well as his obligation under the peaking capacity rate. You have to avoid any duplication of costs. He can't be charged twice for the same thing. (60:7943)

Along the same lines, New England intervenor witness Tippy testified:

> * * * a customer company which uses storage service in conjunction with its basic general or contract demand service has paid, in effect, through its demand charge, for the full capacity cost of facilities required for transmitting the storage service gas from the source to storage. This assumes, of course, that the contract demand customer backs off below his contract quantity in the summer months sufficiently to provide gas volumes at least equal to the storage service volumes he will require during the subsequent winter. Therefore, this general service or contract demand customer, with respect to the storage service gas, should be charged as to further capacity cost only for the further cost related to the transmitting of its storage gas from storage to the point of delivery beyond storage. The customer should not be charged twice either for the capacity or commodity cost of hauling the equivalent of the storage service gas from supply to storage. (62:8174–75)

It is true that both Consolidated and Columbia made adjustments calculated to reduce, to some extent, the costs which they thus assigned to the SS–5 service—but these adjustments do not cure the basic defect in their approach. Consolidated witness Chaney, in his recommended rate derivation method for the SS–5 service (68: 8943–44), assigned to that service per Mcf of contract demand, 65% of the demand cost assigned to Contract Demand service. (47: 5037–8; Exh. 107, p. 7c). As pointed out by Tennessee, the result may be reasonable but the method is fallacious. The 65% factor represents the ratio of storage service deliveries (18,815 Mcf) on the 3-day peak used by witness Learned (Dec. 24–26, 1956) to the monthly billing demand for that service (30,000 Mcf). However, it is merely by accident that on that particular 3-day peak the deliveries for this service were only 65% of the billing demand. Under normal circumstances, this accidental relationship would not have occurred. For example, the deliveries of storage service on the 3-day peak used by the Staff (Jan. 16–18, 1957) were 31,312 Mcf (Exh. 90, Sch. 4; 68:8944). If Chaney's method had been applied to the 1957 peak days used by the Staff, the resulting rate for SS–5 service would have been higher than that for Contract Demand service—obviously an incorrect result in view of the substantial difference in character of the two services.

Columbia witness Nissel's assignment of demand costs to SS–5 service was lower than that to Contract Demand service solely because of the credit given to the storage service under his capacity credit method—the capacity credit

arising from the charge made by Nissel to Seller's option (SO) deliveries in the New York Zone. This capacity credit, amounting to approximately $87,000,[49] resulted from the substantial volumes of SO gas delivered in the test period. (68:8946). The rate level for storage service under the Nissel method is thus made to depend upon the volume of Seller's Option sales—a result which seems clearly unsatisfactory.

Because of the controlling considerations outlined above with respect to the nature and characteristics of the Storage Service, Staff witness Drescher in his Exh. 97-A adjusted the Mcf-demand miles charged to the SS-5 service downward in such a way as to reflect only the miles of haul from storage to the delivery points at which the services are rendered, rather than the miles from the sources of system gas supply to those delivery points. (Sched. 5, Sheet 2). As a result of this adjustment, Drescher obtained an allocated cost of $423,544 for SS-5 service. (Sched. 2, Sheet 5).

While approving the Staff approach to this extent, both Tennessee and intervenor Brooklyn Union contend that two corrections are required with respect to the SS-5 storage service rate as determined by Staff witness Drescher. With respect to the first correction, it is contended that storage service was rendered only for the last two months of the test year; that despite this, witness Drescher in determining the demand cost assigned to Storage Service used the average of the 3-day peak occurring in January, 1957, in the total amount of 31,312 Mcf; that by using this 3-day peak, Drescher in effect assigned a demand cost to the SS-5 service which was equivalent to that which would be assigned if the service had been rendered for a full twelve month period. It is argued that if the cost is allocated to the service on a basis which represents a twelve month cost and revenues are only received from the service for the two months it was actually rndered during the test period, the deficiency in revenue is not due to any inadequacy in the rate, but instead is due to the inconsistency of using twelve months of cost as a basis of allocation and only the two months of actual revenue received by Tennessee. It is therefore suggested that the 3-day peak figure used by Drescher should be reduced to one-sixth of the actual 31,312 Mcf experience—which would result, according to Brooklyn Union's computation, in a reduction of approximately $185,709 in the demand cost of $217,021 which Drescher allocated to the SS-5 service. (Tennessee initial brief, p. 54; Brooklyn Union initial brief, pp. 18-19).

Some normalizing adjustment would appear to be required in this situation, on the basis of the same reasons and criteria which led Staff allocation witness Blair to make certain other adjustments to the January, 1957, 3-day peak delivery figures in his Exh. 90, Sched. 4—for example, the Niagara transportation service adjustment referred to at an earlier point in this decision. However, the indicated correction would not appear to be quite as severe as that suggested by Tennessee and Brooklyn Union. The objective here should be to insure that the relationship between actual SS-5 revenues for the test year 1956 and the peak-day volumes used for the allocation constitutes a normal, representative relationship which would be reasonably close to expected normal operations in the future. The proposed correction referred to above is a somewhat exaggerated one, because it assumes that in a normal year deliveries of SS-5 gas would take place over a full 12-month period. This assumption, however, ignores the facts with respect to Tennessee's delivery obligations under the SS-5 rate schedule. Under that schedule SS-5 gas is to be delivered by Tennessee during the 6-month period from November 1 of each year to May 1 of the following year, at a maximum daily rate of 30,000

[49] Brooklyn Union Gas Company initial brief, pp. 11-12.

Mcf, with a maximum delivery volume for the entire period of 2,700,000 Mcf.[50] This maximum delivery volume is defined in the contract as a quantity equal to ninety times the Daily Storage Quantity, which in turn is designated as the Winter Storage Quantity. Tennessee witness Davis testified:

> * * * the SS–5 rate provisions contemplate the delivery of the gas over a ninety day period. * * * (30:4094–5)[51]

It thus appears that the normal contract situation called for delivery over only a 6-month period, with a maximum delivery volume for such period of 2,700,000 Mcf. The total actual annual deliveries of SS–5 gas in the test year 1956, amounting to 749,836 Mcf, represented 27 percent of the contract maximum delivery volume of 2,700,000 Mcf. It would therefore appear, at the most, that the 3-day peak figure used by Staff witness Drescher should be reduced to a level no lower than 27 percent of the actual 31,312 Mcf experience, rather than to a level amounting to only one-sixth thereof, as proposed by Tennessee and Brooklyn Union.

In connection with their second suggested correction to the SS–5 storage service rate as determined by Staff witness Drescher, Tennessee and Brooklyn Union note that Drescher failed to assign to Storage Service any costs associated with the use of storage facilities, except for a relatively small portion (amounting to $5,124—60:7879) which was included in the transmission cost assigned to storage service. (68:8947) On this point, the Tennessee brief contents itself with the bare conclusion that—

> If the use of storage facilities were properly taken into account, this would tend to offset, although not completely, the over-allocation, mentioned above, resulting from the Staff's use of the 1957 peak period unadjusted. (initial brief, p. 54)

The Brooklyn Union brief carries the matter somewhat further, and concludes that if the use of storage facilities were properly taken into account this would require an upward adjustment to the Drescher SS–5 cost figure, amounting to approximately $92,000. (initial brief, p. 19) This figure was derived by multiplying the total 1956 volume of SS–5 gas, amounting to 749,411 Mcf, by a unit cost of service of top storage capacity at the level of 12.26¢ per Mcf. This 12.26¢ top storage cost figure was obtained from a statement showing estimated cost of service allocated to peaking service, filed by Tennessee on May 30, 1957 pursuant to an order issued by the Commission in the Tennessee certificate proceedings in Docket Nos. G–9331 and G–9448 (17 FPC 416). The said Tennessee cost statement was offered in evidence by Columbia as Exh. 66 in the instant proceeding, and was used by it as the basis for interrogation of Tennessee witness Davis.[52]

Columbia, however, contends that in the event the Staff approach is adopted for the allocation of costs to the SS–5 service, a much higher upward adjustment is required to the Drescher SS–5 cost figure in order to adequately reflect the use of storage facilities—*i.e.*, an adjustment amounting to $326,649. (Exh. 124, Sched. 1) In making this computation, Columbia witness Nissel commenced with a figure of $1,041,542 of underground storage facilities de-

[50] See Commission order of April 21, 1958 certificating SS–5 service in Docket G–10804, 19 FPC 568.

[51] Ninety days times the maximum daily rate of 30,000 Mcf produces the 2,700,000 Mcf maximum delivery volume figure for the entire delivery period.

[52] This Tennessee statement (Exh. 66) computed an estimated cost of storing gas in the Hebron Storage Field. The 12.26¢ per Mcf unit cost was arrived at by dividing a "total cost of service" of $2,451,320 by a top storage capacity of 20,000,000 Mcf. (Exh. 66, Sched. E)

mand cost, and $1,110,453 for underground storage facilities commodity costs—both verified by the Staff witnesses Blair and Drescher. (60:7873, 7876) He then proceeded to allocate the $1,041,542 demand cost figure between SS–5 service, PS–G service, and "other services" on the basis of the relative deliveries from underground storage to each such category of use during the 3-day January, 1957 peak period. The $1,110,453 commodity cost figure was allocated between these three categories of service on the basis of the relative annual volumes delivered to each from storage during the test year.

We are thus confronted with a wide disagreement between the parties as to the proper method to be adopted if the Drescher SS–5 cost figure is to be adjusted upward in order to more adequately reflect the use of storage facilities, and a wide disagreement as to the level of the required adjustment for this purpose. Neither the Tennessee nor the Brooklyn Union briefs comment upon the Columbia method, described above; Tennessee has not bothered to indicate what method it would employ; the Brooklyn Union brief merely embraces, in passing, the short-hand calculation referred to above, without discussion of any kind; and similarly the Columbia brief, with equal reticence, merely embraces, in passing, witness Nissel's shorthand calculation of Exh. 124, *supra*, without discussion of any kind. The Staff briefs contribute to this frustration by ignoring these problems completely. We are thus left without the benefit of the Staff's view as to whether either of the adjustments discussed above to the Drescher SS–5 cost figure are in fact required and, if so, how they should properly be computed.

In the context of this most unsatisfactory situation, we turn next to a consideration of Tennessee's current recommendation as to a method to be employed for the allocation of cost to the SS–5 service. In its initial brief (p. 55) Tennessee directs attention to the method of allocation used for Storage Service in the cost allocation which it submitted in September, 1956 in support of its proposed initial rate for this service, in connection with its application for authorization to render such service in Docket No. G–10804. The said cost allocation was set forth in a Supplement to Application, and an attached Exhibit X3, filed by Tennessee in that proceeding. In the course of the instant hearing, Columbia offered this Supplement and the attached cost allocation exhibit in evidence as Exh. 65, and used it as a basis for cross-examination of Tennessee witness Davis. Tennessee now contends that the method of allocation set forth in such Exh. 65 is a reasonable method for determining the portion of the total cost of service which Storage Service should bear, and recommends that this method be here approved. (Initial brief, p. 55; p. 65, proposed finding No. 15)

The Exh. 65 allocation method was, in fact, used by Tennessee for the SS–5 allocation in its original rate filing in the instant proceeding. (3:358; 30:4092) However, in its allocation exhibits presented in the instant proceeding (Exhs. 22, 51 and 116) Tennessee allocated SS–5 costs along with all other transmission costs, under its general 50% historical revenue pattern, 50% Mcf-mile method. (30:4100–3) The final phase of the Tennessee position on this problem occurred in its initial brief, where it informs us (footnote 57, p. 55):

> It is to be noted that in the preparation of Exhibits 22, 51 and 116, transmission costs were inadvertently allocated to Storage Service from source of gas supply to the storage field. On the other hand, insufficient costs related to storage facilities were allocated to this service in those exhibits.[53]

[53] These two "inadvertent errors" constitute the two corrections which Tennessee contends are now required with respect to the SS–5 storage service rate as determined by Staff witness Drescher.

> The effect on the over-all allocation of costs to zones is *de minimus* because the amount of Storage Service rendered in 1956 (749,000 Mcf) was comparatively insignificant. Nevertheless, for rate derivation purposes, the allocation in Exhibits 22, 51 and 116 is unsuitable for Storage Service. On the other hand, Exhibit 65 is a reasonable basis of allocation for this purpose.

Tennessee's Exh. 116 allocation to SS–5 service (based on the Staff's overall cost-of-service) produced a Storage Service cost figure of $399,107. (Exh. 116, col. 22, line 35) Revenues for SS–5 service at Tennessee's filed G–11980 rates, computed under the Exh. 65 allocation method, amounted to $388,452. (Exh. 116, col. 23, line 35)[54]

The Exh. 65 method was succinctly characterized at pages 1 and 2 of Exh. X3 to the G–10804 supplement, as follows:

> The rendition of this service requires the use of storage facilities and transmission facilities from the storage area to the point of delivery of gas. Accordingly, this cost of service determination is based upon those facilities which will be specifically used in rendering this service with no costs included with respect to other system facilities.
>
> * * * * * * *
>
> The proposed charges for this storage service are based upon a two-part rate composed of a demand charge and commodity charge. The cost allocation herein set forth is related solely to the demand charge in the proposed rate since the demand charge determines the additional revenue which Applicant will receive as consideration for rendering this proposed storage service. The commodity charge in the proposed rate schedule for gas put in storage is identical to and in lieu of the commodity charge contained in Rate Schedule CD–5 under which Public Service and Brooklyn Union each receive contract demand gas service. Thus, the collection of the 28¢ per MCF commodity charge under the storage service schedule upon delivery of gas substitutes for the same commodity charge which would otherwise have been collected under the CD–5 Rate Schedule had the gas been delivered and not put into storage.

At page 4 of the said Exh. X3, cost of service associated with the storage facilities was allocated between Storage Service and all other service on a volumetric basis, reflecting the ratio of top storage capacity required for Storage Service to total available top storage capacity. Tennessee explains:

> In other words, Tennessee's allocation of storage costs to this service is predicated on the concept that a storage field is the same as a warehouse with certain space available. Accordingly, the portion of the space required for the Storage Service is allocated to such service (Tr. 4094). (initial brief, p. 55)

Cost of service associated with natural gas transmission lines from the storage area to the point of delivery of gas was allocated to the proposed storage service 50 percent on the basis of the ratio of maximum daily volumes of storage service gas transported over such lines, to the maximum daily volumes of all other gas so transported; and 50 percent on the basis of the ratio of annual volumes of storage service gas so transported, to the annual volumes of all other gas. (Exh. X3, pp. 5 and 6)

---

[54] The $388,452 figure, however, is based upon Tennessee's claimed over-all cost-of-service, and therefore reflects Tennessee's proposed 6.6% rate of return and 3.5% depreciation rate.

Tennessee notes initial brief, p. 55) that, since the cost allocation in Exh. 65 was prepared in connection with its certificate application in Docket G–10804, the allocation of transmission costs from storage to the delivery points for this special service was based on a segregation of the facilities used in rendering such service, and therefore, in this respect, departs from Tennessee's general zone application approach in this proceeding. However, Tennessee takes the posiition that "for the limited purpose of allocating costs *for this special type of service*" this constitutes a reasonable method. Brooklyn Union also supports the Exh. 65 method, stating that it—

> properly recognizes that the storage service is a segregated service and is in accordance with the physcial facts on which the service is rendered. It supports the form of the rate he[55] has determined and reflects the difference in the character of storage service as contrasted to contract demand service. (initial brief, p. 22)

The Columbia reply brief makes a strong attack upon the Tennessee proposal that the Exh. 65 method should be adopted in this proceeding. It is pointed out that Exh. 65 represented only a computation by Tennessee of *estimated* cost for SS–5 service, submitted in the G–10804 certificate proceeding; that it was prepared in 1956 based on estimated plant "to be as of April 1957"; that it reflected an average net underground storage plant (including three storage pools) of $35,265,000, or more than twice the test-year actual net investment (including only one storage pool) of 17 million dollars; that it estimated total top storage capacity to be 34,840,000 Mcf, whereas actual storage deliveries during the test year were only 6,955,143 Mcf; that Exh. 65 was accordingly unrelated to "actual" operating facts.

It must be remembered, however, that it is not our objective at this particular stage of the instant proceeding to calculate a dollar cost-of-service figure for the SS–5 service, or to design a rate for that service. The question presented here is merely whether the Exh. 65 *method* should be approved as an appropriate approach for the allocation of costs to the SS–5 service. At a later stage of the G–11980 proceeding, when attention is directed to completing the trial and determination of the dollar cost-of-service problems, it would become possible and appropriate to apply the Exh. 65 allocation *method* to the "actual operating facts" with respect to the existing storage facilities. A precise computation could then be made of the dollar costs to be assigned to the SS–5 service under that method, using the then-approved rate of return and depreciation rate for Tennessee, together with the then-approved commodity rate for the New York Zone.

Columbia further contends that the Exh. 65 method is defective in that it allocates underground storage facility costs on a purely volume basis, even though underground storage serves a demand function. There is, of course, no question that storage service does serve a demand function, in the sense that such gas is taken during periods of peak requirements, to supplement CD–5 gas. However, it is important to note here that the entire cost allocation study set forth in Exh. 65 is actually directed solely and exclusively toward developing the *demand charge* in the proposed SS–5 rate; and that all storage gas, whether under the SS–5 rate schedule or otherwise, is delivered during peak requirement periods. Under these circumstances, there does not appear to be any compelling reason for allocating storage facility costs between the different uses of such facilities on any other basis than the simple, straight volumetric basis. The use of the storage facilities is not analogous to the

[55] Tennessee witness Davis.

situation contemplated by the *Atlantic Seaboard* classification formula, and it does not present the same problem.

Columbia complains that, although Tennessee recognizes that the storage program is for the benefit of all customers in all zones, the effect of the Exh. 65 approach is to segregate the benefits of the low-cost underground storage facilities for the use of certain specific customers, and to deprive other customers of their pro rata benefit of such low-cost facilities. The gist of this argument is that SS–5 customers should not be allowed to benefit to such a degree from the low-cost storage operation, simply because of the geographical fact that they are located downstream from storage. This complaint, however, ignores the fact that under the Mcf-mile method, as adopted in this proceeding, the New York and New England Zones, because they are located at the far end of the Tennessee system, are required to pay a higher level of rates than any of the other zones. The New York and New England Zones are thus required to shoulder the *burden* of their greater distance from the common source of supply, and it is not contended by any of the parties that the cost impact of their unfavorable geographical situation in this respect should be shared by the other zones on the Tennessee system. Under the circumstances, it seems only reasonable and fair that the SS–5 customers in the New York Zone should similarly be allowed to enjoy the *benefits* flowing from the fact that they are geographically located downstream from the storage fields, and from the fact that they themselves made SS–5 gas available by cutting back on their takes from Tennessee during the off-peak months.

Columbia finally complains that the Exh. 65 method is completely at odds with the method which Tennessee advocated on the record in this proceeding, and that Tennessee witness Davis

> conveniently avoided a substantial amount of cross-examination by waiting until the record was closed to change his allocation method. (reply brief, page 24)

The fact is, however, that Columbia counsel interrogated witness Davis at length with regard to the Exh. 65 allocation method, at two different stages of the hearing (30: 4091–4109, and 68: 8973–78); and Davis at an early stage of the hearing expressed his approval of the Exh. 65 method, as follows:

> * * * in my opinion, that is a reasonable basis for determining the cost of service for that character of service. (30: 4105)

Curiously, the Staff's reply brief makes no comment whatsoever with respect to Tennessee's recommended Exh. 65 allocation method, but confines itself to a further attack upon Columbia's basic approach to the Storage Service allocation under its zone-gate, capacity-credit method. We are therefore left without the benefit of the Staff's view as to the merits of the Exh. 65 approach to this problem. The Consolidated briefs ignore the SS–5 issue completely.

Under all the circumstances set forth above, and bearing in mind that our only objective at this stage is to select the *method* to be adopted for the allocation of costs to the SS–5 service, it is concluded that the Exh. 65 method is a reasonable method for determining the portion of the total cost of service which Storage Service should bear, and that it constitutes the most satisfactory available method for the treatment of his problem.

Allocation of Costs to Peak Service (PSG)

The PSG service issue involves the same problems, the same conflicting positions, and is subject to the same analysis as the SS–5 service issue which has just been discussed at length—and a large portion of that discussion is equally applicable here.

The PSG issue is mainly a New England Zone problem, virtually all of the Peak Service gas having been sold in New England in the test year.[56] PSG service has been rendered by Tennessee on a year-to-year basis, under temporary certificates, since December, 1955, when the first such temporary authorization was issued by the Commission in Docket G–9331, for service terminating in April, 1956. Subsequently, in Docket G–9448 Tennessee obtained authority to render Peak Service on a temporary basis during the 1956–57 winter season terminating on April 30, 1957. (15 FPC 414) During both of these winter seasons PSG gas was sold at a flat rate of 70 cents per Mcf. In Docket G–11107 Tennessee sought to render Peak Service on a permanent basis commencing with the 1957–58 winter season under a permanent Peak Service rate schedule providing for a rate of 90 cents per Mcf, with a minimum bill provision of $12.00 per Mcf of maximum contract quantity.[57] While this proceeding was pending, the Commission granted Tennessee temporary authority by letter of October 14, 1957 to render such service at the 90 cents rate for the 1957–58 winter season, and again in Docket G–15826 granted further temporary authority to render Peak Service for the 1958–59 winter season.

Finally, in Docket G–11107 the Commission issued its order of January 28, 1959 denying Tennessee the requested *permanent* authority to render Peak Service. (21 FPC 70) However, although concluding that permanent service should not be authorized, the Commission held that the temporary authorizations were supported and justified, and authorized Tennessee to continue rendering Peak Service for the remainder of the 1958–59 winter season, stating:

> Thus in this very case, we cannot find the permanent certification of Tennessee's proposed Peak Service supportable, as discussed hereinafter. However, the temporary grant of such a service for the current heating season is clearly so. Although we cannot know on this record what additional facilities would be required to be built in the future to render permanent service, some would unquestionably be necessary. Nor can the extent of Tennessee's ultimate supply and other obligations for such a service be fixed with exactness on this record. And in the case of a permanent certificate, we would be required to consider such matters as the financibility of the necessary new facilities, the adequacy of gas supply, and the like. *In the case of the temporary short-term authorization, however, the evidence is clear that permission for it could be—and in Docket No. G–15826 was—properly granted without the necessity for constructing any new facilities whatever, or securing new volumes of gas supply. That service is being rendered by existing facilities and the volumes of gas in storage on Tennessee's system, which volumes were in excess of the needs for the winter. Thus, if these sales were not made, unused capacity would exist on the system, and gas would be kept in storage which could and should be sold for use by customers.* The severity of the current winter indicates how vitally necessary this service was and continues to be. Thus in granting the temporary authorization, we need not have recourse to the criteria applicable in deciding a request for a permanent certificate. And since no additional facilities or gas supply were necessary to grant the temporary

[56] A *de minimis* volume of PSG gas was also sold in the Northern Zone.

[57] In Docket G–11107 Tennessee submitted a cost allocation study in support of the 90 cent rate, identified as Exh. 339 in that proceeding. In the course of the instant hearing, Columbia offered this allocation study in evidence as Exh. 67, and used it as a basis for cross-examination of Tennessee witness Davis. This Exh. 67 allocation method, which was the basis for the derivation of the 90 cents per Mcf Peak Service rate, was similar (although with some exceptions) to the Exh. 65 allocation method advocated by Tennessee for the SS–5 allocation, which has been adopted here.

> authority, the grant of such authority, which otherwise serves important public interests, does not and cannot injure any of Tennessee's other customers or any other segment of the public. (21 FPC 76–7) [Emphasis supplied.]

The Commission then proceeded in its G–11107 order to direct that Tennessee

> * * * include as a part of its next major certificate application a firm proposal for the full incorporation of its underground storage facilities into the over-all operation of its pipeline system, and for the full utilization of its storage capabilities and the rendition of its services on a fixed and certain basis in a manner which will secure the maximum benefits of the storage equitably to all its customers. (21 FPC 81)

Pursuant to this directive, Tennessee subsequently filed a new certificate application in Docket G–18877, on July 1, 1959, relating to proposed utilization of its underground storage facilities. For reasons which need not be gone into here this proposal was not carried forward, and on May 2, 1960 Tennessee filed a new comprehensive proposal in Docket CP60–94. Subsequently, by letter dated August 25, 1960 and by an Amendment to Application in that docket, Tennessee has requested that processing of such application be delayed until it can re-evaluate its proposal in the light of the Commission's interim rate decision of August 9, 1960 in Docket G–19983. In the meantime, the practice has been continued of rendering peak service to the New England zone on a year-to-year basis. By order issued on Dec. 16, 1959 in Docket G–20096, the Commission authorized the delivery of peak service gas on a temporary basis for the period ending October 31, 1960, as "interim G–6 service" billed under the G–6 rate; and by order issued November 30, 1960 in Docket CP61–74, such interim service was again temporarily authorized for the period of one year from that date.

It thus appears that the Commission's G–11107 directive—*i.e.*, the development of a comprehensive new plan for the full utilization of the Tennessee underground storage facilities, designed, among other things, to replace the Peak Service for which permanent certification was denied in Docket G–11107—has still not been achieved and remains subject to still further proceedings. The question presented here is how best the Peak Service problem may be handled in the instant proceeding, in the light of the circumstances just outlined.

The PSG Rate Schedule provided

> that peaking service is available only to buyers under the General Service Rate Schedule for annual periods commencing on May 1st of each year, provided such buyers increase their General Service billing demands in effect on the preceding April 30th by 10 percent in the case of buyers whose General Service billing demand is less than 90 percent of Tennessee's maximum daily obligation to deliver, or 5 percent in the instances where the billing demand exceeds 90 percent. (21 FPC 80, footnote 14)

Tennessee states:

> Peak Service fulfilled three purposes. First, it provided the New England area with a much needed winter service which could compete with gas manufactured for peak shaving at a savings in cost. Secondly, because the ratchet provision for such service required customers to increase their billing demand for General Service by a specified percentage above that applicable in the previous year, the service provided a stimulus for load development. Finally, since the service was made available through existing facilities, it provided Tennessee with an additional source of revenues which otherwise would not have been available (Tr. 2582–4, 2599, 2600, 2614). (initial brief, p. 56)

The characteristics of the PSG service are in many ways similar to those of the SS–5 service, as described above. The PSG service was available only to customers also purchasing gas from Tennessee under the General Service (G) rate schedule, and PSG service was accordingly complementary to the firm capacity purchased under the G schedule. Because of space heating load characteristics, buyers under the G Rate Schedule released quantities of gas during the off-peak months, and this released gas (whether directly or by displacement) was made available to such customers under the PSG rate schedule as peaking capacity during the following winter. (49:5751) In addition, just as in the case of the SS–5 service, it is equally pertinent to note with respect to the PSG service that such sales were rendered either directly from storage or by displacement because of the existence of storage, that no main line capacity was installed by Tennessee for injection of gas into storage, and that Tennessee's main line facilities upstream from storage have an installed capacity equal only to the *average* daily requirements of the General Service customers.

Because of these controlling considerations, and in order to avoid charging PSG customers twice for the same capacity, Staff witness Drescher in his Exh. 97–A adjusted the Mcf-demand miles charged to the PSG service downward in such a way as to reflect only the miles of haul from storage to the delivery points at which the services were rendered, rather than the miles from the sources of system supply to those delivery points. (Sched. 5, Sheet 2) As a result of this adjustment, Drescher obtained an allocated cost of $728,454 for the PSG service in the New England Zone—translated into $1.15 per Mcf on a unit cost basis. (Exh. 97–A, Sched. 2, Sheet 6) Drescher testified that he had made a full allocation of costs to the PSG service; that although he recognized that the PSG service had continued for a number of years under annual rate schedules which had been cancelled at the end of each season, he had not treated it as a temporary service and did not use an incremental approach, because of the fact that PSG gas had already been made available for five or six years. (60:7915–16)

Despite the controlling considerations with regard to the PSG service, as outlined above, both Columbia and Consolidated allocated costs to that service under their general zone-gate approach, on the same basis as to any other on-peak service, making no distinction between Peak Service and Tennessee's regular firm services. This approach is subject to the same deficiencies which have already been pointed out with respect to application of the zone-gate approach to the SS–5 service, *supra*.[88] Under this method, Columbia obtained an allocated average cost of $3.45 per Mcf for Peak Service (Exh. 109, col. 9, line 32), as compared with the actual rate of 70¢ per Mcf which was in effect for PSG service in 1956, and the 90 cents rate which was in effect during the 1957–58 and 1958–59 winter seasons. During those last two winter seasons Peak Service sales amounted to a total of 4,394,564 Mcf. Under Columbia's formula, the cost allocated to the total Peak Service sales during that period would amount to $15,161,246, whereas the actual revenues collected were only $3,955,108. (68:8953–54)

Entirely apart from the basic deficiencies in the application of the zone-gate approach to the PSG service, it seems inherently unrealistic and unreasonable to allocate to a service which did not require the construction of additional

[88] Consolidated witness Chaney, in his rate derivation exhibit (Exh. 107, pp. 8a–8c), made an adjustment to this Peak Service allocation, by deducting the approximate amount of revenues actually received from Peak Service from the total cost of service allocated to the New England Zone, and then deriving a rate for that zone to recover the balance of the New England Zone cost. (68:8954–55) This adjustment, however, did not cure the basic error, since it merely had the effect of shifting a portion of the costs initially allocated to Peak Service to the General Service sales made in the same zone.

facilities, and which was rendered on a year-to-year basis under the circumstances outlined above, costs of the magnitude assigned to this service by Columbia witness Nissel. This seems particularly so in view of the fact that Peak Service gas replaced peak shaving gas and provided an additional source of revenues which otherwise might not have been available. (68:8954) It seems highly doubtful that Tennessee could ever have sold Peak Service at a rate of $3.45 per Mcf. (Item BB; 68:8912–14) The fact is that even with Peak Service available certain of Tennessee's customers were manufacturing some gas for peak shaving purposes. (19:2617)

With respect to the Staff approach, Tennessee here contends, as it did in the case of SS–5 service, that even if that method were here adopted for the Peak Service allocation, two corrections would be required: (1) because Staff's use of a peak period subsequent to the test year for allocating demand costs allegedly results in an over-allocation of demand costs to Peak Service; (2) because the Staff allocated only $10,643 of underground storage facilities cost to PSG service (60:7879). Tennessee, however, fails to indicate the magnitude of any such claimed adjustments, or how they should be computed.

In its own allocation exhibits in the instant proceeding, Tennessee handled the PSG allocation in the same way as the SS–5 service—*i.e.*, PSG costs were allocated along with all other transmission costs, under Tennessee's general 50% historical revenue pattern, 50% Mcf-mile method (Exh. 22, 51 and 116), producing a PSG cost figure of $449,551, based on the Staff's over-all cost-of-service. (Exh. 116, col. 22, line 43)

However, in its briefs filed at the end of this proceeding Tennessee now urges that the PSG problem be handled in quite a different manner—*i.e.*, by simply crediting the cost of service with the revenues received from the PSG service during the refund period, at the 90¢ per Mcf rate. In taking this position, Tennessee agrees that if Peak Service were a regular, long-term, special service for which facilities were constructed, there would be justification for treating it in the same manner as the other special long-term services in the allocation of costs. However, Tennessee contends that this is clearly not the case; that actually no additional facilities were constructed to render Peak Service, and there was no increase in costs to the other customers by virtue of the rendition of that service; that the incremental cost of such service was, in fact, substantially less than the revenues received; that Peak Service was rendered in competition with Peak Service gas, and if it had been eliminated there actually would have been no revenues at all to credit to the overall cost of service; that the service clearly would not have been purchased at any such rate as the cost allocated thereto by Columbia and Consolidated. Tennessee contends that under these circumstances it would be unfair and unreasonable to allocate costs to Peak Service in excess of the revenues actually received at the 90¢ rate, thus compelling Tennessee to suffer a monetary loss by virtue of its rendition of a service "that helped all and hurt none." In addition, Tennessee suggests that there is a substantial legal question as to whether costs can be allocated to this service in excess of revenues received, if the result is to deprive it of part of its cost of service. It contends that under the instant situation, where the Commission has denied permament authority to render Peak Service and where no additional capital investment was required to render the service, the standard practice should be to simply eliminate the revenues and the incremental cost of service, so as to normalize the test year operations. (initial brief, pp. 60–62)

In our attempts to resolve the PSG problem, we are confronted with a situation similar to that which was encountered with respect to the SS–5 service—in that despite the great effort and time devoted by the parties to the PSG issue, both during the hearing and in their briefs, the problem has nevertheless

been left in a most unsatisfactory posture. Among other things, the Staff reply brief makes no comment whatsoever upon the Tennessee proposal that the PSG problem should be disposed of by simply crediting the cost of service with the revenues received from such service during the refund period. We are thus left without the benefit of the Staff's view as to the merits of this approach to the PSG problem.

In determining the most appropriate method for the disposition of the PSG problem in this proceeding, the central fact to be borne in mind is that we are dealing here with a stop-gap situation—in the sense that the Commission in its G–11107 order of January, 1959 rejected Tennessee's request for permanent authorization for PSG service, and instead directed that Tennessee come in with

> a firm proposal for the full incorporation of its underground storage facilities into the over-all operation of its pipeline system, and for the full utilization of its storage capabilities and the rendition of its services on a fixed and certain basis in a manner which will secure the maximum benefits of the storage equitably to all its customers. (21 FPC 81)

The Commission went on to say, further:

> We think that this would possibly entail, with respect to Tennessee's Peak Service, the development of a storage service generally comparable to that Tennessee presently renders in New York.
>
> * * * * * * *
>
> Of course, the rates, terms and conditions of this service would have to be designed by Tennessee responsive to the New England market. While the rates should be fair and nondiscriminatory, they should be sufficiently low to assure the availability of the service in helping to meet the needs heretofore met by the Peak Service denied by this order. (21 FPC 81)

When Tennessee finally presents its plan for such a new service, pursuant to the above directive, and when that plan is passed upon by the Commission, it will become necessary and appropriate at that time to determine how the rate should be fixed for such service—and that determination will be made in the light of a detailed analysis and exploration of the cost characteristics of such proposed new service. It seems obvious that under these circumstances a determination of the costs to be allocated to the PSG service in the instant proceeding cannot be useful or meaningful with respect to Tennessee's future operations.

In its G–11107 decision the Commission, in referring to the 90¢ rate which it had previously authorized for Peak Service for the 1958–59 heating season on a temporary basis, stated:

> The inadequacies of this record are such as to preclude a finding that the rate for this service is insufficient to pay the costs properly allocable thereto, insofar as this question is material to the issuance of a temporary certificate. *Actually, this question is material primarily with respect to the issuance of the permanent, not the temporary authorization.* (21 FPC 77) [Emphasis supplied.]

The Commission further concluded:

> Since there has been no firm plan for utilization of Tennessee's storage, the difficulties of properly assigning the costs of the storage facilities to any particular service *are almost insuperable.* (21 FPC 81) [Emphasis supplied.]

In the light of the above conclusions, so strongly expressed by the Commission with respect to the Peak Service problem in its G–11107 decision, it is

difficult to believe that the Commission contemplated that this complex zoning case should be used as the vehicle for a full-scale resolution of the "almost insuperable" problem of determining what costs should properly be assigned to the PSG service—bearing in mind that it was rendered only as a year-to-year temporary service, and that it has now been replaced by still another temporary expedient, namely an "interim G–6 service" billed under the G–6 rate. Furthermore, if such an attempt *were* made in the instant proceeding, this in itself might well have the effect of circumscribing and limiting the ability of Tennessee to carry out the Commission's G–11107 directive that it come in with a proposed new plan for the fuller utilization of its underground storage facilities. For example, if the Columbia approach were here adopted for the PSG service, Tennessee could thereafter only make itself whole by substituting in place of the now-discontinued PSG service a new type of peaking service for the New England Zone, to which would be assigned the same high cost as that here advocated by Columbia for the PSG service. Such a result would be clearly irreconcilable with the objective laid down by the Commission in its G–11107 decision, that—

> * * * the rates, terms and conditions of this service would have to be designed by Tennessee responsive to the New England market. While the rates should be fair and nondiscriminatory, they should be sufficiently low to assure the availability of the service in helping to meet the needs heretofore met by the Peak Service denied by this order. (21 FPC 81)

Under all these circumstances, it is concluded that our objective here should be to dispose of the PSG problem in the simplest possible manner, on an *ad hoc* basis, and in such a way as to leave completely free for future determination the question of the rates to be established for any new service to the New England area, based on the fuller utilization of underground storage facilities. It is further concluded that this objective can best be accomplished by here adopting the Tennessee proposal—*i.e.*, by simply crediting the total cost of service with the revenues received from the PSG service during the refund period, at the 90¢ rate.

Allocation of Costs to Seller's Option (SO) Service

During the test year 1956, Seller's Option gas was delivered in the Eastern, Northern and New York Zones. Under the terms of the Seller's Option rate schedule, Tennessee has an obligation to deliver a fixed annual volume of gas, but has the option as to the time of delivery.

In its instant G–11980 rate filing, Tennessee has proposed an increase in the rate for its Seller's Option service. Previously, the rate for this service was the commodity rate in the zone, plus 50 percent of the CD demand charge converted to a commodity basis at 100 percent load factor. However, the new Seller's Option rate was designed to reflect *75 percent of* the CD demand charge converted to a commodity basis at 100 per cent load factor. Tennessee witness Davis testified that the purpose of this revision was

> to bring these rates in conformity with what I believe to be a sound rate structure for this class of service considering the related facility requirements. (3:357)

The Seller's Option service was inaugurated under Commission Opinion No. 193, issued May 3, 1950, under which Tennessee received initial authorization to deliver 20,000,000 Mcf of SO gas annually to United Fuel Gas Company. (9 FPC 70) On September 18, 1951 Tennessee commenced serving New York State Natural Gas Corporation in an annual amount of 8,000,000 Mcf of SO

gas, authorized at Docket No. G–1248; and on November 14, 1953 Tennessee commenced serving North Penn Gas Company in an annual amount of 5,390,000 Mcf, authorized at Docket G–2108. In justification of its proposed rate revision for the Seller's Option service, Tennessee lays great stress upon certain changes in the nature of its system operations since the SO service was first inaugurated in 1950, as follows:

> * * * At that time, Tennessee had no storage facilities and, therefore, designed its system to provide capacity approaching the *maximum daily* requirements of its General Service customers (Tr. 8813). Since such maximum daily requirements were substantially in excess of the average-day requirements of the General Service customers, Tennessee was able to rely upon this difference, as well as capacity not fully utilized by Contract Demand customers, to make the Seller's Option deliveries (Tr. 8813). With the advent of storage, however, Tennessee designed its system to provide capacity to meet the annual *average* day requirements of the General Service customers in the year in which they reached their maximum authorization, thereby eliminating capacity which was previously available for Seller's Option deliveries. At that time, however, Tennessee was experiencing reduced takes from certain of its Contract Demand customers, which reduction provided sufficient capacity to permit continued delivery of Seller's Option volumes. Subsequently, the load factor of the Contract Demand customers substantially increased, thereby virtually eliminating also that source of off-peak capacity which had been available for making Seller's Option deliveries (Tr. 8813–14, 2631–2) The situation became so serious in 1956 that Tennessee was unable to meet its Seller's Option obligations and, therefore requested and received permission from certain customers to be released as to a portion of its Seller's Option obligations (Tr. 8814–16) Indeed, the situation was so critical that Tennessee had to dip into base storage gas to meet the 1956 requirements of its customers (Tr. 220). (initial brief, pp. 47–48)

Tennessee then states:

> The determination to increase the charge for Seller's Option service, in the manner described above, was made because sufficient unused capacity was no longer available to meet Seller's Option obligations and, accordingly, capacity would have to be provided in order to continue to render the service (Tr. 4138–9) A study was made of the facility requirements, considering off-peak capacity that would be available, and it was determined that 156,092 Mcf of average-day capacity, equaling 88.3 per cent of the total Seller's Option contract commitments (176,696 Mcf), on an average-day basis, would have to be provided (Exh. 44). (initial brief, p. 48)

In further justification of its proposed new SO rate, Tennessee points to the fact that the rate for gas purchased under its Emergency rate schedule (E Schedules) and Interruptible Schedule (R Schedules) is the 100 per cent load factor rate; that service under these schedules is inferior to Seller's Option service inasmuch as unlike the SO schedule, there is no guaranteed annual quantity under the Emergency and Interruptible rate schedules; that accordingly the new rate is also justified on a comparative rate basis with such other schedules.

Tennessee finally concludes:

> It is abundantly clear that consideration of Tennessee's capacity situation in 1956 and the need to provide facilities for this service cannot be ignored in fixing the Seller's Option rate. The previous charge was based

on the fact that this service was met from off-peak capacity and provided an important source of valley gas disposal. These facts are no longer true, and, accordingly, the rate should be changed to conform to present day facts. (initial brief, pp. 51–52)

The Staff briefs make no reference to the Seller's Option problem. However, Staff Exh. 97–A utilizes and reflects the historical 50 percent factor for the SO service (Sched. 2, Sheets 3, 4 and 5). Staff witness Drescher supported this position on the following grounds: that during the test year 1956, no main line capacity was installed for SO gas; that normally SO gas is delivered off-peak; that the customers who purchase SO gas during off-peak months are themselves in an off-peak period, and accordingly would have to have storage in order to utilize SO gas; that SO gas is delivered at Tennessee's election, and the buyer must take or pay for it when tendered; that accordingly if in an abnormal year (such as in fact occurred in 1956) SO gas is tendered during peak periods, the buyer would have to have the capacity to physically take the gas at such a time, in order to avoid paying for something he could not take; that although Tennessee is obligated to deliver a fixed annual volume of SO gas, this is compensated for by a "rather high" minimum bill requirement under the SO rate, *i.e.*, the annual obligation times the SO rate itself. (50:5770–71)

Intervenor North Penn Gas Company (North Penn), which since 1953 has been receiving annually approximately 5,500,000 Mcf of Seller's Option gas from Tennessee in the Northern Zone, recognizes that Tennessee does have the contractual obligation to deliver an annual amount of SO gas and that accordingly *some* charge beyond a bare commodity rate should be assessed against such gas. However, North Penn contends that the historical 50 percent factor is entirely sufficient for this purpose, and that Seller's Option gas in any event should not bear demand costs anywhere near demand costs associated with CD service. North Penn calculates that if SO rates were computed for the Northern Zone, where its deliveries are received, on the basis of the proposed 75 percent factor, the result would be a spread of only 2.7¢ per Mcf between the rate for the firm CD service and the Seller's Option service; whereas, on the basis of the historical 50 percent factor, the spread would amount to 5.4¢ per Mcf. North Penn contends that the latter makes much more sense, in view of the peculiar characteristics of the SO service, as outlined above, as distinguished from Contract Demand service. (initial brief, p. 6) North Penn also directs attention to the fact that although the average general rate increase for all zones amounts to 12.18 percent under Tennessee's instant G–11980 rate filing, the increase in the Seller's Option rate for the Northern Zone would amount to 20.57 percent as a result of utilization of the proposed 75% factor. (17:2383–85)

It is quite clear that the entire Tennessee case for its proposed new SO rate, reflecting a 75 percent factor, rests upon its Exh. 44 study—which constitutes an interoffice communication dated April 1, 1957.[29] The Exh. 44 study set forth a tabulation of Tennessee's total estimated Seller's Option contract commitments, amounting to an annual volume of 64,494,600 Mcf. It also estimated the volume of off-peak gas generated for SO customers by certain of the Contract Demand customers. On the basis of these figures, it estimated that an additional average daily capacity of 156,092 Mcf was required for SO customers, this being the additional capacity which had been applied for in Docket G–11107. The estimated 64,494,600 Mcf of annual Seller's Option gas requirements was derived as follows:

[29] It is of interest to note that this memorandum was prepared subsequent to the instant G–11980 rate filing which proposed the mentioned increase in the SO rate.

(*a*) Existing in 1956:

Buyer	*Annual volume (Mcf)*
United Fuel Gas Company	20,400,000
North Penn Gas Company	5,497,800
New York State Natural Gas Corporation	8,160,000
Subtotal	34,057,800

(*b*) Future requirements:

Buyer	*Annual volume (Mcf)*
New York State Natural Gas Corporation	10,036,800
New York State Natural Gas Corporation	20,400,000
Subtotal	30,436,800
Total	64,494,600

(North Penn initial brief, p. 8)

The Exh. 44 study computed that the above-mentioned additional average daily capacity of 156,092 Mcf required for SO customers constituted 88.3% of Tennessee's total Seller's Option contract commitments on an average-day basis, and accordingly concluded that the 88.3% ratio represented the proper "factor applicable to the determination of the Seller's Option rate". By way of supporting the reasonableness of the proposed new SO rate, reflecting a 75 percent factor, Tennessee witness Davis prepared a further study, Exh. 63, which was based entirely upon the above 88.3% ratio. In this latter study Davis assigned to Seller's Option service 88.3% of the transmission cost per Mcf for each zone in which SO service was sold. To this he added the production costs per Mcf to arrive at the total cost per Mcf for SO service. He then multiplied the total cost per Mcf by the deliveries of SO gas in each zone, to determine the total cost for SO service in each zone. Since the revenues computed for SO gas at the proposed new rate, reflecting a 75 percent factor, were approximately equal to the allocated cost thus computed in Exh. 63 for Seller's Option service in each zone, Davis concluded that the reasonableness of Tennessee's proposed new SO rate was satisfactorily established.

The difficulty with the Tennessee position here is that its case for an increase in its SO rate rests upon certain estimates which it made in April, 1957, but which have since become completely obsolete as a result of subsequent developments. The fact is that no facilities at all were constructed by Tennessee during the test year to render Seller's Option service (17:2473), and the situation was unchanged at the time of the Commission's decision in Docket G–11107 dated January 28, 1959, where it stated:

> Tennessee's Seller's Option Service is presently being rendered by means of seasonal off-peak capacity available on its system. (21 FPC 72)

It is true that, pursuant to a temporary certificate issued October 13, 1957 in Docket G–11107, Tennessee had received temporary authority to construct, *but not to operate*, the 156,000 Mcf of average-day capacity requested for the Seller's Option Service. (21 FPC 74) Authority to operate such facilities was not granted until the Commission's final order of January 28, 1959 in Docket G–11107. (21 FPC 83) However, shortly thereafter Tennessee converted the bulk of its Seller's Option service to Contract Demand service. As noted in Tennessee's initial brief (footnote 50, pp. 48–49), United Fuel entered into a

contract with Tennessee to firm up its Seller's Option obligation of 20,400,000 Mcf into a contract demand obligation. and this contract was filed with the Commission on May 11, 1959. On the same day, contracts with New York State Natural were also filed, firming up into a contract demand obligation the Seller's Option obligations shown in Exh. 44 of 8,160,000 Mcf and 20,400,000 Mcf. As a result of this development, the only two deliveries of Seller's Option gas presently being made by Tennessee are: (1) the 5,497,800 Mcf annual obligation for North Penn, and (2) the 10,036,800 Mcf annual obligation for New York State Natural, totalling an average day obligation of only 42,560 Mcf.

Furthermore, Tennessee has since informed the Commission that—

> Based upon experience with certain contract demand customers, estimates of their purchases received from these customers and discussions with these customers Tennessee believes it is reasonable to expect that there will be available on an annual average day basis at least 42,560 Mcf of gas resulting from cut-backs.

This statement was made by Tennessee in an Exh. X3 attached to its application in a recent certificate proceeding, Docket G–18877, filed July 1, 1959. (Item V in the instant proceeding.) In an Exh. X4 attached to the same application (Item W in the instant proceeding), Tennessee referred to the fact that it had already converted 134,136 Mcf of its total average day SO obligations to contracted demand service, and that in order to effect this conversion it had allocated to the newly converted firm service 134,640 Mcf of the average day SO capacity of 156,099 Mcf which it had been authorized to construct by the G–11107 order of January 28, 1959—thus leaving a balance of 21,459 Mcf of average day capacity available for the remaining 42,560 Mcf of average day SO obligations. Tennessee then went on to state the following:

> However, in designing its pipeline system to provide for the additional service proposed herein, it is Tennessee's judgment that since its average day seller's option obligations have been substantially reduced to a relatively small daily quantity (42,560 Mcf), *it is no longer necessary to assign pipeline capacity to this service and instead, this service can be rendered by relying on cut-backs from several of Tennessee's contracted demand customers who can be expected to regularly operate at an annual load factor of less than 100%. In view of the above, seller's option obligations are not included in Tennessee's design day requirements which are used for the purpose of determining pipeline capacity needs.* (Item W, p. 2) [Emphasis supplied.]

Under the circumstances outlined above, it seems clear that the Exh. 44 study upon which Tennessee rested its case for the proposed new SO rate is now quite irrelevant. Similarly the Exh. 63 study, which Tennessee witness Davis used to demonstrate the reasonableness of the proposed new SO rate, is equally defective since it relies and is based upon the Exh. 44 calculation that an additional average daily capacity was required for SO customers amounting to 88.3% of Tennessee's total Seller's Option contract commitments.

Tennessee concedes in its briefs that "the Seller's Option obligations have been substantially reduced due to the conversion of a large part of the Seller's Option obligation to Contract Demand obligations." (reply brief, p. 19) Nevertheless, Tennessee urges that "there still is insufficient off-peak capacity to make all the remaining Seller's Option deliveries" (reply brief, p. 19), and therefore still insists that the proposed increase in its SO rate is justified and fair. In clinging to this position, Tennessee completely ignores and makes no reference

to the representations which it has made to the Commission in the Docket G–18877 certificate proceeding, to the effect that "it is no longer necessary to assign pipeline capacity" to the SO service—quoted above.

As a final argument in its reply brief, Tennessee suggests that the failure to approve the proposed increase in its SO rate

> * * * may very well lead to additional requests for Seller's Option service. Since as we have shown, additional capacity would be required for such purpose, the rate would again have to be adjusted upward. (reply brief, p. 19)

This argument does not merit serious consideration. The determination to be made here may not properly be influenced by speculation as to some remote possibility of what might conceivably happen in the future.

In view of all the considerations outlined above, the Tennessee proposal to increase its SO rate by converting from a 50 per cent to a 75 per cent factor is rejected. It should be noted that in the historical revenue portion of its allocation in Exh. 116 Tennessee, in view of the said SO proposal, departed from the present revenue level with respect to its SO sales—imputing to SO deliveries a demand based on 75% of the demand component of the CD rate at 100% load factor, and thus arriving at a higher revenue figure for SO sales than that actually received on a historical basis. As Tennessee witness Davis testified:

> I adjusted the effective annual demands and revenues under present seller's option rate schedules to reflect the revision being made in the basis of determination of these rates. (3:357)

Since Tennessee's proposal to increase the SO rate is here being rejected, the historical revenue allocation to SO service has been recomputed on the basis of the historic 50 per cent factor in the revised Exh. 116 which is set forth in Appendix Table B at the end of this decision.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated, that

(1) The Tennessee system is divided into six rate zones, namely, Southern (Zone 1), Central (Zone 2), Eastern (Zone 3), Northern (Zone 4), New York (Zone 5) and New England (Zone 6). The Commission has not previously determined a method by which Tennessee's cost of service should be allocated among its rate zones and classes of service.

(2) Tennessee operates an integrated pipeline system, in which every portion of the system contributes in one way or another to the effectiveness of the entire system, whether directly or by displacement.

(3) Both Columbia and Consolidated advocate a zone-gate (or zone-by-zone) allocation approach whereby each rate zone is treated as if it were a separate operating entity, and involving the segregation of physical property on the basis of zone boundaries. The zone-gate approach is inconsistent with the basic principles upon which Tennessee's integrated system was designed and is operated. In addition, it accentuates the impact upon cost allocation resulting merely from the historical location of the geographical zone boundaries on the Tennessee system. It is also unduly complex.

(4) Columbia rejects the Commission's long-established *Atlantic Seaboard* method for the classification of fixed costs between demand and commodity, and instead applies to its zone-gate approach a "capacity-credit" technique, designed for the purpose of assigning some portion of fixed costs to interruptible de-

liveries. No justification has been shown in this proceeding for rejecting the *Atlantic Seaboard* method of cost classification. In addition, the capacity-credit method here advocated by Columbia is unduly complicated and contains other inherent defects.

(5) The Mcf-mile approach, which uses system-wide average costs and allocates such costs on the basis of mileage, constitutes, in general, a fair and reasonable method for the allocation of costs between zones on the Tennessee system.

(6) The New England Zone is marked by certain unfavorable characteristics which exert some upward impact upon the cost of service—i.e., the physical presence in the New England Zone of a large amount of small-diameter pipe, and a lower load factor than the other zones on the Tennessee system. These characteristics are not so significant or controlling as to outlaw the use of an Mcf-mile allocation approach for the Tennessee system. However, some limited type of adjustment should be made to the straight Mcf-mile allocation approach in this proceeding, so that the costs allocated to the New England Zone will reflect in some limited manner the excess costs reasonably attributable to such unfavorable characteristics.

(7) The Commission Staff employs the Mcf-mile allocation method, but proposes that the allocated costs determined for the New York and the New England Zones should be adjusted upward to the dollar level of the revenue for these two zones at the Docket G–5259 rates. These adjustments were designed to reflect the low load factor in the New England Zone, plus problems of load distribution and volume of sales with respect to the New York and New England Zones. These Staff adjustments were not adequately supported on the record, and do not provide a satisfactory basis for the necessary adjustment to the straight Mcf-mile approach in this proceeding.

(8) Tennessee allocates costs between zones partly on the basis of mileage, and partly on the basis of historical rate differentials. 50 percent of transmission costs are allocated under the Mcf-mile method, and 50 percent on the basis of historical factors, utilizing Docket G–5259 rate levels applied to 1956 deliveries. This Tennessee method, in general, constitutes a fair and reasonable method for the allocation of costs between zones on the Tennessee system. The Docket G–5259 revenue pattern reflects, basically, the historical allocation pattern which was arrived at in the Tennessee Docket G–1741 zoning settlement of 1952—which represented a compromise split between the results flowing from application of the straight Mcf-mile method and those under the zone-gate approach. Accordingly, to the extent that 50 percent of the transmission costs under the Tennessee method are allocated under the historical Docket G–5259 revenue pattern, the effect is to impose a limited penalty upon the New England Zone, as a rough factor giving recognition to its unfavorable cost characteristics. In addition, in view of the fact that rates have now been collected over the entire Tennessee system for a period of eight years on the basis of the historical allocation pattern first arrived at in the Docket G–1741 zoning settlement of 1952, it makes sense that this historical allocation pattern should be reflected to some extent in the zone allocation levels which are now to be fixed for the future for the Tennessee system.

(9) The Tennessee method for allocation of costs to Transportation Service, utilizing the mileage from the actual points of receipt of transportation gas to the points of delivery, is reasonable.

(10) The Iroquois complaint that the use of the Pennsylvania-New York state boundary as a dividing line between the Northern and New York Zones is unfair and discriminatory has not been supported in this record.

s an actual calculation of the costs to be assigned to the SS-5 service under the Exh. 65 rate filing was derived under the Exh. 65 allocation method, and accordingly the SS-5 re- to $388,452, provide a rough approximation of the cost which would actually be allocated gure is therefore regarded as being sufficiently "in the ball park" to be employed here, s which may be expected to flow from the adjustments made in this decision to Tennessee's

(11) In allocating demand costs in this proceeding, demand volumes should be measured on the basis of deliveries during the Staff's three-day peak period of January 16–18, 1957—and not on the basis of average billing demands.

(12) The method of allocation set forth in Exh. 65 is a reasonable method for determining the portion of the total cost of service which Storage Service (SS–5) should bear.

(13) The most reasonable and appropriate method for handling of the Peak Service (PSG) problem in this proceeding is to credit the actual revenues received therefrom during the refund period (*i.e.*, 90¢ per Mcf) to the total cost of service.

(14) The rate for Seller's Option service (SO) should reflect 50 percent of the CD demand charge at a 100 percent load factor basis.

JOSEPH ZWERDLING,
Presiding Examiner.

HELMERICH & PAYNE, INC., DOCKET NO. RI60–198

ORDER REQUIRING THE ESTABLISHMENT OF TRUST FUND TO ASSURE REFUNDS AND DIRECTING THAT THE INCREASED RATE BE CHARGED

(Issued February 6, 1962)

On February 26, 1960, Helmerich & Payne, Inc. (Helmerich) tendered a Notice of Change increasing the level of rate from 11.0¢ to 15.0¢ per Mcf for gas produced from the Hugoton Field, Haskell County, Kansas, and sold to Northern Natural Gas Company. By order issued March 23, 1960, in this proceeding, the tender was designated as Supplement No. 3 to Helmerich's FPC Gas Rate Schedule No. 4, and was suspended until August 28, 1960, "and there-

after until such further time as it is made effective in the manner prescribed by the Natural Gas Act."

On August 17, 1960,[1] Helmerich filed a motion requesting that the aforementioned supplement be made effective at the conclusion of the suspension period. In said tender, Helmerich stated it "is not now prepared and does not at the present time intend to furnish a bond as prescribed by Section 4(e) of the Natural Gas Act, should the Commission so require, nor does it intend at this time to furnish its corporate undertaking to make refunds for the reason that it does not presently intend to commence collection of the increased rate subject to refund. The company instead merely requests the Commission to issue its Order Making Effective Proposed Rate Change at the Commission's finally approved rate, effective as of August 28, 1960. This motion is made pursuant to the obligation of the Commission to so act under the authority of Section 4(e) of the Natural Gas Act as determined in *Associated Oil & Gas Company* v. *Federal Power Commission*, United States Court of Appeals, 5th Circuit, July 12, 1960."[2] (Footnote added.)

We believe that Helmerich misconstrues the *Associated* case and that, therefore, its motion is not well-grounded. We do not believe that decision has any effect on the separate and distinct authority of the Commission to require Respondent to charge and collect an increased rate so made effective. Therefore, our action in this matter is not inconsistent with the holding of the *Associated* case and Helmerich's reliance thereon is without foundation.

Furthermore, on December 5, 1960, the Commission issued Order No. 230 in Docket No. R–193 amending Section 154.102 of the Commission's Regulations under the Natural Gas Act, 24 FPC 1058. That order requires that increased rates made effective pursuant to a motion filed under Section 4(e) of the Natural Gas Act shall be charged and collected.

The policy there enunciated and which requires the collection of increased rates, is clearly in accord with the filed rate doctrine as announced by the Supreme Court in the *Montana-Dakota* case.[3] The Court there held that the company "can claim no rate as a legal right which is other than the filed rate, whether fixed or merely accepted by the Commission, and not even a court can authorize commerce in the commodity on other terms." And as the Fourth Circuit in an earlier opinion in *Hope Natural Gas Company* v. *F.P.C.* clearly stated (134 F. 2d 287, 311):

> When rates were filed with the Commission pursuant to Section 4(c) of the Act they become the only lawful rates which the utility could charge or accept (citing cases).

Furthermore, if independent producers were not required to collect increased rates made effective by motion, serious problems would confront not only pipeline purchasers of natural gas and, in turn, distribution company purchasers, but also the Commission itself in the administration of the Natural Gas Act.

The Commission finds:

In view of the foregoing, it would appear appropriate and in the public interest to declare (1) Supplement No. 3 to Helmerich's FPC Gas Rate Schedule No. 4 to be effective as of August 28, 1960, subject to further orders of the Commission in this proceeding; (2) that Helmerich's gas sales made pursuant to the aforementioned Rate Schedule No. 4 and made on or subsequent to August 28,

[1] Supplemented by certain corrections on August 26, 1960.
[2] 280 F. 2d 31.
[3] *Montana-Dakota Utilities Company* v. *Northwestern Public Service Company*, 341 U.S. 246, 251.

1960, shall be pursuant to the rates, terms and classifications set out in said Supplement No. 3, and (3) that Helmerich shall charge and collect only the rates set out in Supplement No. 3 for all gas delivered on and subsequent to August 28, 1960, subject to the terms and conditions herein prescribed.

The Commission orders:

(A) All gas sales on and subsequent to August 28, 1960, and made by Helmerich pursuant to the aforementioned Rate Schedule No. 4, shall be made pursuant to the rates, terms and classifications set out in the aforementioned Supplement No. 3 and, subject to further orders of the Commission in this proceeding, only the rates set forth in said Supplement No. 3 shall be charged and collected for all gas delivered on and after that date.

(B) Helmerich shall refund at such times and in such amounts to those entitled thereto, and in such manner as may be required by final order of the Commission, the portion of the increased rate and charge made effective as of August 28, 1960, found by the Commission in this proceeding not justified, together with interest thereon at the rate of 7 percent per annum from the date of payment to Helmerich until refunded; shall bear all cost of any such refunding; shall keep accurate accounts in detail of all amounts received by reason of the increased rate or charge effective as of August 28, 1960, for each billing period, specifying by whom and in whose behalf such amounts were paid, and shall report (original and one copy), in writing and under oath, to the Commission quarterly, for gas sales to the purchaser and the revenues resulting therefrom, as computed under the rate in effect immediately prior to August 28, 1960, and under the increased rate effective as of August 28, 1960, together with the difference in the revenue so computed.

(C) Within 30 days from the date of issuance of this order, Helmerich shall execute and file with the Secretary of the Commission a trust agreement in the amount and conditioned as set out in paragraph (D) hereof, accompanied by a certificate showing service of a copy thereof upon the purchaser under the rate schedule involved.

(D) Said trust agreement shall be entered into between Helmerich and any bank or trust company used as a depository for funds of the United States Government and said agreement shall be conditioned as follows:

(1) Helmerich, the bank or trust company, and the successors and assigns of each, shall be held and firmly bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts deposited and the interest thereon, and such bank or trust company shall be bound to repay the purchaser herein and in such manner as may be required by the Commission in this proceeding all or any part of such deposits and the interest thereon as may be required by final order of the Commission.

(2) Such bank or trust company may invest and reinvest such deposits in any form of indebtedness of the United States or any agency thereof and in any form of obligation guaranteed by the United States as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid by Settlor to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this trust, which reimbursement shall be made by the Settlor. Neither the compensation of such

bank or trust company nor its claim for reimbursement of expenses shall be a charge on the funds deposited hereunder or any interest thereon.

(5) Such bank or trust company shall report to the secretary quarterly, certifying the amount deposited in the trust account for the quarterly period.

If Helmerich, in conformity with the terms and conditions of paragraph (B) of this order, makes the refunds as may be required by order of the Commission, the trust agreement shall be discharged; otherwise it shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TRUNKLINE GAS COMPANY, DOCKET NO. CP62-126

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 6, 1962)

On November 21, 1961, Trunkline Gas Company (Applicant) filed in Docket No. CP62-126 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the calendar year 1962, at a total cost not to exceed $2,500,000, with no single project to exceed a cost of $500,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of natural gas which will be purchased from producers thereof in various areas generally coextensive with said system.

Applicant will finance the subject facilities from funds on hand.

Pursuant to due notice a public hearing was held in Washington, D.C., on January 24, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G-882 (8 FPC 250).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed, and to conform to the provisions of the Natural Gas Act, and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to take natural gas purchased from producers thereof during the calendar year 1962 as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, on or before March 1, 1963, a statement under oath showing, by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1962, and the total expenditures for facilities authorized to be constructed thereunder should be limited to $2,500,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Trunkline Gas Company to construct during the calendar year 1962 the proposed facilities hereinbefore described (more fully described in the application filed in this proceeding) and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to Trunkline Gas Company.

(B) Applicant shall submit, on or before March 1, 1963, a statement under oath showing, by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed thereunder are hereby limited to $2,500,000, with no single project to exceed a cost of $500,000.

736-330—64——23

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

E. L. CORD, PROJECT NO. 1746

ORDER ISSUING NEW LICENSE (MAJOR)

(Issued February 7, 1962)

Application was filed on December 13, 1960, and supplemented on May 9, 1961, by E. L. Cord, (Applicant) of Reno, Nevada, for a new license under Sections 4(e) and 15 of the Federal Power Act (hereinafter referred to as the Act) for constructed major Project No. 1746 located on Leidy (or Robinson) Creek in Esmeralda County, Nevada, and affecting lands of the United States within the Inyo National Forest and other lands of the United States.

License No. 1 for the project, issued to Applicant on May 1, 1942, for a period of 20 years from October 1, 1941, was amended on May 3, 1949, to reflect a revision in the project works. The license expired on September 30, 1961.

The above-mentiond May 9, 1961, supplement to the application for license shows that an additional hydroelectric turbine and generator of the same rating as the original unit was installed which increased the capacity of the project to 300 horsepower.

An Assistant Secretary of the Interior, in reporting on the application, has advised that no special license provisions in the interest of fish and wildlife resources are considered necessary.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Inyo National Forest, in reporting on the application, has advised that issuance of a new license will not interfere or be inconsistent with the purpose for which the Inyo National Forest was created or acquired if made subject to the terms and conditions contained in Form L–1 (14 FPC 562).

Since the expired license was issued for a period of 20 years terminating on September 30, 1961, the amortization provision provided for under Section 10(d) of the Act was not applicable and, therefore, not included in that license. However, since License No. 2, hereinafter ordered to be issued, is for 5 additional years commencing October 1, 1961, such license is made subject to Section 10(d).

The Commission finds:

(1) The project affects lands of the United States.

(2) The project consists of:

(a) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by a certain exhibit which was filed as a part of the application for license and which is designated as follows:

Exhibit A: Sheet 1 of 1 (FPC No. 1746–7) A map and plan in one sheet entitled: "Existing Hydro Electric Plant for E. L. Cord at Dyer, Esmeralda County, Nevada. Circle L Ranch, Pipeline Plan & Profile", drawn by Nelson Engineering—Civil Engineer, Reno, Nevada, November 30, 1960.

(b) Constructed project works consisting of a reinforced concrete dam 71 feet long and approximately 9 feet high, two 12-inch pipe conduits 97 feet long to a small concrete settling basin, a 12-inch pipe conduit about 1525 feet

long joining the original pipe line, a 10-inch pipe conduit about 19,484 feet long, a cement-block powerhouse containing two 150-horsepower Pelton water wheels connected to two 100-kw generators, a transmission line 5,700 feet in length; and appurtenant electrical facilities; the location, nature and character of which are more specifically shown by the exhibit hereinbefore cited and by certain other exhibits which also formed a part of the application for license and which are designated and described as follows:

Exhibit M: Sheet 1 of 2 (FPC No. 1746–8) a print in one sheet entitled "Electrical Distribution System, General Area Plot Plan, Service Lines & Equipment for E. L. Cord, Esmeralda County, Nevada" prepared by Nelson Engineering, Civil Engineering, Chester H. Elliott, Electrical Engineering, Reno, Nevada, dated May 3, 1961.

Exhibit M: Sheet 2 of 2 (FPC No. 1746–9) a print in one sheet entitled "Electrical Distribution System Equipment, Type & Manufactures Plant Wiring Diagram for E. L. Cord, Esmeralda County, Nevada, prepared by Nelson Engineering, Civil Engineering; Chester H. Elliott, Electrical Engineering, Reno, Nevada", dated May 3, 1961.

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(3) The transmission line mentioned in finding (2) (b) above, located entirely on State lands, connects the powerhouse with the distribution facilities at Applicant's ranch, and is part of the project within the meaning of Section 3(11) of the Act.

(4) Applicant is a citizen of the United States and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a new license for the project.

(5) Public notice of the application has been given. No protests have been received.

(6) The issuance of a new license for the project will not interfere or be inconsistent with the purposes of any reservation or withdrawal of public lands, or with the purposes for which the Inyo National Forest was created or acquired.

(7) The project does not affect any Government dam, nor will the issuance of a new license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(8) Under present circumstances and conditions and upon the terms and conditions hereinafter imposed, the project is best adapted to a comprehensive plan for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(9) The installed capacity of the project is 300 horsepower, and the energy generated by the project is used by Applicant for pumping, irrigation, and general farm uses.

(10) The amount of annual charges to be paid under the new license for the project for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, and for recompensing it for the use, occupancy, and enjoyment of its lands is reasonable as hereinafter fixed and specified.

(11) The exhibits designated and described in finding (2) above conform to the Commission's rules and regulations and should be approved as part of the new license for the project.

The Commission orders:

(A) This new license is issued to E. L. Cord, of Reno, Nevada, (hereinafter referred to as the Licensee), under Sections 4 (e) and 15 of the Federal Power Act, for a period of five years, effective as of October 1, 1961, for the operation and maintenance of Project No. 1746 on Leidy (or Robinson) Creek in Esmeralda County, Nevada, and affecting lands of the United States within the Inyo National Forest and other lands of the United States, subject to the terms and conditions of the Act which is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This license is also subject to the terms and conditions set forth in Form L–1, December 15, 1953, entitled "Terms and Conditions of License for Constructed Major Project Affecting Lands of the United States" (14 FPC 562), which terms and conditions, designated as Articles 1 through 23, are attached hereto and made a part hereof, except for Article 20 therein, and subject to the following special conditions set forth herein as additional articles:

Article 24. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $13.00;

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $44.43.

Article 25. Effective October 1, 1961 (the first 20 years of operation of the project under license having been completed on September 30, 1961), six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10 (d) of the Act; one half of the project surplus earnings, if any, accumulated after September 30, 1961, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after September 30, 1961, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

(C) The exhibits designated and described in finding (2) above are approved as part of this new license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of this new license. In acknowledgment of the acceptance of this new license, it shall be signed by the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CROW DRILLING COMPANY, INC., DOCKET NOS. G–6622 AND G–8510; W. H. COCKE, DOCKET NO. G–9570

ORDER DENYING REQUEST FOR ADDITIONAL REFUND ASSURANCE

(Issued February 7, 1962)

On November 24, 1961, United Gas Pipe Line Company (United) filed formal complaints pursuant to Section 1.6 (b) of the Commission's Rules of Practice and Procedure in the above-entitled proceedings. In those complaints, United requests that the Commission order W. H. Cocke (Cocke) in Docket No. G–9570 and Crow Drilling Company, Inc. (Crow)[1] in Docket Nos. G–6622 and G–8510 to furnish either a continuing surety bond or comparable refund assurance in the nature of a trust or escrow agreement covering all sums heretofore collected and hereafter to be collected, subject to refund at the increased rates involved in the respective proceedings herein as a condition precedent to their collecting such increased rates.

Cocke was permitted to collect the increased rate involved in Docket No. G–9570 as of April 1, 1956, subject to refund, after filing a surety bond in the amount of $19,000. United states that due to the increase in rate from April 1, 1956 to September 1, 1961, it has paid Cocke $92,217.96 subject to refund, which is $73,217.96 in excess of the amount of the existing surety bond.

Crow was permitted to collect the increased rate involved in Docket Nos. G–6622 and G–8510 as of April 15, 1955, subject to refund, after filing a surety bond in the amount of $36,000. From April 15, 1955 to September 1, 1961, United states that due to the increase in rate, it has paid Crow an aggregate sum of $80,837.10, subject to refund, which is $44,837.10 in excess of the amount of the existing surety bond.

United contends that if Respondents are permitted to continue to collect their increased rates subject to refund under the existing surety bonds the purpose intended to be accomplished by the Commission when it originally required that surety bonds be filed would be thwarted. United further contends that the Commission in a proper exercise of its discretion should require additional assurance of Respondents as set forth above.

In requiring a surety bond, it has been our policy to require independent producers to file a surety bond in the amount of the estimated additional revenues for one year resulting from the proposed increase in rate. The purpose has been to afford some assurance in addition to the assets of the independent producer that refunds, if required, will be made. We realize, of course, that the proceedings herein have been protracted. Nevertheless, we do not believe that we should change our policy in this regard, or make an exception to such policy under the circumstances presented herein. In making our determination, we have considered both United's desire for additional security and the financial burdens which would be imposed upon Respondents here by a more rigorous bonding requirement. On balance, we conclude that United's request should be denied.

---

[1] Effective December 31, 1955, James D. Madole, *et al.* (Madole) succeeded to the interest of Crow. By letter dated February 11, 1959, Crow's FPC Gas Rate Schedule No. 2, as supplemented, involved herein, was redesignated as Madole's FPC Gas Rate Schedule No. 1, as supplemented.

The Commission finds:

United's request for additional assurance by Respondents in the above-entitled proceedings, as set forth in its formal complaints filed on November 24, 1961, should be denied.

The Commission orders:

United's request for additional assurance by Respondents in the above-entitled proceedings, as set forth in its formal complaints filed on November 24, 1961, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO ELECTRIC COMPANY, DOCKET NO. E-7017

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued February 7, 1962)

By order issued January 25, 1962, 27 FPC 174, in the above-entitled matter, the Commission authorized El Paso Electric Company (Applicant) to issue and sell at competitive bidding $10,500,000, principal amount of First Mortgage Bonds, Series due 1992, subject, among others, to the provisions set forth in paragraph (B) of that order, as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on February 7, 1962, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it the bid of Salomon Bros. & Hutzler to purchase the proposed issuance of $10,500,000, principal amount of Bonds, for the price of 100.483% of principal amount, with an interest rate of 4⅝%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued January 25, 1962 in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above, upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D) and (E) of the Commission's order issued January 25, 1962, in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–16235; PACIFIC NORTHWEST PIPELINE CORPORATION, DOCKET NO. G–16237; COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G–16904

ORDER DENYING APPLICATION FOR ISSUANCE OF SUBPENA DUCES TECUM AND MOTION FOR EXPEDITION

(Issued February 7, 1962)

Counsel for California Gas Transmission Company and Tennessee California Gas Transmission Company (Tenn-Cal),[1] at the hearing held in the above-styled proceedings on January 9, 1962, made an oral application upon the record for the issuance of a subpena duces tecum directed to El Paso Natural Gas Company (El Paso). The requested subpena duces tecum would require El Paso to produce at the hearing the stock records of Pacific Northwest Pipeline Corporation[2] (now merged into El Paso) which reflect the sales and transfers of so-called promotional stock of Pacific Northwest up to the date of its public financing which took place on April 28, 1955.

The examiner presiding at the hearing ruled, in light of the Commission's order issued April 25, 1960, in *East Tennessee Natural Gas Company*, Docket No. G–19530, 23 F.P.C. 629, that he did not have the power or authority to issue a subpena duces tecum in the absence of a prior finding by the Commission that the requested documents are relevant and material to the inquiry. The examiner has referred Tenn-Cal's application to us for determination of the relevancy and materiality of the documentary material sought. With his referral the examiner has certified those portions of the record containing the arguments of counsel relating to the application for subpena.

Without determining that the material sought by the application for subpena duces tecum could not in any circumstances be relevant, we have concluded that the record as certified does not reveal the theory upon which the material is sought or the basis for a claim of relevancy. In these circumstances, the application, in our view, should be denied.

Although we have passed upon the application for a subpena upon the examiner's reference, we note that it is our opinion that the power to issue subpenas is within the authority of the examiner. See Section 7(b) of the Administrative Procedure Act (60 Stat. 241; 5 U.S.C. 1006); Federal Power Commission Rules of Practice and Procedure, Sections 1.23(a) and 1.27(b); *Lee* v. *F.M.B.*, 284 F. 2d 577 (CA 9, 1960); *Penfield Co.* v. *S.E.C.*, 143 F. 2d 746 (CA 9),

[1] The two companies are interveners in the consolidated proceedings.

[2] Pacific Northwest.

cert. denied 323 U.S. 768 (1944). Cf. *N.L.R.B.* v. *Gunaca*, 135 F. Supp., 790 (E.D. Wisc.), aff'd. 230 F. 2d 542 (CA 7, 1956).

On December 20, 1961, the Public Service Commission of Wyoming filed a "Motion for Expedition of Proceedings" in which it requests us to (1) order the examiner not to grant any further recesses until cross-examination has been completed and all intervenors have completed their cases; (2) reconsider a recent ruling permitting Tenn-Cal to cross-examine as to matters not raised by its petition to intervene; and (3) waive the intermediate decision procedure at the conclusion of the testimony, and set the matter for oral argument at an early date. The Wyoming Commission alleges that there have been undue delays in these proceedings and that such delays are injurious to the consuming public of Wyoming.

We cannot pass upon the merits of the Wyoming Commission's allegations but we wish to make it clear that it is our desire to see these proceedings concluded at the earliest possible date. Of course, all parties to the proceedings must be accorded all the legal rights to which they are entitled. However, it has now been one year since this proceeding was reopened. The testimony runs to well over 10,000 pages since the reopening. We are aware that difficult issues are presented in the reopened proceeding and that the line between what is and what is not admissible evidence may often be finely drawn. But that does not mean that irrelevant questioning or prolonged argument should be tolerated. The examiner should make full use of his powers to assure that this is not the case. Further, we admonish counsel for all parties to avoid prolonged arguments and statements and to summarize their positions briefly. We agree with the Wyoming Commission that undue delay in any proceeding is not in the public interest. We expect, therefore, within the limits of due process, that these proceedings may be promptly concluded.

In our opinion it would be unwise to attempt to determine that no further recesses should be granted in these proceedings. We believe that this matter lies more properly in the province of the examiner. He is more familiar with the daily progress of the hearing and the necessities of the parties. We do believe, however, that recesses in this case should be granted only when it has been shown they are essential. We leave this matter to the discretion of the examiner, confident that he will exercise his discretion sparingly.

As to the second request in Wyoming's motion, we are not referred specifically to a recent ruling permitting Tenn-Cal to examine as to matters not raised by its petition to intervene. The Wyoming Commission's Motion does not make it clear whether it objects to an order issued by us or to a ruling by the examiner. We have attempted by our orders to confine the proceedings to those matters which resulted from the modifications in the proposals as a consequence of the decisions of the California Commission. In the conduct of the hearing the examiner shall limit testimony to evidence pertinent and relevant to such matters.

The Wyoming Commission's request for omission of the intermediate decision procedure appears to be premature. We will be better able to pass upon such request when the hearing has been concluded. We may indicate, however, that we feel that it would not be appropriate to dispense with briefs in these proceedings, regardless of whether the intermediate decision procedure is omitted.

The Commission orders:

(A) The application of California Gas Transmission Company and Tennessee California Gas Transmission Company for issuance of a subpena duces tecum be and it hereby is denied.

(B) The "Motion for Expedition of Proceedings" filed by the Public Service Commission of Wyoming be and it hereby is denied.

Commissioners Morgan and Ross, *concurring*, filed separate statements.

MORGAN, Commissioner, *concurring:*

I concur in the denial of the application by California Gas Transmission Company and Tennessee California Gas Transmission Company, subsidiaries of Tennessee Gas Transmission Company, for issuance of subpena duces tecum, and in the denial of the motion for expedition of proceedings by the Public Services Commission of Wyoming. However, it seems to me that more emphatic measures for expedition of this case are or may soon be required.

On December 27, 1960, the original proceedings under these docket numbers had resulted in the issuance of conditioned certificates based upon 3,521 pages of record, including oral argument. The case was reopened by the Commission on a limited basis in July 1961 after the issuance of an order by the California Public Utilities Commission involving matters related to the conditions originally attached to the certificate. The Tennessee subsidiaries, Tenn-Cal and CalGas, petitioned for intervention in the reopened proceedings on the following grounds:

III

SUMMARY

This Commission is now faced with a proposal radically different from that which it considered in its order of December 27, 1960. Not only have the applicants in Docket Nos. G–16235, *et al.*, entered into a fundamentally changed project, but they have also now disclosed their design to use the new Rock Springs project as a vehicle to defeat the CalGas-Edison project.

There can be no doubt that the Rock Springs parties have now discarded their original proposal in favor of a new project. The evidence adduced at the February 1961 hearings before the California PUC reveals that the new project entails sharply *different facilities* from those previously presented to this Commission, with a drastically *altered timetable for construction and deliveries* of gas. The Rock Springs project also has been changed to serve *different market requirements* with gas obtained in significant part from *different sources.* Such gas will be supplied in substantially *reduced volumes,* and at *prices different* than those originally proposed. As a result, the new project raises grave doubts concerning *economic feasibility* and the *adequacy of gas reserves and deliverability*—doubts which cannot be resolved on the basis of the obsolete record compiled regarding the now defunct original proposal.

Moreover, the economic feasibility of the new Rock Springs project is purportedly dependent upon serving the fuel requirements of Edison which are to be served by the CalGas-Edison project. Indeed, in the compliance phase of the hearings before the California PUC, the Gas Companies' exhibits show that loss of the Edison load (which would result from certification of the CalGas-Edison project) would transform an estimated 1962–66 so-called Rock Springs revenue excess of $10,200,000 into a revenue *deficiency* of $63,400,000.

From this, it is clear why the Rock Spring parties have contended that the two projects are mutually exclusive and that certification of the Rock Springs project will preclude certification of the CalGas-Edison project. This contention has been made before both the PUC and this Commission. By both the testimony and pattern of proof before the PUC, the Rock

Springs parties have made plain their contention that Southern California cannot support both the Rock Springs and CalGas-Edison projects. And before this Commission the Gas Companies have stated that "if the Rock Springs project is certificated, this would eliminate any possible justification for such an independent project."

In these circumstances, the Commission must reopen the Rock Springs proceedings for further hearings. With such further proceedings, the Commission should also consolidate the applications for the CalGas-Edison project for comparative and simultaneous hearing and decision. Otherwise, the Commission will effectively foreclose full and unprejudiced consideration of the CalGas-Edison project. [Emphasis supplied in the original.]

On September 13, 1961, the Commission, having become convinced of the Tennessee subsidiary companies' rights to intervene, issued an order allowing such intervention but including a specific limitation:

> Tennessee California Gas Company and California Gas Transmission Company are hereby permitted to intervene in these proceedings subject to the rules and regulations of the Commission; *provided*, however, that their participation shall be limited to matters affecting rights and interests expressly asserted in their petitions to intervene; and *provided* further that permission to intervene shall not be construed as recognition by the Commission that any intervener might be aggrieved by any order entered in these proceedings.

Thus, as of September 13, 1961 the Tennessee subsidiary companies had stated precisely the grounds upon which they felt they were entitled to intervene; and on precisely those stated grounds (and on no others) the Commission had allowed them to intervene and participate to an extent limited by those grounds.

On September 13, 1961, the total number of pages in the transcript stood at 4,976.

Notwithstanding the precision with which the grounds for intervention had been stated and granted, the Tennessee subsidiaries promptly began to explore matters remotely, if at all, related to the grounds upon which they based their intervention. Particularly, they began a lengthy and detailed exploration of their allegation that El Paso and its associates in the pending application were in some way involved in a violation of either the letter or the "spirit" of the antitrust statutes. As a consequence, on October 2, 1961 Colorado Interstate Gas Company filed with the Commission a "Motion for Prescribing Procedure", in which that company moved that the Commission—

> enter an order limiting the participation of two interveners, Tennessee California Gas Transmission Company (Tenn-Cal) and California Gas Transmission Company (CalGas), to those matters which were set forth by them in their joint petition to intervene in these consolidated proceedings filed May 1, 1961, for the reasons that they have not so limited themselves nor have they been so limited by the presiding examiner.

The Commission's discussion of the CIG motion contained the following rationale and conclusion:

> We note that CIG did not allege that the petition to intervene filed by TennCal and CalGas fails to comply with Section 1.8(c) of our Rules of Practice and Procedure which was cited by the movant, nor does it point out a single specific instance of transgression of the limitation contained in our order permitting intervention that the interveners' participation shall be limited to matters affecting rights and interests expressly asserted

in their petition to intervene. Instead of citing a specific instance of transgression, CIG makes only the general allegation that:

"Beginning with hearings starting the morning of September 14, 1961, the day following the granting of intervention to TennCal and CalGas, and extending to the conclusion of that session of hearings held through September 19th, the record is replete with questions obviously not concerned with the interests of TennCal and CalGas as disclosed in their petition to intervene—even as expanded to encompass grounds asserted in the motions for reopening and consolidation."

CIG is asking this Commission to issue an order for the guidance of future proceedings without having stated facts to show that such an order is needed. In the absence of an allegation of such facts, *we deem it unnecessary to admonish that the limitation upon the interveners' participation as contained in the order permitting intervention should be observed. Such observance is implicit in the limitation itself.*

Upon consideration of the matters set forth in CIG's motion and in the answer thereto, we find that the motion should be denied.

It is our view, however, that it is in the public interest and the interest of all parties to conclude the hearing in these proceedings as expeditiously as possible. *We, therefore, entrust the examiner with the duty of seeing that the hearing is not unduly protracted by dilatory tactics or by the introduction of irrevelant or immaterial testimony.* [Emphasis not in the original.]

On November 13, 1961, the total number of pages in the transcript stood at 8,683.

Despite the clarity with which the Commission reaffirmed the limitations on the Tennessee intervenors, and despite the fact that the CIG motion had been denied on merely technical grounds, Tenn-Cal and CalGas have continued, and have been allowed to continue, their exploration of the matters previously complained about, with no visible change in their tactics to the present date. Thus far the result of these explorations has been to show that several years ago a very small fraction of one percent of the outstanding stock of what is now the El Paso system was temporarily owned by CIG and/or two officials of that company; and to suggest that a similarly small fraction of one percent of El Paso stock may have been or may be similarly held. This appears to be the heart of the Tennessee intervenors' contention regarding a possible violation of the "spirit" of the antitrust statutes, and is the basis for their request for a subpena duces tecum in the application now before us.

As of January 30, 1962, the total number of pages in the transcript stood at 12,628 and the end is nowhere in sight.

There are cases which justify the conclusion that "The mountain labored and brought forth a mouse", but this is not one of those cases. Such a comment on these reopened proceedings would serve as an unearned accolade. It is true that the usual preliminaries have been performed in this case with what can only be described as total promiscuity, but thus far there is no evidence of gestation, much less of parturition; and if anything as impressive as a mouse has emerged from this mountainous record (several pounds of which have been certified to the Commission by the examiner and diligently studied), that modest refugee has taken his departure unobserved.

This is not to say that there have been no developments since the intervention of the Tennessee companies which may someday become relevant to these proceedings. Acres of trees have been felled, ground into pulp, transmuted into paper, and now stand by the ton on shelves awaiting inclusion in the record. The manufacturers of ink have not been idle. They too stand ready to supply the

remarkable demands of this case. Children have been born in the interim who, if they are not careful to direct their youthful energies into more productive channels, may emerge from law school 25 years hence to become enmeshed in these maundering proceedings.

Perhaps of greater relevance, the earth has performed more than 140 rotations on its axis since the Tennessee subsidiaries intervened and has accomplished more than a third of its annual journey around the sun. Thus, the passage of sidereal time without a final decision in this case may be the principal—and perhaps the only—product of the reopened proceedings to date.

In any event, this case is now regarded by informed members of the regulated utility industries and of the bar as a prime example of abuse and erosion of the administrative process. It should be brought to a prompt and productive conclusion.

Ample latitude is provided within the framework of the Administrative Procedures Act for this Commission to instruct the examiner and the attorneys in these proceedings regarding the future conduct of the case. If there is misunderstanding between the Commission and participants in the proceedings concerning the Commission's views with respect to the requirements of the public interest, that misunderstanding can properly be removed by written instructions or by conference.

I believe there has been such a misunderstanding, and I believe the public interest requires its immediate removal. If it is not effectively removed by our actions taken today, more forceful measures are available to us and should be used.

Ross, Commissioner, *concurring:*

I concur in the denial of the subpoena duces tecum. Assuming that its subject matter is within the proper scope of inquiry under our order reopening the hearings, absent a specific offer of proof, it would appear a speculative fishing expedition for minutiae whose relevance is obscure.

Surely an intervenor who is seeking to serve the same market must be aware that it may be charged with attempting to delay the administrative process for selfish reasons. Thus it becomes doubly important that it exercise self control in the presentation of its case and clearly spell out for the examiner and all parties the relevancy, scope, and purpose of its cross examination and testimony.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NONACCEPTIBILITY OF RATE FILINGS BASED ON STATE-PRESCRIBED MINIMUM PRICES, DOCKET NO. R–168

ORDER TERMINATING PROCEEDING

(Issued February 7, 1962)*

In *Cities Service Gas Company* v. *State Corporation Commission of Kansas*, 355 U.S. 391, a 1958 per curiam opinion vacating a judgment of the Supreme Court of Kansas, the United States Supreme Court held, in effect, that the State of Kansas could not lawfully fix a minimum price at the wellhead for natural gas sold in interstate commerce for resale. The decision was based on the

*Published in Federal Register on February 14, 1962 (27 F.R. 1368); amended by order issued March 14, 1962, 27 FPC 523.

authority of *Phillips Petroleum Company* v. *Wisconsin*, 347 U.S. 672, and *Natural Gas Pipeline Company* v. *Panoma*, 349 U.S. 44. A week later the Court, citing *Cities Service*, reversed a decision of the Supreme Court of Oklahoma, which had applied the holding in the *Panoma* case, *supra*, to sales of residue gas but not to sales at or near the wellhead. *Michigan Wisconsin Pipe Line Company* v. *Corporation Commission of Oklahoma*, 355 U.S. 425 (1958).

In the above-entitled proceeding the Commission has under consideration proposed rulemaking that would amend its general rules to provide for rejection of any tender for filing pursuant to Section 4 of the Natural Gas Act to the extent that such filing is based upon a state-prescribed or attributed minimum price. The Commission also has under consideration herein certain questions which the above decisions of the Supreme Court appear to raise with respect to rate filings previously made under Section 4 of the Natural Gas Act.

Notice of the proposed rulemaking involved herein was issued on April 28, 1958, and published in the Federal Register on May 2, 1958 (23 F.R. 2973). In giving notice of the proposed rulemaking, the Commission invited all interested parties to submit data, views, and comments in writing concerning such rulemaking. In addition, interested persons were afforded an opportunity to present their views in oral argument before the Commission on July 29, 1958.

We believe that at this late date a rulemaking proceeding would be a cumbersome and inappropriate means by which to exercise our jurisdiction over the matters involved herein. Such matters can more conveniently be decided when properly raised in individual proceedings before us. We recognize, moreover, that a buyer of natural gas who has paid seller on the basis of a state minimum price law has an adequate remedy in an appropriate court in the event that his contract entitles him to a refund as a result of the invalidity of the state minimum price laws.[1] Furthermore, with respect to future rate filings the question appears to be moot, for to the best of our knowledge there are no longer any state minimum price laws in effect. We conclude therefore, that the above-entitled proceeding should be terminated.

The Commission finds:

The proceeding in Docket No. R–168 should be terminated.

The Commission orders:

The proceeding in Docket No. R–168 is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

SOUTH TEXAS NATURAL GAS GATHERING COMPANY, DOCKET NO. CP62–124

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 7, 1962)

On November 20, 1961, as supplemented on January 15, 1962, South Texas Natural Gas Gathering Company (Applicant) filed in Docket No. CP62–124 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 65 miles of 16-inch and 6 miles of smaller diameter

[1] *Pan American Petroleum Corp.* v. *Superior Court of Delaware For New Castle County et al.*, 366 U.S. 656 (1961).

pipeline, a 2,500 horsepower addition to Applicant's existing Compressor Station No. 10, and appurtenant facilities, and authority to sell and deliver an additional volume of up to 70,000 Mcf of natural gas per day through the aforesaid facilities to Transcontinental Gas Pipe Line Corporation (Transco), all as more fully set forth in the application and exhibits.

The purpose of the subject application is to effectuate that provision in Applicant's basic contract dated February 17, 1959, with Transco, on file with the Commission as Applicant's FPC Gas Rate Schedule No. 2, which provides for an increase in deliveries from the presently authorized maximum of 140,000 Mcf per day to 210,000 Mcf per day commencing with the 1961–62 winter heating season. The increased volumes of gas proposed to be made available to Transco are intended to augment Transco's supply for its existing customers. No new markets are proposed to be supplied by Transco from these volumes. No question of gas reserves or deliverability is involved under the subject application.

The estimated total cost of the facilities proposed under this application is 3,243,000 which will be financed by the private sale of new securities.

It appears that the rate to be charged for the additional volumes of gas under this application, which rate is provided for in the basic contract of February 17, 1959, is related to the proceedings now pending in Docket No. G–18907 (Docket Nos. G–18638, *et al.*) and that the certificate authorization hereinafter granted to Applicant should be conditioned as to rate, upon the outcome of said proceedings.

Notice of the subject application was published in the Federal Register on December 30, 1961 (26 FR 12786). On January 19, 1962, The United Gas Improvement Company (UGI) timely filed a petition to intervene in this proceeding, which petition was withdrawn by notice filed by UGI on January 30, 1962. Also on January 19, 1962, Transcontinental Gas Pipe Line Corporation filed a petition to intervene in support of the subject application.

Pursuant to the above notice, a public hearing was held in Washington, D.C., on January 25, 1962, at which time and place counsel for the Applicant entered an appearance. Staff counsel requested a recess for one week which was concurred in by Applicant's counsel and granted by the Presiding Examiner.

On February 1, 1962, pursuant to said recess, the hearing reconvened. Transco did not enter an appearance and in view of the favorable action being taken on the application in this proceeding, no further action on Transco's intervention petition appears necessary. No other petitions to intervene or protests to the granting of the application having been received, and no other appearances having been entered, staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, South Texas Natural Gas Gathering Company, a Texas corporation having its principal place of business in Corpus Christi, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in the Examiner's Decision in Docket No. G–17050 (Docket Nos. G–14829, *et al.*) affirmed and adopted by the Commission in its order issued December 1, 1959, in said proceeding (22 FPC 979).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transporta-

tion and sale of natural gas as proposed by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant to Transco are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate hereinafter issued to Applicant should be further conditioned upon Applicant's express agreement to file rates, applicable to all gas sold to Transco under the contract dated February 17, 1959, developed by applying the rate-making and cost of service principles employed in the Commission's ultimate decision in Docket No. G–18907 to the data set forth in Exhibit X–1 of South Texas' application in this docket. In the event that a rate lower than the existing rate of 20¢ per Mcf is filed, South Texas should refund to Transco, within 60 days after the effective date of such reduced rate, the amounts collected in excess of such reduced rate from the date of first delivery of the additional volumes of gas for which authority to deliver is granted herein.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, South Texas Natural Gas Gathering Company, to construct and operate the proposed facilities and to sell and deliver to Transcontinental Gas Pipe Line Corporation for resale, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are further conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The time within which the facilities hereby authorized shall be constructed and placed in actual operation is hereby fixed at six months from the date on which this order issues.

(D) Said certificate issued by paragraph (A) above and the rights granted thereunder are subject to the following condition: In the event that a condition requiring a reduction in rate is attached to the permanent certificate issued in Docket No. G–18907, within 60 days after the Commission's decision in Docket No. G–18907 becomes final, South Texas shall reduce its presently effective rate for the sale of natural gas to Transcontinental under South Texas' FPC Gas Rate Schedule No. 2 to the level of its average cost of service for such sale, if such cost is lower than the presently effective rate, and within 60 days after the effective date of such reduced rate, shall refund to Transcontinental the

amounts collected in excess of such reduced rate from the date of first delivery of the additional volumes of gas for which authority is sought at CP62-124 to the effective date of such reduced rate. For the purpose of this condition the average cost of service for sales to Transcontinental shall be determined by applying to the data set forth in Exhibit X-1 of South Texas' Application herein as supplemented, the rate-making and cost of service principles employed in the Commission's ultimate decision in Docket No. G-18907.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

ARKANSAS LOUISIANA GAS COMPANY,[1] (FORMERLY MIDSOUTH GAS COMPANY), DOCKET NO. G-17567; ILLINOIS POWER COMPANY, DOCKET NO. G-17984; ST. CHARLES GAS CORPORATION, DOCKET NO. G-18405; LACLEDE GAS COMPANY, COMPLAINANT v. MISSISSIPPI RIVER FUEL CORPORATION, DEFENDANT, DOCKET NO. G-17832

ORDER GRANTING MOTION TO SEVER AND REVERSING SUPPLEMENTAL INITIAL DECISION IN PART

(Issued February 8, 1962)

On December 1, 1961, the Presiding Examiner issued his supplemental initial decision* in these consolidated proceedings in which he found, among other things, that Mississippi River Fuel Corporation (Mississippi) and its responsible officers and directors have willfully and knowingly failed to comply with certificate provisions of the Natural Gas Act (Act) and the Commission's rules pertaining thereto. Accordingly, the Examiner ordered, subject to our review, that the record in this consolidated proceeding be referred to the Attorney General of the United States with a request that criminal proceedings be instituted against Mississippi and its officers and directors, under Sections 20 and 21 of the Act.

Mississippi filed its exceptions to said supplemental decision on December 21, 1961,[2] in which it requested that the Commission consider that part of said supplemental decision which concerns the Examiner's finding of willful and knowing violation of the Act before giving consideration to the other matters and issues in these proceedings. Additionally, on December 22, 1961, Mississippi filed a motion with the Commission[3] asking for severance and early consideration of the issue of whether or not Mississippi had violated the Act. We have found that good cause exists to grant Mississippi's motion for severance and consideration of that single issue, and have given it our due and careful consideration.

Examination of the entire record in these proceedings concerning the matter of whether or not Mississippi installed natural gas facilities designed to increase the daily capacity of its natural gas pipeline transmission system without first having obtained certificate authorization therefor from this Commission left us in doubt whether there was a basis to warrant certification of the record to the Attorney General with a request for the institution of criminal proceedings.

---

[1] By order issued October 19, 1961, in Docket No. CP61-334, we authorized Arkansas Louisiana Gas Company to acquire and operate all the facilities of MidSouth Gas Company.

[2] Exceptions were filed by other parties to these proceedings on January 5, 1962.

[3] Mississippi's motion was in the form of a letter sent to the Chairman by the President of Mississippi. Copies of the letter were served on all parties to these proceedings.

*Printed *infra* p. 748.

Thereafter, we had our staff undertake an investigation of the pertinent parts of all past proceedings in which Mississippi was the applicant, and of the applicable books and records of Mississippi contained in its offices at Clayton, Missouri.[4] Additionally, an engineering inspection was conducted at each of Mississippi's compressor stations.

On the basis of the evidence of record, and the supplemental investigation made by our staff, we find that we do not have a basis for referring this matter to the Attorney General for criminal prosecution. Accordingly, we shall reverse the finding of criminal violation and the ordering paragraph referring the record to the Attorney General. We shall, in the near future, consider all other exceptions filed to the Examiner's supplemental decision and make our determination thereon promptly.

Our action herein is not to be construed as a determination by us that Mississippi has complied with all provisions of the Act or the provisions and terms of its filed FPC Gas Tariff.

The Commission finds:

(1) Good cause exists for our separate consideration of the matter of whether or not Mississippi constructed and operated facilities designed to increase the daily capacity of its natural gas pipeline transmission system without first having obtained certificate authority from this Commission in violation of the Act, and Mississippi's motion for severance should be granted.

(2) Finding Paragraph (11) and Ordering Paragraph (H) of the Examiner's Supplemental Decision, issued herein on December 1, 1961, should be reversed.

The Commission orders:

(A) Mississippi's motion for severance filed herein on December 22, 1961, be and the same is hereby granted.

(B) Finding Paragraph (11) and Ordering Paragraph (H) of the Examiner's Supplemental Decision, issued herein on December 1, 1961, be and the same are hereby reversed and held for naught.

Report of Staff Investigation Docket No. G–17567, et al. Mississippi River Fuel Corporation

Pursuant to the Commission's instructions, the alleged violations of the Natural Gas Act, set forth in the Examiner's Decision issued December 1, 1961, Docket No. G–17567, et al., have been investigated by this Bureau. The investigation included a review of the Commission's files relating to certificates of public convenience and necessity issued to Mississippi River Fuel Corporation: an engineering analysis of various system maps and diagrams from the various proceedings; an engineering investigation of Mississippi's main line compressor stations between Perryville, Louisiana and St. Louis, Missouri; and an investigation of Mississippi's records at its main office. Approximately 45 man-days were expended in the investigation. Results of the several parts of the investigation are discussed below.

Review of the Files

Prior to 1946, Mississippi operated a single line (Line No. 1) system from Perryville, Louisiana to St. Louis, Missouri and environs. By order issued August 28, 1946, in Docket No. G–713 (5 FPC 206) Mississippi was authorized

[4] The staff investigation (report attached) did not disclose the construction of any unauthorized mainline transmission facilities by Mississippi. It indicated that by improved flow efficiency, use of higher pressures and construction cross-overs, Mississippi had achieved added flow capacity.

to install and operate partial loops of its original line, and increased compressor horsepower at existing stations.

In order to utilize the partial loops, it was necessary to connect the ends of the loops to the original pipeline. Similarly, by order issued December 8, 1947, Docket No. G–863 (6 FPC 280), Mississippi was authorized to complete the looping of its original pipeline, and add a small increased amount of compressor capacity. The two lines (Line 1 and Line 2) were interconnected and operated at the same pressures.

The proceedings at that time disclosed that the second line (Line No. 2) was capable of operation at pressures in excess of Line No. 1 and that future expansion would be in the form of compressor additions permitting Line No. 2 to be operated at pressures of 720 psig as compared with the 450 psig of Line No. 1.

The Docket Nos. G–1281, et al. proceedings involved main line compressor additions,[1] new delivery points[2] and laterals to new sources of supply.[3] These proceedings proposed increases in the operating pressure of Line No. 2 and in the sales capacity from 266,000 to 450,000 Mcf per day.

The first indication that Mississippi's capacity was greater than 450,000 Mcf per day came in 1957 with the filing of its application Docket No. G–12343. This proceeding revealed that the existing system capacity was actually closer to 500,000 Mcf per day. By means of proposed small minor additions (pipeline loops, No. 3 line and additional compressor facilities) the capacity was to be increased to 515,000 Mcf per day. The Commission's order of August 2, 1957, (18 FPC 106) authorized the installation and operation as proposed. Additional minor facilities authorized November 14, 1958, in Docket No. G–15190 (20 FPC 517) brought the design capacity to 522,000 Mcf per day.

Although the design capacity was 522,000, Mississippi, in the subject proceedings claimed its actual system capacity was 524,000 Mcf per day. The staff claimed a capacity of 534,000 Mcf per day. This latter amount was based, not upon a study of facilities installed, but upon a study of actual deliveries from the system.

Mississippi claims that the increase in capacity, 450,000–to–500,000 Mcf per day is due to an increase in operating pressures, use of Line No. 2 as a "base load" line and a minor increase in flow efficiency due to "pigging." "Pigging" is a term used to describe the insertion of a device (a "pig") into a line for the purpose of cleaning out accumulated debris.

Engineering Analysis

Staff calculations indicate that the increase in operating pressure of Line No. 2 by 35 psig increases its capacity by 40,000-to-50,000 Mcf per day. Line No. 1 is used to supply markets along the route of the pipelines. The "tie" lines installed as a part of the partial looping program permits refilling of Line No. 1 from Line No. 2. Since Line No. 2 is operated at some 300 psig higher than Line No. 1, this "refilling" can be accomplished without further compression. This in turn permits utilization of a greater portion of installed compressor capacity for Line No. 2.

Also our calculations indicate that the "pigging" of Line No. 1 resulted in an increase of flow efficiency of some 1 to 2 percent. This, coupled with an increase

---

[1] Docket Nos. G–1281, G–1524, G–1932.
[2] Docket Nos. G–1454, Z–1490, G–1505, G–1510.
[3] Docket Nos. G–1653, G–1755.

in operating pressure from 450-to-465 psig yields an increase in capacity of approximately 5,000 Mcf per day. We also calculated the compressor horsepower required for the increase in flow gas and concluded that the increased flow could be achieved with the authorized compressor horsepower.

A comparison was made of the location of cross-overs used by Mississippi with the loops proposed in Docket Nos. G–713 and G–863 (see amended order issued April 12, 1949, 8 FPC 810). Slight differences in location were found, but actual pipe available differed somewhat from the original proposals, which may account for this. Otherwise the cross-overs generally conformed to plan. The interconnections were not required to be removed when a change in operation of the two lines was authorized (Docket No. G–12343).

Field Investigation

Field inspection, together with an examination of selected corporate records in the offices of Mississippi, disclosed no installation of rated horsepower in excess of that previously authorized by the Commission. The field examination did, however, clearly disclose Mississippi to have increased the discharge pressures at each of its nineteen compressor stations by the upgrading of pipe pressures and the greater utilization of existing authorized horsepower.

The field examination also disclosed the existence of fifty-one interconnections or "cross-overs", each of which are capable of being used to balance the pressure in Line No. 1 by shifting gas being carried at higher pressure in Line No. 2. These fifty-one interconnections can be identified as to their specific location and docket number authorizing their construction except one installed for an emergency operation in 1951 due to bank erosion at a river crossing.

Company Records

Review of the company's records corroborates that Mississippi has constructed connecting facilities and commenced service to two direct industrial customers (Hill Brick Company and Sterling Steel Castings Company) without prior Commission authorization. It was also disclosed that Mississippi has increased its delivery obligations to other direct industrial customers without seeking Commssion approval. However, as required by the Commission's rules, Mississippi did report the deliveries to these customers.[4]

Review of the minutes of the Board of Directors meetings discloses some inconclusive indication that management was aware that facilities proposed at the 450,000 capacity level could be used to yield increased capacity.

Summary

In summary, our investigation does not disclose the construction of any unauthorized main line facilities by Mississippi. It does indicate, however, that by improved flow efficiency, use of higher pressures and utilization of construcion cross-overs, Mississippi has achieved added flow capacity. The approximate amount of the added flow capacity was reported in subsequent dockets and in annual reports of sales.

---

[4] The connection of facilities to the two industrial customers was not the subject of the examiner's findings and recommendations. We are advised by the Office of the General Counsel that at the time these facilities were constructed there was controversy as to whether construction of this type required Commission approval and that the legal issue had not been definitely settled in the courts.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

BEN BOLT GATHERING COMPANY, DOCKET NO. G–20032; EAST WHITE POINT GATHERING COMPANY, DOCKET NO. G–20355; ENGEO GATHERING COMPANY, DOCKET NO. G–20356

ORDER DENYING APPLICATION FOR REHEARING

(Issued February 8, 1962)

On January 10, 1962, Ben Bolt Gathering Company (Ben Bolt) filed an application for rehearing of the Commission's order issued herein on December 12, 1961, 26 FPC 825. By that order, we adopted an initial decision of the presiding examiner issued August 11, 1961, granting certificates of public convenience and necessity to Ben Bolt, East White Point Gathering Company (East White Point), and Engeo Gathering Company (Engeo), under subsections (c) and (e) of Section 7 of the Natural Gas Act (Act), authorizing the facilities and sales the companies proposed in their applications. In so doing, we adopted the presiding examiner's determination that Ben Bolt is an "interstate pipeline" within the meaning of Section 154.91(a) of our Regulations under the Natural Gas Act.

Ben Bolt, in its application for rehearing, requests that we modify our December 12, 1961 order by eliminating the determination that it is an interstate pipeline company and as such, subject to the requirements of our Uniform System of Accounts applicable to Class C natural-gas companies, but otherwise leave our order unchanged.

We conclude that Ben Bolt's requests and application for rehearing should be denied. The three basic arguments Ben Bolt advances in support of its requests we consider separately below.

Ben Bolt points to various facts which it says differentiate it from interstate pipelines generally—particularly that it sells gas to Natural Gas Pipeline Company of America (Natural), its purchaser, under a contract and not under a tariff, and that it dedicates specific reserves to its sale to Natural. It further contends that Engeo, East White Point, and Ben Bolt perform essentially the same function, so that Ben Bolt cannot be realistically distinguished from the former two, whom we held to be gatherers.

These arguments are without merit. In classifying a particular company as an independent producer or an interstate pipeline we must look to the nature of the operations. The facts in this case clearly indicate that Ben Bolt is but an extension of the interstate pipeline system of Natural. If Natural had constructed an extension of its pipeline system to take gas from Engeo and East White Point it would have been required to obtain a pipeline certificate to construct and operate such facilities. Such an extension, if constructed by Natural, would be treated as an addition to transmission facilities, not as a gathering operation. We find no reasonable basis for reaching a different conclusion by reason of the fact the facilities were constructed and are being operated by Ben Bolt. The function performed is the same, *i.e.*, the transportation of natural gas in interstate commerce, after the gathering function has been completed by Engeo and East White Point.

Looking at the operations of Engeo and East White Point, it is clear to us that they function as gatherers. If the producers of the gas, rather than Engeo and East White Point, collaborated in collecting gas from various wells and bringing it to a central point in the field for delivery into a pipeline system this operation

would be treated as gathering and the producers would be classified as independent producers. Because Engeo and East White Point perform this function, rather than the producers, we see no reason for holding, as in the case of Ben Bolt, that they are interstate pipelines.

In our view, the facts here justify the conclusion that Engeo and East White Point are reasonably to be classified in a different category from Ben Bolt, as gatherers and not interstate pipelines, since we found in our order that Engeo and East White Point are in substance extensions of the producers and not of any pipeline company.

Ben Bolt also contends that we have ignored the force of our own regulations, our practice thereunder, and court precedents cited by Ben Bolt,[1] requiring that we classify it as a gatherer under such regulations. It contends that by ignoring such matters, we have changed established Commission practices in a manner that is discriminatory and otherwise in disregard of law.

These arguments too we must reject. We are under law empowered to interpret our regulations, as well as our decisions. Indeed, when we issued our Order No. 174 on July 16, 1954, promulgating the regulations in issue, we expressly stated that that action was "subject to our further order," 19 F.R. 4534. Unquestionably, we can properly, on the basis of our past several years' experience in applying the Act and in regulating producers and gatherers in addition to pipelines, interpret and apply our regulations by further order in the manner here undertaken. Our holding herein does not single out or discriminate against Ben Bolt, since it applies equally to all companies similarly situated.

Finally, Ben Bolt contends that contrary to our findings, the cost of Ben Bolt's complying with the requirements of a Class C natural-gas company under our System of Accounts would be unduly burdensome to it, since it would cost the company some $10,000 a year for which it would have no recompense under any tariff, and would reduce its net operating income before federal income taxes by approximately one-third. Ben Bolt points out that the presiding examiner recognized the harmful effects of any reduction in its income.

We conclude that these arguments, even assuming *arguendo* that the regulatory expenses would be as large as Ben Bolt contends, must also be rejected. Compliance with the requirements of the regulation prescribed by law entails costs to the regulated interests, but such costs, like taxes, are part of the price we pay for government under law, and certainly form no basis for dispensing with regulation, any more than with taxes.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed herein present no new facts or principles of law which were not considered by the Commission when it issued its order of December 12, 1961, or which having now been considered warrant any change or modification of said order.

The Commission orders:

The application for rehearing of the Commission's order issued herein on December 12, 1961, filed by Ben Bolt Gathering Company on January 10, 1962, is hereby denied.

---

EL PASO NATURAL GAS COMPANY, DOCKET NOS. G–4769, G–12948, G–17929, AND RP60–3

ORDER DENYING PETITION FOR REHEARING

(Issued February 8, 1962)

On January 11, 1962, El Paso Natural Gas Company (El Paso) filed a petition for rehearing seeking reversal of the Commission's order, issued December 27, 1961, 26 FPC 927, adopting the interim order procedure with respect to the issue of a proper rate of return for El Paso in these proceedings and omitting the intermediate decision and fixing dates for filing of briefs with regard to that issue. In its petition El Paso also requests reversal and rehearing of the Secretary's letter order issued December 27, 1961, rejecting the Exceptions of El Paso Natural Gas Company to Presiding Examiner's Ruling on Motion to Certify, and Motion Requesting Opportunity to Present Oral Argument, together with Brief in support thereof, filed on December 19, 1961.

El Paso purports to assert eight categories of error by the Commission as support for its petition and the requests contained therein. The contentions advanced, in the main, restate the arguments presented by El Paso in its 31 page answer to the Staff's motion for interim order procedure and waiver of the intermediate decision. In fact, those same arguments were first repeated by El Paso in its 9 page appeal from the Presiding Examiner's ruling. As is evident from our order issued December 27, 1961, both of those documents, in addition to the record certified to us, were fully considered in arriving at the determinations set forth in that order.

We have reviewed El Paso's categories of error and the numerous contentions thereunder. It is our view that no useful purpose will be served to repeat each of those contentions here.

Basically El Paso contends that it has a "right" to a single decision in these proceedings and that the Commission, because it did not hear the testimony, would find it extremely difficult to "properly analyze and weigh" that testmony without the benefit of a "reasoned and impartial" review of the record by the Presiding Examiner. We deem El Paso's contentions to be without merit.

The public interest under the Natural Gas Act requires that the consumer shall be free of the burden of unjust and unreasonable rates as expeditiously as possible. Further, if the rate of return claimed by El Paso is proper, it is equally in the public interest that such determination be made as soon as possible. It is not our purpose at this point to prejudge in any way the merits of the evidence on rate of return submitted in these proceedings. The record is clear that all parties have had full hearing on that issue. The procedures prescribed by our order issued December 27, 1961, are designed to accomplish these objectives and are therefore necessary and proper to expedite these proceedings and accord substantial justice to all parties.

El Paso also claims that the Commission erred in adopting the interim order procedure here because it (El Paso) only had notice or opportunity for hearing on the issue of rate of return under "normal procedure" and not under interim order procedure. Actually, El Paso had notice as far back as July 25, 1961, immediately after it adduced its direct evidence on the record, that Staff counsel proposed to move for interim order procedure herein (Tr. 2826). The record further shows that California Commission counsel reminded the parties that a

motion for early decision on rate of return had already been filed by that Commission some time before (Tr. 2829). Staff counsel repeatedly stated his intent to move for interim decision on this issue as soon as all evidence thereon was on the record. El Paso presented its rebuttal evidence on November 15, 1961. The staff motions were made the following day. Clearly, El Paso had sufficient notice and opportunity to present and support its claim, now made in this petition, that use of the interim procedure on the rate of return issue requires a "higher rate of return in order to enable El Paso to attract capital" than would be required if such issue is determined in the "normal manner".

El Paso also claims that unless the Commission, in advance of a decision to use the interim order procedure and in advance of a determination on rate of return, reviews a proposal for voluntary recapitalization referred to by El Paso on the record, the Commission will be acting in a manner prejudicial to El Paso and "in violation of express and implied commitments made to investors in El Paso's stock both by the Commission itself and by El Paso in reliance thereon".

We note, first, that El Paso has never presented to us or timely moved for interim decision on any recapitalization proposal prior to decision on rate of return. If any such proposal is part of the evidence in this record, it will, of course, be considered along with the other evidence on this issue. More important this Commission has made no commitments, either expressed or implied, to El Paso's stockholders. This Commission's duty is to serve the public interest in its totality.

Finally, El Paso also claims that it was denied opportunity to present oral argument on the motions, to file a brief thereon, and to file exceptions, and a brief in support thereof, addressed to the ruling of the Presiding Examiner. As heretofore indicated, El Paso was given full opportunity to file an answer to the Staff's motion, and did in fact file a 31 page answer as well as a 9 page appeal from the Presiding Examiner's ruling. All other documents not provided for by our Rules of Practice and Procedure were properly rejected by the Secretary.

The Commission finds:

El Paso's allegations of error in its petition for rehearing filed January 11, 1962, are unsupported and without merit, and such petition should therefore be denied.

The Commission orders:

The petition for rehearing filed by El Paso on January 11, 1962, hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

ORDER ESTABLISHING THE NATURAL GAS ADVISORY COUNCIL

(Issued February 8, 1962)*

It is hereby determined, in connection with the performance of duties imposed on the Federal Power Commission, that it is in the public interest that a Natural Gas Advisory Council be, and it hereby is established.

1. *Purpose.* The Natural Gas Advisory Council (Council) shall advise and make recommendations to the Commission on matters concerning the regulation of the natural gas industry. The Council shall not advise or make recommendations with respect to any case or controversy pending before the Commission.

*Commission determination issued January 20, 1964, continued Advisory Council for additional two years.

2. *Membership of the Council.* The Council shall consist of members from the following organizations, as indicated below:

American Gas Association—two members
American Municipal Association—one member
American Petroleum Institute and Mid-Continent Oil & Gas Association—one member jointly
Independent Natural Gas Association of America—two members
Independent Petroleum Association of America—one member
National Association of Railroad and Utilities Commissioners—two members
United States Conference of Mayors—one member

The Chairman of the Commission may also appoint one or two members-at-large. In addition, there shall be an alternate appointed for each Council member. Council members will be permitted to bring technical advisors to the meeting with the advance permission of the Chairman of the Commission. The members of the Commission and such staff members as the Chairman of the Commission shall designate will also attend Council meetings.

3. *Selection of Council Members.* All Council members and alternates shall be selected by the Chairman of the Commission. The Council members and alternates from each of the organizations listed in Paragraph 2, *Membership of the Council*, shall be selected from lists (containing at least the number of names requested by the Chairman of the Commission) submitted by the president or other authorized officer of each organization.

4. *Chairman and Secretary for Council Meetings.* The Chairman of the Commission, or in his absence, the Vice Chairman of the Commission, shall act as Chairman of the Council meetings and shall be responsible for opening and conducting the meeting and for adjourning the meeting when, in his judgment, adjournment is in the public interest.

The Chairman of the Commission shall appoint a Secretary from among the members of the Commission staff who shall be responsible for preparing summary minutes of the Council meetings, preparing agenda, notifying members of the meetings, and maintaining all records related to organization, membership and operations of the Council.

5. *Preparation of the Agenda.* Suggestions for agenda items by Council members shall be submitted to the Secretary of the Council and transmitted to the Commission for its consideration. Suggestions received by the Commission from persons other than Council members may, at the option of the Commission, be placed on the agenda. The final selection of items for Council consideration shall be made solely by the Commission.

6. *Notification of Meetings.* The Secretary shall notify each Council member and alternate at least 15 days in advance of scheduled meetings and simultaneously request notification if the member or his alternate does not plan to attend. A copy of the agenda shall be forwarded to each Council member and alternate as far in advance of the meeting as possible, but in any event no later than the date of the notification letter.

7. *Location and Timing of Meetings.* All meetings will convene at the Office of the Federal Power Commission, located at 441 "G" Street, N.W., Washington 25, D.C., unless otherwise directed by the Chairman of the Commission. Ordinarily, these meetings will be held during the regular working hours of the Federal Power Commission. The Council shall meet in October of each year and at other times upon the call of the Chairman of the Commission.

8. *Advice and Recommendations Offered by the Council.* The advice and recommendations of the members of the Council may be presented to the Com-

mission at Council meetings either orally or in written form. Ultimate decisions based on the Council's advice or recommendations are reserved to the Federal Power Commission.

9. *Duration of the Council.* The Natural Gas Advisory Council shall terminate not later than two years subsequent to its date of establishment, unless the Commission determines in writing, not more than 60 days prior to the expiration of such two-year period, that its continued existence is in the public interest. A like determination by the Commission shall be required not more than 60 days prior to the end of each subsequent two-year period to continue the existence of such Council thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

REJECTION OF SALES CONTRACTS CONTAINING INDEFINITE ESCALATION CLAUSES AND OF APPLICATIONS RELYING UPON SUCH CONTRACTS FOR GAS SUPPLY, DOCKET NO. R-203

ORDER 242

AMENDING REGULATIONS UNDER THE NATURAL GAS ACT

(Issued February 8, 1962)*

In this proceeding the Commission has under consideration the amendment of §§ 154.93, 157.14(a)(10) Exhibit H (v), and 157.25, Subchapter E, Regulations Under the Natural Gas Act, Chapter I of Title 18, Code of Federal Regulations.

By Order No. 232A, issued March 31, 1961 (26 F.R. 2850, 25 FPC 609), the Commission amended section 154.93 of its Regulations so as to provide that indefinite price escalation clauses in sales contracts executed on or after April 3, 1961, for the sale or transportation of natural gas subject to the jurisdiction of the Commission, would be inoperative and of no effect at law. The amendments herein adopted provide for (1) the rejection of contracts containing such indefinite escalation clauses, (2) the rejection of applications by producers for certificates of public convenience and necessity relying for a gas supply upon contracts containing such indefinite escalation provisions, and (3) the Commission's refusal to consider such contracts submitted in support of certificate applications by pipeline companies.

Public notice of proposed rule making was given by publication in the Federal Register on October 10, 1961 (26 F.R. 9732), and by mailing copies thereof to interested persons, including natural gas companies, and to State and Federal agencies. In response to such notice, numerous comments were submitted. These comments have been carefully considered but, for the reasons set forth below, we adhere to the substance of the amendments as originally proposed.

A number of parties contend that the promulgation of these regulations would be unlawful and beyond the powers granted to the Commission by the Natural Gas Act. We conclude, however, that sections 4, 5, and 7 of the Natural Gas Act contemplate that the Commission will refuse to approve contractual provisions found adverse to the public interest. Section 16 of the Act, of

---

*Published in Federal Register on February 14, 1962 (27 F.R. p. 1356). Rehearing denied by order issued April 4, 1962, 27 FPC 666. Set aside, *Pan American Petroleum Company* v. *F.P.C.*, 317 F. 2d 796 (CA10–1963); reversed, *sub nom F.P.C.* v. *Texaco Inc.*, 377 U.S. 33 (1964).

course, authorizes the Commission to issue rules and regulations of general applicability found necessary or appropriate to carry out the provisions of the Act.

Protection of the public interest is the touchstone of our regulatory powers under the Natural Gas Act. The Commission's obligation under the Act to the natural gas companies, as one segment of the public whose interest is to be protected, does not compel it to acquiesce in the use of contracts which carry provisions incompatible with a scheme of effective rate regulation. To be sure, the proposed rule will have impact upon contractual practices which have been fairly widespread. But the real issue is not one of "freedom of contract"; the question is whether the rule is rationally related to a condition which requires correction if regulatory objectives embraced by the statute are to be achieved. See *American Trucking Associations* v. *United States*, 344 U.S. 298. In our view, the rule we adopt fully meets this test.

We held in the *Pure Oil* case[1] that indefinite escalation clauses are contrary to the public interest and restated this conclusion in Order No. 232A. Increases in producer prices, triggered by indefinite escalation clauses, have resulted in a flood of almost simultaneous filings. These filings bear no apparent relationship to the economic requirements of the producers who file them. The Natural Gas Act contemplates that prices, to be just and reasonable, be related to economic needs. The elimination of indefinite escalation provisions does not, of course, cut off other avenues by which a producer may make provision for filing for increased rates.

Filings under indefinite escalation clauses have created a significant portion of the administrative burdens under which this Commission is laboring today. The Natural Gas Act contemplates that rate increases shall be sought when there is economic justification, but not that there shall be a chain reaction in a wide area whenever one producer in the area negotiates a contract at a new price level. The Act requires the Commission to give precedence to the hearing and decision of rate increases, but the complexity of indefinite price clauses requires it to spend an undue amount of time in their interpretation and application at the expense of making a prompt determination of the rate issues involved. Accordingly, in protecting the public against waves of increases which have no defensible basis, we also serve the need—which we believe we should take into account—of making the tasks of regulation more manageable.

It has been brought to our attention that section 154.93 of the Regulations, as amended by Order No. 232A, refers to the date of execution of a contract, rather than the filing date (to which we referred in the notice of this proceeding). It is suggested that this point should be clarified. The Commission agrees and has made appropriate changes. In order to conform the language of the amendments to our existing regulations, we have also changed the phrase "price-escalation provisions" to "price-changing provisions".

The Commission, acting pursuant to authority granted by the Natural Gas Act, particularly sections 4, 5, 7, and 16 thereof (15 U.S.C. 717c, 717d, 717f, and 717o), *orders* that Parts 154 and 157, Subchapter E, Chapter I, of Title 18 of the Code of Federal Regulations be amended as follows:

(A) § 154.93 *Rate Schedule Defined*, is amended by adding a provision at the end thereof to read:

> *Provided further*, That any contract executed on or after April 2, 1962, containing price-changing provisions other than the permissible provisions set forth in the proviso next above shall be rejected.

---

[1] *The Pure Oil Company*, 25 FPC 383.

(B) § 157.14(a)(10) *Exhibit H—Total Gas Supply Data* (v), is amended by adding a proviso at the end thereof to read:

Provided, further, however, That any contract executed on and after April 2, 1962, and filed in support of an applicant's gas supply showing will be given no consideration in determining adequacy of gas supply if it contains any price-changing provisions other than those defined as permissible in § 154.93 hereof.

(C) § 157.25 *Necessary exhibits, Exhibit B, Contracts,* is amended by deleting all the language after the first sentence thereof, ending with the words "Natural Gas Act", and inserting in lieu thereof the following:

On or after April 2, 1962, the application shall be rejected if any contract submitted in support thereof contains any price-changing provisions other than those defined as permissible in § 154.93 hereof.

(D) These amendments shall become effective on April 2, 1962.

(E) The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

INDEPENDENT PRODUCERS OF NATURAL GAS, DEFINITION OF—TEMPORARY AUTHORIZATIONS, PROCEDURE, DOCKET NO. R-206

ORDER NO. 243

AMENDING §§ 154.91 AND 157.28 OF REGULATIONS UNDER THE NATURAL GAS ACT

(Issued February 8, 1962)*

In this proceeding the Commission has under consideration (1) a redefining of the term "independent producer" as the term is used in Parts 154 and 157 of its regulations, and (2) a revision of its procedures with respect to the issuance of temporary authorizations to independent producers pursuant to section 7(c) of the Natural Gas Act.

The definition of an "independent producer" set forth in the margin[1] is of particular significance because we have provided for simplified regulations for producers as distinguished from pipeline companies. Thus, producers are exempt from the comprehensive reporting and accounting obligations required of the pipeline companies.[2]

We have learned from experience however, that some companies operate lines for the interstate transportation of natural gas under circumstances which require that they be more strictly regulated. If a company is engaged in activities which go beyond production and gathering, the public interest requires that it be regulated as a pipeline company.

---

*Published in Federal Register on February 14, 1962 (27 F.R. p. 1356).

[1] Sec. 154.91(a) provides:

Definition: An "independent producer" as that term is used in this part means any person as defined in the Natural Gas Act who is engaged in the production or gathering of natural gas and who transports natural gas in interstate commerce or sells natural gas in interstate commerce for resale, but who is not primarily engaged in the operation of an interstate pipeline.

[2] See Order No. 174–B, 13 FPC 1576, ordering clause (D), at page 1585.

Before a producer may begin service under a temporary authorization issued pursuant to § 157.28 there must be on file an effective rate schedule covering the proposed service filed not less than 30 days prior to the date service is to begin. However, in order to speed the initiation of emergency operations, subsection (d) of the rule provides an automatic waiver of the 30-day filing requirements of §§ 154.92(b) and 154.94(b). The Commission believes that in the present circumstances it should itself consider applications for waiver. Accordingly, we order herein the revocation of § 157.28(d) which reads as follows:

> (d) Notice by the Secretary of the acceptance of the rate filing and the statements made under this section shall constitute a waiver by the Commission of the 30-day advance filing requirements of §§ 154.92(b) or 154.94 (b), and the proposed temporary sales or transportation may proceed forthwith.

Since a currently effective delegation of authority to the Secretary[3] to issue the notice provided for in the revoked section is no longer necessary, it should be revoked as herein provided.

The Commission finds:

(1) Amendment of the Regulations as herein ordered is appropriate and necessary for carrying out the provisions of the Natural Gas Act.

(2) The amendments herein ordered represent matters of practice and procedure which do not require notice or hearing under section 4(a) of the Administrative Procedure Act.

(3) The reasons for the amendments herein adopted, as expressed above, require that they be made effective as hereinafter ordered.

The Commission, acting pursuant to authority granted by sections 4, 7, and 16 of the Natural Gas Act (15 U.S.C. 717c, 717f, 717o), *orders:*

(A) Parts 154 and 157 of Subchapter E, Regulations Under the Natural Gas Act, Chapter I of Title 18 of the Code of Federal Regulations, are amended as follows:

1. § 154.91, subsection (a) is amended to read as follows:

> (a) *Definition.* An "independent producer" as that term is used in this part means any person as defined in the Natural Gas Act who is engaged in the production or gathering of natural gas and who sells natural gas in interstate commerce for resale, but who is not engaged in the transportation of natural gas (other than gathering) by pipeline in interstate commerce.

2. In § 157.28, subsection (d) is revoked.

(B) The above-described delegation of authority to the Secretary issued December 26, 1956, 22 F.R. 12, is revoked effective April 2, 1962.

(C) The amendments prescribed by paragraph (A)1, above, shall become effective upon the issuance of this order.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

---

[3] Issued Dec. 26, 1956, 22 F.R. 12, and included in the Commission's Statement of Organization, paragraph 5(a)(13), 21 FPC 601 at 604.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP62-108

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1962)

On October 30, 1961, as supplemented on November 2, 1961, and November 27, 1961, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP62-108 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of two 4-inch taps located on Applicant's 12-inch Woodbury Line and 20-inch parallel Marcus Hook Loop, respectively, at mile-post 12.49 on each line, in Gloucester County, New Jersey, all as more fully set forth in the application, as supplemented.

The proposed taps will be used as additional delivery points to provide gas service to South Jersey Gas Company (South Jersey), an existing customer, for resale to Shell Chemical Company (Shell Chemical). South Jersey desires to render service to Shell Chemical, a new industrial customer, on a firm basis, which service South Jersey would be unable to provide from its existing facilities

South Jersey proposes to construct and own all facilities between the proposed taps and the Shell Chemical plant, including a meter station to be operated by Applicant. The meter station will be located adjacent to Applicant's lines at the subject taps. The acceptance for filing by Applicant of a revision of Section 5(a) of the General Terms and Conditions of its FPC Gas Tariff, Original Volume No. 1, renders unnecessary any consideration of the request in the instant application for waiver of the former provision in said Section 5(a) requiring the installation of measuring facilities at Applicant's own expense.

The proposed volumes of natural gas which will be sold and delivered through the subject facilities will come out of South Jersey's presently authorized allocations sold to it under Applicant's rate schedules on file with the Commission.

Applicant estimates the cost of the proposed facilities to be $3,500, which will be financed from general funds.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 31, 1962, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G-1143 (7 FPC 145).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission as integral parts of Applicant's existing system, and the

construction and operation thereof by Applicant are subject to the requirements of Subsection (c) and (e) of section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations, and that the construction of the facilities authorized by this order should be completed and said facilities placed in actual operation within six months from the date on which this order issues.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UTAH POWER & LIGHT COMPANY, PROJECT NO. 696

ORDER DENYING APPLICATION FOR AMENDMENT OF LICENSE (MAJOR)

(Issued February 8, 1962)

Application was filed May 23, 1961, by Utah Power & Light Company, licensee for major Project No. 696, located on American Fork Creek in Utah County, Utah, and affecting lands of the United States within the Uinta National Forest, for amendment of the license to exclude therefrom the transmission line between the Upper American Fork Plant and the transformer house at the mouth of American Fork Canyon.

The 6600-volt line sought to be excluded from the license serves primarily to transmit project energy and is required for project operation, carrying more than 95 percent of the project energy to the interconnected transmission system.

By letter dated October 4, 1961, the licensee was advised that according to a study made by the Commission staff the line is part of a project within the meaning of Section 3(11) of the Federal Power Act and should remain under license, and it was requested to file any additional information in support of its application within 30 days from the date of the letter. By letter dated November 16, 1961, the Commission was informed that the licensee had no additional information to file in support of its application.

The Commission finds:

The line sought to be excluded from the license is part of Project No. 696 within the meaning of Section 3(11) of the Federal Power Act. Consequently, the application for amendment of the license should be denied.

The Commission orders:

The aforesaid application for amendment of the license for Project No. 696 is denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CONTINENTAL OIL COMPANY (OPERATOR), ET AL., DOCKET NOS. G–15170, G–15171, G–18750, RI60–194, RI61–458, G–19027, RI60–160, RI61–285, AND G–16966

ORDER ACCEPTING OFFER OF SETTLEMENT, SEVERING AND TERMINATING PROCEEDINGS AND PROVIDING FOR REFUNDS

(Issued February 9, 1962)

On December 12, 1961, Continental Oil Company, for itself and for other parties of interest (hereinafter referred to collectively as Continental), tendered for filing an Offer of Settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, of the rate suspension proceedings involved in the above-entitled matters. Included in its Offer of Settlement are three proposed increased rates which Continental requests be permitted to become effective without suspension. The sales involved in the Offer of Settlement all concern Continental's jurisdictional sales of natural gas to Texas Eastern Transmission Corporation (Texas Eastern) from Texas Railroad Commission District Nos. Two and Six.

The suspended and proposed rate changes which are the subject of this Offer of Settlement are as follows:

Rate schedule—Supplement No.	Docket No.	Increased rate—¢/Mcf at 14.65 psia	Date effective subject to refund	Settlement rates
84–9	G–15170	13.8733	10/29/58	13.8733
114–12*	G–15171	13.8733	10/29/58	13.8733
125–10*	G–15171	[1] 14.3733	10/29/58	14.3733
11	G–18750	[1] 15.0432	11/18/59	14.3733
12	RI60–194	[1] 15.3765	8/21/60	14.3733
13	RI61–458	[1] 15.7099	9/27/61	14.3733
137–10		13.8733	(proposed in the offer)	13.8733
139–6*		13.8733	(proposed in the offer)	13.8733
141–8*		13.8733	(proposed in the offer)	13.8733
169–3 and 4	G–19027	14.6	1/6/60	14.6
5	RI60–160	14.8	7/29/60	14.6
6	RI61–285	15.0	5/22/61	14.6

*(Operator), *et al.*
[1] Includes 0.5¢ per Mcf allowance to Continental for dehydration and central point delivery.

Under the terms of the offer, Continental agrees to eliminate the favored-nation and price redetermination provisions from the subject contracts. Under Rate Schedule Nos. 84, 114, 137, 139 and 141 Continental proposes to insert schedules of three 0.5¢ per Mcf escalations above the 13.8733¢ per Mcf settlement rates at five-year intervals beginning February 5, 1963. Under Rate Schedule Nos. 125 and 169 Continental proposes to insert schedules of three 0.5¢ and 1.0¢ per Mcf escalations above the respective 14.3733¢ and 14.6¢ per Mcf settlement rates occurring at five-year intervals beginning February 5, 1963 and November 1, 1963. All of the afore-mentioned rates are total rates including any tax reimbursement.

As justification for the offer, Continental contends that the favored-nation and price redetermination provisions of the contracts are valuable to Continental as a means of protection against inflation. In addition, Continental states that the settlement rates are below the level of initial prices for gas sold in the same areas. The offer is consistent with the Commission's announced policy in the Second Amendment to Statement of General Policy No. 61–1.

Docket Nos. G–15170 and G–15171 were consolidated for hearing purposes with Docket Nos. G–16966, a Section 5(a) general investigation.

Texas Eastern concurs in and approves the Offer of Settlement and adverts to the similarity of previous offers of settlement pertaining to jurisdictional sales of gas to Texas Eastern which have been accepted by the Commission. No opposition to the Offer of Settlement has been expressed.

In our judgment, settlement of these proceedings in accordance with the Offer of Settlement is desirable in the public interest and appropriate in carrying out the provisions of the Natural Gas Act. Continental is proposing to eliminate all favored-nation and price-redetermination clauses in its contracts herein involved with Texas Eastern, to waive all its future rights and benefits thereunder and to convert the annual escalations now provided in the contracts to fixed escalations, and provided in its offer.

However, we desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Continental under the fixed escalation provision or otherwise.

The Commission finds:

(1) Good cause has been shown for severing Docket Nos. G–15170 and G–15171 from the consolidated proceedings in Docket Nos. G–16966, *et al.*, and for terminating the proceedings in Docket Nos. G–15170, G–15171, G–18750, RI60–458, G–19027, RI60–160, RI61–285, and RI60–194.

(2) The proposed settlement of these rate proceedings on the basis described herein, as more fully set forth in the Offer of Settlement filed with the Commission by Continental on December 12, 1961, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved by the Commission and made effective as hereinafter ordered.

The Commission orders:

(A) Docket Nos. G–15170 and G–15171 are hereby severed from the consolidated proceedings Docket Nos. G–16966, *et al.*

(B) The Offer of Settlement filed by Continental on December 12, 1961, is hereby approved in accordance with the provisions of this order.

(C) Continental shall execute with Texas Eastern amendments to the gas purchase contracts to implement the provisions of the Offer of Settlement and file with the Commission within 30 days from the issuance of this order such amendments as supplements to the contracts involved.

(D) Within 45 days from the date of issuance of this order, Continental shall refund to Texas Eastern the difference between the amounts collected from Texas

Eastern and the rates agreed upon in the Offer of Settlement, together with simple interest at the rate specified in the respective agreement and undertaking from the respective dates of receipt of said excess amounts by Continental to the date of refund. Continental shall bear all costs incidental to the making of such refunds.

(E) Within 60 days from the date of issuance of this order, Continental shall report to the Commission in writing and under oath the details of its calculations resulting in refunds ordered pursuant to paragraph (D) above, together with copies of releases from Texas Eastern with respect to such refunds.

(F) The proceedings in Docket Nos. G–15170, G–15171, G–18750, RI60–194, RI61–458, G–19027, RI60–160 and RI61–285 upon compliance with paragraphs C, D and E, above, are hereby terminated.

(G) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceedings, which are presently being heard, or in any proceedings now pending or which may be hereafter instituted.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G–13780

ORDER REDUCING INITIAL PRICE AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 9, 1962)*

This proceeding comes before us for reconsideration and redetermination in the light of *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378 (*Catco*) by virtue of the Supreme Court's instructions in *Public Service Commission* v. *F.P.C.*, 361 U.S. 195. Our orders of July 27, 1961 and September 25, 1961, set aside the certificate heretofore issued to Socony (see *Transcontinental Gas Pipe Line Corp.*, 20 FPC 264) and prescribed procedures providing Socony a further opportunity to justify its proposed initial rate as being in the public interest. Socony did file one exhibit and the written testimony of one witness. Under the procedures prescribed by our order the purchaser herein Transcontinental Gas Pipe Line Corporation filed a response to Socony's evidence; Long Island Lighting Company, Philadelphia Electric Company, and The United Gas Improvement Company ("intervenors") filed a statement of position, one exhibit and the written testimony of one witness; and staff counsel filed a motion requesting an order reducing Socony's initial price and ordering refunds. No participant has suggested a need for cross-examination of the written and verified testimony submitted by Socony and the intervenors. Nor has any party answered or objected to staff counsel's motion as provided for by Section 1.12(c) of our Rules of Practice and Procedure. We shall grant staff's motion. Since the motion was not contested, and in view of our recent analysis in Opinion No. 351 (*Continental Oil Co.*, 27 FPC 96, issued January 22, 1962) we need discuss the issues but briefly.

In determining the "in line" price we must look to prices at the time of Socony's contract with Transco, in 1957, for gas produced in Texas Railroad District No. 3. Here, Socony produces and gathers its gas in the High Island Block 10 Field, offshore Texas, and pays 2 cents per Mcf (at 15.025 psia)

*Motion for stay granted by order issued March 30, 1962, 27 FPC 657. Rehearing denied by order issued April 6, 1962, 27 FPC 675. Petition for Review dismissed, *Socony Mobil Oil Company* v. *F.P.C.* (CADC No. 17057). [Unreported]

for transportation to a delivery point in Louisiana. Both staff and intervenors recognize that the in-line price for this sale should exceed the in-line price for a delivery at the offshore platform to the extent of the actual 2-cent line rental.

In our judgment, for 1957, Socony's contract price of 22.8 cents per Mcf is clearly out of line; a total price not exceeding 18 cents per Mcf (at 14.65 psia) would be "in-line" for the gas involved in this proceeding upon delivery in Louisiana and before deduction of the contractual line rental. Interveners' evidence suggests a somewhat lower "line". But the rate schedules cited by interveners do not include certain 1956 contracts which covered part of coastal Transmission Corporation's original gas supply and are cited in staff's motion. See *Houston Texas Gas & Oil Corp.*, 16 FPC 118. We feel these prices should be given some weight in determining the "in-line" price in the public interest.

Finally, Socony presented historical cost evidence purporting to show a direct allocated unit cost of 30.79 cents per Mcf for this High Island gas alone. Socony filed no brief and has not attempted to expound a proper policy which might utilize such cost data, even were we to accept Socony's calculations. In our judgment, it is not feasible to use the cost figures adduced by Socony in redetermining this case. The results of attempting to determine "costs" for each field are too well known to bear extended discussion. As staff points out the ratio of intangible drilling costs, presented by Socony for the 7 productive High Island wells, to the reserve estimates for the pools in which these wells are completed vary from 1 cent per Mcf to 89 cents per Mcf. A system of regulation based on field-by-field cost studies would unduly depress prices in "bonanza" fields—upon which the public heavily relies—and approve excessive prices for marginal production.

Our regulation of producers teaches us that costs should be considered only for aggregates large enough to reflect representative conditions of properties We cannot, here, find the estimated High Island reserves of some 50 million Mcf sufficiently large to give High Island costs any significance standing alone. Since Socony has made no attempt to demonstrate that its isolated cost experience at High Island is representative of experience for other properties, other operators and significant volumes of production in the area, we cannot soundly give any weight whatever to its "cost" showing, and we need not do so. See *Covington & Lexington Turnpike Co.* v. *Sanford*, 164 U.S. 578, 596; *San Diego Land & Town Co.* v. *Jasper*, 189 U.S. 439; *Baltimore & Ohio Rail Road Co.* v. *United States*, 345 U.S. 146.

No controversy outside the price question has been raised in this certificate proceeding. Accordingly, we shall issue Socony a permanent certificate.

The Commission further finds:

(1) Socony Mobil Oil Company, Inc., is an independent producer of natural gas engaged in the sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Federal Power Commission and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found.

(2) The sales of natural gas by Socony to Transcontinental Gas Pipe Line Corporation hereinbefore described, as more fully described in the application, are made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) It is necessary and appropriate in the administration of the Natural Gas Act that the initial price charged by Socony for sales of gas produced from its

offshore High Island Block 10 reserves be 18 cents per Mcf at 14.65 psia rather than the 22.8 cents per Mcf provided by its contract of October 10, 1957, with Transco.

(4) Socony is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) The sales of natural gas by Socony, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) Socony shall, within 60 days of the date of issuance of this order, refund to Transco with 6 percent interest a sum equal to the difference between 22.8 cents per Mcf at 15.025 psia and 18 cents per Mcf at 14.65 psia applied to all volumes delivered to Transco under Socony's FPC Gas Rate Schedule No. 198 from the date of initial delivery to Transco until the first billing date under this order.

(B) A certificate of public convenience and necessity is hereby issued to Socony authorizing the service and sale, proposed by it in its contract with Transco filed as its FPC Gas Rate Schedule No. 198.

(C) The certificate issued by paragraph (B), above, is hereby conditioned so that the total price effective under the aforesaid rate schedule, from the date of initial service thereunder, shall be 18 cents per Mcf at 14.65 psia.

(D) Within 10 days of the date of refund provided in paragraph (A), above, Socony shall file with the Commission an officially certified statement showing the amount of the refund, its manner of computation, and the interest payments related thereto.

(E) The certificate issued to Socony is not transferable and shall be effective only so long as it continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations, and orders of the Commission.

(F) The grant of a certificate to Socony herein is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Socony.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

IDAHO POWER COMPANY, PROJECT NOS. 18 AND 503

ORDER DETERMINING AND DIRECTING ESTABLISHMENT AND MAINTENANCE OF AMORTIZATION RESERVES

(Issued February 13, 1962)

This is an amortization reserve proceeding pursuant to Section 10(d) of the Federal Power Act[1] involving two hydroelectric projects owned and operated

[1] Section 10(d) provides "[t]hat after the first twenty years of operation, out of surplus earned thereafter, if any, accumulated in excess of a specified reasonable rate of return upon the net investment of a licensee in any project or projects under license, the Licensee shall establish and maintain amortization reserves, which reserves shall, in the discretion of the Commission, be held until the termination of the license or be applied from time to time in reduction of the net investment. Such specified rate of return and the proportion of such surplus earnings to be paid into and held in such reserves shall be set forth in the license.

by the Idaho Power Company: licensed Project No. 18 (Twin Falls); licensed Project No. 503 (Swan Falls). It was initiated by the staff through a comprehensive field examination of the books, records and other data of the Licensee, Idaho Power Company.

Staff proposes that the Commission, pursuant to Section 10(d) of the Act and Articles 25 and 19 of the respective licenses for Project Nos. 18 and 503 determine: the amount of Licensee's "surplus earnings" from Project No. 18 for the period from December 3, 1955 through December 31, 1957, to be credited to Account 264, Amortization Reserve-Federal,[3] to be $1,424.20; and the amount of Licensee's "surplus earnings" from Project No. 503 for the period from January 1, 1948 through December 31, 1957, to be credited to Account 264 to be $8,125.64.

Articles 25 and 19 of the respective licenses for Project Nos. 18 and 503 provide as follows:

> After the first 20 years * * * of operation of the project under the license * * *, six * * * percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six * * * percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six * * * percent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Licensee's Project No. 18 was placed in commercial operation on December 3, 1935, and therefore entered the amortization reserve period at the beginning of the twenty-first year of operation, December 3, 1955. Commercial operation of Project No. 503 commenced under license January 1, 1928, making the initial date of the amortization period for that project January 1, 1948. The licenses for both projects were issued pursuant to Section 4(d) of the Federal Water Power Act and are by their respective terms effective for the following periods: Project No. 18 for a period of 50 years commencing June 11, 1934; and Project No. 503 for a period effective January 1, 1928 and terminating June 30, 1970. Project No. 18 was unconstructed when licensed whereas Project No. 503 was in commercial operation when licensed.

Both projects are located within the State of Idaho and are physically operated by Licensee as an integral part of an interconnected system that includes other hydroelectric generating plants not under Commission license, internal combustion generation and a network of transmission and distribution systems. In addition, the Licensee received certain of its electric energy requirements by purchase from outside sources and also participates in power pool or interchange arrangments with other utility systems. The electric energy generated by both of the projects is intermingled and distributed in Licensee's system with energy

[3] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees effective January 1, 1961.

from its other sources of supply. Licensee's electric utility operations generally cover the areas of southern Idaho, eastern Oregon and northeastern Nevada. Licensee owns and operates facilities among others for the transmission and sale at wholesale of electric energy which is transmitted between the States of Idaho and Oregon, Idaho and Nevada, and Montana and Idaho, which energy is consumed at points outside of the States where generated.

Consistent with Licensee's method of physical operation of the above projects, its accounts, books and records do not show any particular earnings specifically associated therewith or derived therefrom. The same is true of Licensee's other generating or purchased power resources. In these circumstances, staff proposes that the Commission determine Licensee's respective "surplus earnings" from Project Nos. 18 and 503 as follows:

(1) Impute to the project during the respective fiscal periods concerned herein the particular earned rate of return which Licensee derived from its electric department utility operations as a whole during that period when computed in accordance with applicable precedents of this Commission;

(2) In the given fiscal period, determine the dollar excess, if any, of the project earnings, computed by applying the particular imputed earned rate of return to the average project net investment during the same period, over the project specified return, computed by applying the 6% specified rate of return to the average project net investment for the same period; such excess to be considered Licensee's "surplus earnings" during the particular period.

The following tabulations show the "surplus earnings" of the two projects during the amortization reserve periods covered by the staff's examination, computed in this manner, and the portions of such earnings to be credited to the respective amortization reserves for the two projects:

Project No. 18

Period	Surplus earnings over specified return and accumulated deficit		
	Surplus earnings	Accumulated deficit	Credits to Account 264
Dec. 3-31, 1955	($359.22)	($359.22)	
1956	(427.08)	(786.30)	
1957	3,634.70		$1,424.20
Total	2,848.40		1,424.20

Project No. 503

Period	Surplus earnings over specified return and accumulated deficit		
	Surplus earnings	Accumulated deficit	Credits to Account 264
1948	$16,138.70		$8,069.35
1949	112.58		56.29
1950	(4,634.13)	(34,634.13)	
1951	(8,322.62)	(12,956.75)	
1952	(5,067.63)	(18,624.38)	
1953	(4,874.75)	(23,499.13)	
1954	(5,076.56)	(28,575.69)	
1955	(4,351.46)	(32,927.15)	
1956	(592.18)	(33,519.33)	
1957	4,991.31	(28,528.02)	
Total	(12,276.74)	(28,528.02)	8,125.64

In developing Licensee's yearly actual earned rate of return, the staff derived rate base for the company's entire electric department operations for any given year is based upon average of beginning and end-of-year balances of electric plant in service (original cost), less related book depreciation reserves for electric plant in service, and less contributions in aid of construction, similarly averaged, plus an allowance for working capital; the last being computed on the basis of a cash allowance equal to one-eighth of cash operating expenses (exclusive of purchased power) for the particular year concerned plus average balances of materials and supplies and prepayments, less average available advance collections of Federal income taxes exclusive of accruals attributable to Federal taxes deferred.

Following this procedure, the staff also excluded for rate base purposes the balance in Licensee's Account 114, Electric Plant Acquisition Adjustments. In determining net electric department operating income, the staff excluded, as a revenue deduction, all annual charges for amortization of Licensee's investment classified in Account 114.

Staff treatment of Licensee's Federal income taxes reflects a normalization of the amounts of income taxes deferred by Licensee pursuant to Sections 167 and 168 of the Internal Revenue Code of 1954, in determining Licensee's net electric department operating income. Deferred State income taxes were treated in the same manner as deferred Federal income taxes.

Upon the conclusion of the staff examination, conferences were held between the staff and representatives of the Licensee at which agreement, subject to Commission approval, was reached as to the respective amounts of the "surplus earnings" of the two projects as well as the portions of such earnings to be credited to Licensee's Account 264 as indicated above. Licensee, by letter dated February 15, 1961, confirmed its agreement in the above matter and concurs that the Commission determine the amounts of "surplus earnings" to be credited to Account 264 as set forth above.

The Public Utilities Commission of Idaho was advised by letter of this Commission dated June 2, 1961, of the staff recommendations herein. That Commission on June 28, 1961, indicated its lack of objection to those recommendations.

As presented, the staff recommendations herein include the recommendation that any Commission determination of Licensee's "surplus earnings" as set forth above be made conditionally subject to revision in the event that certain charges by Electric Bond and Share Company and/or its affiliated service companies entered in Licensee's plant accounts during the years 1937 through 1957 and in Licensee's operating expense accounts during the period from January 1, 1948, through December 31, 1957, are determined hereafter to violate the Commission's "no profits to affiliates" rule. The staff analysis of Licensee's operations and earnings did not include a complete examination of the facts underlying the charges by Electric Bond and Share Company and/or its service company affiliates as to whether such charges include as a part thereof a profit element, or whether Electric Bond and Share Company and/or its service company affiliates and Licensee are associated companies within the meaning of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

While the treatment herein of deferrals of income taxes conforms to our Uniform System of Accounts and certain prior Commission precedents and is accepted for the purposes of this determination of excess earnings, we do not necessarily endorse such treatment in principle and reserve the right to reexamine such treatment. We approve the instant determination for past periods inasmuch as any change in Commission policy would not be made retrospectively.

The Commission finds:

(1) The Federal Power Act [Section 10(d)] and more specifically Articles 25 and 19 of the respective licenses for Project Nos. 18 and 503 require that Licensee establish and maintain amortization reserves with respect to the above project wherein—

> one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six * * * percent per annum on the net investment, shall be set aside * * * in the project amortization reserve account; and the amounts thus established * * * shall be maintained therein until further order of the Commission.

(2) The first twenty years of operation of Project Nos. 18 and 503 under license ended as of December 2, 1955, and December 31, 1947, respectively.

(3) The computation of Licensee's respective "surplus earnings" from Project Nos. 18 and 503, subsequent to those dates, and the portions thereof to be credited to Account 264, in the manner as proposed by the staff all as described above, is reasonable and appropriate for the purposes of the Federal Power Act and the Commission licenses here concerned.

(4) For the periods commencing December 3, 1955 and January 1, 1948, both ending as of December 31, 1957, Licensee's respective surplus earnings for the above projects, on an annual basis, are as set forth in tabular form in the recitals above, as well as the portions thereof required to be set aside for the projects in Account 264, Amortization Reserve-Federal.

(5) As of December 31, 1957, the credit balances required to be maintained by Licensee in Account 264, Amortization Reserve-Federal, for the two projects are as follows: Project No. 18, $1,424.20; and Project No. 503, $8,125.64.

(6) Licensee's concurrence in the staff recommendations herein, and the lack of objection thereto by the Public Utilities Commission of Idaho, obviate the necessity for any public hearings in this matter prior to Commission action in accordance with those recommendations, as hereinafter provided.

(7) It is necessary and appropriate for the purposes of the Federal Power Act and the Commission licenses here concerned that the Commission reserve for future consideration the matter of revision of the respective amounts of Licensee's "surplus earnings" and the portions thereof required to be credited to Account 264 to reflect such adjustments therein as may be necessary: (a) if Licensee's payments to Electric Bond and Share Company, and/or the latter's service company affiliates, as described above are determined to include a profit element; and (b) if Licensee and Electric Bond and Share Company and/or the latter's service company affiliates are determined to be associated companies within the meaning of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

The Commission orders:

(A) Licensee shall credit to Account 264, Amortization Reserve-Federal, by charge to Account 216, Unappropriated Earned Surplus, the amount of $1,424.20, for Project No. 18 for the period from December 3, 1955 through December 31, 1957; the amount of $8,125.64 for Project No. 503 for the period from January 1, 1948 through December 31, 1957; all as shown in the above tabulations.

(B) Licensee shall, within 60 days from the issuance of this order, file three certified copies of its journal entries recording the above credits.

(C) The respective amounts of Licensee's "surplus earnings" from Project Nos. 18 and 503 and the portions thereof required to be credited to Account 264 as determined herein, are expressly subject to revision as set forth in finding (7) above.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

MINNESOTA POWER & LIGHT COMPANY, PROJECT NOS 346 AND 469

ORDER DETERMINING AND DIRECTING ESTABLISHMENT AND MAINTENANCE OF AMORTIZATION RESERVES

(Issued February 13, 1962)

This is an amortization reserve proceeding pursuant to Section 10(d) of the Federal Power Act[1] involving two hydroelectric projects owned and operated by the Minnesota Power & Light Company: licensed Project No. 346; licensed Project No. 469. It was initiated by the staff through a comprehensive field examination of the books, records and other data of the Licensee, Minnesota Power & Light Company.

Staff proposes that the Commission, pursuant to Section 10(d) of the Act and Articles 19 and 18 of the respective licenses for Project Nos. 346 and 469, determine: the amount of Licensee's "surplus earnings" from Project No. 346 for the period from March 1, 1945 through December 31, 1956 to be credited to Account 264, Amortization Reserve-Federal,[2] to be $485,726.07; and the amount of Licensee's "surplus earnings" from Project No. 469 for the period from September 5, 1944 through December 31, 1956 to be credited to Account 264 to be $277,985.46.

Articles 19 and 18 of the respective licenses for Project Nos. 346 and 469 provide as follows:

> After the first 20 years of operation of said project under this license, out of surplus earnings * * * thereafter, if any, accumulated in excess of a specified reasonable rate of return upon the actual, legitimate investment of the Licensee in said project, all as defined in and determined by the provisions of Regulation 17 of said rules and regulations of the Commission, the Licensee shall establish and maintain amortization reserves, which reserves shall, in the discretion of the Commission, be held until the termination of the license or be applied from time to time in reduction of the net investment. Such specified rate of return shall * * * be one and one-half (1½) times the weighted average annual interest rate payable on the par value of the bona fide interest-bearing debt of the Licensee actually outstanding, in whole or in part, or account of the project property at the beginning of the period of amortization and of each calendar year thereafter; such weighted average annual interest rate being determined as provided in paragraphs B and C of Section 3 of said Regulation 17; *Provided*, That if at the beginning of the period of amortization or of any calendar year thereafter, the outstanding interest-bearing debt of the Licensee on account of the project or projects under license, together with any other works or property operated in connection therewith, is less than 25 percent

[1] Section 10(d) provides "[t]hat after the first twenty years of operation, out of surplus earned thereafter, if any, accumulated in excess of a specified reasonable rate of return upon the net investment of a licensee in any project or projects under license, the Licensee shall establish and maintain amortization reserves, which reserves shall, in the discretion of the Commission, be held until the termination of the license or be applied from time to time in reduction of the net investment. Such specified rate of return and the proportion of such surplus earnings to be paid into and held in such reserves shall be set forth in the license."

[2] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees effective January 1, 1961.

of the actual legitimate investment of the Licensee in said project or projects, then and in such event for the calendar year next following the specified rate of return shall be two (2) times the legal rate of interest in the State * * * of Minnesota.

Subject to the provisions of Section 6 of said regulation, the following proportions of such surplus earnings shall be paid into and held in such amortization reserves: of all surplus earnings up to and including 2 percent upon the actual, legitimate investment, 30 precent thereof shall be so paid; of all surplus earnings in excess of 2 percent and not in excess of 4 percent upon such investment, 50 percent thereof shall be so paid; of all surplus earnings in excess of 4 percent and not in excess of 6 percent, 70 percent thereof shall be so paid; and of all surplus earnings in excess of 6 percent 90 percent thereof shall be so paid; *Provided*, That if at the end of any calendar year of the amortization period the Commission shall find that the accumulated earnings of the Licensee during the period of operation, including the first twenty (20) years thereof, have not yielded a fair return upon the actual, legitimate investment in the project or projects under license, the proportion of such surplus earnings for such calendar year and for succeeding calendar years to be paid into such amortization reserves shall be ten (10) percent thereof until such time as the accumulated earnings of the Licensee represent, in the judgment of the Commission, a fair return upon such investment for such period of operation.

Licensee's Project No. 346 was placed in commercial operation on March 1, 1925 and therefore entered the amortization reserve period at the beginning of the twenty-first year of operation, March 1, 1945. Commercial operation of Project No. 469 commenced under license on September 5, 1924 making the initial date of the amortization period for that Project September 5, 1944. The licenses for both projects were issued pursuant to Section 4(d) of the Federal Water Power Act and are by their respective terms effective for the following periods: Project No. 346 for a period of 50 years commencing August 25, 1923; and Project No. 469 for a period terminating October 26, 1973. Project No. 346 was unconstructed when licensed, whereas Project No. 469 was in commercial operation when licensed.

Both projects are located within the State of Minnesota and are physically operated by the Licensee as an integral part of an interconnected system that includes other hydroelectric generating plants not under Commission license, steam production plants and a network of transmission and distribution systems. In addition, the Licensee receives certain of its electric energy requirements by purchase from other sources or through power pool or interchange arrangements with other companies. The electric energy generated by both of the projects is intermingled and distributed in Licensee's system with energy from its other sources of supply. Licensee operates in central and northeastern Minnesota.

Consistent with Licensee's method of physical operation of the above projects, its accounts, books and records do not show any particular earnings specifically associated therewith or derived therefrom. The same is true of Licensee's other generating or purchased power resources. In these circumstances, staff proposes that the Commission determine Licensee's respective "surplus earnings" from Project Nos. 346 and 469 as follows:

(1) Impute to the project during the respective fiscal periods concerned herein the particular earned rate of return which Licensee derived from its electric department utility operations as a whole during that period when computed in accordance with applicable precedents of this Commission;

(2) In the given fiscal period, determine the dollar excess, if any, of the project earnings, computed by applying the particular imputed earned rate of return to the average project net investment during the same period, over the project specified return, computed by applying the specified rate of return for the same period to the project net investment as of the beginning of the same period; such excess to be considered Licensee's "surplus earnings" during the particular period.

The following tabulation shows the "surplus earnings" of the two projects during the amortization reserve periods covered by the staff's examination, computed in this manner, and the portions of such earnings to be credited to the respective amortization reserves for the two projects:

Project No. 346

Period	Surplus earnings	Credits to Account 264	Period	Surplus earnings	Credits to Account 264
Mar. 1–Dec. 31, 1945	$117,136.06	$44,220.19	1952	$83,608.25	$32,512.54

1949	71,276.35	34,400.60			
1950	66,259.94	31,012.30	Total	675,981.57	277,985.46
1951	57,488.67	24,957.45			

In developing Licensee's yearly actual earned rate of return, the staff derived rate base for the Company's entire electric department operations for any given year is based upon average of beginning and end-of-year balances of electric plant in service (original cost), less related book depreciation reserves and amortization of limited-term electric investments, and less contributions in aid of construction, similarly averaged, plus an allowance for working capital; the last being computed on the basis of a cash allowance equal to one-eighth of cash operating expenses (exclusive of purchased power expense) for the particular year concerned plus average balances of materials and supplies and prepayments less average available advance collections of Federal income taxes exclusive of accruals attributable to Federal taxes deferred.

Following this procedure, the staff excluded for rate base purposes the balance in Licensee's Account 114, Electric Plant Acquisition Adjustments. In determining net electric department operating income, the staff excluded, as a revenue deduction, all annual charges for amortization of Licensee's investment classified in Account 114.

Staff treatment of Licensee's Federal income taxes reflects a normalization of the amount of income taxes deferred by Licensee pursuant to Section 168 of the Internal Revenue Code of 1954, in determining Licensee's net electric depart-

ment operating income. Deferred State income taxes were treated in the same manner as deferred Federal income taxes.

Upon the conclusion of the staff examination, conferences were held between the staff and representatives of the Licensee at which agreement, subject to Commission approval, was reached as to the respective amounts of the "surplus earnings" of the two projects, as well as the portions of such earnings to be credited to Licensee's Account 264, as indicated above.

Licensee, by letter dated September 23, 1960, confirmed its agreement in the above matter and concurs that the Commission determine the amounts of "surplus earnings" to be credited to Account 264, as set forth above.

As presented, the staff recommendations herein include the recommendation that any Commission determination of Licensee's "surplus earnings" as set forth above be made conditionally subject to revision in the event that certain charges by Electric Bond and Share Company and/or its affiliated service companies entered in Licensee's Plant accounts during the years 1937 through 1956 and in Licensee's operating expense accounts during the period from September 5, 1944 through December 31, 1956 are determined hereafter to violate the Commission's "no profits to affiliates" rule. The staff analysis of Licensee's operations and earnings did not include a complete examination of the facts underlying the charges by Electric Bond and Share Company and/or its service company affiliates, as to whether such payments include as a part thereof a profit element or whether Electric Bond and Share Company and/or its service company affiliates and Licensee are associated companies within the meaning of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

While the treatment herein of deferrals of income taxes conforms to our Uniform System of Accounts and certain prior Commission precedents and is accepted for the purposes of this determination of excess earnings, we do not necessarily endorse such treatment in principle and reserve the right to reexamine such treatment. We approve the instant determination for past periods inasmuch as any change in Commission policy would not be made retrospectively.

The Commission finds:

(1) The Federal Power Act [Section 10(d)] and Articles 19 and 18 of the respective licenses for Project Nos. 346 and 469 require that Licensee establish and maintain amortization reserves with respect to those projects wherein:

> Subject to the provisions of Section 6 of said regulation, the following proportions of such surplus earnings shall be paid into and held in such amortization reserves: Of all surplus earnings up to and including 2 percent upon the actual, legitimate investment, 30 percent thereof shall be so paid; of all surplus earnings in excess of 2 percent and not in excess of 4 percent upon such investment, 50 percent thereof shall be so paid; of all surplus earnings in excess of 4 percent and not in excess of 6 percent, 70 percent thereof shall be so paid; and of all surplus earnings in excess of 6 percent, 90 percent thereof shall be so paid; *Provided*, That if at the end of any calendar year of the amortization period the Commission shall find that the accumulated earnings of the Licensee during the period of operation, including the first twenty (20) years thereof, have not yielded a fair return upon the actual, legitimate investment in the project or projects under license, the proportion of such surplus earnings for such calendar year and for succeeding calendar years to be paid into such amortization reserves shall be ten (10) percent thereof until such time as the accumulated earnings of the Licensee represent, in the judgment of the Commission, a fair return upon such investment for such period of operation.

(2) The first 20 years of operation of Project Nos. 346 and 469 under license ended as of February 28, 1945 and September 4, 1944, respectively.

(3) The computation of Licensee's respective "surplus earnings" from Project Nos. 346 and 469, subsequent to those dates and the portions thereof to be credited to Account 264, in the manner as proposed by the staff, all as described above, is reasonable and appropriate for the purposes of the Federal Power Act and the Commission licenses here concerned.

(4) For the periods commencing March 1, 1945 and September 5, 1944, both ending as of December 31, 1956, Licensee's respective "surplus earnings" for the above projects, on an annual basis, are as set forth in tabular form in the recitals above, as well as portions thereof required to be set aside for the projects in Account 264, Amortization Reserve-Federal.

(5) As of December 31, 1956, the credit balances required to be maintained by Licensee in Account 264, Amortization Reserve-Federal for the two projects, are as follows: Project No. 346—$485,726.07; and Project No. 469—$277,985.46.

(6) Licensee's concurrence in the staff recommendations herein, obviates the necessity for any public hearings in this matter prior to Commission action in accordance with those recommendations, as hereinafter provided.

(7) It is necessary and appropriate for the purposes of the Federal Power Act and the Commission licenses here concerned that the Commission reserve for future consideration the matter of revision of the respective amounts of Licensee's "surplus earnings" and the portions thereof required to be credited to Account 264, to reflect such adjustments therein as may be necessary: (a) if Licensee's payments to Electric Bond and Share Company and/or the latter's service company affiliates as described above are determined to include a profit element; and (b) if Licensee and Electric Bond and Share Company and/or the latter's service company affiliates are determined to be associated companies within the meaning of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

The Commission orders:

(A) Licensee shall credit to Account 264, Amortization Reserve-Federal, by charge to Account 216, Unappropriated Earned Surplus, the amount of $485,726.07 for Project No. 346 for the period from March 1, 1945 through December 31, 1956; the amount of $277,985.46 for the period from September 5, 1944 through December 31, 1956; all as shown in the above tabulations.

(B) Licensee shall, within 60 days from the issuance of this order, file three certified copies of its journals entries recording the above credits.

(C) The respective amounts of Licensee's "surplus earnings" from Project Nos. 346 and 469 and the portions thereof required to be credited to Account 264 as determined herein, are expressly subject to revision as set forth in finding (7) above.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SHELL OIL COMPANY, DOCKET NO. G–13876

ORDER REQUIRING ADDITIONAL REFUND

(Issued February 13, 1962)*

By order issued February 23, 1960, in El Paso Natural Gas Company, *et al.*, Docket Nos. G–13862, *et al.* (23 FPC 369, 380), the Commission issued to Shell

*Rehearing denied; stay granted by order issued April 6, 1962, 27 FPC 674.

Oil Company, Docket No. G–13876, a certificate of public convenience and necessity authorizing the sale by Shell to El Paso of natural gas to be produced in certain fields in the Aneth area in San Juan County, Utah, at the rate of 17.7¢ per Mcf. The Commission ordered that Shell file a supplement to its FPC Gas Rate Schedule No. 178 providing for the rate of 17.7¢ per Mcf in lieu of the initial price of 20¢ contained in Shell's contract with El Paso, and that Shell refund to El Paso amounts collected from El Paso pursuant to the temporary authorization issued to Shell on November 18, 1958, in excess of the amounts which would have been collected under the certificate rate, with interest at the rate of 6% per year.

While the temporary authorization was in effect the State of Utah increased its occupation tax from 1% to 2%, effective January 1, 1960. Pursuant to the terms of its contract concerning additional taxes, Shell submitted on May 18, 1960, a notice of rate change reflecting full reimbursement of the 1% tax increase applied to its 20¢ contract rate. That tax increase, amounting to approximately 0.2¢ per Mcf, was accepted by our letter order dated July 10, 1960, which specified that the acceptance was subject to Shell's agreement to the refund conditions of the temporary authorization issued November 18, 1958.

On October 30, 1961, Shell submitted the required supplement to its Rate Schedule No. 178, and by letter dated December 5, 1961, it reported that on November 7, 1961, it refunded to El Paso, pursuant to the Commission's Opinion and Order No. 335, a total of $176,786.01, which sum included interest in the amount of $13,677.42. Details of the computation of the amount refunded were given in Shell's letter to the Commission dated November 2, 1961.

The sum of $176,786.01 refunded to El Paso did not include the tax reimbursement which Shell had collected from El Paso and which, during the period commencing May 18, 1960 (effective date of the 0.2¢ tax filing), and ending November 7, 1961 (date of refund to El Paso), amounted to approximately $7,500.

The Commission finds:

Shell Oil Company should refund to El Paso Natural Gas Company all amounts which it has collected from El Paso, including said tax reimbursement, in excess of the amounts resulting from the 17.7¢ per Mcf rate authorized by us as aforesaid under Docket No. G–13876, and Shell's supplement to its FPC Gas Rate Schedule No. 178 should be modified accordingly.

The Commission orders:

(A) Shell Oil Company shall refund to El Paso Natural Gas Company within 90 days after the date of this order all amounts collected from El Paso in excess of the amounts which would have been collected under the rate at which Shell's sales were certified in our aforesaid order issued February 23, 1960 (23 FPC 380), and in excess also of amounts previously refunded by Shell to El Paso pursuant to said order, with interest at the rate of 6% per year computed from the date of the collection of said amounts to the date of refund, and shall report to the Commission, in writing and under oath, the details of such refund within 15 days after it is made.

(B) Shell shall file with the Commission, within 30 days after the date of this order, a supplement to its FPC Gas Rate Schedule No. 178 reflecting compliance with the Commission's said order issued February 23, 1960.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NOS. 67, 120 AND 382

ORDER DETERMINING AND DIRECTING ESTABLISHMENT AND MAINTENANCE OF AMORTIZATION RESERVES

(Issued February 13, 1962)

This is an amortization reserve proceeding pursuant to Section 10(d) of the Federal Power Act[1] involving three hydroelectric projects owned and operated by Southern California Edison Company; licensed Project No. 67 (Big Creek-Part); licensed Project No. 120 (Big Creek-Part); and licensed Project No. 382 (Borel). It was initiated by the staff through a comprehensive field examination of the books, records and other data of the Licensee, Southern California Edison Company.

Staff proposes that the Commission, pursuant to Section 10(d) of the Act and Articles 10, 18 and 20 of the respective afore-mentioned project licenses determine: the amount of Licensee's "surplus earnings" from Project No. 67 for the period from June 1, 1941, through December 31, 1955, to be credited to Account 264, Amortization Reserve-Federal,[2] to be $88,124.52; the amount of Licensee's "surplus earnings" from Project No. 120 for the period from October 1, 1943 through December 31, 1955 to be credited to Account 264, to be $59,834.52; and the amount of Licensee's "surplus earnings" from Project No. 382 for the period from March 1, 1945 through December 31, 1955 to be credited to Account 264 to be $7,715.64.

Articles 10, 18 and 20 of the licenses for Project Nos. 67, 120 and 382, respectively, provide as follows:

> After the first twenty (20) years of operation of the project under the license, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act, one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent per annum on the net investment shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed,

---

[1] Section 10(d) provides "[t]hat after the first twenty years of operation, out of surplus earned thereafter, if any, accumulated in excess of a specified reasonable rate of return upon the net investment of a licensee in any project or projects under license, the Licensee shall establish and maintain amortization reserves, which reserves shall, in the discretion of the Commission, be held until the termination of the license or be applied from time to time in reduction of the net investment. Such specified rate of return and the proportion of such surplus earnings to be paid into and held in such reserves shall be set forth in the license."

[2] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees effective January 1, 1961.

and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account, and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Licensee's Project No. 67 was placed in commercial operation on June 1, 1921, and, therefore, entered the amortization reserve period at the beginning of the twenty-first year of operation, June 1, 1941. Project No. 120 was placed in commercial operation on October 1, 1923 and entered its amortization reserve period October 1, 1943. Commercial operation of Project No. 382 commenced under license March 1, 1925 making the initial date of the amortization period for that project March 1, 1945. The licenses for all three projects were issued pursuant to Section 4(d) of the Federal Water Power Act and are by their respective terms each effective for a period of fifty years (except Project No. 120, the term of which ends March 3, 1971) from the following effective dates: Project No. 67, March 3, 1921; Project No. 120, June 8, 1922; and Project No. 382, February 28, 1925.[2]

All of the projects are located within the State of California and are physically operated by Licensee, as an integral part of an interconnected system that includes other hydroelectric generating plants not under Commission license, steam production plants and a network of transmission and distribution systems. In addition, Licensee receives certain of its electric energy requirements by purchase from outside sources and also participates in power pool or interchange arrangements with other utility systems including federal and state agencies or authorities. The electric energy generated by each of the three projects is intermingled and distributed in Licensee's system with energy from its other sources of supply. Licensee's electric utility operations generally cover Central and Southern California. In addition Licensee's electric facilities are located in or interconnect with facilities of others located in one or more of the States of Arizona, California or Nevada.

Consistent with Licensee's method of physical operation of the above projects, its accounts, books and records do not show any particular earnings specifically associated therewith or derived therefrom. The same is true of Licensee's other generating or purchased power resources. In these circumstances, staff proposes that the Commission determine Licensee's respective "surplus earnings" from Project Nos. 67, 120 and 382 as follows:

(1) Impute to the project during the respective fiscal periods concerned herein the particular earned rate of return which Licensee derived from its electric department utility operations as a whole during that period when computed in accordance with applicable precedents of this Commission;

(2) In the given fiscal period, determine the dollar excess, if any, of the project earnings, computed by applying the particular imputed earned rate of return to the average project net investment during the same period, over the project specified return, computed by applying the 6% specified rate of return to the average project net investment for the same period; such excess to be considered Licensee's "surplus earnings" during the particular period.

The following tabulations show the "surplus earnings" of the three projects during the amortization reserve periods covered by the staff's examination computed in this manner, and the portions of such earnings to be credited to the respective amortization reserves for the three projects:

---

[2] Project No. 382 was constructed and in commercial operation when licensed.

Project No. 67

Period	Surplus earnings over specified return and accumulated deficit		
	Surplus earnings	Accumulated deficit [1]	Credits to Account 264
June 1–Dec. 31, 1941	$31,049.71		$15,524.86
1942	30,909.22		15,454.61
1943	(230,795.96)	($230,795.96)	
1944	(20,422.30)	(251,218.26)	
1945	(20,371.74)	(271,590.00)	
1946	385,880.10		57,145.05
1947	(1,971,621.52)	(1,971,621.52)	
1948	(1,047,108.84)	(3,018,730.36)	
1949	190,775.08	(2,827,955.28)	
1950	55,349.84	(2,772,605.44)	
1951	(180,034.92)	(2,952,640.36)	
1952	193,601.40	(2,759,038.96)	
1953	(295,389.14)	(3,054,428.10)	
1954	(170,421.39)	(3,224,849.49)	
1955	(182,409.90)	(3,407,259.39)	
Total	(3,231,010.36)	(3,407,259.39)	88,124.52

[1] The deficiency in earnings occurring mainly in the years 1947 and 1948 reflects large expenditures by Licensee in converting portions of its electric system from 50 to 60 cycle operation. The major portion of such cost was expensed by Licensee.

Project No. 120

Period	Surplus earnings over specified return and accumulated deficit		
	Surplus earnings	Accumulated deficit	Credits to Account 264

1955	(6,545.27)	(137,024.41)	
Total	(121,593.14)	(137,024.41)	7,715.64

In developing Licensee's yearly actual earned rate of return, the staff derived rate base for the company's entire electric department operations for any given year is based upon average of beginning and end-of-year balances of electric plant in service (original cost), less related book depreciation reserves, less customers' advances for construction, and less contributions in aid of construction, similarly averaged, plus an allowance for working capital; the last being computed on the basis of a cash allowance equal to one-eighth of cash operating expenses (exclusive of purchased power and fuel expenses associated with the operation of Licensee's thermal electric generating resources) for the particular year concerned plus average balances of materials and supplies and prepayments, less average available advance collections of Federal income taxes exclusive of accruals attributable to Federal taxes deferred.

Following this procedure, the staff also excluded for rate base purposes the balance in Licensee's Account 114, Electric Plant Acquisition Adjustments. In determining net electric department operating income, the staff excluded, as a revenue deduction, all annual charges for amortization of Licensee's investment classified in Account 114.

Staff treatment of Licensee's Federal income taxes reflects a normalization of the amounts of income taxes deferred by Licensee pursuant to Sections 167 and 168 of the Internal Revenue Code of 1954, in determining Licensee's net electric department operating income. Deferred State income taxes were treated in the same manner as deferred Federal income taxes.

Upon the conclusion of the staff examination, conferences were held between the staff and representatives of the Licensee at which agreement, subject to Commission approval, was reached as to the respective amounts of the "surplus earnings" of the three projects, as well as the portions of such earnings to be credited to Licensee's Account 264 as indicated above. Licensee, by letter dated October 5, 1960, confirmed its agreement in the above matter and concurs that the Commission determine the amount of "surplus earnings" to be credited to account 264, as set forth above.

The Public Utilities Commission of California was advised by letter of this Commission dated May 16, 1961, of the staff recommendations herein. That Commission by letter dated June 2, 1961 indicated its lack of objection to those recommendations.

While the treatment herein of deferrals of income taxes conforms to our Uniform System of Accounts and certain prior Commission precedents and is accepted for the purposes of this determination of excess earnings, we do not necessarily endorse such treatment in principle and reserve the right to re-examine such treatment. We approve the instant determination for past periods inasmuch as any change in Commission policy would not be made retrospectively.

The Commission finds:

(1) The Federal Power Act [Section 10(d)] and more specifically Articles 10, 18 and 20 of the respective licenses for project Nos. 67, 120 and 382 require that Licensee establish and maintain amortization reserves with respect to those projects wherein—

> one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent per annum on the net investment, shall be set aside * * * in the project amortization reserve account; and the amounts thus established * * * shall be maintained therein until further order of the Commission.

(2) The first twenty years of operation of Project Nos. 67, 120 and 382 under license ended as of May 31, 1941, September 30, 1943 and February 18, 1945, respectively.

(3) The computation of Licensee's respective "surplus earnings" from Project Nos. 67, 120 and 382 subsequent to those dates, and the portions thereof to be credited to Account 264, in the manner as proposed by the staff, all as described above, is reasonable and appropriate for the purposes of the Federal Power Act and the Commission licenses here concerned.

(4) For the periods commencing June 1, 1941, October 1, 1943 and March 1, 1945, all ending as of December 31, 1955, Licensee's respective "surplus earnings" for the above projects, on an annual basis, are in tabular form in the recitals above, as well as the portions thereof required to be set aside for the project in Account 264, Amortization Reserve-Federal.

(5) As of December 31, 1955, the credit balances required to be maintained by Licensee in Account 264, Amortization Reserve-Federal for the three projects are as follows: Project No. 67—$88,124.52; Project No. 120—$59,834.52; and Project No. 382—$7,715.64.

(6) Licensee's concurrence in the staff recommendations herein, and the lack of objection thereto by the Public Utilities Commission of California, obviate the necessity for any public hearings in this matter prior to Commission action in accordance with those recommendations, as hereinafter provided.

The Commission orders:

(A) Licensee shall credit to Account 264, Amortization Reserve-Federal, by charge to Account 216, Unappropriated Earned Surplus, the amount of $88,124.52, for Project No. 67 for the period from June 1, 1941 through December 31, 1955; the amount of $59,834.52 for Project No. 120 for the period from October 1, 1943 through December 31, 1955; the amount of $7,715.64 for Project No. 382 for the period from March 1, 1945 through December 31, 1955; all as shown in the above tabulations.

(B) Licensee shall, within 60 days from the issuance of this order, file three certified copies of its journal entries recording the above credits.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 372

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued February 13, 1962)

Application was filed September 29, 1961 by Southern California Edison Company, licensee for major Project No. 372, for further amendment of the license for the project located on Middle Fork of Tule River in Tulare County, California, and affecting lands of the United States within Sequoia National Forest.

The application states that the flumes and ditches of the conduit between a point in the NW¼SW¼ of Section 28 and a point in the SE¼SW¼ of Section 29, T. 20 S., R. 30 E., M.D.B. & M. have been replaced with two relocated 30 inch diameter welded steel pipes, and the ditches and flumes have been abandoned and removed. Relocation of the section of conduit reduced the area of government lands occupied by the project by 13.37 acres, and the amount of annual charges for the occupancy of such lands should be reduced accordingly.

On July 9, 1960, approximately 5,000 feet of flume were rendered useless by fire. Replacement of the flumes and ditches with the double siphon was the quickest and most economical way in which the project plant could be put back into service.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Sequoia National Forest, in reporting on the application, has advised that the destroyed and abandoned flumes have been removed and the right-of-way restored to a condition satisfactory to the Service, and no special conditions for the protection and utilization of National Forest lands are necessary other than those already in the license.

Although invited, no comments on the application have been received from any agency of the State of California.

The Commission finds:

(1) The license, further amended as hereinafter ordered, will not interfere or be inconsistent with the purposes for which the Sequoia National Forest was created or acquired and is in the public interest.

(2) Public notice has been given of the filing of the application. No protests have been received.

(3) The following described exhibits filed as a part of the application for amendment conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the exhibits which they supersede and which are now part of the license should be eliminated therefrom to the extent indicated—all as hereinafter provided:

Exhibit J: (FPC No. 372–46), superseding *Exhibit J:* (FPC No. 372–40);

Exhibit K: (FPC No. 372–47), superseding *Exhibit K:* (FPC No. 372–17);

Exhibit K: (FPC No. 372–48), superseding *Exhibit K:* (FPC No. 372–18); and

Exhibit L: (FPC No. 372–49), superseding *Exhibit K:* Sheets 6 and 7 (FPC No. 372–21 and –22), insofar as they show the profile of the conduit from Station 241+67.64 to Station 173+60.04.

The Commission orders:

(A) The exhibits described in finding (3) above as conforming to the Commission's rules and regulations are approved as part of the license for Project No. 372 and the exhibits described in the same finding as being superseded are eliminated from the license for the project to the extent therein indicated.

(B) The license for Project No. 372 is further amended, effective as of January 1, 1962, as follows:

PARAGRAPH I. Article 2 of the license is amended by substituting in subparagraph C thereof the figure "32,122.8" for the figure "34,856" appearing in line 8 therein.

PARAGRAPH II. Article 19 of the license is amended by revising subparagraph B thereof to read as follows:

B. For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands within the project area, $217.16.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in anyway constitute a waiver of any other part, provision or condition of the license as heretofore amended.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act and failure to file such an application shall constitute acceptance of this amendment of license. In acknowledgment of the acceptance of this amendment of license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7020

ORDER AUTHORIZING ISSUANCE OF COMMON STOCK

(Issued February 16, 1962)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of California, Oregon, Washington, Wyoming, Montana and Idaho, with its principal business office at Portland, Oregon, filed an application on December 28, 1961, as amended January 24, 1962, for authority, pursuant to Section 204 of the Federal Power Act, to issue not to exceed 6,981,361 shares of Common Stock, par value $3.25 per share, for a reclassification, or split, of the outstanding Common Stock of Applicant.

Applicant's Common Stockholders, at a special meeting on February 7, 1962, amended Applicant's Certificate of Organization and By-Laws to increase and change the Common Stock which it is authorized to issue from 8,212,679 shares of par value $6.50 per share to 16,425,358 shares of par value $3.25 per share, and to split and change the number of shares of its outstanding Common Stock of the par value of $6.50 per share into twice such number of shares of Common Stock of the par value of $3.25 per share.

After the effective date of the amendments, the outstanding certificates of the present $6.50 par value Common Stock will be treated as evidencing and will automatically represent the same number of shares of new $3.25 par value Common Stock. As promptly as possible after such effective date, all holders of Common Stock of record at the close of business on such date will be sent certificates for the additional shares of $3.25 par value stock to which they will be entitled as a result of the two-for-one split. Common Stockholders will then have, together with the certificates which they retain, two shares of $3.25 par value stock for each share of $6.50 par value stock held before the split. The aggregate capital represented by Applicant's Common Stock will not be changed as a result of the proposed transaction.

Applicant states that the purpose of the proposed reclassification of its Common Stock is to establish the price per share of such Common Stock at a market value level which will more readily attract new investors and broaden the public interest in the Common Stock of Applicant.

Written notice of the application has been given to the Public Utilities Commission of California, the Public Utilities Commission of Idaho, the Board of Railroad Commissioners of Montana, the Utilities and Transportation Commission of Washington, the Public Service Commission of Wyoming, the Public Utility Commissioner of Oregon, and to the Governors of each of those States. Notice has also been given by publication in the Federal Register on January 13, 1962 (27 F.R. 432), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before January 29, 1962 with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Public Utilities Commission of California, by order dated January 23, 1962, and the Public Utilities Commission of Idaho, by order dated January 24, 1962, authorized Applicant to double the number of shares of its Common Stock authorized and outstanding and to change the par value thereof from $6.50 to $3.25 per share, as described above. The Public Service Commission of Wyoming,

by letter dated January 11, 1962, and the Board of Railroad Commissioners of Montana, by minute entry dated January 22, 1962, advised Applicant that the proposed stock split is not subject to their jurisdiction.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued April 24, 1958, *In the Matters of The California Oregon Power Company and Pacific Power & Light Company*, 19 FPC 573.

(2) The proposed issuance of Common Stock, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of Common Stock, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock, as described above, is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(1) thereof.

(5) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Common Stock, as described above, upon the terms and conditions and for the purposes specified in the application, is hereby authorized, subject to the provisions of this order.

(B) This authorization shall expire unless the transaction hereby authorized is consummated within 60 days from the date of issuance of this order.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any other matter whatsoever which is now pending or which hereafter may come before this Commission or any other regulatory body.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NOS. G–20388, G–20389, AND G–1922

ORDER DENYING APPLICATION FOR REHEARING

(Issued February 14, 1962)

On January 15, 1962, Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, and Anthracite Institute (Applicants) timely

filed a joint application for rehearing of the Commission's Opinion No. 349 and accompanying order issued December 14, 1961, (a) granting Tennessee Gas Transmission Company (Tennessee) a certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act (Act) to receive, transport and sell certain volumes of natural gas to be purchased on an interruptible basis from Trans-Canada Pipe Lines Ltd., (b) granting Tennessee authority under Section 3 of the Act to import said gas, and (c) amending Tennessee's Presidential Permit pursuant to Executive Order 10485 to allow the use of the existing border facilities for the importation, all as more fully set forth in the opinion.

Contending that the actions are contrary to law and unsupported by facts, Applicants request that we grant rehearing, that Opinion No. 349 and accompanying order be declared of no force and effect, and in lieu thereof that we affirm the examiner's decisions of September 2, 1960 and June 20, 1961, denying Tennessee's applications.

We have considered the assignments of error and grounds for rehearing set forth in the application for rehearing, described above, and have reconsidered our Opinion No. 349. The arguments advanced here by Applicants are essentially the same as those advanced in their briefs to the examiner and rejected by us in the opinion. No new facts or arguments are called to our attention which would be cause for granting rehearing or disturbing the original opinion and order.

There is, however, one matter we desire to discuss briefly here. In their discussion of why market data is a prerequisite to the issuance of Tennessee's requested certificate, Applicants contend that by not requiring Tennessee to submit market data demonstrating the exact disposition of the imported gas no determination can be made as to the effect, if any, the importation would have on coal markets. Their argument is that the gas could be sold to new markets and, consequently deprive coal of markets. For example, they allege that Tennessee could sell the gas on an interruptible basis to existing customers who in turn could sell the gas to new consumers who might not otherwise obtain any service because of the lack of available gas during the summer or other off-peak periods.

This argument is not well-grounded. Tennessee received no certificate authority to increase sales to existing customers or to institute service to new customers. Tennessee's sales to its present customers are limited by terms of contracts which are necessarily incorporated in certificates, and should Tennessee desire to increase its sales above certificate levels, additional certificate authority would be necessary. Within the limits of existing authorizations Tennessee's customers always could take excess gas, but there is no showing that all gas available in off-peak periods ever was taken or that more will be taken when Canadian gas rather than Southwest gas is offered.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the above-described application for rehearing present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 349 and accompanying order on December 14, 1961, or which having now been considered warrant any change or modification of said opinion and order.

The Commission orders:

The application for rehearing filed by the Applicants on January 15, 1962, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. G-20272

ORDER GRANTING IN PART PETITION FOR RECONSIDERATION AND MODIFYING ORDER CONDITIONALLY APPROVING RATE SETTLEMENT AGREEMENT

(Issued February 19, 1962)

On January 15, 1962, Atlantic Seaboard Corporation (Atlantic Seaboard) filed a petition for reconsideration of our order issued December 29, 1961, 26 FPC 945, conditionally approving a rate settlement agreement and providing for a limited hearing in the above proceeding.

The settlement agreement provided, among other things, for stipulated rate reductions and refunds from April 5, 1960, in the event that Atlantic Seaboard's Boldman Compressor Station were transferred to United Fuel Gas Company (United Fuel), an affiliate in the Columbia Gas System, Inc. We conditioned our approval of the settlement agreement to require Atlantic Seaboard also to file revisions in rates and proposals for refunds appropriate to other transfers by Atlantic Seaboard.[1]

In its petition for reconsideration, Atlantic Seaboard requests deletion of said requirement concerning facilities other than Boldman Compressor Station. Atlantic Seaboard states that the settlement provision for refunds upon the transfer of Boldman Station is correlated with a provision in another rate settlement agreement between United Fuel and others in the proceeding in Docket No. G-20270. The United Fuel Settlement is based on a cost of service which includes the cost of Atlantic Seaboard's Boldman Station and further provides that in the event certificate authority for the transfer of Boldman Station to United Fuel is not granted, then United Fuel will make stipulated rate reductions and refunds from April 5, 1960. Thus under the correlated settlement agreements, either United Fuel or Atlantic Seaboard will include the Boldman Station in its rate base from April 5, 1960, and the other will make related refunds. The United Fuel settlement, however, is not based upon a cost of service which also includes the cost of other facilities that may be transferred to it by Atlantic Seaboard under the above referenced certificate proceeding. Therefore, if Atlantic Seaboard makes refunds incident to transfers of facilities other than Boldman Station, United Fuel will not have recovered the cost of service of those facilities.

Atlantic Seaboard admits that prospective rate reductions are appropriate to the transfer of any of its facilities, but states that it should not be obligated also to make refunds incident to the transfer of facilities other than Boldman Station. Atlantic Seaboard requests that we delete from the order issued December 29, 1961 all provisions concerning the transfer of facilities other than Boldman Station and that, instead, any problem of related rate reductions be redelegated to the proceeding in Docket No. CP61-107.

We deem it appropriate to modify our order by removing any requirement of refunds incident to the transfer of facilities other than Boldman Station. However, we shall continue to require, as a condition to our approval of the settlement agreement, that Atlantic Seaboard prospectively reduce its rates to reflect the transfer of facilties, not limited to the transfer of Boldman Sta-

[1] Permission to transfer the Boldman Compressor Station and other facilities is being sought in the proceeding in Docket No. CP61-107.

tion.[2] Atlantic Seaboard shall, of course, remain obligated to make refunds appropriate to the transfer of the Boldman Station as provided in the approved settlement agreement.

The Commission finds:

Atlantic Seaboard's petition for reconsideration of the order issued December 29, 1961, in this proceeding should be granted as hereinafter provided.

The Commission orders:

(A) Ordering paragraph (C) of the order issued December 29, 1961, in the proceeding in Docket No. G–20272 is hereby modified to reflect the deletion of reference to refunds, and to read as follows:

(C) In the event and to the extent that transfers of its facilities are approved in the proceeding in Docket No. CP61–107, Atlantic Seaboard shall tender for filing, subject to approval by the Commission, revisions to the settlement costs of service for the period from and after the date of transfer as may be required by, or otherwise appropriate to, approval of the transfer of facilities in the proceeding in Docket No. CP61–107; if all the issues to be heard in the proceeding in Docket No. G–20272 have been determined prior to said approval of the transfer of facilities, Atlantic Seaboard shall also tender for filing, subject to approval of the Commission, revisions in rates appropriate to the revised costs of service tendered for filing as hereby required.

(B) Atlantic Seaboard's petition for reconsideration, filed herein on January 15, 1962, is hereby denied to the extent not granted in paragraph (A) above.

(C) The time within which Atlantic Seaboard shall comply with paragraph (E) of the order issued herein on December 29, 1961, is extended until 30 days from the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP62–43

ORDER DENYING INTERVENTION

(Issued February 19, 1962)

A petition seeking leave to intervene in the above-entitled proceeding was filed on January 22, 1962, by Harold A. Knapp, Jr., of Germantown, Maryland (Petitioner).

This proceeding is upon an application filed by Atlantic Seaboard Corporation (Applicant) on August 22, 1961, as supplemented on October 17, 1961, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity seeking authorization for (1) the construction and operation of approximately 40.3 miles of 30-inch gas transmission pipeline extending in a northeasterly direction from Applicant's 26-inch pipelines at Leesburg Gate, Loudoun County, Virginia, to a point of interconnection with Applicant's 20-inch and 26-inch pipelines at Linden Church, Howard County, Maryland, and (2) the installation and operation of an additional 1320 horsepower at Applicant's Lost River Compressor Station, Hardy County, West Virginia.

Petitioner a resident of Montgomery County, Maryland, states that there are four "public issues which must be considered and clarified before it may

[2] The related impact of the transfer on the rates of United Fuel will of course be considered in appropriate proceedings.

reasonably be judged that the particular facility proposed would in fact serve the public interest, and before the public can be assured that its interests have in fact been duly considered." They are:

(1) In the absence of a full hearing, Commission approval is more in the nature of failing to find any cause for objecting, on the basis of material submitted by the Applicant, rather than a positive assertion that, in the light of all the evidence, increased facilities are in fact necessary.

(2) The proposed pipeline does not follow a direct route nor does it follow the route of Applicant's existing facilities through Montgomery County, Maryland. Applicant has not stated sufficient reasons to justfy the use of a new rather than the existing right-of-way. Also, Applicant has represented to property owners along the proposed right-of-way that it would resort to condemnation proceedings unless it secured the needed right-of-way by negotiation; however, Applicant did not reveal that it could not undertake condemnation proceedings unless and until a certificate of public convenience and necessity was issued.

(3) Applicant has not justified the use of a 60-foot right-of-way for a 30-inch pipeline. Further, Applicant refuses to discuss the need for such a right-of-way with Petitioner or the Maryland-National Capital Park and Planning Commission.

(4) Applicant did not submit its proposed plans to the Maryland-National Capital Park and Planning Commission until after the request for temporary authorization had been made to the Federal Power Commission. This would have deprived the Maryland-National Capital Park and Planning Commission of an opportunity to make representations to the Federal Power Commission if temporary authorization had been granted. Furthermore, the application stated that "No application to any other Federal, State or other regulatory body will be necessary to supplement or effectuate Applicant's herein proposed project," and this is untrue.

On January 30, 1962, Applicant filed its Answer and Objection to Petition to Intervene of Harold A. Knapp, Jr. The answer states that Petitioner does not have any right to intervene conferred by statute of the United States nor does he claim any interest which may be affected directly by Commission action. Applicant further states in its answer that it has submitted sufficient information to the Commission for the Commission to make a full and complete investigation of the proposed project, that the reason for Applicant's desire to remove its pipeline from the metropolitan area is due to the rapid growth of the area, and that Applicant did in fact submit its proposed plans to the Maryland-National Capital Park and Planning Commission on October 27, 1961, together with an actual aerial survey with the proposed pipeline superimposed.

It appears that what is before us in this proceeding is the question of whether the public convenience and necessity require the construction and operation of the facilities proposed by Applicant to meet the gas requirements in the immediate future in the Washington-Baltimore area. It appears further that Petitioner desires us to consider non-jurisdictional questions raised by the application in this docket and by the purported deceitful and unco-operative conduct of Applicant.

Petitioner's contention that "in the absence of a full hearing, Commission approval is more in the nature of a failing to find any cause for objecting, on the basis of material submitted by the Applicant, rather than a positive assertion that, in light of all the evidence, increased facilities are in fact necessary" is entirely without merit. The Commission does not issue a certificate unless it finds that the applicant has complied with all of the provisions of the Natural Gas Act and that a certificate should be issued under Subsections (c) and (e)

of Section 7 of the Act. Lack of objections by the Commission to the material submitted by an applicant is not a sufficient ground for the issuance of a certificate under the Natural Gas Act, and the Commission does not, in fact, issue certificates under such circumstances. Certificates are issued only "in light of all the evidence."

Petitioner states "My own property is not involved, but my enjoyment of the area where I live and of the physical appearance of the countryside throughout Montgomery County is adversely affected by the cutting of a 60 foot wide right of way through the forested areas." In a Section 7(c) proceeding such as this, there are undoubtedly many property owners who will be indirectly affected by the action taken by this Commission. Should each be allowed to intervene upon a mere showing of property ownership, proceedings, already burdened with numerous issues, would become nigh uncontrollable. Congress has provided in the Natural Gas Act for participation as a party any interested State, State commission, municipality, or any other person whose participation in the proceeding may be in the public interest. The participation of any other party in this proceeding requires more than a tenuous likelihood of an indirect injury. Even if Petitioner's own property were directly involved, his property rights would be protected by the courts, as provided by Section 7(h) of the Natural Gas Act, where they would be given the consideration which they merit.

All other contentions made by Petitioner in his petition to intervene are likewise found to be without merit.

The Commission finds:

It is not appropriate in the proper administration of the Natural Gas Act and in the public interest to allow Petitioner to intervene in this proceeding.

The Commission orders:

The Petition to Intervene filed by Harold A. Knapp, Jr., on January 22, 1962, in Docket No. CP62-43 be and the same is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

BRADLEY EMPIRE CORPORATION, DOCKET NOS. G-18407 AND G-20201

ORDER CONDITIONALLY TERMINATING PROCEEDINGS

(Issued February 20, 1962)

On March 30, 1959, Bradley Empire Corporation (Bradley) tendered for filing Fifth Revised Sheet No. 5 to its FPC Gas Tariff, Original Volume No. 1, proposing an increase of about $63,000 per year in rates and charges for gas sold to Bradley's affiliate and sole wholesale customer, Empire Gas and Fuel Company, Limited (Empire). The increase was suspended by order issued April 29, 1959, in Docket No. G-18407 and became effective subject to refund as of June 1, 1959. The increase was based solely on increased costs of gas purchased from Bradley's supplier, New York State Natural Gas Corporation (New York Natural). New York Natural's increase had been suspended by order issued December 22, 1958, in Docket No. G-17296 and became effective subject to refund as of June 1, 1959.

On October 30, 1959, Bradley tendered for filing Sixth Revised Sheet No. 5 to its FPC Gas Tariff, Original Volume No. 1, proposing a further increase of $12,800 per year to Empire. Bradley's further increase was suspended by order issued November 20, 1959, in Docket No. G-20201 and became effective subject to

refund as of December 1, 1959. This increase was also based solely on an increase in the cost of gas purchased from New York Natural. New York Natural's further increase had been suspended by order issued July 31, 1959, in Docket No. G–19087 and became effective subject to refund as of December 1, 1959.

The staff of the Commission has completed an investigation of Bradley's books, records, and operations. It appears (see Appendix A) that the increased rates and charges proposed by Bradley do not result in revenues above its cost of service including return at 6%. Bradley accepts the staff's findings and has agreed that if its proceedings are terminated it will make appropriate refunds to Empire in the event it receives refunds from New York Natural in the proceedings in Docket Nos. G–17296 and G–19087. Therefore, the Commission, upon its own motion, deems it appropriate to terminate Bradley's proceedings, subject to the terms and conditions hereinafter ordered.

No hearings have been held or scheduled in Bradley's proceedings and no one has petitioned to intervene therein.

The Commission finds:

Good cause exists for terminating the proceedings in Docket Nos. G–18407 and G–20201, subject to the terms and conditions hereinafter ordered.

The Commission orders:

(A) The increased rates and charges tendered for filing by Bradley on March 30, 1959 and October 30, 1959, are hereby allowed as of June 1, 1959 and December 1, 1959, respectively, subject to the following terms and conditions.

(B) In the event and to the extent that New York Natural reduces its rates and charges to Bradley below those reflected in Bradley's cost of service (see Appendix A), then Bradley shall file reductions in its rates subject to the approval of the Commission.

(C) In that event and to the extent that New York Natural makes refunds to Bradley in the proceedings in Docket Nos. G–17296 and G–19087, Bradley shall make immediate proportionate refunds to Empire, including interest received.

(D) Within 15 days after the making of any refund as herein provided, Bradley shall report to the Commission, in writing and under oath, the amount of refund showing separately the amounts of principal and interest and the billing determinants or other bases used for such determinations, and shall serve a copy of such report upon Empire. Concurrently therewith, Bradley shall file a release from Empire with respect to such refund, showing receipt of principal and interest in conformity to this order.

(E) Bradley shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of issuance of this order, in writing and under oath, an original and one copy of its acceptance or rejection of the terms of this order.

(F) Upon full compliance by Bradley with all the terms and provisions of this order, the proceedings in Docket Nos. G–18407 and G–20201 shall be deemed terminated.

(G) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by the Commission, Bradley, the Commission staff, or any affected person herein, in any proceedings now pending or hereafter instituted by or against Bradley or any other companies or any others affected by this order.

CENTRAL LOUISIANA ELECTRIC COMPANY, INC., DOCKET NO. CP62-129

DECLARATION OF EXEMPTION

(Issued February 20, 1962)

Central Louisiana Electric Company, Inc. (Applicant), filed an application on November 21, 1961, as supplemented on December 4, 1961, for exemption from the provisions of the Natural Gas Act pursuant to Section 1(c) thereof.

Upon the basis of the application filed, the exhibits appended thereto, and the files of the Commission, it appears that:

(1) Applicant is a Louisiana corporation having its principal place of business in Alexandria, Louisiana, and is authorized to do business in the State of Louisiana.

(2) Applicant has acquired the properties of Sabine Gas Company, Inc., and is assignee of the contract of Sabine Gas Company, Inc., to receive interstate gas from United Gas Pipe Line Company in the State of Louisiana;

(3) All natural gas received by Applicant is to be consumed ultimately within the State of Louisiana, and all of its facilities, including those acquired from Sabine Gas Company, Inc., are located within said state; and

(4) The Louisiana Public Service Commission has certified to the Federal Power Commission that it has and is exercising regulatory jurisdiction over the rates, services and facilities of Applicant.

WHEREFORE, The Commission declares, by reason of the foregoing:

Central Louisiana Electric Company, Inc., is exempt from the provisions of the Natural Gas Act, and the orders, rules, and regulations of this Commission issued thereunder.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP62–109

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 20, 1962)

The order of the Commission issued on January 11, 1962, in Docket No. CP62–109 authorizes Columbia Gulf Transmission Company (Columbia Gulf) to construct during the calendar year 1962 certain limited field facilities and to operate such facilities to take natural gas supplies from producers who have received authorization from the Commission "to sell natural gas to Columbia Gulf Transmission Company."

The records of the Commission show that the operation for which authorization was sought in the subject proceeding was the transportation of natural gas for the account of United Fuel Gas Company.

On January 29, 1962, Columbia Gulf filed a motion to amend the aforesaid order of the Commission issued January 11, 1962, in Docket No. CP62–109 by adding the words "or to United Fuel Gas Company" at the end of ordering paragraph (A) of said order. It appears more appropriate to amend said order as hereinafter ordered.

The Commission finds:

It is in the public interest and appropriate in carrying out the provisions of the Natural Gas Act to amend as hereinafter ordered the order of the Commission issued January 11, 1962, granting a certificate of public convenience and necessity to Columbia Gulf Transmission Company in Docket No. CP62–109.

The Commission orders:

(A) The order of the Commission issued on January 11, 1962, in Docket No. CP62–109 be and the same is hereby amended by deleting the last line of ordering paragraph (A) of said order and substituting therefore the following:

> from the Commission to sell natural gas for transportation by Columbia Gulf Transmission Company for the account of United Fuel Gas Company.

(B) In all other respects said order issued January 11, 1962, in Docket No. CP62–109 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

DUKE POWER COMPANY, DOCKET NO. E-7018

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF FIRST AND REFUNDING MORTGAGE BONDS

(Issued February 20, 1962)

By order issued February 5, 1962, in the above-entitled matter, the Commission authorized Duke Power Company (Applicant) to issue and sell at competitive bidding $50,000,000, principal amount of First and Refunding Mortgage Bonds, Series due 1992, subject, among others, to the provisions set forth in paragraph (B) of that order, as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2 (k) (3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on February 20, 1962, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it the bid of Stone & Webster Securities Corporation to purchase the proposed issuance of $50,000,000, principal amount of Bonds, for the price of 99.269% of principal amount, with an interest rate of 4½%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued February 5, 1962 in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above, upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D) and (E) of the Commission's order issued February 5, 1962 in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-114

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 20, 1962)

On November 3, 1961, El Paso Natural Gas Company (Applicant) filed in Docket No. CP62-114 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional 100,000 Mcf of natural gas per day to Pacific Gas and Electric Company (PG&E) at an existing delivery point near Topock, Arizona, on a best efforts basis for the limited term commencing December 1, 1961, and extending through April 30, 1962, all as more fully set forth in the application.

The subject 100,000 Mcf of natural gas are in addition to the presently certificated quantities of gas delivered by Applicant to PG&E and are to be provided from Applicant's existing sources of supply by use of its certificated pipeline facilities only after meeting its other customer requirements throughout its pipeline system.

No additional facilities are proposed by Applicant for the subject service which will be rendered by Applicant in accordance with a service agreement between Applicant and PG&E dated October 12, 1961, and at rates contained in Applicant's FPC Gas Rate Schedule G-X-1 on file with the Commission as part of its FPC Gas Tariff, Original Volume No. 1.

The proposed service will aid Applicant in disposing of a short-term oversupply of gas and will aid PG&E in meeting its system requirements.

Applicant received authorization to render similar service to PG&E in Docket No. CP60-80 and has submitted the instant application for an extension of that service.

Temporary authorization to render the proposed service was granted to Applicant on December 4, 1961.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 8, 1962, respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The proposed sale of natural gas as hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce, subject to the jurisdiction of the Commission, and is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The proposed sale of natural gas as hereinbefore described, and as more fully described in the application in this proceeding, is required by the public

convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of said Regulations.

(6) The authorization granted hereinafter should be limited to sales during the period from December 4, 1961 through April 30, 1962, and deliveries should be limited to a maximum of 100,000 Mcf per day.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing El Paso Natural Gas Company to sell up to 100,000 Mcf of natural gas per day to Pacific Gas and Electric Company on an interruptible best efforts basis for the period from December 4, 1961 through April 30, 1962, as hereinbefore described and as more fully described in the application in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of said Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-122

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE FILING

(Issued February 20, 1962)

On November 14, 1961, El Paso Natural Gas Company (Applicant) filed in Docket No. CP62-122 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of additional natural gas to Northwest Natural Gas Company (Northwest Natural), an existing customer, for resale and distribution in the communities of Scappoose and St. Helens, Columbia County, Oregon, and environs, all as more fully set forth in the application.

Applicant proposes to make delivery to Northwest Natural at the existing measuring and regulating station located at the terminus of Applicant's 18-inch O.D. Portland-Vancouver sales lateral near Portland, from which point Northwest Natural will construct the necessary connecting line and the distribution systems at Scappoose and St. Helens.

Northwest Natural estimates the annual and peak day requirements of the two communities as follows:

	1st year	Mcf at 14.73 psia	
		2d year	3d year
Peak day	3,493	5,524	8,455
Annual	909,600	1,492,000	2,329,000

The sale by Applicant will be on a firm and an interruptible basis. The gas will be used for residential, commercial and industrial purposes by the ultimate consumers.

Service under this application is proposed to be rendered in accordance with revised exhibits to service agreements contained in Applicant's FPC Gas Tariff, Original Volume No. 3, which revised exhibits were filed concurrently with the instant application.

No new facilities or construction by El Paso are necessary for this additional service.

The proposed service should not seriously affect Applicant's gas supply nor impair its ability to meet its other firm obligations.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 6 and 7, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The sale and delivery of natural gas by Applicant for resale, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale and delivery of natural gas by Applicant to Northwest Natural Gas Company for resale are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(6) Applicant's tendered related revised Exhibit A dated November 2, 1961, to the service agreement between Applicant and Northwest Natural dated May 18, 1961, and the related revised Exhibits A and B dated November 2, 1961, to the service agreement between said parties dated May 15, 1961, should be accepted for filing to become effective upon the date of issuance of this order.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing El Paso Natural Gas Company to sell and deliver natural gas to Northwest Natural Gas Company for resale as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(C) The sale and delivery of natural gas authorized by this order shall commence within 12 months of the date on which this order issues.

(D) Applicant's tendered related revised Exhibit A dated November 2, 1961, to the service agreement between Applicant and Northwest Natural dated May 18, 1961, and the related revised Exhibits A and B dated November 2, 1961, to the service agreement between said parties dated May 15, 1961, are hereby accepted for filing to become effective upon the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

LAKE SHORE PIPE LINE COMPANY, DOCKET NO. CP62-137

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 20, 1962)

On December 1, 1961, Lake Shore Pipe Line Company (Applicant), filed in Docket No. CP62-137 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof from time to time during the twelve-month period commencing on the date on which the order in this docket issues, at a total cost not to exceed $250,000, with no single project to exceed a cost of $50,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The proposed facilities will be financed from cash on hand or short term bank loans.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 8, 1962, respecting the matters involved in and the issues presented by the application in this proceeding. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the

Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Lake Shore Pipe Line Company, an Ohio corporation having its principal place of business in Cleveland, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued February 13, 1951, in Docket No. G–1236 (10 FPC 22).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof during the twelve-month period as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within sixty days from the expiration of the twelve-month period for which the order in this docket is issued, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization granted hereunder, (d) the location of said project or projects, (e) the cost of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(6) The authorization granted herein should be limited to construction during the twelve-month period commencing on the date on which this order issues, and the total cost for facilities to be constructed hereunder should be limited to $250,000, with no single project to exceed a cost of $50,000.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Lake Shore Pipe Line Company to construct during the twelve-month period commencing on the date on which this order issues the proposed facilities hereinbefore described (more fully described in the application filed in this proceeding) and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Lake Shore Pipe Line Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) Applicant shall submit within sixty days from the expiration of the twelve-month period for which this order is issued a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(D) Total expenditures for the construction of the facilities authorized by paragraph (A) above are hereby limited to $250,000, with no single project to exceed a cost of $50,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, ET AL., DOCKET NOS. G–17485, ET AL.

ORDER AMENDING ORDER ACCOMPANYING OPINION NO. 324

(Issued February 20, 1962)

On August 28, 1961, as supplemented November 15, 1961, the Town of Woodbine, Iowa, filed an application for amendment of the order accompanying Opinion No. 324, issued July 31, 1959, in the above-entitled proceeding, 22 FPC 164, requesting that the Town be substituted for Iowa Power and Light Company (Iowa Power) as the distributor of gas in Woodbine. The order accompanying Opinion No. 324 had authorized Northern Natural Gas Company (Northern), *inter alia*, to sell and deliver gas to Iowa Power for distribution in the Town of Woodbine provided Iowa Power made a contribution to Northern toward construction of the measuring station necessary to deliver natural gas to Woodbine. Woodbine's application requests that Northern be authorized to sell and deliver gas to Woodbine, instead of Iowa Power, because Woodbine now proposes to construct a municipally-owned distribution system.[1]

Northern filed on July 31, 1961, a "Petition for Further Amendment" of the order accompanying Opinion No. 324 requesting that the authorization it had originally received to construct the facilities necessary to serve Woodbine be deleted. On November 1, 1961, the Commission issued an order in Docket Nos. G–17485, *et al.*, 26 FPC 672, granting Northern's petition, except for deferring action on Northern's request to have its authorization to construct the facilities required to serve Woodbine deleted from the order accompanying Opinion No. 324 until such time as the Commission had made a final determination regarding Woodbine's application for amendment of the order accompanying Opinion No. 324.

[1] Attached to Woodbine's application is a copy of Ordinance No. 63, passed by the Town Council of Woodbine on November 7, 1960, canceling and terminating the gas-distribution franchise which Iowa Power had previously received on June 4, 1954.

Northern indicated in an answer to Woodbine's application, filed December 20, 1961, that it would not object to rendering town-border service to Woodbine provided the Town would sign appropriate service agreements and would make a contribution toward the cost of constructing the measuring station in the amount of $14,200, which was the sum Iowa Power would have had to pay if it had become the gas distributor in Woodbine. Woodbine's application states that it is willing to make the required contribution toward the cost of construction. Since Northern is now willing to provide gas for Woodbine's proposed municipal system, that portion of Northern's petition, filed July 31, 1961, requesting deletion from the order accompanying Opinion No. 324 of authorization to construct the facilities required to serve Woodbine will necessarily have to be denied.

Woodbine has submitted detailed engineering studies in support of its estimated sales volumes, cost of construction and economic feasibility. It estimates that its first, second, and third-year peak daily requirements will be 393 Mcf, 466 Mcf and 538 Mcf, respectively, and that the first, second, and third-year annual requirements will be 57,490 Mcf, 65,110 Mcf and 72,730 Mcf, respectively. The cost of construction of the distribution system is estimated at $200,000, including an allowance for the contribution to Northern in aid of construction.

Woodbine proposes to finance the project by issuing $200,000 in municipal gas system revenue bonds which will have a 20-year maturity with an interest rate of 4.5 percent for the first 10 years and 4.75 percent for the remaining 10-year period. The application states that the Carleton D. Beh Company, Des Moines, Iowa, has entered into an agreement with Woodbine for financing the distribution system.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act (1) that the Town of Woodbine's application for amendment, filed August 28, 1961, of the order accompanying Opinion No. 324 be granted and (2) that Northern's "Petition for Further Amendment", filed July 31, 1961, be denied insofar as it requested deletion from the order accompanying Opinion No. 324 of authorization to construct the facilities required to serve Woodbine, Iowa.

The Commission orders:

(A) Paragraph (A) of the Commission's order accompanying Opinion No. 324, issued July 31, 1959, 22 FPC 164, 179, as amended August 26, 1960, 24 FPC 341, and November 1, 1961, 26 FPC 672, is hereby further amended to authorize Northern to sell and deliver natural gas to the Town of Woodbine for its proposed municipal distribution system, instead of to Iowa Power and Light Company, provided the Town of Woodbine makes the contribution in aid of construction hereinbefore discussed.

(B) That portion of Northern's "Petition for Further Amendment", filed July 31, 1961, which requested deletion from the order accompanying Opinion No. 324 of Northern's authorization to construct the facilities required to serve Woodbine, Iowa, is hereby denied.

(C) All other provisions of the order accompanying Opinion No. 324, 22 FPC 179, as amended August 26, 1960, 24 FPC 341, and November 1, 1961, 26 FPC 672, shall remain unchanged.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP62-14; THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP61-155

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 20, 1962)

These matters are before us upon a motion made upon the record on December 18, 1961, by Tennessee Gas Transmission Company (Tennessee) and The Manufacurers Light and Heat Company (Manufacturers) for disposition of these matters as non-contested proceedings and for omission of the intermediate decision procedure. All parties participating in the hearing concurred in said motion.

The proceedings are upon applications filed pursuant to Section 7 of the Natural Gas Act for certificates of public convenience filed by Manufacturers and Tennessee on November 25, 1960, and July 19, 1961, respectively.

By its application filed July 19, 1961, Tennessee, a Delaware corporation having its principal place of business in Houston, Texas, seeks a certificate of public convenience and necessity authorizing it to transfer the deliveries of 35,000 Mcf[1] of gas per day, which is part of the contract-demand volume Tennessee is presently delivering to United Fuel Gas Company (United) in Tennessee's Eastern Rate Zone, to Manufacturers for the account of United in Tennessee's Northern Rate Zone. The transfer of deliveries is proposed to be for the six months period commencing on November 1, 1961, and ending on April 30, 1962, and for each six months period thereafter that commences on November 1st and ends on April 30th for a term of years coextensive with the term of the gas sales contract between Tennessee and United dated May 4, 1959.

By its application filed November 25, 1960, as supplemented on February 20, April 10, and July 21, 1961, Manufacturers seeks a certificate of public convenience and necessity authorizing it to construct and operate 4,000 additional horsepower compressor units at its existing Adaline Compressor Station in Marshall County, West Virginia, and approximately 10.47 miles of 24-inch pipeline in several sections replacing corresponding sections of 16-inch pipeline in Manufacturer's Line 65 in the western part of Allegheny, and adjoining portions of Washington and Beaver Counties, Pennsylvania. The cost of facilities is estimated to be $2,387,000, which will be financed from funds obtained from The Columbia Gas System, Inc.

Tennessee shows that it is presently authorized to sell and deliver to United a contract demand of 544,680 Mcf of natural gas per day, under the terms of a gas sales contract between Tennessee and United dated May 4, 1959. Said contract provides for the delivery of 76,500 Mcf of natural gas per day in Tennessee's Central Rate Zone and 468,180 Mcf of natural gas per day in Tennessee's Eastern Rate Zone.

Tennessee shows also that it is authorized to sell and deliver to Manufacturers a contract demand of 30,600 Mcf of natural gas per day, in accordance with a gas sales contract between Tennessee and Manufacturers dated January 28, 1959, which provides for said delivery in Tennessee's Northern Rate Zone. In addition, Tennessee transports for the account of Manufacturers up to 113,371

[1] All volumes set forth herein are at a pressure base of 14.73 psia unless otherwise indicated.

Mcf of natural gas per day that is purchased by Manufacturers from producers in the State of Texas. Of this amount, 36,871 Mcf per day is delivered by Tennessee in its Eastern Rate Zone and the balance is delivered in its Northern Rate Zone.

The evidence shows that United is presently delivering a contract demand of 185,000 Mcf of natural gas per day to Manufacturers. United has been requested by Manufacturers to provide it with a contract demand of 220,000 Mcf per day commencing on November 1, 1961. United has adequate capacity to deliver this volume to Manufacturers at existing delivery points. Manufacturers' facilities are adequate [2] to transport a volume of 220,000 Mcf per day during the summer months, but are inadequate to transport such volume during the winter months of November through April. The evidence further shows that in order to provide adequate pipeline capacity to transport 220,000 Mcf of natural gas per day during the peak winter months, Manufacturers would be required to construct twenty miles of 20-inch pipeline loop of its Line No. 1740 at a point north of Glenville, Pennsylvania at a cost of approximately $1,900,000. In order to avoid this expenditure, Manufacturers and United have requested Tennessee to transfer the deliveries of 35,000 Mcf of natural gas per day which is presently being delivered to United in Tennessee's Eastern Rate Zone to Manufacturers, for the account of United, in Tennessee's Northern Rate Zone for the six-month period commencing on November 1, 1961, and ending on April 30, 1962, and for each six-month period thereafter that commences on November 1st and ends on April 30th, for a term of years coextensive with the term of the gas sales contract between Tennessee and United. Tennessee's application in Docket No. CP62–14 seeks authority to make this transfer of deliveries.

Tennessee shows that it is able to render the proposed service with its existing facilities; that its requirements customers in its Southern and Central Rate Zones purchase gas at high load factors during the winter months of November through April. Thus, Tennessee's pipeline system has unused winter-day capacity between Station No. 87 near Portland, Tennessee, and Tennessee's storage fields in northern Pennsylvania and New York.

Tennessee and United have entered into a letter-agreement dated July 13, 1961, providing for this proposed service.

Tennessee also presented in evidence the superseding service agreement dated October 10, 1961, between it and United providing for the transfer of the deliveries of 34,314 Mcf (@15.025 psia) of natural gas per day of contract demand from Tennessee's Eastern Rate Zone for the period from November 1, 1961, through April 30, 1962, and during each six months period thereafter, November through April until November 1, 1979, which agreement became effective by order of the Commission of December 8, 1961.

Manufacturers shows that the proposed pipeline facilities are necessary in order to increase the capacity of its main trunk transmission system to make it possible to serve 1961–1962 peak day additional requirements of its customers, while the 4,000 additional horsepower compression facilities are necessary in order to inject and withdraw additional gas into and from storage. Manufacturers' most recent estimates indicate that its 1961–1962 winter additional gas requirements total 79,700 Mcf per day or 47,500 Mcf per day more than initially estimated in its original application.

It was originally proposed that the additional volumes of natural gas (32,200 Mcf per day) were to come from Manufacturers' Victory Storage Field. Manu-

[2] This assumes that Manufacturers will be authorized to construct the facilities proposed in Docket No. CP61–155.

facturers now proposes to meet its additional 1961–1962 winter requirements of 79,700 Mcf (47,500 Mcf plus 32,200 Mcf) as follows:

Additional volume from United (Tennessee's Northern Zone)	35,000 Mcf
Additional volume from Victory Storage Field	45,000 Mcf
	80,000 Mcf

Manufacturers' evidence shows that the peak-day availability from the Victory Storage Field will be increased from 160,000 Mcf to 205,000 Mcf and of this volume 183,000 Mcf is to be compressed at Adaline Compressor Station, so that substantially all of the proposed 4,000 additional horsepower will be required.

Manufacturers shows that it will increase its contract demand with United from 185,000 to 220,000 Mcf per day to provide it with the additional 35,000 Mcf per day. Manufacturers' evidence corroborates that of Tennessee to the effect that the existing facilities of Manufacturers are adequate to transport the higher volume of 220,000 Mcf per day during the summer period, but to provide such adequacy during peak winter periods would require substantial transmission construction.

Tennessee was by order of the Commission on December 14, 1961, permitted to intervene in Docket No. CP61–155. Likewise, by the same order Manufacturers and United were permitted to intervene in Docket No. CP62–14. The Commission also permitted the intervention of thirty-eight additional interveners, including customers of Tennessee, the Public Service Commission of West Virginia, Pennsylvania Public Utility Commission, Public Utilities Commission of the State of Connecticut, Department of Public Utilities of the Commonwealth of Massachusetts, Division of Public Utilities of the State of Rhode Island, the City of Pittsburgh, Pennsylvania, Washington Gas Light Company, Commonwealth Natural Gas Corporation, The Dayton Power and Light Company, Cincinnati Gas & Electric Company and The Union Light, Heat and Power Company. However, only the following interveners, besides the parties, appeared by counsel at the hearing, which was held on December 18, 1961, and January 2, 1962, pursuant to due notice: Pennsylvania Public Utility Commission, City of Pittsburgh, and companies receiving their supplies of gas from Columbia Gas System Companies, i.e., The Dayton Power and Light Company, The Cincinnati Gas & Electric Company, The Union Light, Heat and Power Company, Washington Gas Light Company, and Commonwealth Natural Gas Corporation.

The above-named company interveners, who receive either directly or indirectly a major portion of their gas supplies from United, objected to the proposed transfer of deliveries of 35,000 Mcf of gas per day in Tennessee's Northern Rate Zone instead of in its Eastern Rate Zone because it would increase the cost of the gas to United by approximately $239,000 per year. It was stipulated and agreed at the hearing by all the parties appearing that the additional cost of purchasing this gas at the Northern Zone rate should be borne by Manufacturers, because such additional cost will be incurred for the benefit of Manufacturers and the delivery will be made a substantial distance outside United's operating territory. It was agreed that a condition be attached to the certificates issued herein requiring United to file as a part of its FPC Gas Tariff, Original Volume No. 2 an appropriate agreement, satisfactory to the Commission, providing that any net additional cost incurred by United in purchasing said 35,000 Mcf of natural gas per day for the period of six months per year, November through April, in the Northern Rate Zone

over and above the cost of purchasing such volume of gas in the Eastern Zone shall be reimbursed by Manufacturers to United.

At the close of the hearing, it was agreed that staff counsel would prepare and distribute to all of the participating parties on or before January 2, 1962, a draft of a proposed order which would be transmitted to the Commission together with the record and the motion for omission of the intermediate decision. It was further agreed that the hearing would reconvene on January 15 for the submission of said draft and that any party who might have any objection might be present to object. Said proposed draft, with minor changes made for purposes of clarification only, was submitted on said date.

It appears to the Commission that there is a serious question as to whether the granting of these applications will not place Manufacturers in the position of making payments to United for a service which United does not render. If this is the case, then it is not appropriate for United to make a charge for a service it does not render.

An additional question arises as to whether the proposed arrangement appropriately falls within the scope of a Volume No. 2 tariff filing, inasmuch as Section 154.52 of the Commission's Regulations under the Natural Gas Act limits Volume No. 2 tariff filings to cover special operating arrangements such as for exchange or transportation of natural gas, or for the sale of gas at charges computed on a cost-formula basis.

Under the circumstances, we are of the view that the certificate authorization should be issued to Tennessee for the current winter season as well as the 1962–1963 winter season, but that continuation of the arrangement on a long term basis should be permitted only on the basis of a record developed in a formal hearing. Accordingly, the Commission on its own motion will remand these proceedings to the Presiding Examiner to be set for further hearing with notice to be given by the Secretary.

Temporary authority was granted on August 18, 1961, to Tennessee, as requested in its application in Docket No. CP62–14, to make the proposed transfer of deliveries as of November 1, 1961. Temporary authority was also granted by the Commission on said date to Manufacturers to construct and operate the facilities proposed in Docket No. CP61–155.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G–910, (6 FPC 777).

(2) The proposed transfer by Tennessee of deliveries of 35,000 Mcf of natural gas per day, that is presently being delivered by Tennessee to United in Tennessee's Eastern Rate Zone, to Manufacturers, for the account of United, in Tennessee's Northern Rate Zone, as described in the application in Docket No. CP62–14, is required by the public convenience and necessity for two six months periods, the first commencing on the date of first delivery in the Northern Rate Zone on November 1, 1961, and ending April 30, 1962, and the second period commencing on November 1, 1962, and ending April 30, 1963, and a certificate therefor should be issued.

(3) The Manufacturers Light and Heat Company, a Pennsylvania corporation and a subsidiary of The Columbia Gas System, Inc., having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket Nos. G–593, *et al.* (4 FPC 821).

(4) The natural gas facilities proposed to be constructed and operated by The Manufacturers Light and Heat Company, as described in the application in Docket No. CP61–155, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as an integral part of Manufacturers' existing pipeline system and the operation thereof by Manufacturers is subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The proposed construction and operation of facilities by The Manufacturers Light and Heat Company, as described in the application in Docket No. CP61–155, are required by the public convenience and necessity and a certificate therefor should be issued.

(6) The applicants herein are able and willing to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said regulations, and the terms and conditions set forth in paragraph (c) (4) of said section should also attach to the certificate issued to Manufacturers.

(8) Public convenience and necessity require that the certificate hereinafter issued to Tennessee Gas Transmission Company be conditioned to become effective upon the filing by United Fuel Gas Company as a part of its FPC Gas Tariff, Original Volume No. 2 an appropriate agreement, satisfactory to the Commission, between The Manufacturers Light and Heat Company and United Fuel Gas Company, providing that Manufacturers shall reimburse United for any net additional cost of purchasing said 35,000 Mcf of natural gas per day at Tennessee's Northern Zone rate over the cost of purchasing such volume at Tennessee's Eastern Zone rate, for the six months period commencing on the date of first delivery in said Northern Rate Zone on November 1, 1961, and ending April 30, 1962, and also for the period commencing November 1, 1962, and ending April 30, 1963.

(9) Tennessee and Manufacturers having requested the omission of the intermediate decision procedure, and all the requirements of Section 1.30(c)(1) [18 CFR 1.30(c)(1)] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission forthwith to render its final decision in the instant proceeding.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Tennessee Gas Transmission Company authorizing it to transfer the deliveries of 35,000 Mcf (at 14.73 psia) of natural gas per day, which is part of the volume of gas which Tennessee is presently delivering to United Fuel Gas Company in Tennessee's Eastern Rate Zone, to The Manufacturers Light and Heat Company, for the account of United, in Tennessee's Northern Rate Zone, as described in the application in Docket No. CP62–14, for two six months periods, the first commencing on the date of first delivery in said Northern Rate Zone on November 1, 1961, and ending April 30, 1962, and the second period commencing on November 1, 1962, and ending on April 30, 1963, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued to The Manufacturers Light and Heat Company, authorizing it to construct and operate the proposed facilities, as described in the application, as supplemented, herein, upon the terms and conditions of this order.

(C) The certificates issued by paragraphs (A) and (B) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations; and the terms and conditions set forth in paragraphs (c) (4) of said section shall attach to the certificate issued by paragraph (B), and to the exercise of the rights granted thereunder.

(D) The certificates herein issued in paragraphs (A) and (B) shall become effective upon the filing by United Fuel Gas Company as a part of its FPC Gas Tariff, Original Volume No. 2 an appropriate agreement, satisfactory to the Commission, between The Manufacturers Light and Heat Company and United Fuel Gas Company, providing that Manufacturers shall reimburse United for any net additional cost of purchasing said 35,000 Mcf of natural gas per day at Tennessee's Northern Zone rate over the cost of purchasing such volume at Tennessee's Eastern Zone rate, and providing that said reimbursement shall cover two six months periods, the first commencing on the date of the first delivery in the Northern Zone on November 1, 1961, and ending on April 30, 1962, and the second commencing on November 1, 1962, and ending on April 30, 1963.

(E) These proceedings are hereby remanded to the Presiding Examiner for further hearing to determine whether the transfer of deliveries of natural gas herein authorized for two winter seasons shall be continued for the term of years coextensive with the term of the gas sales contract between Tennessee and United. The Presiding Examiner shall fix the date for further hearing in these proceedings.

Before Commissoners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP62-107

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 20, 1962)

On October 27, 1961, as supplemented on November 27, 1961, Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP62-107 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the sale of natural gas, as hereinafter described, all as more fully described in the application, as supplemented.

The proposed facilities consist of a sales meter station and appurtenant facilities in Hudson County, New Jersey, near Transco's Central Manhattan meter station on the west bank of the Hudson River. The proposed meter station will be used as an additional delivery point to provide gas service to Public Service Electric and Gas Company (Public Service), and existing customer, for resale.

Public Service has requested the proposed new delivery point in order that it might serve a new industrial customer, Lever Brothers Company (Lever Brothers), on a firm basis, which service Public Service would be unable to render from its existing facilities. Public Service will construct and operate the required facilities between the proposed meter station and Lever Brothers' plant, and such service will be rendered from authorized allocations of gas from Transco.

The proposed facilities are estimated to cost approximately $22,000, and will be financed initially by Transco from its general funds. Public Service has agreed to reimburse Transco in full for the cost of the facilities.

Temporary authorization was granted to Transco on December 28, 1961, to construct and operate the proposed facilities.

The acceptance for filing by Transco of a revision of Section 5(a) of the General Terms and Conditions of its FPC Gas Tariff, Original Volume No. 1, renders unnecessary any consideration of the request in the instant application for waiver of the former provision in said Section 5(a) requiring the installation of measuring facilities at Transco's own expense.

Pursuant to due notice, a public hearing was held February 6, 1962, respecting the matters involved in and the issues presented by the application, as supplemented, in this proceeding. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practic and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Transco's existing system, and the construction and operation thereof by Transco are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Transco are required by the public convenience and necessity, and a certificate thereof should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Transco's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations, and that the construction of the facilities authorized by this order should be completed and said facilities placed in actual operation within three months from the date on which this order issues.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities as hereinbefore described, and as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The construction of the facilities authorized by this order shall be completed and said facilities shall be placed in actual operation within three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. CP60–122 AND CP61–203; ALGONQUIN GAS TRANSMISSION CORPORATION, DOCKET NOS. CP60–124 AND CP61–220; UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP61–151; SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP61–206; TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP61–247; ARKANSAS MISSOURI POWER COMPANY, DOCKET NO. CP62–20.

ORDER PERMITTING AND DENYING INTERVENTIONS

(Issued February 21, 1962)

Petitions for leave to intervene in the above-entitled consolidated proceedings were filed by the named petitioners on the dates indicated and in the dockets specified:

* * * * * * *

*Petitioner**	*Docket No.*	*Date filed*
Joint Adair County Petitioners: Billie Gist, Gradyville, Kentucky. Chesley G. Rogers, 1912 Crimson Ave., Valley Station, Kentucky. L. R. Seaborn, Casey Creek, Kentucky. Nell Richard, Gradyville, Kentucky. Morton Smith, Milltown Route, Columbia, Kentucky.	All	Feb. 1, 1962

The Joint Adair County Petitioners aver that " * * * they are all owners of lands lying within or in close proximity to the existing pipelines of Texas Eastern Transmission Corporation in Adair County, Kentucky, and the interests of petitioners in such land will or may be seriously affected by any action taken or orders entered in these proceedings by the Commission" (paragraph 2). As relief, they state their, "desire that any permission granted to Texas Eastern Transmission Corporation for the placing of additional pipelines, and which involve the running of such pipelines across or within the limits of land owned by these petitioners or any of them, shall take into account and contain adequate provision for full and reasonable compensation to these petitioners for such use or taking of their property" (paragraph 3).

On February 12, 1962, Texas Eastern filed an answer, stating *inter alia*, that the Joint Adair County Petition does not comply with Section 1.8 of the Commission's Rules of Practice and Procedure in that no facts are set forth to show

* Additional petitioners omitted in printing.

that intervention by the petitioners is necessary or appropriate to the administration of the Natural Gas Act or that petitioners' participation may be in the public interest.

Section 7(h) of the Natural Gas Act, 15 USC 717 (f), (h) does confer the right of eminent domain on a holder of a certificate of public convenience and necessity should the holder be unable to acquire by contract or is unable to agree with the owner of property to the compensation to be paid for, the necessary right-of-way. However, this section specifically gives the jurisdiction over these eminent domain proceedings to the State courts and the United States District courts in which the property is located.

In a complex Section 7 proceeding such as this, there are undoubtedly many property owners who will be indirectly affected by the action taken by this Commission. Should each be allowed to intervene on a mere showing of property ownership, proceedings, already burdened with numerous parties and issues, would become nigh uncontrollable. Congress has provided that their property rights be protected by the courts where they will be given the proper consideration which they merit.

Since the Joint Adair County Petitioners fail to show that they have an interest of such nature that intervention is necessary or appropriate to the administration of the Natural Gas Act, the petition will therefore be denied.

The Pennsylvania Public Utility Commission filed a Notice of Intervention in Docket Nos. CP61–203, CP61–151, CP61–206, and CP61–247 on January 17, 1962.

The Commission finds:

(1) It is desirable to allow the above-named petitioners, except the Joint Adair County Petitioners, to intervene in these proceedings in order that said petitioners may establish the facts and law from which the nature and validity of their alleged rights and interests may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act. Although the petition of Southern Natural Gas Company was not filed within the time required by Section 1.8(d) of the Commission's Rules of Practice and Procedure, good cause has been shown why the participation of said petitioner may be in the public interest.

(2) The above-named Adair County petitioners have failed to show that their participation in these proceedings may be in the public interest.

The Commission orders:

(A) The above-named petitioners, except the Joint Adair County Petitioners, are hereby permitted to intervene in these proceedings, subject to the rules and regulations of the Commission: *Provided, however*, that the participation of each intervener shall be limited to matters affecting asserted rights and interests as specifically set forth in its petition for leave to intervene: And, *Provided, further*, that the admission of these interveners shall not be construed as recognition by the Commission that they or any of them might be aggrieved because of any order or orders of the Commission entered in these proceedings.

(B) The petition of the above-named Adair County Petitioners is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

BLANCO OIL COMPANY (OPERATOR), ET AL.

ORDER DENYING APPLICATION FOR REHEARING

(Issued February 23, 1962)

On December 1, 1961, Blanco Oil Company (Operator), *et al.* (Blanco) tendered for filing a proposed rate increase from 18.0¢ to 20.0324¢ per Mcf at 14.65 psia for natural gas sold under its FPC Gas Rate Schedule No. 9 to Natural Gas Pipeline Company of America from leases in the Northeast Thompsonville Field, Webb and Jim Hogg Counties, Texas (District No. 4). The subject sale is being made under temporary authority granted to Blanco by the Commission's letter order of November 25, 1960 in Docket No. CI61-618, conditioned at an initial rate of 18.0¢ per Mcf, including tax reimbursement and dehydration, in lieu of the 20.0324¢ per Mcf initial rate provided by contract. By letter order issued December 28, 1961, the Commission rejected Blanco's December 1, 1961 submittal as not in accord with the temporary authorization granted by the order of November 25, 1960.

On January 26, 1962, Blanco filed an application for rehearing of the Commission's letter order of December 28, 1961. In support thereof, Blanco states, *inter alia*, that (1) in accepting the conditioned temporary authorization, Blanco expressly reserved the right to file for rate increases in accordance with the terms of its contract;[1] (2) imposition of an initial rate below the initial contract price did not alter Blanco's right to file for the initial contract price; (3) if the Commission intended to impose as a condition to the issuance of the temporary authorization that the 18¢ per Mcf rate be maintained during the period of the temporary authorization, it was compelled fully and precisely to inform Blanco of such fact prior to Blanco's acceptance thereof; (4) Blanco's right to file for an increased rate is not altered by the fact that temporary, not permanent, authorization is involved here; and (5) Blanco will suffer irreparable loss, if not permitted to file the proposed increased rate, in the event the contract price is ultimately determined to be just and reasonable.[2]

The holder of a temporary price-conditioned certificate is not authorized to change the *status quo*, pending disposition of an application for a permanent certificate, by filing a change in rate schedule. Furthermore, in accepting temporary authorization, Blanco specifically agreed that the rate during the period of temporary authorization shall be 18.0¢ per Mcf, as indicated by the

[1] The pertinent language in Blanco's January 16, 1961 letter accepting temporary authorization is as follows: "Blanco Oil Company accepts the price condition imposed by paragraph (1) of the letter order of the Commission dated November 25, 1960, and specifies hereby that the initial price to be paid by Natural Gas Pipeline Company of America for the natural gas sold under Blanco Oil Company FPC Gas Rate Schedule No. 9 *during the period the temporary authorization granted by said letter order of November 25, 1960, is in effect shall be 18 cents per Mcf* including tax reimbursement and dehydration charge; provided, however, that in the event the Commission shall announce or fix an area price applicable to the area where this sale is made which is higher than 18 cents per Mcf, including tax reimbursement and dehydration charge, then Blanco Oil Company shall be entitled to collect such higher price, but not to exceed the applicable contract price, without any obligation to refund; and provided further, that the right of Blanco Oil Company to file for price increases in accordance with the terms of its gas sales contract dated September 1, 1960, is expressly recognized by the acceptance of this filing." [Emphasis added]

[2] In support of its last contention, Blanco cites *Sohio Petroleum Company* v. *F.P.C.*, 10th Cir., December 19, 1961, and *The Pure Oil Company* v. *F.P.C.*, 292 F. 2d 350.

underlined portion of its acceptance letter set forth in footnote 1, *supra*.[3] Under the circumstances, we think there is no merit to Blanco's argument that the Commission should have been more explicit as to the limitation imposed with respect to subsequent rate filings during the period of the temporary authorization. In like manner, Blanco's attempt to now attack the Commission's power to so condition the issuance of a temporary certificate represents an unwarranted collateral attack on the November 25, 1960 letter order of the Commission granting such temporary authorization. *Texaco Inc.* v. *F.P.C.*, 290 F. 2d 149, 157.

We do not agree that the present matter is controlled by the decision in the *Texaco* case, *supra*, 290 F. 2d 149, 156, because the court's statement with respect to a company's right to file for a rate increase up to the initial contract rate was made with reference to a company's right to file after the issuance of a permanent certificate. In the instant case a permanent certificate has not been issued to Blanco covering the subject sale. We think that such difference is important. For, we are convinced that to protect adequately the public interest it is our duty to maintain the *status quo* pending disposition of the permanent certificate if we are to prevent potential damage that may arise from out of line price proposals in an applicant's contract.[4]

The Commission finds:

The assignments of error and grounds for rehearing contained in Blanco's application for rehearing filed January 26, 1962, set forth no new facts or principles of law which were not fully considered by the Commission in its letter order of December 28, 1961, or which having now been considered warrant any change or modification of that order.

The Commission orders:

Blanco's application for rehearing of the Commission's letter order of December 28, 1961 herein, filed on January 26, 1962, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

ROBERT P. WILSON, PROJECT NO. 2279

ORDER DISMISSING APPLICATION FOR PRELIMINARY PERMIT

(Issued February 23, 1962)

Application was filed September 20, 1960, by Robert P. Wilson, of Taylorsville, California, for a preliminary permit under Section 4(f) of the Federal Power Act (hereinafter referred to as the Act) for proposed Project No. 2279 to be located on the upper reaches of Indian Creek and its tributaries Hungry Creek, Antelope Creek, Little Antelope Creek, and other—all ultimately tributary to North Fork of Feather River.

---

[3] The final proviso in Blanco's acceptance, read in the light of the italicized language in its letter, can be interpreted only to reserve the right to file for increases during a period subsequent to that governed by the temporary authorization. We note additionally that we do not recognize the right of an applicant to modify the conditions which are set forth in the certificate tendered by the Commission.

[4] Among existing contracts which may be triggered or for which the proposed rate may serve as a basis for a price redetermination at a higher rate are the gas purchase contracts of Tennessee Gas Transmission Company and Texas Eastern Transmission Company in Texas District No. 4. See The Atlantic Refining Company's FPC Gas Rate Schedule No. 5; Phillips Petroleum Company (Operator), *et al.* FPC Gas Rate Schedule No. 20; and Pauley Petroleum, Inc. (Operator), *et al.* FPC Gas Rate Schedule No. 1.

The proposed project would be in the vicinity of Taylorsville, Crescent Mills, and Greenville, California, would lie enterly within Plumas County, California, and would affect lands of the United States within the Plumas National Forest.

As described in the application, the proposed project would consist of three dams on Indian Creek and their resultant reservoirs, three tunnels aggregating about 18,000 feet in length, and three powerhouses with an aggregate installed capacity of approximately 40,000 horsepower. The uppermost reservoir, which would flood a portion of the valley of Indian Creek and an area known as Antelope Valley at the confluence of the Antelope and Little Antelope Creeks, would provide the necessary storage for the two run-of-river downstream developments.

According to the application, power developed by the proposed project would be used, in part, in mining, smelting, refining and manufacturing operations, and for the use of persons, public agencies, farms, and corporations supplying power within the area of northern California.

By letter dated January 12, 1962, we were informed by the Chief, Forest Service, of the receipt by that Service of an application for special-use permit filed by the California Department of Water Resources (Department) for construction of the Antelope Valley Dam and Reservoir which would be primarily a public recreation project, including fishery enhancement. The Department's reservoir would occupy a considerable portion of Applicant's uppermost reservoir storage lands on Indian Creek as proposed in the application for Project No. 2279. By letter dated January 18, 1962, the Department's Director of Water Resources, in requesting early Commission disposition of the application for Project No. 2279, pointed out that the Antelope Valley Dam and Reservoir "was authorized by the Legislature in 1957, acquisition of the required private land was completed in 1959, funds for construction were included in a bond issue authorized by the Legislature in 1959 and ratified by a general election in 1960, water-right applications were assigned [by the State to the Department] in 1961, and construction of the project is scheduled to commence in April 1962."

The Chief, Forest Service, also requests that we make an early disposition of the application for Project No. 2279, and states that it considers it to be in the public interest and consistent with the purposes for which the Plumas National Forest was created to issue the special-use permit applied for by the Department and has requested that we either vacate the power withdrawal for Project No. 2279 or concur in the Forest Service proposal to issue a special-use permit to the Department, containing such conditions as we may specify as necessary for power purposes. The Department has advised the Forest Service that it is willing to accept a special-use permit conditioned on the applicability of Section 24 of the Federal Power Act preserving the power values of the lands of the United States. In the event power is developed later in connection with the Department's project, such development will of course be subject to licensing under the Federal Power Act.

Public notice of the application was followed by the filing of protests and petitions to intervene in this proceeding by Pacific Gas and Electric Company, the County of Plumas, California, and the Department of Water Resources, State of California. Permission to intervene was granted by Commission orders issued January 10, 1961, June 30, 1961 and June 9, 1961, respectively.

In view of the definite proposal of the Department to proceed immediately with development of its Antelope Valley Dam and Reservoir for recreation and possibly for later water-power development; and the desire of the Forest Service to have this reservoir constructed within the National Forest, *the Commission finds:*

736-330—64——28

It is appropriate and in the public interest in carrying out the provisions of the Federal Power Act that the application for preliminary permit for proposed Project No. 2279 be dismissed.

The Commission orders:

The aforesaid application is dismissed.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NOS. CP60-32 AND CP62-82

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 26, 1962)

On September 27, 1961, as supplemented on November 22, 1961, and January 12, 1962, Cities Service Gas Company (Applicant) filed in Docket No. CP62-82 an application for disclaimer of jurisdiction or, in the alternative, for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act authorizing the installation and operation of pipeline taps and block gates on Applicant's Kansas City-Hugoton pipeline at the intake side of Applicant's Hugoton Compressor Station in Grant County, Kansas, to enable Applicant to deliver natural gas to Cities Service Helex, Inc. (Helex), all as more fully set forth in the application as supplemented.

Helex proposes to construct and operate a field processing plant adjacent to Applicant's presently existing Hugoton Compressor Station and connected to Applicant's Hugoton Field pipeline system. Applicant has agreed to deliver to Helex for processing in its plant volumes of natural gas on an interruptible basis as such volumes are available to Applicant. From the volumes of gas so delivered, Helex has the right to consume up to a maximum volume of 75 MMcf of gas in any 24-hour period for the purpose of extracting helium, liquid hydrocarbons, and other components of the natural gas so delivered. The volumes of natural gas remaining after such processing by Helex will be returned to Applicant at a point adjacent to the point of delivery by Applicant to Helex.

The extraction of helium, liquid hydrocarbons, and other components from the natural gas so delivered, together with the use of gas for fuel and incidental use in the plant, will necessarily result in Helex's redelivery to Applicant of a lesser volume of gas than it received. It is estimated by Applicant that this reduction will average approximately 60 MMcf of gas per day based on deliveries to Helex of approximately 500 MMcf of gas per day.

The contract between Applicant and Helex provides that Helex will pay Applicant an initial price of 20.8¢ per Mcf, with annual adjustments, for the net volumes of gas consumed in Helex's processing operations.

Helex has agreed with Applicant that in the operation of the processing plant the unit heating value of the gas redelivered to Applicant will be the same as the unit heating value of the gas delivered by Applicant to Helex. Helex further agreed with Applicant to return gas at the same pressure at which Applicant delivers it to Helex.

From the subject volumes of gas Helex proposes to extract crude helium, a crude stream of normally liquifiable higher hydrocarbons, and such volumes of nitrogen as may be required to enable Helex to fulfill its obligation with respect to the heat content of the gas redelivered to Applicant. The helium to be

extracted will be resold by Helex pursuant to its contract with the United States of America dated August 22, 1961. The mixed hydrocarbon product will be sold by Helex in a crude stream which will be transported by pipeline to refining facilities at another location. The refined hydrocarbon product will be either sold as liquified petroleum gas or used in petro-chemical processes.

The proposed facilities to be built by Cities Service Gas Company will cost $95,000 and will be financed from treasury cash.

Concurrently with the subject application, Applicant has submitted a study of its gas reserves. Based on this study, Applicant has requested that paragraph (F) of the order issued December 27, 1960, in Docket No. CP60-32 (24 FPC 1127) be eliminated. That paragraph requires that Applicant shall limit its total annual sales of natural gas to an amount approximately equal to the total demands served, as shown in line 43 of Exhibit No. 30 in Docket No. CP60-32, beginning with the calendar year 1961 and in each calendar year thereafter until Applicant makes a showing, satisfactory to the Commission, that such restriction should be eliminated or modified. Applicant has made a showing in the instant application that said restriction should be eliminated.

Due notice of the application for amendment in Docket No. CP60-32 was published in the Federal Register on January 19, 1962 (27 F.R. 598). No protest, petition to intervene or request for hearing thereon has been received.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 13, 1962, in Docket No. CP62-82, respecting the matters involved in, and the issues presented by, the application in this proceeding. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in Docket No. CP62-82, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued in Docket No. CP62-82 authorizing Cities Service Gas Company

to construct and operate the proposed facilities and to transport natural gas in interstate commerce as hereinbefore described, all as more fully described in the application as supplemented in said Docket No. CP62–82, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 2 years from the date on which this order issues.

(D) The Commission's order issued on December 27, 1960, in Docket No. CP60–32 (24 FPC 1127) be and the same is hereby amended to rescind the restriction in service contained in paragraph (F) thereof.

(E) In all other respects said order issued on December 27, 1960, in Docket No. CP60–32 (24 FPC 1127) shall remain unchanged and in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

ALABAMA POWER COMPANY, DOCKET NO. E–6893

DETERMINATION OF PROPORTION OF ANNUAL CHARGES FOR HEADWATER BENEFITS

(Issued February 27, 1962)

By Commission order issued October 11, 1951 (10 F.P.C. 1423), an investigation was instituted pursuant to the provisions of the Federal Power Act, particularly Section 10(f) thereof, for the purpose of enabling the Commission to determine whether certain hydroelectric developments of Alabama Power Company (Company); namely, its Lay, Mitchell and Jordan developments, which are presently maintained and operated under licenses issued under the Act as Project Nos. 2146, 82 and 618, respectively, on the Coosa River are directly benefited by the construction and operation of the upstream Allatoona project of the United States and, if it so finds, to assess against the Company the equitable proportion of the annual charges for interest, maintenance, and depreciation on the Allatoona headwater improvement which the Company should pay to the United States. In addition, under the provisions of Section 10(f) of the Act, the Company is required to pay to the United States the cost of making such determination as fixed by the Commission.

The Allatoona headwater improvement is located on the Etowah River, a tributary of the Coosa River, near Cartersville, Georgia, and was constructed by the Corps of Engineers, Department of the Army. Completed in 1950, the Allatoona project is operated for the primary purposes of flood control and power.

The installed capacity of the Company's Lay, Mitchell and Jordan developments is 64,800 kilowatts, 72,500 kilowatts and 100,000 kilowatts, respectively.

By determinations issued August 18, 1954 (13 FPC 1317), August 9, 1956 (16 FPC 827), and October 27, 1959 (22 FPC 749), the Commission determined the equitable proportion of the above-stated annual charges for the years 1950 through 1957 and fixed costs of making such determinations.

The investigation made for the calendar years 1958 through 1960, discloses that the regulation of flows by the Allatoona headwater improvement caused an increase in generation at the Company's three afore-mentioned downstream developments totaling 111,229,125 kilowatt-hours during this period. During the period covered by this investigation, the operation of the Allatoona project did not affect the dependable capacity of the Lay, Mitchell and Jordan developments.

The Commission determines:

The equitable proportion of the annual charges for interest, maintenance and depreciation on the Allatoona headwater improvement to be paid by Alabama Power Company to the United States for benefits directly received for the calendar years 1958 through 1960 is as follows:

Calendar year	*Amount*
1958	$56,417
1959	53,916
1960	57,888
Total	168,221

The Commission finds:

The cost to the Commission of making the determination herein is $6,560.

The Commission orders:

Payment to the Commission of the sum of $168,221 and $6,560 for the above-stated purposes shall be made by Alabama Power Company within 30 days from the date of issuance of this determination.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CAROLINA POWER & LIGHT COMPANY, PROJECT NO. 2206

ORDER APPROVING REVISED EXHIBIT L DRAWINGS

(Issued February 27, 1962)

On December 13, 1961, Carolina Power & Light Company, licensee for major Project No. 2206, filed for Commission approval two revised Exhibit L drawings relating to the Tillery development of the project. The filing was pursuant to Article 5 of the license for the project.

The revised drawings reflect corrections of minor errors appearing in the Exhibit L drawings now parts of the license, but do not reflect any changes in the project structures.

The Commission finds:

The following-described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the Exhibit L drawings (FPC Nos. 2206-35 and 2206-36), now parts of the license, and which are superseded, should be eliminated from the license—all as hereinafter provided:

Exhibit L (Revised) sheet 2 of 12 (FPC No. 2206-39) entitled "Development Expansion—Plans"

Exhibit L (Revised) sheet 3 of 12 (FPC No. 2206-40) entitled "Development Expansion—Cross-Section"

The Commission orders:

The revised Exhibit L drawings described in the above finding as conforming to the Commission's rules and regulations are approved as parts of the license for Project No. 2206, and the exhibits described in the same finding as being superseded are eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TENNESSEE NATURAL GAS LINES, INC., DOCKET NO. CP61-197; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP62-93

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 27, 1962)

On October 30, 1961, as amended on November 16, 1961, Tennessee Natural Gas Lines, Inc. (Tennessee Natural), filed in Docket No. CP61-197 a motion to amend an order issuing a certificate of public convenience and necessity, and on October 12, 1961, as supplemented and amended on November 2, 1961, Tennessee Gas Transmission Company (Tennessee) filed in Docket No. CP62-93 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity, both as hereinafter described, and as more fully set forth in the motion and application.

Tennessee Natural in the subject motion requests amendment of the order of the Commission issued April 10, 1961, in Docket No. CP61-197 (which order authorized Movant to sell up to 20,800 Mcf of interruptible gas per day to Ford Motor Company (Ford), a direct industrial customer, for use in its glass plant in Nashville, Tennessee) by authorizing Tennessee Natural to sell to Ford 15,500 Mcf of interruptible gas per day and 5,300 Mcf of firm gas per day, instead of 20,800 Mcf of interruptible gas per day. The change is necessary due to an expansion at the Ford plant. In Docket No. CP61-27 Tennessee Natural has a pending application to make the same conversion on a long-term basis, which application is dependent on Tennessee's expansion pending in Docket No. CP60-94. The motion proposes that the conversion be effective for the period ending November 30, 1962.

Tennessee seeks authorization in Docket No. CP62-93 to render interim additional service until November 30, 1962, to three of its existing customers as follows (Mcf per day at 14.73 psia):

Customers	Presently authorized long-term maximum contract quantity	Proposed interim service	Total long-term and interim service
Inland Gas Corporation	40,800	5,100	45,900
United Gas Pipe Line Company:			
Oxford	5,945	1,055	7,000
Shaw, *et al.*	8,318	1,166	9,484
Tennessee Natural Gas Lines, Inc.	111,364	5,300	116,664
Total	166,427	12,621	179,048

These customers are Tennessee's only existing customers that will not have sufficient gas supply to meet their 1961–62 winter requirements. The proposed interim service will be rendered under Tennessee's FPC Gas Rate Schedules on file with the Commission, and can be rendered without additional facilities.

Temporary authorization to render the service proposed in Docket No. CP62–98 was granted to Tennessee on December 11, 1961.

Due notice of the application for amendment in Docket No. CI61–197 was published in the Federal Register on January 24, 1962 (27 F.R. 705). No protests, petitions to intervene or requests for hearing have been received.

Pursuant to due notice a public hearing was held in Docket No. CP62–93 in Washington, D.C., on February 15, 1962, respecting the matters involved in and the issues presented by the application therein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that intermediate decision procedure be omitted and that the Commission render a decision in Docket No. CP62–93 pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued on April 10, 1961, in Docket No. CP61–197 (25 FPC 717) be amended as hereinafter ordered.

(2) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(3) The sales of natural gas proposed in Docket No. CP62–93 as hereinbefore described, and as more fully described in the application in Docket No. CP62–93, will be made in interstate commerce, subject to the jurisdiction of the Commission, and are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The proposed sales and delivery of natural gas by Tennessee Gas Transmission Company in Docket No. CP62–93 are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Tennessee's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(6) Tennessee is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(7) A request during the public hearing in Docket No. CP62–93 by staff counsel for omission of the intermediate decision procedure therein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) The order of the Commission issued on April 10, 1961, in Docket No. CP62–197 be and the same is hereby amended to authorize Tennessee Natural Gas Lines, Inc., to sell and deliver to Ford Company up to 15,500 Mcf of interruptible gas per day and 5,300 Mcf of firm gas per day in lieu of the

previously authorized quantity of 20,800 Mcf of interruptible gas per day until November 30, 1962. Beyond November 30, 1962, the service shall return to 20,800 Mcf per day of interruptible service.

(B) In all other respects the order issued on April 10, 1961, in Docket No. CP61-197 shall remain unchanged and in full force and effect.

(C) A certificate of public convenience and necessity be and the same is hereby issued authorizing Tennessee Gas Transmission Company to make the proposed sales and deliveries, as hereinbefore described and as more fully described in the application in Docket No. CP62-93, until November 30, 1962, upon the terms and conditions of this order.

(D) The certificate issued by paragraph (C) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

THE WESTERN COLORADO POWER COMPANY, PROJECT NO. 400

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued February 27, 1962)

Application was filed August 1, 1960 and supplemented August 15, 1960 by The Western Colorado Power Company, licensee for major Project No. 400, for further amendment of its license for the project located on Lake Fork and Howard Fork of San Miguel River in San Miguel County, Colorado, and affecting lands of the United States within the Uncompahgre National Forest.

The presently licensed project consists of three constructed power developments designated as Tacoma, Ames and Ilium.

The amendment sought would exclude from the license the Ilium power development works consisting of diversion dams, flume, surge tank, penstock, powerhouse, operators' cottages, and other appurtenant works of the Ilium power development, including a segment of the (T-3) 11 kv line, between Station 45+44 and Station 367+27. Another segment of the (T-3) line, would be relocated on a new center line between the Town of Ilium and the Town of Telluride, Colorado.

The application states that the Ilium plant has not been in service since July 1959 when a portion of the wood box flume collapsed and further operation became impossible. Continued operation would require, according to the application, a new flume and semiautomatic controls, the cost of the installation of which would render the operation of the plant economically infeasible, and, moreover, other facilities belonging to the licensee are sufficient to supply all power demands within the licensee's territory.

Elimination from the license of the Ilium plant with its 1,600 horsepower capacity will reduce the annual administration charges, under the license, based upon installed horsepower capacity, from 16,000 to 14,400 horsepower. Such elimination will also reduce the lands of the United States occupied by the project by approximately 47.45 acres. By the removal of the afore-mentioned 11 kv (T-3) line, 1.909 miles of 100-foot right-of-way on lands of the United States will be eliminated, while the relocation of the 12 kv (T-3) line will increase the lands of the United States occupied by transmission lines by 0.839 mile of 100-foot right-of-way.

By letter dated August 10, 1961, the Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Uncompahgre National Forest, has advised us that the lands formerly occupied by the Ilium development have been restored to a condition satisfactory to the Service.

The Commission finds:

(1) The license, further amended as hereinafter ordered, will not interfere or be inconsistent with the purposes for which the Uncompahgre National Forest was created or acquired, and is in the public interest.

(2) Public notice has been given of the filing of the application. No protests have been received.

(3) The authorized installed capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 14,400 horsepower and the annual charge for reimbursing the United States for the costs of administration of Part I of the Federal Power Act, based upon such capacity, as hereinafter provided, is reasonable.

(4) The decreased amount of annual charges to be paid under the license, as hereinafter fixed and specified, for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, including those used for transmission line rights-of-way, is reasonable.

(5) The following described exhibits filed as part of the application as supplemented conform to the Commission's rules and regulations and should be approved as part of the license for the project and the exhibits hereinafter decribed as being superseded in whole or in part, should be eliminated from the license or revised as hereinafter indicated and as so-revised should be reapproved as part of the license for the project—all as hereinafter provided:

Supplemental Exhibit J (FPC No. 400–46) showing the General-System Map of The Western Colorado Power Company, superseding Exhibit J (FPC No. 400–17); and

Amended Exhibit K (FPC No. 400–47) showing the relocation of the 12 kv (T–3) line, and superseding Exhibit K (FPC No. 400–24) insofar as it shows the 11 kv (T–3) line.

(6) Amended Exhibit K, sheet 5 of 7 (FPC No. 400–22) showing location of dams, powerhouses, lands and center line of pipe and power lines of the Ilium Plant, and Amended Exhibit L (FPC No. 400–29), showing the Ilium Project improvements to be removed—both parts of the license for the project—should be eliminated from the license as hereinafter provided.

(7) Amended Exhibit L, sheet 4 of 5 (FPC No. 400–28) showing general design drawings of Tacoma-Ames-Ilium Project of The Western Colorado Power Company, now part of the license for the project, should be revised so as to delete therefrom the portion showing the Ilium Station and as so-revised should be reapproved as part of the license for the project as hereinafter provided.

The Commission orders:

(A) The exhibits described in finding (5) above as conforming to the Commission's rules and regulations are approved as part of the license for Project No. 400 and the exhibits described in the same finding as being superseded in whole or in part, are eliminated from the license for the project to the extent indicated.

(B) The exhibits described in finding (6) above are eliminated from the license for the project.

(C) The exhibit described in finding (7) above revised by Commission staff to delete therefrom the portion showing the Ilium Station is reapproved as part of the license for the project.

(D) The license for Project No. 400, as amended, is further amended, effective as of August 10, 1961, as follows:

PARAGRAPH I. The following part of subparagraph (b) of Article 2 of the license is further amended to read:

(b) All project works, consisting of two constructed power plants designated as Tocamo and Ames plants with appurtenant dams, reservoirs, water conduits, and equipment; and six transmission lines as follows: one from Tacoma power plant to Silverton substation; one from Ames power plant to station 348+38 (T–1) line); one between Ames and Ilium (T–2 line); one from Ilium to Telluride (T–3 line); and one from Ames power plant to the Burro Bridge Sectionalizing Station, and one from Tacoma to Durango; the location and character of said project works being more fully shown and described by the exhibits hereinbefore listed, and certain other exhibits which are designated and described as follows:

PARAGRAPH II. Article 20 of the license is further amended to read:

Article 20. The Licensee shall pay to the United States the following annual charges:

(i) for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, one (1) cent per horsepower on the authorized installed capacity (14,400 horsepower), plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated by the project during the calendar year for which the charge is made;

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, excluding those used for transmission line right-of-way, $168.52; and

(iii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands used for transmission line right-of-way only, $213.56.

(E) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license as heretofore amended.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act and failure to file such an application shall constitute acceptance of this amendment of license. In acknowledgment of the acceptance of this amendment of license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NEW ENGLAND POWER COMPANY

ORDER ACCEPTING RATE SCHEDULES FOR FILING, DIRECTING THE SUBMISSION OF DATA, AND DIRECTING STAFF INVESTIGATION

(Issued February 28, 1962)

The New England Power Company (Nepco) Boston, Massachusetts, filed the rate schedules in issue on December 12, 1961. By agreement with the company the effective date was postponed in order to permit the Commission to make a more intensive study of the filings than would otherwise have been

possible.[1] The Commission has also directed staff to make a field investigation to aid it in its consideration of the proper action to take on these filings. Such an investigation has been made, although on a necessarily limited basis, both because of lack of availability of staff and because Nepco's revenue needs appear to be such as to require prompt action upon the filings.

This order accepts without suspension and formal hearing a number of revised rate schedules of Nepco increasing that company's present demand and energy charges for firm power and energy service to eight wholesale customers by an estimated 2.9%, or $1,545,000 per annum for all purchasers. In view of the fact that some of Nepco's claimed costs are so high as to raise question as to their allowability, our reasons for doing so should be stated at the outset.

At present Nepco and its corporate affiliates in the New England Electric System incur substantial costs in connection with a number of small, scattered, and inefficient steam electric generating sources located throughout the New England System.[2] These facts have been recognized by Nepco management which has been engaged in intensive efforts in recent years to bring down its costs of power supply. However, for purposes of this order we recognize the foregoing to be the situation in which Nepco now finds itself. Our allowance of the proposed rate increase will prospectively assist Nepco in meeting its power supply problems. The increased revenues to be derived under Nepco's revised rates and charges will afford the company an opportunity to continue, accelerate and enlarge its current program for replacement of these small generating sources with larger and more efficient units, and to increase the coordination of its electric utility facilities with those of other systems.

Nepco's representatives have advised the Commission's staff that during 1962, and possibly 1963, the rate increases we are permitting to go into effect will be absorbed within the New England Power System and will not affect consumer rates.

The long-range interests of the consumers of New England, including the industries which provide employment in the area, require acceleration of Nepco's progress in reducing the cost of producing power. For that reason we think the public interest will best be served by affording Nepco this opportunity to use the proceeds of the rate increase to improve system efficiency. For that reason we find it unnecessary to consider matters which would be significant were we here proposing, after formal investigation and hearing pursuant to Section 205 of the Federal Power Act, to disallow certain of Nepco's claimed costs and to prescribe the company's rates and charges for the future. Our rate regulatory jurisdiction over Nepco is a continuing one (Section 206 of the Federal Power Act). In the exercise thereof, we are directing Nepco to submit additional cost and revenue data showing its cost of rendering firm wholesale electric service for the 1962 calendar year, adjusted for the rate increases for the full year. Also, we have directed the Commission's staff to undertake a more comprehensive field investigation and study of Nepco's electric utility operations, with special emphasis upon inter-system connections and other projected power supply arrangements looking to further coordination of company's facilities with those of other systems. The information thus made available will afford the Commission a basis upon which to consider the need for any additional action relative to Nepco's services and rates.

---

[1] Nepco's December 12, 1961, filing was an amendment of an earlier rate schedule filing tendered April 25, 1961. The requested effective date of March 1, 1962, was agreed to by Nepco following conferences with the Commission's staff.

[2] Statistics of these plants are set forth in detail in Appendix A attached hereto.

The proposed rate schedules have been designated in the files of the Commission as follows:

Rate schedule designation	*Purchasing utility*
Supplement No. 2 to Nepco's Rate Schedule FPC No. 105.	Fitchburg Gas and Electric Light Company.
Supplement No. 2 to Nepco's Rate Schedule FPC No. 112.	Granite State Electric Company.
Supplement No. 1 to Nepco's Rate Schedule FPC No. 116.	Town of Littleton, New Hampshire.
Supplement No. 2 to Nepco's Rate Schedule FPC No. 111.	Lynn Electric Company.
Supplement No. 2 to Nepco's Rate Schedule FPC No. 117.	Massachusetts Electric Company.
Supplement No. 11 to Nepco's Rate Schedule FPC No. 99.	Merrimack-Essex Electric Company.
Supplement No. 2 to Nepco's Rate Schedule FPC No. 106.	The Narragansett Electric Company.
Supplement No. 1 to Nepco's Rate Schedule No. 115.	Suburban Electric Company.[1]

[1] With the exception of Fitchburg Gas and Electric Light Company all of the above-designated companies are corporate affiliates of Nepco in the New England Electric System.

Protests or objections to the revised schedules were submitted by a number of persons and municipalities, including several municipalities which purchase electric power and energy from certain of the above-mentioned direct customers of Nepco. The Commission's staff, as already noted, conducted a field examination of Nepco's supporting cost and operating data.

Facts currently before the Commission indicate that Nepco's proposed increased rates and charges will produce revenues sufficient to cover its cost of service, including a return of approximately 6% upon net investment allocated to Nepco's firm power wholesale service. This rate of return, based upon a 1960 test year, was determined in accordance with the principles customarily applied by the Commission in computing cost of service, rate base, and rate of return. The computed rate base includes average net investment in Nepco's power pool facilities, i.e., production plant, transmission plant (exclusive of lines, substations, and other facilities used solely for distribution), and an allocated share of general plant. Working capital allowance includes an amount of cash working capital allocable to Nepco's power pool, together with prepayments, less 50% of Nepco's federal income tax accruals, including deferred federal income tax credits arising from accelerated depreciation practices pursuant to Section 168 of the Internal Revenue Code of 1954. The federal income tax allowance in Nepco's cost of service reflects depreciation expense, other than accelerated, in excess of book depreciation, but exceeds actual income taxes for the period by the amount of deferred tax resulting from accelerated amortization.

We note that Nepco's treatment of deferrals of income taxes conforms to certain prior Commission precedents. We do not necessarily endorse such treatment in principle and reserve the right to reexamine that matter, but if there is any change in Commission policy in respect to the treatment of income tax deferrals it will not be applied retrospectively.

Included among Nepco's claimed costs of service are fixed and operating expenses in connection with eight small steam electric generating stations owned by three corporate affiliates of Nepco: Merrimack-Essex Electric Company, Massachusetts Electric Company, and Lynn Electric Company. Pursuant to contractual arrangements among Nepco and its affiliates, Nepco pays all fixed

and operating costs associated with those generating stations, including income and other taxes, and allowances for a 6% return upon a net investment base. In return for that payment Nepco is contractually entitled to the entire output of all plants, an aggregate of 205,500 kw under 1961 ratings.[2] Most of the generating units located in those stations have been in service for many years, and some are of questionable value in Nepco's rendition of electric utility service to the public. For example, during calendar years 1960 and 1961, two of Merrimack-Essex Electric Company's generating stations failed to produce any of the electric energy which Nepco supplied to its customers. Since 1959 those stations (Lawrence and Lowell) have been maintained as cold standby generating reserves, requiring periods of up to 30 days to be made serviceable as hot or ready generating reserves. Merrimack-Essex Electric Company's Salem plant was placed in cold reserve during June 1961. Collectively, these three stations are currently rated by Nepco at 50,000 kw gross capability.

By present technological and operating standards, Merrimack-Essex Electric Company's steam electric generating stations—Lawrence, Lowell, Salem, Gloucester, Haverhill, and Newburyport—and the low pressure units in Massachusetts Electric Company's Webster Street Station are thermally inefficient and generally have high costs. Appendix A hereto sets forth in summary form Nepco's claimed costs in connection with such steam electric generating station of its corporate affiliates during the calendar years 1960 and 1961.

Corrective measures will require the outlay of substantial amounts of capital by Nepco and its corporate affiliates in the New England Electric System. We are advised that current construction programs contemplate replacement of the generating capacity made available to Nepco by its affiliates with larger and more efficient units now under construction; expansion and strengthening of transmission and distribution facilities of Nepco and its affiliates; and enlargement and further development of interconnections between Nepco and its affiliates and nonaffiliated electric untility systems.

Nepco currently owns and operates fourteen hydroelectric generating stations having a total installed capability of 484,000 kw, and one steam electric generating station (Salem Harbor) with an installed capability of 322,000 kw. Nepco also has under construction a second steam electric generating station at Brayton Point, Massachusetts, which, as planned, will ultimately have a capability of approximately 1,000,000 kw. One 245,000 kw generating unit in the Brayton Point station is scheduled for completion in 1963 and a second 245,000 kw generating unit is scheduled for completion in 1964. Nepco's current firm power purchase arrangements total 437,000 kw. Included among these sources of supply are Nepco's three affiliates (Merrimack-Essex Electric Company, Massachusetts Electric Company, and Lynn Electric Company), and five other companies (Montaup Electric Company, Holyoke Power and Electric Company, Public Service Company of New Hampshire, Boston Edison Company, and Yankee Atomic Electric Company). In July of the current year Nepco's proposed 230 kv interconnection with the Niagara Mohawk Power Corporation will be completed.

Based upon projected loads and sources of generating capacity available to Nepco, including the above purchase arrangements, Nepco's system planning as reported to this Commission results in the following peak hour system reserves:

---

[2] Nepco estimates that by the end of 1964 these eight plants will be down-rated to an aggregate capability of approximately 130,000 kw for system planning purposes.

	1961	1962	1963
	Kw	*Kw*	*Kw*
Capacity	1,243,000	1,333,000	1,452,000
Load	1,117,000	1,192,000	1,317,000
Reserve	126,000 (11.3%)	141,000 (11.8%)	135,000 (10.3%)

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 307, and 309 thereof, that Nepco's revised rate schedules, as designated above, be accepted to become effective as filed rate schedules under that Act on and after March 1, 1962; that Nepco be directed to submit cost and revenue data for the 1962 calendar year, adjusted for the rate increases for the full year; and that the Commission's staff undertake a field examination and study of Nepco's electric utility operations, including the company's present electric loads and sources, projected electric loads and sources, present interconnections with other electric systems, and possible additional interconnections which Nepco might consider in order to improve its system performance.

The Commission orders:

(A) Nepco's revised rate schedules, as designated above, are hereby accepted for filing pursuant to Section 205(d) of the Federal Power Act and Section 35.3 (c) of the Commission's Regulations under that Act, to become effective as filed rate schedules of Nepco on March 1, 1962.

(B) On or before March 1, 1963, Nepco shall show its cost of rendering service under the revised rate schedules, calculated in accordance with applicable Commission rulings and utilizing, among other things, as the test period the calendar year 1962 adjusted for the rate increases for the full year, a prudent net investment rate base, a fair rate of return thereon, and electric operating revenues collected during the test period.

(C) The foregoing showing shall not preclude or limit any additional showing by Nepco, and shall be without prejudice either to any future action by the Commission or its staff or to any future position Nepco may wish to take as to the significance of, or conclusions to be drawn from, the above factual showing.

(D) The foregoing showing shall be submitted in writing with sufficient copies to provide this Commission with six copies and to provide each State Commission affected with a like number of copies.

NEW YORK STATE NATURAL GAS CORPORATION; TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP62-102

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 28, 1962)

On October 19, 1961, New York State Natural Gas Corporation (New York Natural) and Texas Eastern Transmission Corporation (Texas Eastern) filed in Docket No. CP62-102 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the exchange of natural gas and the construction and operation of facilities for such exchange, all as more fully set forth in the application.

New York Natural owns four gas wells in Monroe Township, Bedford County, Pennsylvania, an area in which it has no transmission pipeline of its own. In order to market the gas produced from these wells, New York Natural and Texas Eastern have entered into an exchange agreement dated August 16, 1961, in which New York Natural agrees to construct and operate approximately 7.1 miles of 6-inch pipeline from its Bedford County producing area to a point of connection with Texas Eastern's 20-inch and 24-inch transmission pipelines near Rock Hill Church, approximately three miles west of Mattie in Monroe Township, Bedford County, Pennsylvania, and to construct and operate a measuring station at the connection. New York Natural proposes to deliver the Bedford County production into Texas Eastern's lines at said point up to a maximum of 10,000 Mcf of gas in any 24-hour period unless otherwise agreed upon by the parties. The agreement further provides that Texas Eastern will simultaneously return equivalent daily quantities of gas to New York Natural at an existing interconnection of their respective pipeline systems in Greene County, Pennsylvania; or with prior consent of the parties, deliveries may be made at any other point of connection between their pipeline systems.

New York Natural estimates the total cost of the pipeline and measuring station to be $155,694, which will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 21, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, New York State Natural Gas Corporation, a New York corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 27, 1942, in Docket No. G-312 (3 FPC 844).

(2) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued October 11, 1947, in Docket No. G-880 (6 FPC 148).

(3) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the exchange of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by New York Natural are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The construction and operation of the facilities and the exchange of natural gas as proposed by Applicants are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations, and further, that the time within which construction of the facilities authorized by this order should be completed and said facilities placed in actual operation should be fixed at 30 days from the date on which this order issues.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing New York State Natural Gas Corporation to construct and operate the facilities hereinbefore described, and New York State Natural Gas Corporation and Texas Eastern Transmission Corporation to exchange natural gas, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The time within which the facilities shall be completed and placed in regular operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at 30 days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SOUTH GEORGIA NATURAL GAS COMPANY, DOCKET NO. CP60-11

ORDER DENYING IN PART AND GRANTING IN PART PETITION FOR MODIFICATION OF CERTIFICATE

(Issued February 28, 1962)

On January 10, 1962, South Georgia Natural Gas Company (Petitioner) filed a petition to modify the certificate of public convenience and necessity granted

to the petitioner herein by order issued on January 12, 1961, so as to extend the time for completion of the facilities authorized until August 1, 1962, and so as to delete paragraph (D) of said order.

Said certificate authorized the construction and operation of certain facilities consisting of pipeline extensions, laterals and meter and regulator stations for the sale and delivery of natural gas to the cities of Ocilla and Sylvester, Georgia for resale to the public.

Paragraph (D) of the Commission's order granting said certificate reads as follows:

> This certificate shall not be effective as to the sales and the additional facilities necessary to the consummation of such sales to either of said cities of Sylvester and Ocilla, Georgia, unless, and until the said city shall have presented proof, to this Commission and to South Georgia, that the necessary bonds for the construction of its proposed distribution system (as described in the record) have been sold and that a contract for the construction of such distribution system has been let and construction begun under the contract.

Paragraph (E) of said order reads as follows:

> South Georgia Natural Gas Company shall be under no obligation to sell and deliver natural gas to either of the cities of Sylvester and Ocilla or to construct additional facilities for the purpose of consummating such sale or sales, unless such city shall, within 12 months from the date of this order, have submitted to this Commission and to South Georgia Natural Gas Company the proof described in paragraph (D) hereof.

Petitioner alleges that it has not as yet started construction of said facilities because of the inability of the cities of Ocilla and Sylvester to comply with the requirements of said order of the Commission. Petitioner states further that it is persuaded that both municipalities have made every reasonable effort to comply with the requirements of said certificate order and that both municipalities will have performed all requirements of said order on or before August 1, 1962.

Petitioner alleges that the City of Ocilla has encountered legal difficulties which have been time-consuming: that in order to correct its voters list, legislation was required to be enacted by the State Legislature. However, the proposed bond issue has now been approved by the voters in Ocilla and Ocilla's application to the Housing and Home Finance Agency for the sale of revenue anticipation bonds at a rate of 3⅝ percent interest was approved by said agency in December 1961.

Petitioner alleges that the engineers and city officials of the City of Ocilla are diligently preparing to receive bids on a construction contract.

Petitioner alleges that the voters in the City of Sylvester have authorized the issuing of $272,000 gas revenue anticipation bonds; that the city has officially sold the bonds to the Housing and Home Finance Agency at an interest rate of 3⅝ percent.[1] An ordinance authorizing the bonds was adopted by the City of Sylvester on January 2, 1962 and proceedings for the judicial validation of said bonds were soon thereafter to be filed. The City of Sylvester has awarded the construction contract in the amount of $218,607.75 and it is alleged that construction is expected to begin during or soon after the month of February 1962.

[1] The interest rate used in hearing and order was 5¼ percent.

Petitioner asserts that it proposes to begin construction now when agricultural land is not under cultivation and thus reduce, and in some cases eliminate, most crop damage.

Petitioner contemplates that construction of its gas system extensions herein authorized will be completed and in operation by August 1, 1962, if the relief requested herein is granted.

The Commission finds:

(1) Good cause has been shown for an extension of time within which to present the proof required by ordering paragraph (D) of the Commission's order herein, but sufficient reason has not been shown for the elimination of the requirement to furnish said proof.

(2) The cities of Ocilla and Sylvester should be granted an extension of time within which to present the proof required by said ordering paragraph (D) until July 1, 1962 and petitioner should be allowed six months from July 1, 1962 within which to complete the facilities necessary to render service to said cities.

The Commission orders:

(A) The petition of South Georgia Natural Gas Company to modify the Commission's order herein effective January 12, 1961 by deleting ordering paragraph (D) thereof be and the same is hereby denied.

(B) The petition of South Georgia Natural Gas Company to modify the Commission's order herein effective January 12, 1962, by amending ordering paragraph (E) so as to extend the time for the completion of the facilities authorized by said order be and the same is hereby granted so that paragraph (E) and (G) will read as follows:

(E) South Georgia Natural Gas Company shall be under no obligation to sell and deliver natural gas to either of the cities of Sylvester and Ocilla or to construct additional facilities for the purpose of cousummating such sale or sales, unless such city shall, on or before July 1, 1962, have submitted to this Commission and to South Georgia Natural Gas Company the proof described in paragraph (D) hereof.

(G) The time within which the facilities hereby authorized for service to Sylvester and Ocilla, Georgia, shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at 6 months from the date on which each of the said cities may hereafter submit, to the Commission and to South Georgia Natural Gas Company the evidence described in paragraph (D) hereof, but not later than six months from July 1, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

WASHINGTON PUBLIC POWER SUPPLY SYSTEM, PROJECT NO. 2244

ORDER AMENDING LICENSE (MAJOR)

(Issued February 28, 1962)

Application was filed on December 22, 1960, and supplemented on August 23 and December 19, 1961, by Washington Public Power Supply System, licensee for major Project No. 2244, for amendment of the license for the proposed project to be located on Lake Creek and Packwood Lake in Lewis County, Wash-

ington, and affecting lands of the United States within the Gifford Pinchot National Forest.

The amendment sought would principally: (1) increase the authorized installed capacity from 26,700 horsepower to 34,800 horsepower; (2) change the location and design of the diversion structure from an earth-fill dam and intake to a concrete drop structure and intake to be located on Lake Creek approximately 400 to 450 feet downstream from the outlet of Packwood Lake; (3) relocate center-lines of certain pipe line sections and add tunnel sections wherever it will improve their hydraulic properties; (4) modify the tailrace canal by minor center-line relocation and detailing of structures; (5) change the design of the powerhouse from a semi-outdoor type to a semi-buried concrete structure; and (6) change the voltage of the 115 kv transmission line, now included in the license, to 69 kv and include in the project works an additional 69 kv transmission line to extend about 50 miles from the project to the Silver Creek Substation of the Bonneville Power Administration.

According to the application and supplements thereto, the proposed changes and additions to the project works are necessary and desirable for the reasons that: (1) as a result of modifications in pipe line gradient to accommodate greater hydraulic capacity, the generating capacity is increased and the increase so realized will enhance the economic feasibility of the project; (2) the redesign and relocation of the spillway crest and the intake structure make a lower head diversion dam feasible; (3) seismic sections studies and pipe line gradient studies made possible better location of the pipe line; (4) relocation of the tailrace serves to benefit the area as a drainage ditch and to return water to the Cowlitz River as requested by the State of Washington Bureau of Fisheries; (5) relocation of the powerhouse was to fit the available foundation conditions and its redesign permitted the accommodation therein of a small horizontal unit; and (6) the construction of the new 69-kv transmission line to the Bonneville Power Adminstration transmission network is required to transmit the additional capacity for use by Member Public Utility Districts.

The principal effects of approval of the amendment sought will be reflected in the description of the project works and the authorized increased installed horsepower capacity of the project with the resultant increase in the administrative annual charges payable under the license as amended.

An Assistant Secretary of the Interior, in reporting on the application, has requested that an additional provision be included in any amended license for the project in the interest of fish life, and that Article 27 of the license be revised by removing therefrom the date specified therein within which the Secretary of the Interior may request modification of project structures in the interest of fish and wildlife resources.

The Director of the Washington Department of Games, in reporting on the application, has requested that an additional provision in the interest of fish life, similar to the provison requested by the Assistant Secretary of the Interior, be included in any amended license for the project.

The Secretary of Agriculture, in reporting on the application, has requested the inclusion in any amended license for the project, additional provisions which the Forest Service believes necessary for the protection of the natural resources of the National forest lands involved, including recreation.

The Commission finds:

(1) Public notice of the filing of the application has been given. No formal protests or petitions to intervene have been received.

(2) The license, amended as hereinafter ordered, will not interfere or be inconsistent with the purposes for which the Gifford Pinchot National Forest was created or acquired, and is in the public interest.

(3) The authorized installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is increased to 34,800 horsepower, and the increased annual charge for reimbursing the United States for the costs of administration of Part I of the Federal Power Act, based on such capacity, as hereinafter provided, is reasonable.

(4) The new 69 kv transmission line referred to in item (6) of the second paragraph of this order as extending about 50 miles from the project to the Silver Creek Substation of the Bonneville Power Administration is part of the project within the meaning of Section 3(11) of the Federal Power Act, and should be included in the amended license for the project as hereinafter provided.

(5) The following described revised exhibits filed as part of the application for amendment conform to the Commission's rules and regulations and should be approved as part of the license for the project as hereinafter provided:

Exhibit J: (FPC Nos. 2244–41 and –42);

Exhibit K: (FPC Nos. 2244–43 through –47, –51 and –52, –55 through –64, –72 and –73);

Exhibit L: (FPC Nos. 2244–65, –69 and –70, and –74 through –76); and

Exhibit M: Filed in the Commission December 22, 1960.

(6) The following described exhibits, now part of the license, and which have been superseded by the revised exhibits described in finding (5) above, should be eliminated from the license as hereinafter provided:

Exhibit J: (FPC Nos. 2244–4 and –5);

Exhibit K: (FPC Nos. 2244–6 through –9, –11, and –13 through –34);

Exhibit L: (FPC Nos. 2244–35, –36 and –38); and

Exhibit M: Filed in the Commission April 20, 1959.

The Commission orders:

(A) The exhibits described in finding (5) above as conforming to the Commission's rules and regulations are approved as part of the license for Project No. 2244 and the exhibits described in finding (6) as being superseded are eliminated from the license.

(B) The license for Project No. 2244 is amended, effective as of February 1, 1962, as follows:

PARAGRAPH I. Subparagraphs (a) and (b) of finding (2) of the license are amended to read as follows:

(2) The proposed project will consist of:

(a) All lands constituting the project area and enclosed by the project boundary, or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: Sheet 1 (FPC No. 2244–3) Location Map; Sheet 2A (FPC No. 2244–41) General Project Map; Sheet 3A (FPC No. 2244–42) Vicinity Transmission System;

Exhibit K: Sheets, 1A, 4A, 5, 6A, 7 and 8A (FPC Nos. 2244–10, –12 and –43 to –46 incl) Project topography except insofar as a diversion dam is shown on Sheet 8A; Sheet 11A (FPC No. 2244–47) Packwood Lake; Sheets 16A, 19A, and 20A (FPC Nos. 2244–52, –55 and –56) Pipe Line—Plan and Profile; Sheets 21A and 22A (FPC Nos. 2244–57 and –58) Penstock—Plan and Profile; Sheet 23A (FPC No. 2244–59) Penstock, Powerhouse, Yard and Tailrace; Sheet 24A (FPC No. 2244–60) Tailrace Canal; Sheets 25A through 28A (FPC Nos. 2244–61 through –64) Access Road; Sheet 15A (FPC No. 2244–51) Pipeline—Plan

and Profile only insofar as it shows the conduit location; and Sheets 17A and 18A (FPC Nos. 2244–72 and –73) Pipeline—Plan Profile.

(b) Project works consisting of:

A concrete drop structure and intake located on Lake Creek about 450 feet downstream from the outlet of Packwood Lake, providing a maximum operating pool at elevation 2,858.5 feet and creating usable power storage of about 3,500 acre-feet; an excavated approach channel to the intake; a conduit consisting of tunnel and pipeline; a penstock; surge chamber; semi-buried powerhouse containing a 36,700-horsepower turbine connected to a 26,125-kilowatt generator; a tailrace canal; semiautomatic control equipment; a 69-kv transmission line about two miles long extending to existing facilities of Lewis County PUD No. 1 and a 69 kv transmission line extending about 50 miles to the Silver Creek Substation of the Bonneville Power Administration; access roads; and appurtenant electrical and mechanical facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license or amendment thereof and which are designated and described as follows:

Exhibit L: Sheet 1A (FPC No. 2244–65) Powerhouse Plan and Elevations; Sheet 2B (FPC No. 2244–74) Drop Structure and Intake-General Arrangement; Sheet 3B (FPC No. 2244–75) Intake Area-General Plan, only insofar as it shows Site No. 1; Sheet 4B (FPC No. 2244–76) Drop Structures & Cutoff Details; Sheet 5A (FPC No. 244–69) Pipeline and Penstock, Sections and Details; Sheet 6A (FPC No. 2244–70) Tailrace Canal Structures, Plans and Sections; Sheet 3 (FPC No. 2244–37) Geological Plan and Sections—Intake Area; Sheet 5 (FPC No. 2244–39) Powerhouse Yard and Tailrace, Plans and Sections, only insofar as it shows the tailrace canal sections; and

Exhibit M: General Description and General Specifications of Equipment, filed in the Commission December 22, 1960.

PARAGRAPH II: Article 27 of the license is amended to read as follows:

Article 27. The Licensee shall construct, maintain and operate such protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources, provided that such modifications shall be reasonably consistent with the primary purpose of the project, as may be prescribed hereafter by the Commission upon its own motion or upon recommendation of the Secretary of the Interior or the Washington Departments of Fisheries and Game or the Forest Service, after notice and opportunity for hearing and upon a finding that such modifications are necessary and desirable and consistent with the provisions of the Act: Provided further, That subsequent to approval of the final design drawings prior to commencement of construction no modifications of project structures in the interest of fish and wildlife resources which involve a change in the location, height or main structure of a dam, or the addition of or changes in outlets at or through a dam, or a major change in generating units, or a rearrangement or relocation of a powerhouse, or major changes in a spillway structure shall be required.

PARAGRAPH III. Subparagraph (i) of Article 31 of the license is amended to read as follows:

(i) For the purpose of reimbursing the United States for the costs of administration of the Federal Power Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations. The authorized installed capacity for such purpose is 34,800 horsepower;

PARAGRAPH IV. Article 35 of the license is amended to read as follows:

Article 35. The Licensee shall, within one year following the date of completion of the project, submit for Commission approval Exhibits F and K show-

ing the project area and boundary of the project and Exhibits F and K for the transmission lines, all prepared in accordance with the Commission's rules and regulations.

PARAGRAPH V. The license is amended by adding thereto the following articles:

Article 36. Prior to the start of construction of any phase of the project occupying national forest land between the surge chamber and Packwood Lake, the Licensee shall submit to the authorized representatives of the Commission and the Forest Service construction plans, procedures, and methods pertaining to control against land sliding and prevention of silt and debris deposition in Packwood Lake and Lake Creek as a result of construction, operation, and subsequent maintenance of project facilities. No construction between the surge chamber and Packwood Lake, including pipeline, pipeline access and drop structures and inlet channel, is to start until the construction details have been approved by the authorized representatives.

Article 37. The Licensee shall operate the project so that the maximum operating pool shall be at elevation 2858.5 and the minimum operating pool shall be elevation 2850.5. During the period each year between May 1 and September 15, the Licensee shall maintain the pool level at elevation 2857, except for conditions which may occur which are beyond the control of the Licensee.

Article 38. The Licensee shall, prior to commencing construction of the project access road, submit to and obtain Commission approval of revised Exhibit K maps showing the location of the access road.

Article 39. The Licensee shall participate with the United States Forest Service in a five-year recreation and fishery water flow study to determine the long term minimum flow requirements needed for multiple-use purpose of the National Forest, such study to begin with the completion of construction of the drop structure. The Licensee shall initially maintain a minimum flow of 10 cfs immediately below the drop structure and may adjust the flows between 5 and 15 cfs during the study period as directed by the authorized representative of the Commission upon the advice of the Forest Service: *Provided, however,* That the minimum water flow in Lake Creek below the Primary State Highway No. 5 bridge crossing of Lake Creek shall not be less than 10 cfs. Within six months after completion of the study, the Forest Service may recommend to the Commission minimum flows in Lake Creek immediately below the drop structure for multiple-use purposes of the National Forest. The Licensee shall comply with such reasonable modification of the minimum flow requirements prescribed herein as the Commission may prescribe hereafter upon its own motion or upon recommendation of the Forest Service, after notice and opportunity for hearing.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act and failure to file such an application shall constitute acceptance of this amendment of license. In acknowledgment of the acceptance of this amendment of license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NOS. CP60-84 AND CP62-7

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 1, 1962)

On April 22, 1960, as supplemented on May 20, 1960, Kansas-Nebraska Natural Gas Company, Inc. (Applicant) filed in Docket No. CP60-84 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of transmission facilities extending from Alliance, Nebraska, to the communities of Chadron, Crawford, Gordon, Hay Springs, Hemingford and Rushville, all in Nebraska, and authorizing the sale and delivery of natural gas to Western Gas Fuel Company (Western) for resale and distribution in said communities.

Specifically, Applicant proposes to construct and operate the following facilities: approximately 17 miles of 8-inch pipeline south of Alliance replacing an equal amount of 6-inch pipeline which will be salvaged; about 126 miles of 2- to 6-inch lines from Alliance to the six towns;[1] and approximately 24 miles of 8-inch pipeline extending from an existing 10-inch line in the vicinity of Sidney, Nebraska, to Applicant's existing 11 miles of 10-inch line leased to North Central Gas Company (North Central) south of Northport, Nebraska.

Applicant states that gas is presently brought to the Alliance area from the Sidney area through partially looped lines extending from Sidney to Northport. One of these parallel lines is owned and operated by North Central and the other is the aforementioned 10-inch line owned by Applicant and leased to North Central. North Central presently transports gas for Applicant through this leased line. Originally Applicant sought herein to abandon the transportation agreement and to assume operation of the leased line itself. However, by its amendment to its application in Docket No. CP60-84, filed September 7, 1961, Applicant requests deletion of requested authorization to construct and operate the 24 miles of 8-inch line to have been constructed from the vicinity of Sidney to Applicant's line leased to North Central. The amendment shows that North Central will continue the transportation service for Applicant and that Applicant will install three 125-horsepower compressor units at Northport rather than the originally proposed 24 miles of 8-inch line to have been constructed between Sidney and Northport.

The following are the estimated natural gas requirements of Western for the areas proposed to be served:

	Volumes—Mcf at 14.73 psia		
	1st year	2d year	3d year
ANNUAL			
Total firm requirements	94,700	355,400	533,000
Total interruptible industrial requirements[2]	14,000	38,000	38,000
Total	108,700	393,400	571,000
PEAK DAY			
Total firm requirements	2,200	3,960	4,445

[1] Applicant will also build town border stations for the six communities.

[2] The industrial gas would be used at Nebraska State College for boiler fuel.

On July 14, 1961, as supplemented on August 2, 1961, Applicant filed in Docket No. CP62–7 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to remove three 125-horsepower compressor units from its Holdrege compressor station and to relocate said units at a new station at Northport.

As set forth above, Applicant in Docket No. CP60–84 proposes, among other things, to construct and operate 24 miles of 8-inch pipeline between Sidney and Northport to help serve six new communities north of Alliance. Applicant states that the 1960–1961 peak demand of Alliance and the six new communities was met without the construction of the 8-inch line, and, therefore, Applicant has decided to postpone installation of said line.[2]

Applicant states that it is currently completing contracts for purchase of new gas supplies in Wyoming which will probably require a change in its present operations between Sidney and Northport. Applicant further states that this contemplated change might enable it to provide service to the Alliance-Chadron area more economically than previously contemplated, and, therefore, rather than construct the subject Sidney-Northport 8-inch line, which may not be properly sized to handle the future Wyoming gas, Applicant proposes to relocate the three 125-horsepower units from Holdrege to Northport in order to meet the future increased requirements of the Alliance-Chadron area. The three units have only operated 22 hours in the last 5½ years at Holdrege.

The total estimated cost of constructing the proposed facilities in Docket No. CP60–84 is $1,347,200, which estimate does not include the cost of constructing the postponed 8-inch Sidney-Northport line. The estimated net cost of relocating the facilities in Docket No. CP62–7 is $48,000. Applicant will finance the estimated costs in both dockets from current working capital.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 21, 1962, respecting the matters involved in the issues presented by the applications, as supplemented and amended, herein. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Phillips County, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–259 (3 FPC 966).

(2) The facilities hereinbefore described, as more fully described in the applications, as supplemented and amended, in these proceedings, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction, operation and relocation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

---

[2] Applicant was granted temporary authorization by letter, dated July 8, 1960, to construct and operate facilities and to sell natural gas as proposed in Docket No. CP60–84. Applicant was granted temporary authorization by letter, dated October 6, 1961, in Docket No. CP62–7.

(4) The construction, operation and relocation of the proposed facilities by Applicant are required by the public convenience and necessity and certificates therefor should be issued as herinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicant, Kansas-Nebraska Natural Gas Company, Inc., in Docket No. CP60-84, to construct and operate the proposed facilities and to sell and deliver natural gas to Western Gas Fuel Company for resale, and in Docket No. CP62-7, to relocate facilities, all as hereinbefore described and all as more fully described in the applications, filed in the respective dockets, as supplemented and amended, herein, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

KENTUCKY GAS TRANSMISSION CORPORATION AND THE UNION LIGHT, HEAT AND POWER COMPANY, DOCKET NO. CP61-312

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued March 1, 1962)

On June 7, 1961, as supplemented on September 21, 1961, Kentucky Gas Transmission Corporation (Kentucky Gas), 1700 MacCorkle Avenue, S.E., Charleston, West Virginia, and The Union Light, Heat and Power Company (Union), 7th & Scott Streets, Covington, Kentucky, (sometimes hereinafter referred to jointly as Applicants) filed a joint application pursuant to Section 7 of the Natural Gas Act for: (a) permission and approval for Kentucky Gas to abandon by sale to Union and The Cincinnati Gas & Electric Company (Cincinnati) a segment of Kentucky Gas' 24-inch transmission pipeline AM-7 located in Kentucky and Ohio, including a multiple 20-inch O.D. crossing of the Ohio River; and (b) a certificate of public convenience and necessity authorizing Union to acquire and operate that portion of the subject 24-inch pipeline and subject river crossing located in Kentucky and authorizing Union to transport and deliver for the account of Kentucky Gas, through the facilities to be acquired, volumes of natural gas deliverable to Cincinnati by Kentucky Gas.

The facilities to be sold by Kentucky Gas to Union and Cincinnati are:

	Original cost	Depreciated cost as of Dec. 31, 1960
To Union: 25,349 feet of 24-inch gas pipeline AM-7 including 4,915 feet of 20-inch river crossing and related facilities extending from Erlanger, Ky., to the Kentucky-Ohio State line	$683,169.93	$623,736.77
To Cincinnati: 1,572 feet of 20-inch river crossing and related facilities extending from the Kentucky-Ohio State line to an existing point of connection with Cincinnati near Anderson Ferry, Ohio	93,171.25	84,547.81

Applicants state that the proposed transfer of facilities is designed to eliminate the necessity of constructing duplicate pipeline facilities for the distribution of peak-shaving propane-air gas following the development by Union of propane storage facilities in the Commonwealth of Kentucky.

Union and Cincinnati have agreed to purchase the subject facilities at a price which would be the original cost less accrued depreciation as of the date of closing.

The proposed transportation service by Union is for the purpose of maintaining existing service rendered by Kentucky Gas to Cincinnati through the facilities herein proposed to be acquired. Union will charge Kentucky Gas $97,895 for the transportation and delivery of gas to Cincinnati based on a cost formula including 6¾ percent return and associated income taxes. Kentucky Gas, in turn, will collect the same amount from Cincinnati. Union is presently making other deliveries to Cincinnati for the account of Kentucky Gas wherein a rate of return of 6¼ percent is used in the computation of charges. It appears to the Commission that Union has shown no justification in the subject proceeding for the use of a 6¾ percent rate of return; therefore, the authorization hereinafter granted to Union shall limit the rate of return to 6¼ percent until another rate is permitted by the Commission. Union consented to this condition in its letter filed September 21, 1961.

Union was granted temporary authorization by letter, dated November 29, 1961, to acquire and operate the subject facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 19, 1962, respecting the matters involved in and the issues presented by the joint application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Kentucky Gas Transmission Corporation, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 6, 1958, in Docket No. G–15288 (20 FPC 463).

(2) Applicant, The Union Light, Heat and Power Company, a Kentucky corporation having its principal place of business in Covington, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 14, 1955, in Docket No. G–8610 (14 FPC 1097).

(3) The facilities proposed to be acquired and operated by Union as hereinbefore described and as more fully described in the joint application, as supplemented, in this proceeding, will be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation thereof by Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The transportation of natural gas by Union for the account of Kentucky Gas, as more fully described in the application, as supplemented, in this proceeding, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such transportation is subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The acquisition and operation of the facilities and the transportation of natural gas therefrom as proposed by Union, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) The facilities to be abandoned by sale by Kentucky Gas, as hereinbefore described and as more fully described in the joint application herein are subject to the jurisdiction of the Commission and abandonment of such facilities by Kentucky Gas is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment by Kentucky Gas, as hereinbefore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

(8) Kentucky Gas and Union are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) Public convenience and necessity require that the certificate issued hereinafter to Union and the rights granted thereunder be conditioned upon Union's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (d) and (e) of Section 157.20 of such Regulations.

(10) The certificate hereinafter issued to Union should be conditioned to revise Union's transportation charges proposed in the subject application to include a 6¼ percent rate of return and associated income taxes, in lieu of the proposed 6¾ percent rate of return and associated income taxes, until another rate of return is permitted by the Commission.

(11) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing The Union Light, Heat and Power Company to acquire and operate the facilities and to transport natural gas for the account of Kentucky Gas as hereinbefore described, all as more fully described in the joint application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Union's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (d) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued to Union in paragraph (A) above is hereby conditioned to revise Union's transportation charges proposed in the subject application to include a 6¼ percent rate of return and associated income taxes, in lieu of the proposed 6¾ percent rate of return and associated income taxes, until another rate of return is permitted by the Commission.

(D) The acquisition hereinabove authorized shall be consummated and operation begun by Union within 6 months of the date hereof.

(E) Permission for and approval of the abandonment by sale by Kentucky Gas Transmission Corporation of the facilities hereinbefore described, all as more fully described in the joint application in this proceeding, be and the same is hereby granted.

(F) Kentucky Gas shall advise the Commission of the date of the abandonment by sale of the facilities within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. G–16841, RP61–19 AND CP61–38

ORDER AMENDING ORDER ISSUED JANUARY 23, 1962

(Issued March 1, 1962)

It appears that the order of the Commission issued on January 23, 1962, 27 FPC 171, amending certain orders in the above-entitled dockets contained an inadvertent inaccuracy which should be corrected as hereinafter ordered.

The Commission finds:

Ordering paragraph (C) of the Commission's order issued on January 23, 1962, in Docket Nos. G–16841, RP61–19 and CP61–38 should be amended as hereinafter ordered.

The Commission orders:

(A) Ordering paragraph (C) of the Commission's order issued on January 23, 1962, in Docket Nos. G–16841, RP61–19 and CP61–38 is hereby amended to read as follows:

(C) The order of the Commission issued July 27, 1961, in Docket No. CP61–38 be and the same is hereby amended by deleting therefrom the fourth paragraph of the preliminary statement, and by adding a new ordering paragraph (G) to read as follows:

(G) The deliveries of natural gas for the testing and development of storage and for service to the aforesaid communities are to be made from Northern Illinois' existing authorized contract quantity from Midwestern. These deliveries are to be made pursuant to Midwestern's FPC Gas Rate Schedule CD–1 and the related gas service agreement between Midwestern and Northern Illinois dated July 20, 1961.

(B) In all other respects, said order issued on January 23, 1962, in Docket Nos. G–16841, RP61–19 and CP61–38 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

MURPHY CORPORATION, ET AL., DOCKET NO. RI61-145; MURPHY CORPORATION, DOCKET NO. RI61-146

ORDER DENYING MOTION TO TERMINATE PROCEEDINGS

(Issued March 1, 1962)

On August 28, 1961, Murphy Corporation, *et al.*, and Murphy Corporation (Murphy), filed a motion to terminate the above-designated proceedings, involving proposed increased rates which have been suspended.

In support of its motion, Murphy cites the Commission order of February 27, 1961, in Murphy Corporation, *et al.*, Dockets Nos. G-9548, *et al.*, 25 FPC 334, terminating proceedings under Sections 4(e) and 5(a) of the Natural Gas Act. Murphy contends that the costs which it presented in the terminated proceedings justify the granting of the motion now under consideration.

In the aforementioned order terminating the proceedings in Docket Nos. G-9548, *et al.*, we stated that in a case such as that then before us, in which the increased rate was filed, the hearing held, and the examiner's decision issued prior to the release of the Statement of General Policy No. 61-1, on September 28, 1960, 24 FPC 818, the purposes of the Natural Gas Act would best be served by the expeditious disposition of the proceedings on the existing record, to the extent that the record affords a reasonable basis for a determination of the lawfulness of the proposed rates.

The proceedings in Docket Nos. G-9548, *et al.*, related to the Section 4(e) proceedings consolidated therewith, and to Murphy's rates as of the time of the order. The findings in that order in no manner passed upon the justness and reasonableness of any suspended rates not consolidated therewith. In the instant proceedings, not consolidated with those in Docket Nos. G-9548, *et al.*, the proposed increased rates exceed the applicable area price ceiling established by the Statement of General Policy No. 61-1. In the above-cited order of February 27, 1961, we stated that it was our intention to consider such proposed increases over the indicated rate level in general area-wide hearings, to determine just and reasonable rates on an area basis.

The Commission finds:

For the reasons hereinabove stated, Murphy's motion to terminate the proceedings in Docket Nos. RI61-145 and RI61-146 should be denied.

The Commission orders:

Murphy's motion to terminate the proceedings in Docket Nos. RI61-145 and RI61-146 is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NATURAL GAS STORAGE COMPANY OF ILLINOIS, DOCKET NO. CP62-136

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF SERVICE

(Issued March 1, 1962)

On November 30, 1961, Natural Gas Storage Company of Illinois (Applicant) filed in Docket No. CP62-136 an application for permission and approval to

abandon natural gas storage service for three of its existing customers, all as more fully set forth in the application.

The authorized maximum daily storage-withdrawal service for said customers is as follows:

Customers:	Mcf
Citizens Gas Company	473
City of Nashville, Illinois	656
United Cities Gas Company	778
Total	1,907

The three customers are also customers of Natural Gas Pipeline Company of America (Natural) which sells gas to them for resale. Under the storage arrangement, the customers would advise Natural to deliver during the off-peak periods portions of their contract demand gas to Applicant for injection into storage. During winter periods the customers would request Applicant to withdraw their gas for return to them in volumes up to the maximum daily quantities authorized.

In recent expansion applications (Docket Nos. CP61–30 and CP61–185), Natural was authorized to sell additional contract demand gas to the three customers involved herein. As indicated in the CP61–30 proceedings, the customers have determined that, with the increased contract demands from Natural, they no longer need the storage service rendered for them by Applicant. Accordingly, Applicant proposes to abandon such storage service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 21, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Storage Company of Illinois, an Illinois corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued September 11, 1952, in Docket No. G–1757 (11 FPC 366).

(2) The service to be abandoned, as hereinbefore described, and as more fully described in the application in this proceeding, is subject to the jurisdiction of the Commission, and abandonment of such service is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity, and an order approving same should be issued as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

Permission for and approval of the abandonment by Natural Gas Storage Company of Illinois of the service hereinbefore described, all as more fully described in the application in this proceeding, be and the same is hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP62-138

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 1, 1962)

On December 1, 1961, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP62-138 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of miscellaneous pipeline replacement and loop facilities during the calendar year 1962 at a total cost not to exceed $2,000,000, with no single project to exceed cost of $500,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to allow Applicant to act with reasonable dispatch in scheduling and undertaking construction of minor facilities at various locations on its transmission system. The subject application is not for authorization for any individual facility for the specific purpose of extending service to a new market areas, communities, mail-line industrial customers, or for underground storage.

The proposed facilities will be financed by the Columbia Gas System, Inc., Applicant's parent.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 21, 1962, respecting the matters involved in and the issues presented by the application in this proceeding. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued August 21, 1945, in Docket No. G-871 (4 FPC 1033).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to transport and sell natural gas during the calendar year 1962 as proposed by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

736-330—64——30

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, on or before March 1, 1963, a statement under oath showing by projects: (a) the location of said project or projects, (b) a description of said project or projects, (c) facilities replaced, if any, (d) abandonment of service, if any, (e) market areas involved, (f) capacity increase, if any, and (g) the actual cost of the facilities constructed under the authorization hereinafter granted.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1962, and the total expenditures for facilities to be constructed thereunder should be limited to $2,000,000, with no single project to exceed a cost of $500,000.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(8) The certificate issued hereinafter should be conditioned upon the Applicant's obtaining permission and approval, as required, from the Federal Power Commission or the Ohio Public Utilities Commission for any abandonment of service which may result from the replacement of facilities authorized by said certificate.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing The Ohio Fuel Gas Company to construct and operate during the calendar year 1962 the facilities hereinbefore described, as more fully described in the application in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder is further conditioned upon Applicant's obtaining permission and approval, as required, from the Federal Power Commission or the Ohio Public Utilities Commission for any abandonment of service which may result from the replacement of facilities authorized by said certificate.

(D) Applicant shall submit, on or before March 1, 1963, a statement under oath showing by projects: (a) the location of said project or projects, (b) a description of said project or projects, (c) facilities replaced, if any, (d) abandonment of service, if any, (e) market areas involved, (f) capacity increase, if any, and (g) the actual final cost of the facilities constructed under the authorization hereinbefore granted.

(E) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1962, and the total expenditures for

facilities to be constructed thereunder are hereby limited to $2,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TEXAS EASTERN PENN JERSEY TRANSMISSION CORPORATION, DOCKET NO. G–2341; WILCOX TREND GATHERING SYSTEM, INC., DOCKET NO. G–13007

ORDER TERMINATING PROCEEDINGS

(Issued March 2, 1962)

On May 10, 1957, Texas Eastern Penn Jersey Transmission Corporation (Penn Jersey) and Wilcox Trend Gathering System, Inc. (Wilcox Trend) tendered for filing proposed changes in rate for sales of natural gas to Texas Eastern Transmission Corporation (Texas Eastern). The filings of both Penn Jersey and Wilcox Trend were premised on Texas Eastern's tender of an increase in rate, which reflected, *inter alia*, a 6¾% rate of return, and was suspended by order of the Commission issued June 7, 1957, in Docket No. G–12706. The filings of Penn Jersey and Wilcox Trend, which similarly proposed to reflect a 6¾% rate of return, were suspended in Docket Nos. G–2341 and G–13007, respectively, until November 10, 1957, to coincide with the suspension period ordered with respect to Texas Eastern's proposed rate increase in Docket No. G–12706. No hearings have been held in Docket Nos. G–2341 or G–13007.

At the time of their filings, both Wilcox Trend and Penn Jersey were subsidiaries of Texas Eastern; however, on January 1, 1959, Texas Eastern acquired the facilities of these two subsidiaries by merger.[1] Thereafter, Texas Eastern filed an additional increase, which was suspended in Docket No. G–18841 and subsequently allowed to become effective December 1, 1959. On January 25, 1961, in Docket Nos. G–12706 and G–18841, 25FPC 172, the Commission approved an offer of settlement with the rates of return for both proceedings computed as if Texas Eastern, Penn Jersey and Wilcox Trend constituted a single company for the period of the test year involved. Inasmuch as the refunds ordered in Docket Nos. G–12706 and G–18841 are based upon the rates of the merged companies as a single corporate entity, the refund obligations in Docket Nos. G–2341 and G–13007 on a separate basis are no longer applicable.

The Commission finds:

In view of the merger of the respondents in the above-designated proceedings with Texas Eastern, and the determination of Texas Eastern's rates by a settlement dispositive of the issues involved therein, good cause exists for allowing the termination as moot of the proceedings in Docket Nos. G–2341 and G–13007.

The Commission orders:

The proceedings in Docket Nos. G–2341 and G–13007 are hereby terminated.

---

[1] The merger of Penn Jersey and Texas Eastern Transmission Corporation was approved by order of the Commission issued July 9, 1958, and by order issued on the same date in Docket No. G–14870, Wilcox Trend was permitted to abandon its facilities and Texas Eastern was authorized to acquire and operate such facilities. [20 FPC 21.]

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

IDAHO POWER COMPANY, PROJECT NO. 2055

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST; NET CHANGE THEREIN; AND PRESCRIBING ACCOUNTING THEREFOR

(Issued March 2, 1962)

Idaho Power Company, Licensee for Project No. 2055,[1] on November 9, 1954, filed its initial statement, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for Project No. 2055, as of October 31, 1954, an actual legitimate original cost of $19,757,269.72.[2] In addition, Licensee's books and records show for the period November 1, 1954, through December 31, 1958, a net increase in project cost of $90,593.38, resulting in a total claimed or recorded actual legitimate original cost of the project as of December 31, 1958, of $19,847,863.10. The recorded net increase of $90,593.38 in the cost of the project for the period November 1, 1954, through December 31, 1958, results from recorded project gross additions of $95,863.23, project gross retirements of $382.50, and credit adjustments of $4,887.35, all as more specifically shown in the attached Schedule II.

The Commission's staff made a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the claimed project cost as of October 31, 1954, and the correctness of recorded project cost changes and resulting project cost as of December 31, 1958.

Following that examination, an agreement, subject to Commission approval was reached between the staff and Licensee's representatives with respect to certain proposed adjustments involving (1) the reclassification and transfer of certain items among the project plant accounts and the elimination of $54,760.52 from the claimed and recorded project cost as of October 31, 1954; (2) a debit adjustment of $11.19, representing the difference between project cost as recorded on Licensee's books of account as of October 31, 1954, and Licensee's claimed project cost as shown in FPC Form No. 6 as of that date; and (3) the accounting dispositions of the foregoing amounts.

Based upon the proposed adjustments, the resulting revised actual legitimate original cost of Project No. 2055 as of October 31, 1954 is $19,702,509.20; the resulting revised net increase or change in the project cost is $90,593.38, consisting of gross additions of $95,863.23, gross retirements of $382.50, and credit adjustments of $4,887.35; and the resulting revised actual legitimate original cost of the project as of December 31, 1958, is $19,793,102.58.

---

[1] The project is located on the Snake River in Elmore, Owyhee, Ada, and Canyon Counties, Idaho, and may be described as the C. J. Strike hydroelectric development. The license, issued pursuant to Section 4(e) of the Federal Power Act, authorizing the construction, operation and maintenance of the project, is by its terms effective for a period of 50 years, commencing December 1, 1950.

[2] Article 23 of the license provides for Commission determination of the actual legitimate original cost of the project and of any additions thereto or betterments thereof.

The proposed eliminations relative to project costs in the total amount of $54,760.52 as of October 31, 1954, are composed of the following items:

Nonproject preliminary investigation costs	($31,644.81)
FPC annual charges applicable to operations	(163.20)
Interest accrued after commercial operations	(19,848.74)
Delayed credits applicable to construction recorded after October 31, 1954	(2,225.39)
Taxes applicable to period after date of commercial operations	(878.38)
Total	(54,760.52)

The proposed accounting disposition of the amounts involved in the adjustments proposed above to bring Licensee's claimed and recorded project cost as of October 31, 1954, into agreement with the recommended project cost tentatively agreed to between Licensee and the staff are shown by the following composite journal entry:

Account No.[1]		Debit	Credit
107	Construction work in progress	$2,225.39	
183	Preliminary survey and investigation charges	31,644.81	
216	Unappropriated earned surplus	20,890.32	
101	Electric plant in service—Project No. 2055		$54,760.52

[1] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees, effective Jan. 1, 1961.

In its examination of Licensee's books of account for the period November 1, 1954, through December 31, 1958, the Commission's staff found that the total project cost as recorded on Licensee's books of account as of December 31, 1958, was $19,793,091.39, or $11.19 less than the total project cost as of that date as recommended by the staff. The amount of $11.19 represents the difference between the total project cost as of October 31, 1954, as recorded upon Licensee's books of account, and the total claimed project cost shown in FPC Form No. 6 as of that date, which difference was still found to exist on Licensee's books of account as of December 31, 1958.

The proposed accounting disposition of the amount involved in the proposed adjustment to bring Licensee's recorded project cost and changes into agreement with the recommended project cost and changes as of December 31, 1958, tentatively agreed to between Licensee and the staff is shown by the following journal entry:

Account No.		Debit	Credit
101	Electric plant in service—Project No. 2055	$11.19	
401	Operation expense		$11.19

After giving effect to the above proposed adjustments, the Commission's staff recommends and Licensee, by its revised statement of project original cost filed on September 17, 1956, confirming its agreement to the proposed adjust-

ments, accounting disposition and resulting project costs for Project No. 2055 (C. J. Strike), concurs that the Commission determine (1) the actual legitimate original cost of the C. J. Strike project as of October 31, 1954, to be $19,702,509.20; (2) the net increase or change in the actual legitimate original cost of the C. J. Strike project during the period from November 1, 1954, through December 31, 1958, to be $90,593.38, consisting of project gross additions of $95,863.23, project gross retirements of $382.50, and credit adjustments of $4,887.35; and (3) the actual legitimate original cost of the C. J. Strike project at December 31, 1958, to be $19,793,102.58, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees as shown in the attached Schedules I and II.

The Idaho Public Utilities Commission was advised by letter of this Commission of the proposed adjustments, including the accounting disposition and resulting project costs and changes therein, all as recommended by the Commission's staff and agreed to by the Licensee as set forth above. By its letters dated September 14, 1956, and August 22, 1961, that Commission indicated that it had no objection to the foregoing.

The Commission finds:

(1) Licensee, by its tentative agreement and its revised statement of project claimed cost filed on September 17, 1956 showing the proposed adjustments and accounting disposition thereof and the resulting project costs, and the Idaho Public Utilities Commission, by its letters dated September 14, 1956 and August 22, 1961, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) It is necessary and appropriate for the purposes of the Federal Power Act that the charges of Ebasco Services Incorporated includable as a part of the actual legitimate original cost of Project No. 2055 as of December 31, 1958, be tentatively approved by the Commission, subject to future revision so as to reflect any portion thereof that may be determined later to represent non-allowable intercompany profits.

(3) The foregoing adjustments, including the accounting dispositions, are reasonable and appropriate for the purposes of the Federal Power Act, and therefore, should be approved and directed as hereinafter provided.

(4) The actual legitimate original cost of Project No. 2055 as of October 31, 1954, is $19,702,509.20; the net increase of change in the actual legitimate original cost of Project No. 2055 from November 1, 1954, through December 31, 1958, is $90,593.38, comprised of gross additions of $95,863.23, gross retirements of $382.50, and credit adjustments of $4,887.35; and the resulting actual legitimate original cost of the project as of December 31, 1958, is $19,793,102.58, all classified by primary plant accounts as shown by the attached Schedules I and II.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments and accounting dispositions, as proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for Project No. 2055, showing the debit balance of $19,702,590.20 as of October 31, 1954; the debit amount of $90,593.38 as the net increase or change in the project cost for the period November 1, 1954, through December 31, 1958; and the total debit balance of $19,793,102.58, as the actual legitimate original cost of the project as of December, 31, 1958, all as more specifically shown in the attached Schedules I and II classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(D) Licensee shall within 90 days from the issuance of this order file with the Commission FPC Form No. 7 and three certified copies of its adjusting journal entries showing compliance with this order.

Project No. 2055—Idaho
(C.J. Strike)

Schedule No. I

Actual legitimate original cost as of Oct. 31, 1954

ARKANSAS LOUISIANA GAS COMPANY, ET AL., DOCKET NO. G–16125, ET AL.*

ORDER REQUIRING REFUNDS IN CERTAIN PROCEEDINGS AND TERMINATING ALL PROCEEDINGS

(Issued March 5, 1962)

Respondents in the above-entitled proceedings have heretofore filed proposed increased rates solely reflecting reimbursement for the additional gas gathering tax of one cent per Mcf imposed upon said respondents, effective August 1, 1958, by the State of Louisiana pursuant to Section 678 of Title 47 of the Louisiana Revised Statutes.[1] Respondents' proposed rates were suspended for one day and thereafter permitted to go into effect subject to refund of the increase in the event the tax was subsequently invalidated. On November 17, 1958, the Louisiana legislature suspended the operation of the gathering tax, effective December 1, 1958, and early in 1960 the Louisiana Supreme Court held the tax unconstitutional. *Bel Oil Corp. et al.* v. *Rufus W. Fontenot, Collector*, 238 La. 1002, 117 S. 2d 571; *Southern Natural Gas Co.* v. *Robert Q. Roland, Collector of Revenue*, 240 La. 471, 123 S. 2d 891.

On February 13, 1961, the Commission, without prior notice and without hearing, issued an order requiring respondents in all of the above proceedings to refund to their respective purchasers the amounts collected subject to refund under the Commission's original suspension orders. A timely application for rehearing of the February 13 order was filed by Arkansas Louisiana Gas Company, in Docket No. G–16125, and by order issued April 13, 1961, such application was granted by the Commission.

By order issued June 6, 1961, again without notice to potentially interested parties, and again without hearing, the Commission modified its February 13 order to provide in effect that rate refunds would be required of respondents only to the extent that respondents were able to obtain corresponding tax refunds from the State of Louisiana.

On July 5, 1961, Texas Gas Transmission Corporation (Texas Gas) and on July 6, 1961, the Memphis Light, Gas, and Water Division (Memphis) filed petitions seeking leave to intervene in Olin Gas Transmission Corporation (Olin), Docket No. G–15695, and concurrently therewith both companies tendered applications for rehearing of the said June 6, 1961, order, insofar as that order was applicable to said Docket No. G–15695.[2]

By order issued August 30, 1961, the Commission reopened all of the above-entitled proceedings and permitted Texas Gas and Memphis to intervene in Docket No. G–15695. The order also authorized all parties to file statements of position with respect to the controverted issues.

On November 15, 1961, the Commission issued and caused to be published in

---

*As noted in Appendix A hereof under columns entitled "Docket Nos." and "Respondents".

[1] Act No. 8, approved June 16, 1958, 47 La. Rev. Stat. 1950, § 678. The additional tax imposed by Section 678 was intended as a temporary supplement to the existing gathering tax of one cent per Mcf, imposed under 47 La. Rev. Stat. 1950, § 671, which had been in effect since June 22, 1954.

[2] Texas Gas is a direct purchaser from Olin and a direct supplier of Memphis.

the Federal Register a notice fixing December 8, 1961, as the deadline for filing petitions to intervene in these proceedings. As a result, a petition to intervene in certain proceedings was filed on December 5, 1961, by Southern Natural Gas Company (Southern).

For reasons fully elaborated in our order issued today terminating the proceedings in Texaco Inc., *et al.*, Docket Nos. G–15546, *et al.*, which involved identical legal issues in connection with the Louisiana gathering tax, we are convinced that Texas Gas and Memphis took appropriate steps to preserve their standing in Docket No. G–15695, that the Commission was not justified in reopening any of the other dockets involved herein, and that the petition for intervention filed by Southern Natural Gas Company on December 5th was untimely. Accordingly, we shall vacate the August 30 order insofar as it reopened proceedings other than Docket No. G–15695, and shall reject as untimely Southern's petition for intervention. In taking this action, however, we do not intend, and should not be construed, to foreclose any party from seeking whatever relief, if any, may be appropriate under state law. Cf. *Pan American Petroleum Corp.* v. *Superior Court*, 366 U.S. 656 (1961).

In the aforesaid order issued today by which we dispose of the proceedings in Docket Nos. G–15546, *et al.*, we presented in considerable detail the grounds for our conclusion that respondents who declined to pay the Louisiana gathering tax under protest, and who thereby failed to qualify for tax refund from the State of Louisiana, should not for that reason be exempt from the duty to refund tax reimbursement amounts to their customers. On the grounds therein stated, we shall require Olin to refund the amounts collected, subject to refund, in Docket No. G–15695 under Rate Schedule P–2, the only schedule which is applicable to Texas Gas.

The Commission finds:

(1) Good cause has been shown for vacating the August 30, 1961, order insofar as it reopened the proceedings in Appendix A, other than the proceeding in Docket No. G–15695.

(2) The petition to intervene filed on December 5, 1961, by Southern should be rejected as untimely.

(3) It is in the public interest and necessity in the effective administration of the Natural Gas Act that the increased rates reflected in 2nd Revised Sheet No. 7 to FPC Gas Tariff, Original Vol. No. 1 (Rate Schedule P–2), involved in Docket No. G–15695, be disallowed, and refunds be made to Texas Gas.

The Commission orders:

(A) The increased rates identified in Finding (3), involved in Docket No. G–15695, are disallowed, and Olin shall refund to Texas Gas the amounts collected under the agreements and undertakings filed by Olin in compliance with the Commission's suspension orders herein, together with a proportionate part of any interest received from the State of Louisiana.

(B) Within 90 days from the date of issuance of this order, Olin shall, if it has not already done so, report to the Commission, in writing and under oath, the details of its calculations resulting in the refunds to be made pursuant to paragraph A hereof, together with copies of releases from Texas Gas with respect to such refund.

(C) The August 30, 1961, order is hereby vacated insofar as it reopened the proceedings in Appendix A hereto, other than the proceeding in Docket No. G–15695.

(D) The petition to intervene filed on December 5, 1961, by Southern is hereby rejected as untimely.

(E) The proceedings listed in Appendix A hereto are hereby terminated.

CENTRAL NATURAL GAS COMPANY, DOCKET NO. CP62–71

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 5, 1962)

On September 20, 1961, as supplemented on December 8, 1961, Central Natural Gas Company (Applicant) filed in Docket No. CP62–71 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Northern Natural Gas Company (Northern) to establish physical connection of its facilities with those which Applicant proposes to construct and operate, and to sell and deliver to Applicant natural gas for resale and distribution in the Villages of Afton, Lakeland, Lakeland Shores, Lake St. Croix Beach and St. Mary's Point, in Washington County, Minnesota, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct regulator stations at Afton, Lakeland and Lake St. Croix Beach, and distribution systems in all five of the communities named above, which communities have granted franchises for the proposed service. The estimated total investment in the subject facilities at the end of the third year of operation is $99,940, which Applicant proposes to finance through a temporary bank loan and the subsequent issue of bonds and preferred stock.

The estimated natural gas requirements of the communities involved herein are:

	1st year	2d year	3d year
Annual (Mcf)	34,200	43,720	51,600
Peak day (Mcf)	288	382	460

Northern Natural Gas Company filed its answer to the subject application on October 23, 1961, stating that it does not oppose said application and is willing to render service for the five proposed communities. Applicant has shown that no increase in its authorized contract demand from Northern will be required inasmuch as its existing manufactured gas peak shaving equipment at Hastings, Minnesota, is capable of increased output sufficient to assure Applicant's meeting its customer requirements, including those of the third year for the five towns under the instant application, within its presently authorized contract demand.

Northern's meter station which will be used for the service hereinafter authorized was constructed under its budget-type authorization granted in Docket No. CP61–34 for service to existing markets.

There is no question as to gas supply.

Due notice of the filing of the subject application and opportunity for hearing thereon has been given by publication in the Federal Register on January 25, 1962 (27 FR 758). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) Applicant, Central Natural Gas Company, a Delaware corporation having its principal place of business in Vermillion, South Dakota, is duly authorized to sell and distribute natural gas in the State of Minnesota.

(3) It is necessary and desirable in the public interest to direct Northern to establish physical connection of its transmission system with the facilities which Applicant proposes to construct and operate and to sell and deliver, within Central Natural's authorized contract demand, natural gas for resale in Washington County, Minnesota, as hereinbefore described and as more fully described in the application, as supplemented in this proceeding.

(4) The requirement that Northern serve Applicant, as proposed herein, will not place an undue burden upon Northern nor impair its ability to render adequate service to its existing customers.

(5) The directive hereinafter issued should be conditioned upon Applicant's commencing taking of natural gas thereunder within one year from the date of issuance of this order.

The Commission orders:

(A) Northern Natural Gas Company be and it is hereby directed to establish physical connection of its transmission system with the facilities which Central Natural Gas Company proposes to construct and operate, and to sell and deliver, as part of Central Natural Gas Company's authorized contract demand, volumes

of natural gas, under Northern's appropriate gas rate schedules on file with the Commission, for resale in Washington County, Minnesota, as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding, providing Central Natural Gas Company commences the purchase of such natural gas within one year from the date of issuance of this order.

(B) Northern shall report to the Commission in writing and under oath the date of commencement of service to Applicant hereunder within ten days of the commencement thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TEXACO INC., ET AL.*, DOCKET NO. G–15546, ET AL.*

ORDER REQUIRING REFUNDS IN CERTAIN PROCEEDINGS AND TERMINATING ALL PROCEEDINGS [1]

(Issued March 5, 1962)**

Respondents in the above-entitled proceedings have heretofore filed proposed increased rates solely reflecting reimbursement for the additional gas gathering tax of one cent per Mcf imposed upon said respondents, effective August 1, 1958 by the State of Louisiana pursuant to Section 678 of Title 47 of the Louisiana Revised Statutes.[2] Respondents' proposed rates were suspended for one day and thereafter permitted to go into effect subject to refund of the increase in the event the tax was subsequently invalidated. On November 17, 1958, the Louisiana legislature suspended the operation of the gathering tax, effective December 1, 1958, and early in 1960 the Louisiana Supreme Court held the tax unconstitutional. *Bel Oil Corp. et al.* v. *Rufus W. Fontenot, Collector*, 238 La. 1002, 117 S. 2d 571; *Southern Natural Gas Co.* v. *Robert Q. Roland, Collector of Revenue*, 240 La. 471, 123 S. 2d 891.

On February 21, 1961, the Commission, without prior notice and without hearing, issued an order requiring respondents in all of the above proceedings to refund to their purchasers the amounts collected subject to refund under the Commission's original suspension orders. Timely applications for rehearing of the February 21 order were filed by respondents in the proceedings listed in Appendix B hereto,*** and by order of April 14, 1961 such applications were granted by the Commission.

By order issued May 29, 1961, again without notice to potentially interested parties and again without hearing, the Commission modified its February 21 order to provide in effect that rate refunds would be required of respondents only to the extent that respondents were able to obtain corresponding tax refunds from the State of Louisiana. The order also denied petitions to intervene

---

*As noted in Appendix A hereof under columns entitled "Docket Nos." and "Respondents." [Appendix A omitted in printing.]

**Rehearing denied by orders issued April 13 and 26, 1962, 27 FPC 688 and 847. Orders issued June 1, 1962 and July 2, 1962, granting stay pending judicial review, 27 FPC 1106, and 28 FPC 8, respectively. See order on remand, 31 FPC 438. [See Pan American Petroleum Corp. v. F.P.C., 322 F. 2d 999 and Tennessee Gas Transmission Co. v. F.P.C., 322 F. 2d 1006 (CADC–1963).]

***Omitted in printing.

[1] This order does not provide for consolidation of the proceedings involved herein, nor should it be so construed.

[2] Act No. 8, approved June 16, 1958, 47 La. Rev. Stat. 1950, § 678. The additional tax imposed by Section 678 was intended as a temporary supplement to the existing gathering tax of one cent per Mcf, imposed under 47 La. Rev. Stat. 1950, § 671, which had been in effect since June 22, 1954.

which had been filed in March and April by Transcontinental Gas Pipe Line Corporation (Transco), Southern Natural Gas Company (Southern), and a group of four eastern distributing companies (Distributors).[3] As a corollary to this action, the Commission rejected a joint and several application for rehearing of the February 21 order tendered by the Distributors along with their petitions for intervention.

On June 28, 1961, Transco and United Fuel Gas Company (United Fuel), which had been admitted as an intervenor in some of the proceedings, filed applications for rehearing of the May 29 order in the dockets listed in Appendices C and D hereto,* respectively. The Commission took no action on the Transco and United Fuel applications within thirty days of their filing, and therefore such applications must be "deemed to have been denied." Transco, on July 28, 1961 and August 9, 1961, filed petitions for review of the May 29 order in the Court of Appeals for the District of Columbia Circuit (CADC Nos. 16510, 16538); United Fuel filed no petition for review.

On June 27, 1961, the Memphis Light, Gas and Water Division (Memphis), and on June 28, 1961, Texas Gas Transmission Corp. (Texas Gas), filed petitions seeking leave to intervene in the proceedings listed in Appendix E hereto, and concurrently therewith both companies tendered applications for rehearing of the said May 29, 1961 order.[4]

By order issued August 30, 1961, the Commission reopened all of the above-entitled proceedings and permitted the Distributors, Transco, Southern, Memphis, Texas Gas, and United Fuel to intervene in the proceedings designated in their respective petitions for intervention and for rehearing. The order also authorized respondents and intervenors to file statements of position with respect to the controverted issues.

By order issued October 31, 1961, the Commission denied motions by certain respondents for rehearing of the August 30, 1961, order, explaining that its decision to reopen all of the instant proceedings had been prompted by concern as to whether potentially interested parties had been given adequate notice of the Commission's earlier actions. To remedy any prior lack of notice, the Commission on November 6, 1961, issued and caused to be published in the Federal Register a notice fixing November 30, 1961, as the deadline for filing petitions to intervene in these proceedings. As a result, petitions to intervene in certain proceedings were tendered for filing within the prescribed deadline by Texas Eastern Transmission Corporation (Texas Eastern), Tennessee Gas Transmission Company (Tennessee), Southern, and United Fuel.[5]

Petitions for review of the order of August 30, 1961, have been filed by a number of respondents in the Court of Appeals for the Fifth Circuit and the Court of Appeals for the District of Columbia Circuit.[6]

---

*Omitted in printing.

[3] Long Island Lighting Company, Public Service Electric and Gas Company, Philadelphia Electric Company, and The United Gas Improvement Company.

[4] Memphis sought intervention in proceedings which involve rates for gas purchased by Texas Gas, its direct supplier. Texas Gas sought intervention in proceedings which involve rates for gas purchased by it.

[5] The thirty-four dockets in which Southern petitioned to intervene on November 20, 1961, did not include any of the proceedings in which it had earlier sought intervention and been permitted to intervene by the order of August 30, 1961. United Fuel's petition of November 8, 1961, sought intervention in docket numbers G-13972, G-16042, and G-16070, in which it had earlier inadvertently omitted to intervene.

[6] Fifth Circuit Case Nos. 19403 (F. A. Callery, Inc.), 19395 (Hunt Oil Company et al.), 19399 (Sun Oil Company), 19401 (Placid Oil Company, J. R. Goff, Trustee); D. C. Circuit Case Nos. 16787 (Pan American Petroleum Corporation), 16794 (Sun Oil Company).

In their various statements of position, motions for reconsideration, and petitions for review, respondents have urged that the order of August 30, 1961, be vacated as to their respective proceedings, on the ground that the February 21, 1961 order, May 29, 1961, order, or both, are final orders and as such may not be reconsidered. They contend, among other things, that if an aggrieved party neglects to apply for rehearing and petition for court review of a Commission order in the manner prescribed by Section 19 of the Natural Gas Act (hereinafter called "the Act"), then the order becomes irrevocable as to all parties, including the Commission.

It is evident from the foregoing chronology that Transco, United Fuel, Memphis, and Texas Gas took appropriate steps to preserve their standing in these proceedings and are not dependent upon any *sua sponte* action of the Commission in order to qualify for a rehearing of the May 29 order. Transco filed a timely application for rehearing of the May 29 order denying its earlier petition for intervention, and when the Commission failed to act on such application within thirty days, filed a timely petition for review. Since the record in our proceedings has not yet been filed in the Court of Appeals, we still retain jurisdiction under Section 19(a) of the Act to affirm, modify, or set aside our May 29 order.

United Fuel, already admitted as an intervenor, likewise filed a timely application for rehearing of the May 29 order, and its subsequent omission to seek court review did not affect its standing before the Commission. It is true that by virtue of our failure to act upon United Fuel's application within thirty days, such application must, under Section 1.34(c) of the Commission's Rules of Practice and Procedure, be "deemed to have been denied." That section, however, the sole purpose of which was to establish a definite commencement date for the running of the sixty day period within which to petition for judicial review under Section 19(a) of the Act,[1] was not intended and cannot be construed to disable the Commission from granting an application for rehearing later than the thirtieth day after its filing. In any event, the order of August 30, reopening all proceedings, was issued prior to the expiration of the sixty day period for filing a petition for review. Section 19(a) of the Act provides that "until the record in a proceeding shall have been filed in a court of appeals * * * the Commission may at any time * * * modify or set aside, in whole or in part, any filing or order made or issued by it under the provisions of this Act." If the Commission retains jurisdiction to modify a prior order, and perhaps render litigation unnecessary, even after a petition for review of that order has been filed, then by reasonable inference it must also have such jurisdiction, absent a petition for review, during the period in which such petition would be timely and no reliance could legitimately be placed on the finality of the prior order.

Memphis and Texas Gas filed petitions to intervene and tendered applications for rehearing less than thirty days after the May 29 order, and by such action preserved their standing. Respondents argue that such petitions were untimely because filed after the issuance of final orders terminating the proceedings.

[1] Section 19(a) of the Act provides that an application for rehearing which is unacted upon for thirty days "*may* be deemed to have been denied." (Emphasis added). In *Texas-Ohio Gas Co.* v. *Federal Power Comm.*, 207 F. 2d 615 (D.C. Cir. 1953), it was held that because of the indefiniteness of the statutory language, the sixty day limitations period for filing petitions for review would not commence to run absent a general rule of the Commission that thirty-day inaction "*shall*" be deemed denial. Shortly thereafter, the Commission adopted Section 1.34(c) in order to avoid a repetition of the result in the *Texas-Ohio* case.

This contention, however, overlooks the fact that prior to May 29, 1961, Memphis and Texas Gas had not been aggrieved, nor their right to a refund placed in doubt, by any order of the Commission, and that the Commission had neither held hearings, invited statements of position, nor fixed a time for intervention. Under these circumstances, it was not untimely for Memphis and Texas Gas to seek intervention subsequent to the May 29, 1961, order as a means of submitting timely applications for rehearing thereof.

With respect to all other proceedings, the action taken by the Commission in its August 30, 1961, order was *sua sponte* and, as explained in our October 31, 1961, order, was prompted by concern as to whether potentially interested parties had been given adequate notice and opportunity to be heard prior to May 29, 1961. Careful restudy of the intricate history of these proceedings has satisfied us that lack of formal notice prior to the May 29 order did not irreparably prejudice any party now before the Commission. Southern and the Distributors were obviously not prejudiced, since they filed timely petitions for intervention subsequent to the February 21 order. Upon denial of those petitions, their proper course was to apply within 30 days for a rehearing of the May 29 order. *Public Service Commission of New York* v. *Federal Power Commission*, 284 F. 2d 200, 204 (D.C. Cir. 1960). Texas Eastern, Tennessee, United Fuel, and Southern—all of which filed petitions to intervene during the month of November, 1961—are direct purchasers of respondents, and as such were routinely served with copies of the May 29 order.[3] They, too, had ample opportunity to seek intervention and/or rehearing but neglected to do so. It might be added, moreover, that each of the above pipelines was served with a copy of the April 14, 1961 order granting rehearing to certain of the respondents. Such notice was sufficient to alert the purchasers that the Commission was contemplating modification of its February 21 order and that the refund seemingly promised them by said order was in jeopardy. Although failure of the November petitioners to seek intervention and/or rehearing prior to May 29 did not bar them from doing so promptly thereafter, their protracted lack of diligence both before and after the controverted order prevents us from extending them grace at this late date.

In light of the preceding considerations, we shall vacate the August 30 order insofar as it permitted intervention by Southern and the Distributors and insofar as it reopened proceedings other than those designated in Appendices C, D, or E hereto. Additionally, we shall reject as untimely the petitions for intervention filed in November, 1961, by Texas Eastern, Tennessee, Southern and United Fuel. In taking this action, however, we do not intend and should not be construed to foreclose any party from seeking whatever relief, if any, may be appropriate under state law. Cf. *Pan American Petroleum Corp.* v. *Superior Court*, 366 U.S. 656 (1961).

We consider now the ultimate substantive issue raised by these proceedings, i.e., whether respondents who declined to pay the tax under protest and thereby failed to qualify for a tax refund from the state of Louisiana should be exempted from the duty to refund tax-reimbursement amounts to their customers. The answer to this question depends, in part at least, upon the meaning of the Commission's original orders in 1958. On July 11, 1958, anticipating that the new Louisiana tax would trigger rate filings based upon tax-reimbursement clauses in the producers' contracts with the pipelines, the Commission issued Order No. 206, 20 FPC 28, in which it prescribed a simplified procedure for filing proposed

---

[3] It is the Commission's practice to serve direct purchasers with copies of all orders relating to action taken with respect to their suppliers.

rate increases based on the tax, waived the 30 day notice requirement for such filings, and announced that it would suspend such rates for one day and then permit them to go into effect subject to refund. Proposed rates filed pursuant to Order No. 206 were suspended for one day by identical orders[8] issued in each docket, the pertinent terms of which were as follows:

> (D) Respondent shall refund at such times and in such amounts to the persons entitled thereto, and in such manner as may be required by final order of the Commission, the difference between the presently effective rate and charge and the proposed increased rate and charge hereby allowed to become effective in the event the additional tax of 1 cent per Mcf levied by the State of Louisiana is for any reason held to be invalid. Should such additional tax eventually be held invalid and the State of Louisiana make refund, with interest, of the tax monies collected pursuant to the said Act No. 8 of 1958, then, and in that event, a proportionate part of the interest so received by the respondent herein shall be passed on and paid to the persons entitled thereto at such times and in such amounts, and in such manner as may be required by final order of the Commission.

From the first sentence of the above paragraph it is clear that the obligation to refund the difference between the "presently effective rate" and the "proposed increased rate" was contingent solely upon the judicial invalidation of the tax. It was only the duty to refund *interest*, under the second sentence, which was made to depend upon the receipt by respondents of a refund from the state. A contingency carefully written into the second sentence cannot reasonably be deemed implicit in the first, from which it was omitted. Confronted also by an order in terms exposing them to refund obligations regardless of whether they were made whole by the state, respondents could have moved for reconsideration of the suspension orders or otherwise sought clarification from the Commission. In failing to do so they assumed the risk that the Commission's orders meant what they said.

In support of a contrary interpretation, respondents rely upon two letters from the Commission to the Collector of Revenue of the State of Louisiana, dated October 2, 1958, and October 28, 1958, respectively, and published in Commission press releases. The same letters were also cited by the Commission itself—misguidedly, we now concede—in the May 29 order. It is elementary that the obligations of parties subject to regulation by this Commission are governed by the plain language of its official orders, not by its subjective intent as expressed in collateral correspondence made public in press releases. However, even if the suspension orders were so ambiguous as to require extrinsic illumination, we should still not regard the particular letters in question as persuasive glosses. While certain language in the letter of October 2 does seem to suggest that respondents' refund obligation should be limited to amounts actually received from the state, an opposite conclusion is inferable from the letter of October 28, the core of which was as follows:

> Neither this general order nor the orders subsequently adopted in accordance with its terms suggested in any way that a suit should be brought to test the validity of the Louisiana gathering tax, *but merely sought to protect ultimate consumers in a proper manner against payment of operating expenses which included the tax if the tax is held to be invalid.*

Indeed, in Opinion No. 278, El Paso Natural Gas Company, Docket No. G–2018, issued November 26, 1954 (13 FPC 421), the Commission refused

[8] See, *e.g.*, *Shell Oil Company (Operator)*, Docket No. G–15552, 20 FPC Reports 105 (July 30, 1958).

to allow as an operating expense a payment by El Paso of a somewhat similar tax under a Texas statute subsequently declared invalid, notwithstanding the failure of El Paso to make its tax payments to the State under protest. A similar ruling was made in Opinion No. 269, Panhandle Eastern Pipe Line Company, issued April 15, 1954 (13 FPC 53).

The Federal Power Commission has no desire to force the testing of a State statute and it is not doing so in the present instance. Nevertheless, before adopting Order No. 206, *it was advised by a number of pipeline companies subject to the Natural Gas Act that they intended either to test the Louisiana gathering tax or would see that a test suit was filed. Therefore, in order to protect ultimate consumers against imposition of tax expense held to be unlawful, some steps had to be taken along the lines of Order No. 206 and the orders subsequently issued thereunder.* Some of the companies which previously advised the Commission that the Louisiana law would be tested in court have again advised the Commission to the same effect. Under these circumstances it would not appear appropriate to amend Order No. 206. [Emphasis added.]

Citation of *El Paso Natural Gas Company*[10] in this context indicates that the Commission deemed it immaterial to the producers' refund obligation whether they paid the tax under protest or not. Moreover, in light of the advice received by the Commission that pipeline companies had already decided to test the statute, its disclaimer of any intent to "force" such test meant simply that Order No. 206 was a response to the prospect of litigation, not an attempt to bring litigation about. Such disclaimer carried no implication whatever that respondents who did not protect their right to a refund from the state would be exonerated from the duty to refund appropriate amounts to their customers.[11]

In view of the conflicting inferences to which the above letters give rise, they can scarcely be relied upon as guides to the interpretation of the suspension orders. The same must be said of various orders, cited by respondents, granting certificates of public convenience and necessity in proceedings involving the Louisiana gas gathering tax as part of the initial rate, and expressly conditioning the applicants' refund obligations upon the payment to them of tax refunds by the state.[12] Whether the absence of a comparable condition in the instant rate suspension orders was the result of inadvertence or policy, the fact remains that the Commission cannot be deemed to have implied by silence in the rate orders what it took pains to spell out in the certificate orders.

It is possible that the suspension orders were not intended to fix conclusively the scope of respondents' refund obligation, but instead reserved that matter for later determination by final orders of the Commission. If so, then whatever

[10] Opinion No. 278, Docket No. G-2018, 13 F.P.C. 421, 486. See *Panhandle Eastern Pipe Line Company*, Docket No. G-1116, *et al.*, 13 F.P.C. 53, 103. Cf., *Tennessee Natural Gas Line, Inc.* v. *F.P.C.*, 221 F. 2d 531 (D.C. Cir. 1954).

[11] Under Louisiana law, payment under protest does not oblige the taxpayer to file a suit, so long as he shows that litigation involving the validity of the assessment is already pending in the courts and so long as he agrees to abide by the results of such litigation, 47 La. Rev. Stat., § 1576. Actually, *Bel Oil Corp.* v. *Pontenot, supra*, the case in which the gathering tax was eventually struck down, had been pending in the 19th Judicial District Court, East Baton Rouge Parish, since December 6, 1954. (Docket No. 51809). Therefore, it would not have been necessary for any producer to "test" the statute in order to preserve its right to a refund.

[12] See, *e.g.*, *Transcontinental Gas Pipe Line Corporation, et al.*, Docket Nos. G-13143, *et al.*, Opinion No. 315, issued September 4, 1958, 20 FPC 264 at 285; *Texas Gas Transmission Corp., et al.*, Docket Nos. G-14494, *et al.*, order issued December 4, 1958; *American Louisiana Pipe Line Company, et al.*, Docket No. G-15053, *et al.*, order issued November 7, 1958.

discretion the Commission retained was exercised in the order of February 21, which once again required refunds of all producers without hint of qualification. The chief ordering clause of that order provided as follows:

> (A) The above-designated increased rates are disallowed and Respondents shall refund their respective purchasers the amounts collected under the respective agreements and undertakings filed in compliance with the Commission's orders herein together with a proportionate part of any interest received from the State of Louisiana.

The above clause was later modified by the order of May 29, 1961. For present purposes we need not decide whether such modification was inconsistent with the mandate contained in the original suspension orders or whether it fell within the range of discretion left open by such orders. In either case it still lies within our discretion to reimpose the unqualified refund obligation originally embodied in the February 21 order, and upon full consideration of the competing equities involved herein, we deem such imposition appropriate.

By the time the Section 678 tax had become effective, litigation testing the validity of the Louisiana gathering tax was already before the courts;[13] the Commission's suspension orders had in terms prescribed a duty to repay purchasers if the tax were held invalid; and, in many instances, the pipelines had written the producers, cautioning or demanding them to pay the tax under protest.[14] Thus, respondents were amply forewarned of the consequences they invited in refusing to register protests. Such refusal cannot be justified on the ground that payment under protest would have launched respondents into immediate litigation or would have encouraged the State of Louisiana to raise its severance tax in order to replace lost revenues. Since litigation to challenge the gathering tax was already pending, no protesting producer would have been forced to initiate a test case.[15] Moreover, the degree of likelihood that Louisiana would respond by raising the severance tax (a point on which no evidence has been presented), and if so, whether forfeiture of the gathering tax refund would have yielded a net benefit to the purchasers and consumers who would eventually have had to pay a large part of the tax, were not questions of unilateral concern to respondents. At the very least, it was incumbent upon them to consult with and seek the approval of the purchasers for the course they proposed to follow.[16] The purchasers themselves had no standing under Louisiana law to protest the assessments and were entirely dependent upon their respective suppliers to protect their interests. Some producers paid the tax under protest; others, either through negligence or conscious policy, did not protest. Under all the circumstances, we see no justification for burdening pipeline, distributor, or consumers with the consequences of a unilateral decision by the producer, heedless, in many cases, of the express admonitions of its customers.

Many of the instant proceedings involve sales by a respondent to more than one purchaser under different rate schedules. It is argued by respondents that the May 29 order should be revised and refunds ordered only with respect to rate schedules or supplements involving a direct or secondary purchaser which

[14] See, *e.g.*, Southern's Statement of Position, pp. 14–15; Transco's Statement of Position, p. 10; Texas Gas's Statement of Position, p. 4; United Fuel's Statement of Position, p. 4.

[15] See f.n. 11, *supra*.

[16] It may well be that respondents were under a legal duty to preserve the rights of their customers to recover the invalid taxes, and that they could be held to account for breach of that duty, even if the Commission's suspension order had required refund only of such amounts as were actually recovered from the state. Cf. *Natural Gas Pipeline Co.* v. *Harrington*, 246 F. 2d 915 (5th Cir. 1957).

has been properly permitted to intervene and whose petitions to intervene or application for rehearing was the basis for reopening the docket. We agree with this contention and accordingly shall require respondents in proceedings listed in Appendices C through E hereto, respectively, to refund amounts collected subject to refund under rate schedules applicable to Transco, United Fuel, and Texas Gas.

Several of the intervenors have taken the position that their contracts obligate them to reimburse their respective suppliers only for valid taxes, and therefore, under *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332 (1956) the Commission has no choice but to order refunds. Having decided on other grounds to order refunds, we deem it unnecessary to pass upon the *Mobile* question or to construe the tax reimbursement provisions of the subject contracts.

One additional matter needs to be settled. Union Oil Company of California (Union) claims that the issue of reimbursement for the additional gathering tax in Docket Nos. G–15846 and G–15847 was covered by Union's offer of settlement, accepted by the Commission in its order of January 13, 1960, in Docket Nos. G–4331, *et al.*, 23 FPC 73. That settlement order, however, did not purport to apply to Docket Nos. G–15846 and G–15847. Moreover, by order issued March 17, 1960 in Docket Nos. G–4331, *et al.*, the Commission accepted for filing the superseding rate schedule supplements of Union, tendered in compliance with the said order of January 13, 1960, upon condition that such acceptance would not impair Union's obligation to refund to Transco the .75¢ per Mcf Louisiana gathering tax reimbursement subject to refund in Docket Nos. G–15846 and G–15847. Accordingly, we believe that Union should be required to refund the amounts collected, subject to refund, in Docket Nos. G–15846 and G–15847.

The Commission finds:

(1) Good cause has been shown for vacating the August 30, 1961, order insofar as it reopened the proceedings in Appendix A, except for those proceedings listed in Appendices C through E inclusive, and insofar as it permitted Southern and the Distributors to intervene in certain proceedings.

(2) The petitions to intervene filed in November 1961 by Texas Eastern, Tennessee, Southern, and United Fuel should be rejected as untimely.

(3) It is in the public interest and necessity in the effective administration of the Natural Gas Act that the supplements filed in the proceedings listed in Appendices C through E hereof with respect to sales of gas to Transco, United Fuel, or Texas Gas be disallowed, and that refunds be made to said purchasers.

The Commission orders:

(A) The increased rates reflected in the rate supplements applicable to Transco, United Fuel, and Texas Gas in the proceedings designated in finding (3) above are disallowed and respondents in such proceedings shall refund to said purchasers the amounts collected under the respective agreements and undertakings filed in compliance with the Commission's suspension orders herein, together with a proportionate part of any interest received from the State of Louisiana.

(B) Any purchaser which receives a refund pursuant to paragraph (A) hereof, and which is obligated by the terms of any contract or settlement agreement to pass all or any part of such refund on to its customers, shall promptly make such refund to its customers in compliance with the terms of such contract or settlement agreement.

(C) Within 90 days from the date of issuance of this order, each respondent designated in paragraph (A), if it has not already done so, shall report to the

Commission, in writing and under oath, the details of its calculations resulting in the refunds to be made pursuant to paragraph (A) hereof, together with copies of releases from its customers with respect to such refund.

(D) Within 120 days from the date of issuance of this order, each purchaser designated in paragraph (B), if it has not already done so, shall report to the Commission, in writing and under oath, the details of its calculations resulting in the refunds to be made pursuant to paragraph (B) hereof, together with copies of releases from its customers with respect to such refund.

(E) The August 30, 1961 order is hereby vacated insofar as it reopened the proceedings in Appendix A hereto, except for those proceedings listed in Appendices C through E hereto, and insofar as it permitted the Distributors and Southern to intervene in certain proceedings.

(F) The petitions to intervene filed in November, 1961, by Texas Eastern, Tennessee, Southern, and United Fuel are hereby rejected as untimely.

(G) The proceedings listed in Appendix A hereof are hereby terminated by the Commission.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 7, 1962)*

Syllabus

1. *Panhandle* case (Op. No. 350) found controlling with respect to determination of price and area questions in this proceeding. P. 454.
2. Evidence of comparative costs and of geological, operating and marketing characteristics of Woodward area is not of such compelling nature as to cause Commission to depart from pricing pattern established in *Policy Statement*. P. 454.
3. Until such time as Woodward area develops to extent that area hearing may be utilized to determine area prices, or evidence of necessity of *ad hoc* adjustment is more compelling than here, Commission will adhere to ceiling levels set forth in *Policy Statement*. P. 454.
4. Commission conditions producer certificates at initial wellhead price of 17 cents per Mcf for sales in Panhandle area, and 15 cents for sales in "other" Oklahoma area. P. 454.
5. Should current study of area boundaries result in any increase in area price levels applicable to sales herein certificated, producers may substitute new rates consistent with their contracts reflecting such increase and collect new rates prospectively in lieu of initial rates herein required. P. 454.

---

*Designated Commission Opinion No. 353; Initial decision appears on p. 464.

6. Commission *allows* 100 percent take-or-pay provision proposed by producers subject to ultimate disposition with respect thereto in rulemaking proceeding (R–199). P. 454.
7. Prepayment provisions of Michigan Wisconsin contracts *allowed:* Commission finds such arrangements represent reasonable solution to Michigan Wisconsin's need for large, flexible new supply; such increased costs to jurisdictional customers as may reasonably be expected to result therefrom will not be excessive; and benefits to all concerned, including jurisdictional customers, justify such allowance. P. 455.
8. Commission *rejects* Staff contention that initial prices be for gas dehydrated in accordance with standard for pipeline quality gas proposed in Docket No. R–200; finds nothing in this record to show that proposed sales are not of pipeline quality-gas as that term is generally understood in these pricing areas. P. 461.
9. Commission *issues* certificates of public convenience and necessity to producer applicants and Michigan Wisconsin under Section 7 of the Natural Gas Act. P. 462.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

O'Connor, *Commissioner:*

This is a certificate proceeding under Section 7 of the Natural Gas Act involving applications by Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) and twelve natural gas producers. Michigan Wisconsin desires to construct and to operate a supply lateral and gathering facilities which will enable it to receive gas which it has contracted to purchase from the producers in the Woodward area of northwest Oklahoma and to transport this gas to its existing main line some 97 miles to the north. The producers propose to sell this gas to Michigan Wisconsin under 20-year contracts at a base initial wellhead price of 19.5 cents per Mcf,[1] with periodic escalations of 2.5 cents per Mcf every

[1] All prices referred to herein are at 14.65 psia.

five years. In addition to the base price, the contracts provide for an upward adjustment of 1/100 per cent Mcf for each Btu of heat content in excess of 1,000 Btu's per cubic foot, but not over 1,200 Btu's per cubic; as well as for reimbursement of 100 percent of the producers' present production, gathering, severance, and similar taxes, plus 75 percent of the new or increased future taxes.

The proposals in this case are not part of an expansion of the Michigan Wisconsin system, but are for the purpose of providing a gas supply to offset an anticipated decline in gas supply from Michigan Wisconsin's principal supplier, Phillips Petroleum Company (Phillips). Under its contracts with Phillips, Michigan Wisconsin is obligated to purchase its first 343,000 Mcf of gas from Phillips so long as Phillips is able to maintain deliverability. As the record shows, Phillips will not be able to maintain full delivery of the 343,000 Mcf per day in 1963 and later years; and this drop-off will result in a daily average delivery of less than 300,000 Mcf in 1964, and less than 200,000 Mcf by 1967. Thus Michigan Wisconsin, which has no production of its own, is faced with the necessity of obtaining large new gas reserves which it can integrate with the decline in Phillips' deliveries so as to maintain the operation of its pipeline on a high load factor basis.

To meet the Phillips drop-off, Michigan Wisconsin has negotiated contracts with the producer applicants for the dedication of extensive reserves in the Woodward area. Under these contracts, the producers have committed a total of some 287,000 acres to Michigan Wisconsin, of which 17,900 acres with gas reserves of 238 million Mcf have been proven. To enable Michigan Wisconsin to integrate the deliveries of the Woodward area gas with the drop-off of its Phillips supply, the contracts contain flexible take provisions which give Michigan Wisconsin the right to defer its takes during the early years of the contracts, and to make up these deferred takes in later years. Thus Michigan Wisconsin may take as little as 25 percent (40 percent from Pan American) of the average daily contract quantities during the first three years, and make up the deficiencies over the life of the contracts (over 10 years from Pan American). Although it must currently pay for a daily minimum of 75 percent of the average daily contract quantities (the deficiencies being figured as 1,000 Btu gas), no additional payment, other than for Btu's in excess of 1,000, is required when Michigan Wisconsin actually takes delivery of the gas, regardless of when the deferred takes are made up.[2]

In addition to the foregoing provisions for the deferral of takes under its gas purchase contracts, Michigan Wisconsin has entered into supplemental agreements with the major producers for the prepayment of a one-year supply of gas computed on the basis of one Mcf per day for each 4,000 Mcf of presently proven reserves. In accordance with these agreements, such prepayments were made

[2] Apart from these special provisions for reduced takes during the first three years of the contracts, Michigan Wisconsin is required on any one day to take not less than 75 percent of the average daily contract quantities and not more than 125 percent of such quantities. Average daily contract quantities are computed on the basis of one Mcf per day for each 7,300 Mcf of recoverable reserves. Michigan Wisconsin is required to pay for 100 percent of these quantities on an annual basis. Thus, to the extent that there is a deficiency at the end of any year, Michigan Wisconsin must pay for such gas not taken at the price in effect at the end of the year plus a Btu adjustment based on the average Btu content of gas delivered during the year. Michigan Wisconsin, however, may make up these deficiencies over a period of four years, paying the difference between the price in effect when the gas is taken and the price already paid. To the extent that Michigan Wisconsin takes deliveries in excess of the average daily contract quantities, such excess is to be first imputed to the make-up of any accrued contract deficiencies under the provisions just described, and then to the make-up of any gas paid for but not taken under the special provisions for reduced takes during the first three years of the contracts.

in the amount of $4,040,928 upon the filing of the producer applications in this proceeding. The agreements provide that Michigan Wisconsin may take delivery of the prepaid gas at any time during the term of its contracts with the producers; however, takes may be charged against the prepayments only to the extent that they are in excess of the average daily contract quantities which Michigan Wisconsin is required to purchase under the contracts, and provided there are no outstanding deficiencies to be made up by reason of prior takes less than the contract quantities. The supplemental agreements further provide, with respect to the make-up of prepaid gas, for the daily delivery, upon request by Michigan Wisconsin, of volumes in excess of 125 percent of the average daily contract quantities, to the extent that the producers' equipment, prudent operations and State Conservation Commission regulations permit. The producers, however, are not required to deliver in excess of 125 percent of the average daily contract quantities except for the purpose of making up the prepaid gas.

The Woodward area of northwest Oklahoma lies within the counties of Woodward, Woods, Major, Dewey, and Alfalfa, and is just southeast of the Laverne field in Harper and Beaver Counties where Michigan Wisconsin is presently buying gas under Commission certificates at 17 cents per Mcf plus Btu adjustment. Woodward County along with Harper, Beaver, Ellis, Texas and Cimarron Counties comprise the Panhandle Area set forth in the Commission's Statement of General Policy No. 61–1, and for which the initial service rate level is 17 cents per Mcf. Woods, Major, Dewey, and Alfalfa Counties are in an area described for purposes of the Policy Statement as "Other," and which includes all of the remaining counties in Oklahoma except those parts of Grady and Stephens within the Knox field.[3] The initial service rate level for "Other" Oklahoma is 15 cents per Mcf.

The Issues.

The controversy in this proceeding centers on five basic questions:

(1) Is the initial contract price of 19.5 cents per Mcf required by the public convenience and necessity? If not, what price is so required?

(2) Should the initial price be uniform throughout the Woodward area, or should the initial price reflect the different levels established in the Commission's Statement of General Policy for the Panhandle and "Other" Oklahoma Areas?

(3) Is the provision for prepayment in the public interest and required by the public convenience and necessity?

(4) Is the Btu adjustment provision required by the public convenience and necessity as part of the initial price?

(5) Should the initial price be for undehydrated or for dehydrated gas?

The Examiner's Decision.

On July 14, 1961, the presiding examiner issued an initial decision granting certificates to the applicants herein subject to certain conditions. These conditions apply to the producer certificates and require: (a) The filing of an initial price of 17 cents per Mcf plus tax reimbursement; (b) the elimination of the prepayment provisions, or the modification thereof so that prepayments shall be credited against the first deliveries made. The producer certificates so issued would authorize the Btu adjustment to the base price as set forth in the producer contracts, and would establish the 17-cent base price as a uniform initial price for undehydrated gas throughout the Woodward area.

Exceptions to Examiner's Decision.

Exceptions to the examiner's decision have been filed by all of the producers except Skelly Oil Company and Wilcox Oil Company, and also by the Commis-

[3] The Knox field is set forth as a separate area known as the Carter-Knox area, with an initial price level of 16.8 cents per Mcf.

sion's staff. The producers' exceptions are directed to the imposition of the conditions on the initial price and the prepayment provisions. Staff excepts to the examiner's failure to follow the area levels set by the Statement of General Policy under which the 17-cent base price would apply only to Woodward County and 15 cents Mcf would be the proper initial price for gas from Woods, Major, Dewey, and Alfalfa Counties. Staff also excepts to the examiner's failure to require elimination of the Btu adjustment provision, and to his failure to specify that the initial price be for gas dehydrated in accordance with the standards for pipeline quality gas proposed in Docket No. R-200.

The Producer Certificates

Initial Price and Areas.

The questions here presented with respect to the initial price to be charged for gas from the Woodward area, are similar to those considered by the Commission in *Panhandle Eastern Pipe Line Co., et al.*, Docket Nos. CP60-103, *et al.* (Opinion No. 350, issued January 15, 1962). The producer applicants in the *Panhandle* case proposed wellhead sales of gas from these same Woodward area counties, and in some instances from the same fields. There, as in the instant case, the applicants argued for a uniform initial price for gas throughout the production area regardless of the fact that part of the gas was to be produced in the Panhandle area and part in the "Other" Oklahoma area, as those areas are delineated in the Policy Statement. And like the applicants in this proceeding, the producers there attempted to justify their initial contract price by comparing the proposed sales to presently certificated Laverne field sales in the Panhandle area, in light of evidence intended to show the geographical, geological, marketing and operating considerations governing the sales. The only essential difference between the present case and the *Panhandle* case is that the applicants here propose an initial price of 19.5 cents per Mcf as compared to the 17-cent price proposed in *Panhandle*.[4]

In support of their proposed 19.5-cent initial contract price, the producers presented evidence to show that the costs of production are higher in the Woodward area than in the Laverne area, where the Commission has already certificated wellhead sales at 17 cents per Mcf. They would show that the producing formations are deeper in the Woodward area; that the producing sands are scattered and lenticular and do not lend themselves to multiple completions; and that the general trend of costs is continually upward.[5] Although the examiner was persuaded by the producers' showing that the costs of production are higher in the Woodward area, he was nevertheless unable to determine any logical relationship between such evidence and the particular initial price proposed by the producers. In these circumstances the examiner concluded that the initial price should be no higher than the 17-cent ceiling price for the Panhandle area set forth in the Policy Statement. The examiner, however, would apply the 17-cent price uniformly to all of the proposed sales, whether in the Panhandle area or the "Other" Oklahoma area, finding, as did the examiner in the *Panhandle* case, that the Oklahoma Panhandle and the Woodward area are a single pricing area from a geological and marketing point of view, and that Woods, Major, Dewey, and Alfalfa Counties should be treated as part of the Panhandle area for the purpose of determining the proper initial price in this proceeding.

[4] Five of the producers here proposing sales at 19.5 cents share common wells with producers who proposed to sell their interest to Panhandle at 17 cents in the *Panhandle* case.

[5] 19.5 cents is the second step in the periodic price escalations provided for in the Laverne field gas purchase contracts.

Our Opinion No. 350 in the *Panhandle* case is controlling with respect to our determination of the price and area questions in this proceeding. In that case we set forth the basic considerations which govern the disposition of these questions. We there said, in part:

> The Policy Statement, however, should not be construed as suggesting that changes in either area boundaries or prices will readily be made in individual proceeding. It would defeat our purpose of simplifying and clarifying producer regulation, if every individual proceeding were to become a forum for attacking the area standards and we were to begin varying those standards from case to case. Adjustments in the area price structure can best be made upon a general review of all relevant factors. At the least, it would take a very compelling showing to warrant any change on an *ad hoc* basis.

Although the parties have gone to great lengths to justify the proposed initial price on the basis of comparative cost evidence and evidence to show the geological, operating and marketing characteristics of the Woodward area in relation to the Laverne area,[6] this evidence is not of such compelling nature as to convince us that we should depart from the pricing pattern established in the Policy Statement by ordering either an adjustment in price or in area boundaries on the basis of the record in this individual certificate proceeding. The existing area ceilings in the Panhandle and "Other" Oklahoma areas are based upon and are reasonably related to prevailing prices for wellhead sales as heretofore certificated by this Commission. Until such time as the Woodward area has developed to the extent that an area hearing can be fruitfully utilized to determine area prices, or unless evidence of the necessity of an *ad hoc* adjustment more compelling than that contained in the present record is presented, we shall adhere to the ceiling levels set forth in the Policy Statement. We shall therefore condition the certificates herein issued at an initial wellhead price of 17 cents per Mcf for sales in the Panhandle area, and at 15 cents per Mcf for sales in the "Other" Oklahoma area. Inasmuch as the ceilings in these areas are prices which include tax reimbursement, if any, the prices so allowed shall include all taxes, and no additional amounts for tax reimbursement shall be allowed.

As noted in Opinion No. 350 in the *Panhandle* case, the Commission is presently making a general review of area boundaries. In view of the fact that the Woodward area, which straddles the existing boundry between the Panhandle and "Other" Oklahoma pricing areas, was for the most part undeveloped at the time the present boundary was established, it is possible that some adjustment in that boundary may be made as a result of this study. If and when this should occur, we shall permit the producers to substitute new rates consistent with their contracts reflecting any increase in the area levels applicable to the sales herein certificated which may result from such adjustment, and thereafter to collect these new rates prospectively in lieu of the initial rates herein required. This is consistent with our treatment of the producers similarly situated in the *Panhandle* case. Also consistent with Opinion No. 350, we shall make the 100 percent take-or-pay provisions proposed by the producers, and herein allowed as part of their certificates, subject to our ultimate disposition with respect to such provisions in the current rule-making proceeding in Docket No. R–190.

The Prepayments.

The examiner disallowed the prepayment provisions because in his opinion they create an element of uncertainty with respect to the cost of the Woodward area gas to Michigan Wisconsin's jurisdictional customers. He found that the

---

[6] One producer introduced cost of service evidence. Quite aside from the general question of the weight to be given cost evidence in individual producer certificate proceedings, it is apparent that the costs of one of twelve producers cannot be accepted as representative.

practical effect of the prepayments is to enhance the initial price of the gas; and although the impact may be small if the prepaid gas is taken as quickly as anticipated by Michigan Wisconsin, nevertheless the public interest requires that the Commission consider the potential effect of the prepayments in the "worst possible eventuality." Such an eventuality here would be that the prepaid gas would not be taken at all, or, if taken, might be taken so near to the end of the contract period that the price would be clearly exorbitant. The examiner therefore concluded that the prepayment provisions should be eliminated, or modified so as to require that the prepayments be credited against the first deliveries of gas under the various contracts.

In our opinion, the proposed prepayment provisions do not involve such a risk of exorbitant costs as to require us to disallow them. The evidence in this case shows the prepayments to be an essential part of the arrangements negotiated by Michigan Wisconsin and the producers to provide Michigan Wisconsin with an increasing gas supply to be integrated with its existing supplies in meeting the problem of the Phillips drop-off. We think that these arrangements represent a reasonable solution to Michigan Wisconsin's need for a large and flexible new supply; that such increased costs to jurisdictional customers as may reasonably be expected to result from the payments in advance of deliveries will not be excessive; and that the benefits to all concerned, including Michigan Wisconsin's jurisdictional customers, justify allowance of the prepayments.[7]

The prepayments in the amount of $4,014,928.17 apparently were made not only in consideration of the producers' agreement to hold the prepaid gas for later delivery as needed by Michigan Wisconsin, but also in consideration of the great flexibility allowed to Michigan Wisconsin in taking its contract quantities, especially in the early years of the contracts, and the dedication of extensive undeveloped and potentially productive acreage. They are thus basic to those features of the proposed sales which will enable Michigan Wisconsin to integrate its Woodward area supplies with the depletion of its deliveries from Phillips.

If allowed by us in this proceeding, the prepayments presumably would be included in Michigan Wisconsin's rate base as working capital for the purpose of determining Michigan Wisconsin's rates.[8] As part of the rate base, the prepayments would earn whatever rate of return Michigan Wisconsin is allowed in fixing its rates, and would so result in an additional cost to its jurisdictional customers. The extent of this additional cost would be determined by the rapidity with which Michigan Wisconsin can make up the prepaid gas, since the amount of the prepayments in the rate base would be reduced as the prepaid gas is actually taken by Michigan Wisconsin.

The prepaid gas to be made up by Michigan Wisconsin amounts to some 20,000,000 Mcf, or about two years of takes at the initial contract quantities. As noted above, Michigan Wisconsin can only make up the prepaid gas after taking currently required contract quantities and making up any prior con-

[7] The Commission allowed prepayments of a somewhat different nature in *El Paso Natural Gas Co.*, 22 FPC 260, 270.

[8] Michigan Wisconsin's rates for the future are now in the process of being determined in Docket No. RP60–9, a rate proceeding under Section 4 of the Act. Although the Commission has not yet rendered a decision in this case, it has approved in substance a stipulation which would include $3,656,615 in Michigan Wisconsin's rate base as working capital, subject to refund should the prepayments be disallowed in Docket No. CP61–102, *et al.* The amount so included represents the prepayments actually made during the 1960 test year. A part of the prepayment, amounting to $358,312, was made after the close of the test year. Michigan Wisconsin's total rate base, as stipulated to in this proceeding, is $214,824,344. The prepayments included as working capital would therefore constitute less than 2 percent of the total rate base.

tract deficiences resulting from deferrals in earlier years. Michigan Wisconsin may take up to 125 percent of the average daily contract quantities for the purpose of making up any contract deficiencies, and may take as much in excess of 125 percent of such quantities as is consistent with prudent operation of the wells for the purpose of making up the prepaid gas.

The record shows that Michigan Wisconsin plans to start taking 25,000 Mcf per day, and to take this amount daily for the first two years prior to the Phillips drop-off. These takes are about 75 percent of the average daily contract quantities based on presently proven reserves. Thereafter, Michigan Wisconsin proposes to make up the deficiencies so incurred by taking 125 percent of the contract quantities. If the additional reserves develop rapidly, the takes in the first years may drop to 25 percent, as contemplated by the contracts; but at the same time Michigan Wisconsin's ability to make up the deficiencies would increase because the make-up would be based on takes of 125 percent of the increasing contract quantities in subsequent years. Thus it appears from the record that Michigan Wisconsin should be able to make up any early-year deficiences within two years after the commencement of the drop-off.

Once these early-year deficiencies are made up, Michigan Wisconsin may begin to take the prepaid gas to the extent that prudent operation of the wells will permit. The record shows that if the wells are operated at maximum reasonable output, Michigan Wisconsin can make up the prepaid gas by the end of 1968, the eighth year following the prepayments, and six years after the commencement of the Phillips drop-off. This assumes that no additional reserves are proved. If additional reserves are proved, and it may be reasonably expected that they will be, Michigan Wisconsin can, and no doubt will, accelerate its takes of prepaid gas in order to meet the drop-off. Thus, in all probability, Michigan Wisconsin will have completed the make-up of both its early-year deficiencies and the prepaid gas within a period of eight years from the time of the prepayments.[9] Although there is a possibility, as staff contends, and as the examiner found, that the Woodward area wells might not produce as anticipated and that Michigan Wisconsin might not be able to take the prepaid gas as rapidly as the experts who have testified herein would expect, if at all, it is admitted that this is to view the operation "in extremis"; and in our judgment the possibility of Michigan Wisconsin not being able to take the prepaid gas at all, or only in the latter years of the contracts, is not of sufficient likelihood to warrant the conclusion that the public interest requires us to decide the propriety of the prepayment provisions on the basis of such an unrealistic assumption.

Assuming a total of some 20,000,000 Mcf of prepaid gas at 19.5 cents per Mcf, the proposed initial price under the contracts, and further assuming that the amount so paid for each Mcf of prepaid gas earns 6¼ percent as part of Michigan Wisconsin's rate base,[10] the added cost of prepayments to gas consumers, over the eight years which Michigan Wisconsin will require to take the prepaid gas if no additional reserves are proven, will be $1,341,980. Staff

[9] The Phillips' drop-off is estimated to be 45,300 Mcf per day in 1964, 82,600 Mcf in 1965, and 172,500 Mcf in 1966. With this drop-off providing continually increasing capacity in its system so as to enable it to take increasing larger amounts of gas from the Woodward area, and with its potential markets and its availble storage, Michigan Wisconsin should be able to absorb all of the gas which will become available to it under its contracts as the Woodward area reserves are developed.

[10] Both the staff and Michigan Wisconsin briefs assume a 6¼ percent return and the 19.5-cent proposed price in computing the cost of prepayments in Michigan Wisconsin's rate base.

contends that this cost should be assigned only to the 20,000,000 Mcf of prepaid gas. On this basis, the additional cost of the prepaid gas would be 6.7 cents per Mcf. However, the prepayments were made not merely in consideration of the deferred delivery of the 20,000,000 Mcf, but for all of the reserves, both proven and potential, to be delivered to Michigan Wisconsin under the producer contracts. Thus, the $1,341,980 should properly be rolled in with the cost of all gas delivered to Michigan Wisconsin under the contracts, and spread over the total volumes so delivered. Spread over the 238,000,000 Mcf of reserves proven at the time these applications were filed and the prepayments were made, the additional cost would be .564 cent per Mcf. Should the total proven reserves double, triple, or quadruple, as hoped by Michigan Wisconsin, this cost would be further reduced as follows: .268 cent per Mcf for 500,000,000 Mcf; .179 cent per Mcf for 750,000,000 Mcf; and .134 cent per Mcf for 1,000,000,000 Mcf. We cannot, of course, anticipate at what rate, or to what extent, the Woodward area reserves will develop. However, we do not think it unreasonable to expect that they will develop, and that the additional cost will in fact be something less than .5 cent per Mcf. In addition to this cost, which represents return on the prepayments included as working capital in Michigan Wisconsin's rate base, there will be an essentially like amount to be paid by Michigan Wisconsin's ratepayers to cover additional income taxes which must be included in Michigan Wisconsin's cost-of-service because of the added return on the prepayments.

In view of the proceedings in Docket No. RP60-9, and the conditions here imposed on the proposed initial prices, these cost figures are only rough approximations. Nevertheless, they are sufficient to show that the additional cost to Michigan Wisconsin's jurisdictional customers which may be expected by reason of the prepayments is not unreasonable in light of the benefits to be derived from Michigan Wisconsin's acquisition of these reserves with the right to take the gas as it needs it to meet the Phillips drop-off.[11] The producers' agreement to defer deliveries so as to enable Michigan Wisconsin to integrate its takes with the drop-off of its Phillips supplies is, in our judgment, a "service or forbearance" in connection with the sale of this gas which justifies consideration of the benefits thereof to Michigan Wisconsin and to Michigan Wisconsin's customers in determining whether the increase in the initial prices which would result from allowance of the prepayment provisions is required in the public interest;[12] and in our opinion these benefits warrant the conclusion that both the prepayment provisions and the additional costs to be associated therewith are in the public interest and are required by the public convenience and necessity.[13]

---

[11] If the Phillips drop-off were not replaced with this Woodward area gas, the additional cost to Michigan Wisconsin's customers in 1964, assuming the 19.5-cent proposed initial price, would be 0.61 cents per Mcf. With annual estimated sales of 254,467,000 Mcf for 1964, the total cost to consumers would be $1,552,000. For 1965 the extra cost per Mcf would be 2.32 cents, or a total cost of $5,482,000 based on annual sales of 236,312,000 Mcf. These costs, which reflect the decrease in Michigan Wisconsin's gas deliveries which would result from the Phillips' drop-off, would be even greater if the computations were based on the conditioned prices required by this Opinion.

[12] See Opinion No. 350, page 13.

[13] Inasmuch as we are conditioning the certificates herein issued to require the filing of initial prices of 15 or 17 cents, depending upon the area of the sales, we shall require the substitution of such prices in the supplemental agreements providing for the prepayments, and shall require the producers to credit against their first deliveries to Michigan Wisconsin the difference between the prepayments actually made and those that properly should be made at the conditioned prices.

The Btu Adjustment.

In this proceeding, as in the *Panhandle* case, we are faced with the problem of passing on a proposed Btu adjustment, which is an integral part of the parties' contract arrangements, prior to completion of the pending rule-making proceeding in Docket No. R–200, in which it is our intention to determine, as a matter of general policy, whether such adjustments should be allowed in producer contracts, or, if allowed, the conditions to govern their operation. In the absence of basic policy guidelines with respect to Btu adjustments, to be established in Docket No. R–200, our determination of the Btu question in this case must necessarily be limited in scope, and should not be construed either as a precedent to be relied upon or followed in subsequent proceedings, or as a prejudgment of the issue presented in the rule-making proceeding.

Our primary concern with the Btu adjustment is its potential impact upon the pipeline company's jurisdictional gas service. If there is no adverse impact upon Michigan Wisconsin's jurisdictional customers by reason of the operation of the proposed adjustment, and there are benefits to be realized therefrom by the producers, the pipeline, or gas consumers, then, in our opinion, the proposed adjustment may be allowed; subject, however, to such conditions as may be necessary to fully protect the public interest, including a condition making the allowance of the adjustment in this case contingent upon and subject to the general policy requirements to be set forth in Docket No. R–200.

The base initial price in Michigan Wisconsin's contract with the producers is for gas with a heating value of 1,000 Btu's per cubic foot. The Btu adjustment provisions in the contracts would increase the base price by 1/100 cent per Mcf for each additional Btu over 1,000, with a maximum adjustment based on a heating value of 1,200 Btu's per cubic foot. No adjustment is provided for gas containing less than 1,000 Btu's.[14]

It is expected that all of the gas in this case will be gathered to a central point and will be processed for the removal of the heavier hydrocarbons by either the producers or by Michigan Wisconsin prior to transmission through Michigan Wisconsin's new lateral. Thus the Woodward area gas, which is estimated to run on a composite stream close to 1,100 Btu's, will be stripped to close to 1,000 Btu's before entering Michigan Wisconsin's mainline system. In these circumstances, it is not anticipated that Michigan Wisconsin will encounter any operating difficulties by reason of its purchase of high Btu gas at the wellhead; and to the extent that the processed gas is not stripped below 1,000 Btu's per cubic foot when it enters Michigan Wisconsin's new lateral, it can be mixed with Michigan Wisconsin's low Btu Phillips' gas so as to enhance to some degree the average heating value of Michigan Wisconsin's mainline gas stream.[15] Any such increase in the heating value of Michigan Wisconsin's gas would be within a range which normally can feasibly be utilized by most gas consumers. Thus, there seems to be no serious problem with respect to the transmission and use of this proposed gas supply in Michigan Wisconsin's system or with respect to the cost of transmission associated therewith. There remains to be considered, however, in determining whether the Btu adjustment should be allowed, the effect of the operation of the adjustment provisions on the pipeline's purchased gas cost. If the cost of purchased gas to be passed on to jurisdictional cus-

[14] The contracts provide that the gas shall have a total heating value per cubic foot of not less than 1,000 Btu's and not more than 1,200 Btu's.

[15] Michigan Wisconsin's Form No. 2 filed with the Commission for the year 1960 shows a weighted average Btu content of 995 for gas delivered through its main line transmission system from the southwest. Michigan Wisconsin's gas is not processed for the removal of liquids after it enters the mainline system.

tomers is not increased out of proportion to the benefits to be derived from the purchase of the additional Btu's the adjustment may properly be allowed subject to such conditions as may be required to fully safeguard the consuming public.

Michigan Wisconsin has entered into precedent processing agreements with the producers whereby the latter are given an option to construct and operate, either alone or in cooperation with others, a gas products recovery plant on Michigan Wisconsin's lateral for the purpose of processing the gas. If any producer exercises this option, then all of the gas purchased by Michigan Wisconsin in the Woodward area will be gathered and delivered by Michigan Wisconsin to the producer's plant for processing, whether or not other producers join in the processing arrangements. Under the agreements, the producers participating will reimburse Michigan Wisconsin for shrinkage and fuel used in processing, as well as for the loss of Btu's down to 1,000 on a basis of 1/100 cent per Mcf per Btu. Thus, to the extent that the gas is not stripped below 1,000 Btu's, Michigan Wisconsin will recover essentially what it pays for the Btu's at the wellhead, and there will be no adverse impact on Michigan Wisconsin's jurisdictional rates by reason of the Btu adjustment provisions in the producer contracts.

Should none of the producers exercise the option to process the gas—an unlikely occurrence in view of testimony by representatives of both the producers and Michigan Wisconsin as to the desirability and profitability of the stripping operation—Michigan Wisconsin will process the gas itself. However, even if this should occur, the Btu adjustment provisions in the purchase contracts would not operate to the disadvantage of Michigan Wisconsin's jurisdictional customers, since in fixing Michigan Wisconsin's rates the Commission would either offset the profits from the sale of the liquids against the increased cost of gas, or would allocate the additional cost of the Btu's removed in processing to the sale of the liquids and not to the jurisdictional resale of the gas. It should further be noted in this connection, that the cost of the additional Btu's to Michigan Wisconsin under the limited type of Btu adjustment provided in these contracts will be considerably less than would be the case under a full percentage type of adjustment such as that recently allowed by us in the *Panhandle* case, referred to above. Thus, assuming a base price of 17 cents per Mcf for 1,000-Btu gas, which is a price of .017 cents per 1,000 Btu's, a full percentage type of adjustment would result in an additional cost of .017 cent per 1,000 for the excess Btu's. Under the limited adjustment here provided, the excess Btu's will cost Michigan Wisconsin only .010 cent per 1,000.

Under the terms of the purchase contracts, the producers may not process their gas for the removal of liquids at the wellhead. They must, if they wish to process, exercise the option under the precedent processing agreements to undertake, individually or in cooperation with others, the construction and operation of a central plant through which all of the gas gathered in the Woodward area will be processed. The purpose of this provision is to insure delivery of a sufficiently rich stream of gas to the central plant to make the operation profitable. If there were no Btu adjustment provisions in the purchase contracts, those producers who are either unwilling or unable to enter into a centralized processing operation would be unable to realize any revenue for the additional heating volume of their gas, as represented by Btu's per cubic foot over 1,000 sold to Michigan Wisconsin at the wellhead. Thus, even though the net effect of the operation of the Btu adjustment may be a "wash" so far as Michigan Wisconsin is concerned, the Btu adjustment will nevertheless provide partial compensation for those producers who do not join in the processing operation.

736-330—64——32

In our judgment the Btu adjustment provisions will not adversely affect Michigan Wisconsin's jurisdictional gas customers, and as applied under the circumstances of this case may be found to meet the test of public convenience and necessity. We shall therefore allow the adjustment, subject however to the following conditions required in the public interest. First, the adjustment, as herein allowed, shall be subject to our determination with respect to such adjustments as a matter of general policy in the current rule-making proceeding in Docket No. R-200; and we reserve continuing jurisdiction to require modification of the adjustment provisions in the purchase contracts and processing agreements consistent with the policy so determined and the requirements of the public convenience and necessity in the circumstances of these sales.[16] However, no such modification of the terms and conditions of the purchase contracts or the processing agreements shall be made which would permit a Btu price adjustment more favorable to the producers than the limited price adjustment for Btu's over 1,000 per cubic foot now provided in the producers' contracts with Michigan Wisconsin and herein certificated. Allowance of the adjustment herein shall be further conditioned upon inclusion in the rate schedules to be filed by the producers of a full percentage downward adjustment in price for gas having less than 1,000 Btu's per cubic foot, and upon modification of the precedent processing agreements to require reimbursement by the producers to Michigan Wisconsin on the basis of a full percentage adjustment for the removal of Btu's below 1,000 in processing the gas.

The purchase contracts presently contain no provision at all for a downward adjustment in price for gas having less than 1000 Btu's per cubic foot. Similarly, the precedent processing agreements contain no provisions for reimbursement to Michigan Wisconsin for Btu's below 1,000 removed by the producers in stripping the gas, although they provide that the producers may strip the gas to 950 Btu's before redelivering it to Michigan Wisconsin at the tailgate of the processing plant. In the absence of such provisions, gas consumers would be required to pay for Btu's not received if Michigan Wisconsin were to take delivery of gas of less than 1000 Btu's at either the wellhead or the tailgate of the plant.[17] To protect the consumer against such an occurrence, the full percentage type of adjustment referred to is required; since only through the operation of this kind of adjustment will the price of the gas be adjusted on the basis of the price which Michigan Wisconsin is required to pay for the Btu's at the wellhead.

Under the full percentage type of adjustment, the reduction in the wellhead price for gas of less than 1,000 Btu's, and the reimbursement to Michigan Wisconsin for Btu's below 1,000 removed by the producers in processing the gas, are computed as that proportion of the base price for 1000 Btu gas which the number of Btu's below 1,000 bears to 1,000. Thus, if the base price is 17 cents per Mcf, and the gas is delivered to Michigan Wisconsin after processing at 950 Btu's, the reimbursement for the 50-Btu reduction below 1,000 would be 50/1,000×17 cents per Mcf, or .85 cents per Mcf. This is a price for the Btu's of .017 cents per 1,000, which is the price paid by Michigan Wisconsin for the Btu's at the wellhead.

---

[16] Such modification as may be required in accordance with this condition and the policies to be set forth in Docket No. R-200 shall be prospective only.

[17] Although Michigan Wisconsin is not required to take delivery at the wellhead of gas with a heating value of less than 1,000 Btu's, it is possible that it may do so, and provision should be made for the protection of the gas consumers should this occur.

Dehydration.

Staff urges that the initial prices herein certificated should be for gas which has been dehydrated in accordance with the standard for pipeline quality gas proposed in Docket No. R–200. Under this standard, the producers would be required to deliver the gas to Michigan Wisconsin with a water content of not more than 7 lbs. per million cubic feet. Statement of General Policy No. 61–1 indicates that the price standards therein set forth apply to "pipeline quality gas as that term is generally understood in each area." There is nothing in the record in this case to show that the proposed sales are not of pipeline quality gas as that term is generally understood in these pricing areas. The gas is from the same fields, and in some instances from the same wells, as that which we authorized to be sold to Panhandle at the ceiling levels in the *Panhandle* case referred to before.[18] Furthermore, as heretofore, this gas will in all probability be processed by the producers in accordance with the precedent processing agreements; and under these agreements the producers are required to deliver the gas to Michigan Wisconsin at the tailgate of the processing plant with a water content of not more than 5 lbs. per million cubic feet.

The Pipeline Certificate

Michigan Wisconsin's need for additional gas supplies to offset the dropoff in deliveries from Phillips is clearly established. The Phillips gas presently represents nearly two-thirds of Michigan Wisconsin's total supply to the southwest, and Michigan Wisconsin must replace this southwestern supply with new gas from the same general area if it is to maintain service through its existing mainline facilities on a high load factor basis. The record shows that the Woodward area represents the only substantial proved and uncommitted reserves located within reasonable proximity to Michigan Wisconsin's mainline. There does not appear to be any question with respect to the desirability of the proposed gas supply, or with respect to the cost, the economic or engineering feasibility, or the financing of Michigan Wisconsin's proposed facilities for the transportation of the gas.[19] Accordingly, we shall certificate the construction and operation of the facilities proposed by Michigan Wisconsin in its application; subject, however, to acceptance by the producer applicants of the certificates herein issued to them for the sale of the Woodward area gas to Michigan Wisconsin.

The Commission further finds:

(1) Michigan Wisconsin is a "natural gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) Michigan Wisconsin's proposed facilities hereinabove referred to, and more fully described in the application, will be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such facilities, together with the construction and operation thereof, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

---

[18] Allowance of the ceiling prices for sales at the wellhead or at the outlet of separators near the wellhead in this case and the *Panhandle* case, does not constitute a determination by us of the standard of pipeline quality to be applied to gas sold in these areas. This determination will be made in Docket No. R–200.

[19] Michigan Wisconsin's proposed facilities consist generally of some 62 miles of 20-inch line, 35 miles of 16-inch line, 69 miles of smaller diameter line. The estimated cost of these facilities is approximately $6,796,000.

(3) Each of the independent producers named above as parties to this proceeding is or upon initiation of the proposed sales to Michigan Wisconsin will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is or will be a "natural-gas company" within the meaning of the Natural Gas Act.

(4) The sales of natural gas proposed by each of the producer applicants, as more fully described in their applications, are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Subject to the requirements of our order herein and the conditions of the certificates herein issued, Michigan Wisconsin and the producer applicants are able and willing to properly do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The construction and operation of the facilities proposed by Michigan Wisconsin, and the sales proposed by each of the producer applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates should be issued to each of them as hereinafter ordered and conditioned.

(7) The conditions attached to the certificates of public convenience and necessity herein issued are required by the public convenience and necessity.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued, upon the conditions hereinafter set forth, to Michigan Wisconsin Pipe Line Company for the construction and operation of the facilities proposed, as more fully described above and in its application, and to each of the above-named independent producers for the sale of natural gas in interstate commerce for resale as proposed, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described above and in their applications.

(B) The certificate herein issued to Michigan Wisconsin and the rights granted thereunder are conditioned upon Michigan Wisconsin's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c), and (e) of Section 157.20 of such Regulations. The time within which Michigan Wisconsin's facilities shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20, is hereby fixed at six months from the date of issuance of this order.

(C) The certificates herein issued to the producer applicants are granted upon the express condition that each of said producers shall file a rate schedule with the Commission within 30 days from the date of issuance of this order providing for an initial wellhead price, replacing the initial contract price as proposed, not in excess of 15 cents per Mcf, at 14.65 psia, including tax reimbursement, for gas sold in Woods, Dewey, Major and Alfalfa Counties, and not in excess of 17 cents per Mcf, at 14.65 psia, including tax reimbursement, for gas sold in Woodward County. The initial price, as so conditioned, shall be subject to upward adjustment for gas containing more than 1000 Btu's per cubic foot as proposed; provided, however, as a further condition of the issuance of the certificates herein, that the rate schedules to be filed by the producer applicants shall also make pro-

vision for a full percentage downward adjustment in price for gas containing less than 1000 Btu's per cubic foot. The precedent processing agreements shall be similarly modified to provide reimbursement to Michigan Wisconsin on the same basis for Btu's below 1000 removed by the producers in processing the gas. Except as provided by this order, said rate schedules shall in all respects conform to the producers' applications.

(D) In the event the Commission, by amendment of Policy Statement No. 61–1, adjusts the boundary between the Panhandle area and the "Other" Oklahoma area so as to increase the initial wellhead price level for new gas in the area of the sales herein certificated, the producer applicants accepting the certificates herein issued may thereupon substitute new rates consistent with their contracts reflecting the amount of such increase, and thereafter collect these new rates prospectively in lieu of the initial rates herein required.

(E) The certificates herein issued to the producer applicants are granted upon the express condition that the allowance of the take-or-pay provisions and the upward Btu price adjustment provisions in their contracts with Michigan Wisconsin is subject to our ultimate disposition with respect to such provisions in the rule-making proceedings in Docket Nos. R–199 and R–200, respectively; provided, however, that no modification of the terms and conditions of the purchase contracts or the processing agreements with respect to the operation of the Btu adjustment shall be made which would permit a Btu price adjustment more favorable to the producers than the limited price adjustment for Btu's over 1,000 per cubic feet now provided in the producers' contracts with Michigan Wisconsin and herein certificated. Upon the establishment by amendment to the Statement of General Policy No. 61–1, or by regulation, of general policies governing such provisions in producer contracts, the producers accepting the certificates herein issued shall file within 30 days amended rate schedules in conformity therewith and with this paragraph (E). The producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. Any changes or modifications to be made in accordance with this paragraph (E) shall be prospective only.

(F) The certificates herein issued to those producer applicants who have entered into supplemental agreements with Michigan Wisconsin for prepayments of gas are granted upon the express condition that the amount of said prepayments be recalculated on the basis of the reduced initial prices required by paragraph (C) above; and to the extent that the prepayments heretofore made exceed the amount of the prepayments as so recalculated, the producers shall credit the prepayments made against the first deliveries of gas to Michigan Wisconsin under the basic contracts. The producers shall submit to the Commission within 30 days from the date of issuance of this order the recalculation of the prepayments herein required, together with a statement of the excess of prepayments to be credited against the purchase price of gas first sold to Michigan Wisconsin pursuant to the contracts.

(G) The certificates herein issued to the producer applicants shall be accepted in writing and under oath within 30 days from the date of the issuance of this order; and the facilities authorized by said certificates shall be constructed and placed in actual operation within six months from the date of the issuance of this order.

(H) The certificates herein issued to the producer applicants are not transferable and shall be effective only so long as each of said applicants continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objection relating to the operation of any price or related provision in the gas purchase contracts herein involved.

(J) The certificate herein issued to Michigan Wisconsin shall not become effective until acceptance by the producer applicants of the certificates herein issued to them.

(K) Except as herein granted the exceptions to the examiner's decision are hereby denied.

DECISION

UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY UNDER THE NATURAL GAS ACT

(Issued July 14, 1961)

COSTELLO, *Presiding Examiner:* This is a certificate proceeding which was initiated by the applications of Michigan Wisconsin Pipe Line Company and twelve independent producers of natural gas.[1] Michigan Wisconsin and the producers are seeking jointly and severally to obtain Commission approval of a transaction which would provide Michigan Wisconsin with a large amount of natural gas for general use on its system. Before discussing the matter in somewhat greater detail, it might be mentioned that there are two features of this proposed transaction which will draw the greatest attention by the Commission. These features generally relate to the proposed initial price to be paid by Michigan Wisconsin for the gas in question, and the other feature is related to a prepayment plan under which the pipeline company would pay in advance for natural gas to be taken in subsequent years. Other than for these two features and a question with respect to the acceptability of a Btu adjustment provision in the contract, there are no significant problems which merit attention.[2]

This matter involves a relatively short record which was accumulated over some eight hearing sessions. There are no participants other than for the pipeline and producer applicants and the Commission's Staff. Absent from participation in the hearing phase of the proceeding are any of Michigan Wisconsin's numer-

---

[1] These producers are as follows:

Pan American Petroleum Corporation, Shell Oil Company, Sinclair Oil and Gas Company, Wilcox Oil Company, Atlantic Refining Company, Kerr-McGee Oil Industries, Inc., Skelly Oil Company, Woodson Oil Company, Amerada Petroleum Corporation, Sun Oil Company (Mid-Continent Division), J. M. Huber Corporation, and Sunray Mid-Continental Oil Company.

It might be remarked that the project herein involved 16 producer contracts of which only 12 are embraced by this proceeding.

[2] There was a question raised by the Staff with respect to the dehydration of the gas. Several producers scoffed, some indicated puzzlement, others and Michigan Wisconsin did not discuss the matter. It appears to have only minor significance. Pipeline quality gas, in the area in question, is "sweet gas, undehydrated, delivered at natural well pressure at the wellhead or the outlet of the separator located nearby the well, of a Btu content in excess of at least 950 Btu's per cubic foot." Under this definition, provided by Shell's Mr. Golush, the producers have contracted to sell Michigan Wisconsin pipeline quality gas. Michigan Wisconsin must dehydrate the gas.

ous customers and the state regulatory commissions from the states in which Michigan Wisconsin provides natural gas service. The only opposition of record to the proposals of these applicants stems from the Staff of the Commission, which has taken the position that the proposals are not acceptable in their present form.

It might be noted at this point that the questions and issues have been very carefully and thoroughly briefed by all of the major participants. The briefs and arguments submitted contain careful and skillful analyses of the record, the issues, and the precedents which may have a bearing upon the Commission's consideration of this matter.

The facts are relatively simple. Michigan Wisconsin desires to construct and to operate a supply lateral and gathering facilities which will enable it to receive and transport natural gas from the Woodward area of northwest Oklahoma to its existing main line.[3] These facilities of Michigan Wisconsin would consist generally of some 62 miles of 20-inch line, 35 miles of 16-inch line, as well as some smaller diameter line aggregating approximately 69 miles. The cost of these facilities is estimated at approximately $6,796,000.[4]

It should be noted for the benefit of those not well acquainted with Michigan Wisconsin Pipe Line Company and its history that this proposal does not relate to an expansion program of the pipeline but relates to an anticipated decline in gas supply from Michigan Wisconsin's principal supplier, Phillips Petroleum Company. The Michigan Wisconsin system was launched with Phillips gas, which was known to have a limited life. It was known at the time Michigan Wisconsin began its operations that the Phillips gas would have to be replaced within a foreseeable time. Michigan Wisconsin is obligated to purchase its first 343,000 Mcf of gas from Phillips so long as Phillips is able to maintain that deliverability. It is known, however, that Phillips cannot deliver the full 343,000 Mcf per day in 1963 and in later years. This situation, which is commonly referred to in the record and by the witnesses as the Phillips "drop-off," is the problem Michigan Wisconsin hopes to solve by the contracts it has entered with the producers in the Woodward area. It is believed that the drop-off by Phillips will result in a daily average delivery of less than 300,000 Mcf in 1964, and that by 1967 this amount will have been reduced to something less than 200,000 Mcf per day. In order to maintain its pipeline on a high-load factor basis, Michigan Wisconsin must procure additional gas from some source. It faces the alternative of purchasing or attempting to purchase smaller packages of gas to fit the drop-off as this drop-off occurs, or to contract for enough gas now to meet all of the anticipated drop-off whenever it might occur.

Because independent producers, as a general rule must insist that a purchaser take delivery of gas very near its time of purchase, and because the drop-off by Phillips will be gradual, Michigan Wisconsin cannot contract for and take delivery of any large amount of gas at any one time unless there is some way of disposing of the gas which is surplus to its immediate needs, until such time

---

[3] This is an area described as consisting of approximately 30 townships located in Woodward, Woods, Major and Dewey Counties, Oklahoma, and situated immediately adjacent to and southeast of Laverne Field, Oklahoma.

The fields included in this area are the Northeast Cederdale Field of Major and Woodward Counties; the Northeast Selling Field of Major County; the Northwest Chester Field of Woodward County; the West Campbell Field of Major County and the Lenora Field of Dewey County, all in Oklahoma.

[4] The lateral line involved herein would run from Michigan Wisconsin's compressor Station #2 to the Cederdale Field in Woodward County, and would have a capacity to carry "upwards of 100 million cubic feet per day."

as its needs have expanded to the point where all of the gas may be fitted into its load pattern.[5]

There are probably a number of ways this problem may be solved. Michigan Wisconsin has chosen an arrangement whereby gas reserves in this large new field[6] have been contracted for with producers with fairly substantial prepayments being made to the producers in lieu of immediately taking the gas. Another solution, as indicated above, would be to wait until the needs for additional quantities of natural gas actually arise and, at, or just before that time, scout around for the needed quantities of gas. Another possible partial solution which has been advanced by the Staff and which has aroused considerable indignation by Michigan Wisconsin, would be the giving up of certain undeveloped Phillips gas by Michigan Wisconsin from the so-called Kathryn Field, which gas is to be made available to Michigan Wisconsin later.[7] Such foregoing of the taking of the Kathryn gas from Phillips, the Staff has urged, would provide more opportunity for Michigan Wisconsin to take greater quantities of gas under the present proposed arrangement at an earlier date. Another solution (and there may be several others which will not be advanced herein) would be for Michigan Wisconsin to make arrangements with some other pipeline company to share in the utilization of gas involved in these contracts, until Michigan Wisconsin finds it necessary to utilize the gas entirely for its own needs. There is no suggestion in the record that any attempt has ever been made by Michigan Wisconsin to find such other pipeline which might be able to cut down its own takes from existing sources, or to cut back on its own production, in order to utilize some of the Woodward area gas for a while.

None of the briefs of the applicants or the Staff has cited cases wherein this particular kind of arrangement has been proposed to the commission before in a certificate case, *i.e.*, a prepayment for gas.[8]

The other matter which calls for particular attention by the Commission in its disposition of these applications is the proposed 19.5 cents per Mcf price which is involved in all of these contracts. This price is one which does not stem from any prior or existing sale in the area (as this is a new field) and therefore the initial price proposed herein is one which must be carefully considered in the light of precedent, and with consideration of the effect such price may have upon the public interest and the regulatory processes of the Commission.[9] In general, the applicants have presented all of the evidence which they

---

[5] In general, the contracts herein meet this problem by providing that Michigan Wisconsin's rate of take shall be one million cubic feet per day for each 7.3 billion cubic feet of agreed-upon reserves with a daily minimum of 75 percent and a daily maximum of 125 percent of that volume. In addition, during the first three years after deliveries commence, Michigan Wisconsin has the contract right to reduce its takes down to 25 percent of the average daily quantity with the right to take make-up gas over the life of the contracts. (One producer, Pan American, provides a minimum take of 40 percent and a make-up period of 10 years beyond the initial three years of delivery).

[6] 287,000 net acres with 238 billion cubic feet of proved reserves.

[7] The Kathryn sale is not yet covered by certificate. It is assigned Docket No. CI61–1237 and, of course, is not before this examiner, and may not be commented upon appropriately herein. The Kathryn gas is 13 cent gas.

[8] Subsidy-type prepayments have been considered an acceptable cost in at least one rate case.

[9] *cf* the *Humble Case*, G–13679, 24 FPC 191 at 193: "In view of the Supreme Court's emphasis in the *Catco* case on holding the line on gas prices, *particularly in new and undeveloped gas fields*, we consider that we should not lightly give our approval to these proposed new higher initial prices. One or a few higher prices in a new field inevitably exert pressure for increased prices for all other sales in the vicinity, even though all sales may not be identical as to conditions of production or delivery, thus forming the basis

believe would have a bearing upon this matter of the initial contract price. The Staff of the Commission believes the initial price to be excessive and recommends that a certificate, if granted by the Commission, should contain a condition which will reduce the price by two to four cents per Mcf, depending upon its source. All of these matters will be discussed in some detail in the following text.

Additional Factual Considerations

In 1957 Michigan Wisconsin applied for and obtained authority to construct lateral main line facilities to transport gas from the Laverne Field in northwestern Oklahoma. The Laverne Field has been developed by at least some of the same producers that are involved in this case, and is in the general vicinity. The Laverne contracts contain the key to the 19.5 cents for the Laverne gas under its contracts beginning in 1964. The Laverne gas started out at 17 cents per Mcf but will go to 19.5 cents per Mcf in 1963 under the periodic price increase provision in the Laverne contract. There are many statements in the record and important argument to the effect that the Laverne development and production costs are considerably lower than the Woodward costs would be, and that the 2.5 cents additional amount for the initial price for Woodward gas is more than justified by the particular geology involved, as well as cost trends since the Laverne Field was opened.

There is no question but that if Michigan Wisconsin could obtain approval of the instant proposal absent any price problem arising either from the stated initial price or from the price aspects of the prepayment proposal, the solution it proposes to its drop-off problem would be ideal. Michigan Wisconsin would obtain flexibility in its takes of gas and it would obtain the dedication of potentially productive acreage which is greater than that usually provided by other gas purchase contracts. By having the gas from the Woodward area available when the drop-offs from Phillips are experienced, Michigan Wisconsin would be able to maintain its pipeline at a high-load factor and would thereby obviate the cost of service impact which would surely result from operating the pipeline at its less than full capacity.

Michigan Wisconsin has no production of its own. It has been tied to Phillips since 1945 under an agreement which has obligated it to take its first 343,000 Mcf per day from Phillips so long as Phillips is able to deliver that volume. If Phillips is not able to deliver the full volume, Michigan Wisconsin is still obligated to purchase such lesser volume. In these circumstances, it may be observed that Michigan-Wisconsin has had little flexibility in being able to acquire any firm substitute gas supply until the shortages actually occur on the Michigan Wisconsin system. The Phillips deliveries represent nearly two-thirds of Michigan Wisconsin's total supply in the southwest, and this pipeline does not now have numerous supply lines and gathering systems into areas of potential production.

There is no question about the decline in production from the Hugoton Field within a very short time. As noted previously, Phillips will be required to develop the so-called Kathryn or sub-sea acreage in order to maintain the full deliveries of 343,000 Mcf per day in 1962.

The record in this matter shows that from five fields in the Woodward area Michigan Wisconsin will have access to recoverable reserves of 304,076,000 Mcf and that the proved recoverable reserves under contract amount to 238,000,000 Mcf.

---

for general area price rises. The prevention of such results was a major objective of the *Catco* decision." (emphasis added)

The record also supports the proposition that the Woodward area of western Oklahoma represents the only substantial proved and uncommitted reserves which lie within reasonable proximity to Michigan Wisconsin's main line. It is argued that the only areas of present and potential production available to Michigan Wisconsin to meet the Phillips drop-off are the Woodward and adjacent areas.

There has been no question raised with respect to the cost or engineering feasibility of the proposed facilities. The Michigan Wisconsin engineering and operating personnel are experienced and skillful, and there is no question with respect to the ability of the proposed facilities to provide the transportation capacity required.

Michigan Wisconsin's proposed facilities will be financed by short-term bank loans and by internally-generated funds. Permanent financing will follow as a part of a subsequent over-all financing program. It is contended by Michigan Wisconsin and its witnesses that failure to replace the Phillips drop-off with this particular gas from the Woodward area would be detrimental to the customers of Michigan Wisconsin and would actually result in an increase of their cost of gas. If present pipeline deliveries are reduced, the cost of service for the remaining deliveries will be increased. Thus it would be the customers who would bear the brunt from an inability of Michigan Wisconsin to keep its line filled from the southwest to Station 10 in Illinois.

The only alternative suggested by Michigan Wisconsin would be for it to obtain additional gas from its other suppliers, namely Midwestern and American Louisiana. This purchase of gas from either of these two suppliers would be expensive and even if purchased would not improve the use or load factor on the lower end of the system.

It does not appear that there is any substantial issue with respect to the desirability of the gas which Michigan Wisconsin seeks to have authorized nor the economic feasibility of the proposal from the standpoint of Michigan Wisconsin. While the gas it would purchase from the producers involved in this matter is vastly more expensive than the Phillips gas which it will replace, Michigan Wisconsin has demonstrated that its failure to get gas for replacement even at this price would result in considerable detriment to its customers.

The Issues and Elements of Proof

As indicated heretofore, the issues in this matter stem almost entirely from the initial price proposed for the Woodward area gas. The issue stated in general terms is, of course, whether the public convenience and necessity requires the certification of the project as proposed by Michigan Wisconsin and the 12 suppliers. Considerations attaching to what is required by the public convenience and necessity, and what constitutes adequate proof thereof have been the subject of numerous Commission opinions and court review proceedings over the past several years since the Commission began its regulation of independent producers. It may be said, in general, that more certainly must be shown for a producer to obtain certificate authorization than the mere fact that the pipeline company to which it would sell the gas is ready, willing, able, and eager to get the gas, and that there was an absence of fraud or collusion in connection with the transaction which gave rise to the purchase. Also, it is clear from the various court decisions that the Commission must satisfy itself when a proposed transaction such as this comes before it that there will be no disturbance of the price structure for natural gas in the particular area, either by reason of the activation of the favored nations clauses or other automatic provisions of con-

tracts in the area or by the establishment of a new price level in the market area which all prospective buyers must meet or exceed if they have any hope whatever of acquiring additional supplies of gas. Much of the advice obtained from court decisions is necessarily of a negative nature because the courts do not attempt to supplant an agency's function. It is the function of the courts on review, speaking generally, to proscribe faulty treatment of a matter by the Commission, rather than to prescribe a course of action by a regulatory agency which would govern its future consideration of other cases.

In fairness to the producers in this matter, it should be noted that there has been an effort to provide good and sufficient reasons for the Commission to authorize this transaction by the issuance of a certificate without any condition. There has been presented considerable amount of data with respect to the geological conditions which affect the price in these new fields, and to demonstrate why the 19.5 cents initial price should not be considered as excessive.

One of the producers, Sinclair Oil and Gas Company, made an abbreviated cost of service presentation based upon hypothetical rates of return. This evidence purports to show that the proposed contract price in this proposal is well supported from a cost standpoint. The other producers did not undertake as ambitious a presentation in this regard as did Sinclair.

Discussion of the Evidence and Conclusions

The Prepayment Proposal

Michigan Wisconsin has prepaid to the producers $4,014,928.17 for one year's contract quantity of gas on the basis of one million cubic feet for each 4 billion cubic feet of presently proved reserves. In each contract there is a provision that if either party refuses to accept a certificate, the contract is terminated and the seller must refund the prepayments at 6 percent interest.

Michigan Wisconsin has the right to make up prepaid gas (a two-year supply based upon minimum contract deliveries) over the entire life of the contract and, if demanded, the seller must deliver daily quantities even in excess of the 125 percent of the average daily quantity specified in the gas purchase contract to the extent the seller's equipment, prudent operations and state conservation commission regulations permit.

On its face the prepayment plan advanced by the applicants herein has many plus features and no minus features. If all things were to work out as envisioned everyone involved in this transaction would receive benefits. Michigan Wisconsin would have gas "in the bank" so to speak, for future use when needed. The producers would have some of their money now instead of having to wait until the gas is actually delivered. Is there any reason why such an arrangement will be adverse to the interests of the customers attached to Michigan Wisconsin, to gas customers in general, or to the public at large? Is there anything inherent faulty with such proposed arrangements?

The Staff has attacked the prepayment feature on several grounds, one of which is that the true cost of prepaid gas would range from 20.7 cents to 45.1 cents per Mcf (depending upon the date the gas is actually taken). This increased cost is brought about by the addition of the interest component which might otherwise have been earned by the cash used for the prepayment or which Michigan Wisconsin must pay to lenders for the use of money in lieu of the money on deposit with the producers in the form of the prepayment. Thus, points out the Staff, the effect of the prepayment arrangement is to "transfer the burden of acquiring capital to the consumer." It is the position of the Staff that regardless of the justification for the initial price

of 19.5 cents, the gas on deposit with the producers is sure to cost more than 19.5 cents, possibly a great deal more, and these additional gas costs will be paid ultimately by consumers. The Staff points out that the inclusion of the prepaid provisions in the gas purchase contracts represents additional gain to the producer which might otherwise be reflected in an even higher initial contract price. Another point which the Staff has advanced is that the gas does not belong to Michigan Wisconsin by reason of its prepayments, and that it will not become the property of Michigan Wisconsin until it is reduced to possession. The Staff indicates that there are possibilities that this gas might never be available to Michigan Wisconsin by reason of drainage or the failure of wells to perform in accordance with the expectations. The Staff does not believe that Michigan Wisconsin would have any basis for a claim to retrieve the prepayments from the producer applicants in the event it became impossible for some reason for Michigan Wisconsin to get the gas.

Michigan Wisconsin has undertaken to answer the Staff in great detail in the various points it has presented. The company points out that the prepayments are based upon only proved reserves, and that the Woodward area being in its early stages of development will eventually contain as much as three or four times the present proved reserves. These prepayments, it is alleged, while geared to a particular volume of gas, were in fact related to all of the gas presently proved or to be proved in the Woodward area. Another point urged by Michigan Wisconsin is that the makeup of the prepaid gas will occur much faster than was assumed by the Staff and that the cost of the prepayments must be spread over a larger volume of gas than that used by the Staff if a meaningful figure of additional cost per Mcf is to be obtained under Michigan Wisconsin's view. It is quite probable that the reserves involved will amount to some 750,000,000 Mcf or more, and that in such case the additional cost of which may be related to the prepayments amounts to no more than two or three-tenths of a cent per Mcf.

Michigan Wisconsin has argued at considerable length to the effect that it will take make-up gas caused by contract-take deficiencies at a considerably greater rate than estimated by the Staff.[10] Michigan Wisconsin plans to make up deficiencies by taking 125 percent, or more, of a much higher daily quantity in subsequent years. Michigan Wisconsin believes that deficiencies in initial takes could be made up within a matter of a year or two after the commencement of the Phillips drop-off.

Michigan Wisconsin says that the Staff is in error in its contention that it would take three years to take all of the deficiency gas. The pipeline company is not limited to 125 percent of the average daily quantity in taking prepaid gas, but only to the limitations imposed by prudent operation of the wells. Michigan Wisconsin points out that the Staff has ignored the fact that the reserves, and hence the contract quantities, to be delivered are expected to triple or quadruple the initial volumes. Thus, while it would take nearly eight years to make up the prepaid gas at 125 percent of the daily contract quantity on the basis of the original reserve, it would take only two years to do so if the initial reserves are enhanced, as it is expected they will be.

Michigan Wisconsin points out another alleged fallacy in the Staff's calculation of the cost per Mcf of the prepaid gas. This fallacy is the assignment of all of the prepayment costs to approximately 20,000,000 Mcf of gas. Michigan

[10] Under the contracts, the early year deficiencies must be made up before any of the prepaid gas may be taken. As the recoverable reserves increase, the daily contract quantity increases proportionately.

Wisconsin points out that the prepayment represents less than 10 percent of initial proved reserves and on the basis of future increases in reserves, the prepayment will represent only four or five percent of total reserves. It is true, says Michigan Wisconsin, that the total amount of the prepayments was mechanically arrived at on the basis of a relatively small proportion of the proved reserves. This does not justify assignment of all prepayment costs to those particular Mcf's, Michigan Wisconsin claims. The prepayment was part of a package that included purchase of 238 billion cubic feet of proved reserves, plus all of the potential reserves underlying some 280,000 acres of land. Michigan Wisconsin has purported to demonstrate that on the basis of presently proved reserves the prepaid gas will all be delivered by the end of the eighth year at the very least. The reserves expected to be developed total 500,000,000 Mcf or more. Thus, on this basis the additional cost per Mcf attributable to prepayments will be less than three-tenths of a cent.

Michigan Wisconsin thus emphasizes the fact that these prepayments add "almost nothing" to the cost of the Woodward gas, and that the benefits Michigan Wisconsin shall have obtained in return are essential to its continued efficient and economical operation.

Michigan Wisconsin believes that the Staff's argument that it will realize a handsome margin of profit on the prepayment to be in error. It is the Staff's theory that Michigan Wisconsin can borrow money at 4.5 percent and 5.5 percent, and that by capitalizing the prepayments as a part of the rate base, Michigan Wisconsin will be earning over 6 percent, or a profit margin of approximately 2 percent on the prepayments. Michigan Wisconsin maintains that the prepayments, like any other dollar of rate base, are financed with both debt and equity capital costing an amount equivalent to the rate of return, and that there is no profit to Michigan Wisconsin from prepayments.

The Staff has also contended that there is a possibility that Michigan Wisconsin might find it impossible to take all of the prepaid gas, and would thus lose some or all of the prepayments. Michigan Wisconsin believes this possibility to be too remote for serious consideration.

While Michigan Wisconsin has pointed out one instance in a rate case where the Commission has approved the inclusion of prepayments of a certain type for inclusion in the rate base (*El Paso Natural Gas Company*, 22 FPC 260, 270) the fact is inescapable that the payment of this sum of $4,140,928 will have the effect of increasing the cost of all of the gas that Michigan Wisconsin will take from these producers in some unknown amount, depending on just when the prepaid gas will be actually taken into its system. As we have seen, Michigan Wisconsin has maintained that the prepaid gas will be taken within two years, probably, and at the very least before the end of the eighth year. The Staff, however, utilizes the most adverse condition in testing the proposition and has demonstrated how serious the price impact could be with respect to this gas if it were not taken until the latter years of the contract.

The prepayment proposal in this matter creates such an element of uncertainty with respect to the impact it will have upon the customers who will have to pay for it that it raises a serious question as to whether or not this kind of an arrangement is in the public interest and whether a certificate proposal which embodies such a proposition can be said to be *required* by the public convenience and necessity. It is not the function of the Commission to manage gas pipeline companies or to tell the management of pipeline companies either directly or indirectly how they must conduct their negotiations and transact their business. On the other hand, the responsibility of this regulatory agency with respect to rates (whether those rates are contained in a certificate application

of 19.5 cents, the gas on deposit with the producers is sure to cost more than 19.5 cents, possibly a great deal more, and these additional gas costs will be paid ultimately by consumers. The Staff points out that the inclusion of the prepaid provisions in the gas purchase contracts represents additional gain to the producer which might otherwise be reflected in an even higher initial contract price. Another point which the Staff has advanced is that the gas does not belong to Michigan Wisconsin by reason of its prepayments, and that it will not become the property of Michigan Wisconsin until it is reduced to possession. The Staff indicates that there are possibilities that this gas might never be available to Michigan Wisconsin by reason of drainage or the failure of wells to perform in accordance with the expectations. The Staff does not believe that Michigan Wisconsin would have any basis for a claim to retrieve the prepayments from the producer applicants in the event it became impossible for some reason for Michigan Wisconsin to get the gas.

Michigan Wisconsin has undertaken to answer the Staff in great detail in the various points it has presented. The company points out that the prepayments are based upon only proved reserves, and that the Woodward area being in its early stages of development will eventually contain as much as three or four times the present proved reserves. These prepayments, it is alleged, while geared to a particular volume of gas, were in fact related to all of the gas presently proved or to be proved in the Woodward area. Another point urged by Michigan Wisconsin is that the makeup of the prepaid gas will occur much faster than was assumed by the Staff and that the cost of the prepayments must be spread over a larger volume of gas than that used by the Staff if a meaningful figure of additional cost per Mcf is to be obtained under Michigan Wisconsin's view. It is quite probable that the reserves involved will amount to some 750,000,000 Mcf or more, and that in such case the additional cost of which may be related to the prepayments amounts to no more than two or three-tenths of a cent per Mcf.

Michigan Wisconsin has argued at considerable length to the effect that it will take make-up gas caused by contract-take deficiencies at a considerably greater rate than estimated by the Staff.[10] Michigan Wisconsin plans to make up deficiencies by taking 125 percent, or more, of a much higher daily quantity in subsequent years. Michigan Wisconsin believes that deficiencies in initial takes could be made up within a matter of a year or two after the commencement of the Phillips drop-off.

Michigan Wisconsin says that the Staff is in error in its contention that it would take three years to take all of the deficiency gas. The pipeline company is not limited to 125 percent of the average daily quantity in taking prepaid gas, but only to the limitations imposed by prudent operation of the wells. Michigan Wisconsin points out that the Staff has ignored the fact that the reserves, and hence the contract quantities, to be delivered are expected to triple or quadruple the initial volumes. Thus, while it would take nearly eight years to make up the prepaid gas at 125 percent of the daily contract quantity on the basis of the original reserve, it would take only two years to do so if the initial reserves are enhanced, as it is expected they will be.

Michigan Wisconsin points out another alleged fallacy in the Staff's calculation of the cost per Mcf of the prepaid gas. This fallacy is the assignment of all of the prepayment costs to approximately 20,000,000 Mcf of gas. Michigan

[10] Under the contracts, the early year deficiencies must be made up before any of the prepaid gas may be taken. As the recoverable reserves increase, the daily contract quantity increases proportionately.

Wisconsin points out that the prepayment represents less than 10 percent of initial proved reserves and on the basis of future increases in reserves, the prepayment will represent only four or five percent of total reserves. It is true, says Michigan Wisconsin, that the total amount of the prepayments was mechanically arrived at on the basis of a relatively small proportion of the proved reserves. This does not justify assignment of all prepayment costs to those particular Mcf's, Michigan Wisconsin claims. The prepayment was part of a package that included purchase of 238 billion cubic feet of proved reserves, plus all of the potential reserves underlying some 280,000 acres of land. Michigan Wisconsin has purported to demonstrate that on the basis of presently proved reserves the prepaid gas will all be delivered by the end of the eighth year at the very least. The reserves expected to be developed total 500,000,000 Mcf or more. Thus, on this basis the additional cost per Mcf attributable to prepayments will be less than three-tenths of a cent.

Michigan Wisconsin thus emphasizes the fact that these prepayments add "almost nothing" to the cost of the Woodward gas, and that the benefits Michigan Wisconsin shall have obtained in return are essential to its continued efficient and economical operation.

Michigan Wisconsin believes that the Staff's argument that it will realize a handsome margin of profit on the prepayment to be in error. It is the Staff's theory that Michigan Wisconsin can borrow money at 4.5 percent and 5.5 percent, and that by capitalizing the prepayments as a part of the rate base, Michigan Wisconsin will be earning over 6 percent, or a profit margin of approximately 2 percent on the prepayments. Michigan Wisconsin maintains that the prepayments, like any other dollar of rate base, are financed with both debt and equity capital costing an amount equivalent to the rate of return, and that there is no profit to Michigan Wisconsin from prepayments.

The Staff has also contended that there is a possibility that Michigan Wisconsin might find it impossible to take all of the prepaid gas, and would thus lose some or all of the prepayments. Michigan Wisconsin believes this possibility to be too remote for serious consideration.

While Michigan Wisconsin has pointed out one instance in a rate case where the Commission has approved the inclusion of prepayments of a certain type for inclusion in the rate base (*El Paso Natural Gas Company*, 22 FPC 260, 270) the fact is inescapable that the payment of this sum of $4,140,928 will have the effect of increasing the cost of all of the gas that Michigan Wisconsin will take from these producers in some unknown amount, depending on just when the prepaid gas will be actually taken into its system. As we have seen, Michigan Wisconsin has maintained that the prepaid gas will be taken within two years, probably, and at the very least before the end of the eighth year. The Staff, however, utilizes the most adverse condition in testing the proposition and has demonstrated how serious the price impact could be with respect to this gas if it were not taken until the latter years of the contract.

The prepayment proposal in this matter creates such an element of uncertainty with respect to the impact it will have upon the customers who will have to pay for it that it raises a serious question as to whether or not this kind of an arrangement is in the public interest and whether a certificate proposal which embodies such a proposition can be said to be *required* by the public convenience and necessity. It is not the function of the Commission to manage gas pipeline companies or to tell the management of pipeline companies either directly or indirectly how they must conduct their negotiations and transact their business. On the other hand, the responsibility of this regulatory agency with respect to rates (whether those rates are contained in a certificate application

or are the subject of inquiry in a rate case) should be clear; *i.e.*, there should be no approval of a rate which unnecessarily contains indefinite elements of cost.[11] As has been observed heretofore, while the prepayments method as it has been described and outlined by Michigan Wisconsin and the producer applicants, *appears* to be the only way that Michigan Wisconsin can make arrangements now for a certain supply of gas to replace the Phillips drop-off as this drop-off occurs in future years, the element of indefiniteness of the real cost of the prepaid gas is a disturbing aspect. It may be true that as the matter finally develops, the additional cost of gas by reason of this prepayment arrangement may be a *de minimis* matter. But we do not know this now, nor is there any possible way of demonstrating that the results will be as favorable as Michigan Wisconsin anticipates they shall be.

One of the cardinal elements of rates and rate making is that a filed rate should be one which is definite and certain to the greatest degree possible. There may be factors which the regulatory agency cannot anticipate which will have a bearing upon the stability of a filed rate. However, if there are known factors which are certain to have an adverse effect upon the rate structure it is believed that the Commission should take whatever steps are available to it to protect the rate payer before approving a transaction which will give rise to additional costs and thus to potentially higher rates.[12]

It does not appear that the proposal for prepayments, attractive though it may be, has been shown to require approval in its present form. It not only provides the producers with an interest-free loan (which might be tolerated) but a loan of an unknown magnitude for which no account has been taken in the initial rate provided for in the contracts. It might be suggested that such prepayment proposal might have been acceptable if the prepayments were agreed to constitute a simple credit to be applied against the *first* deliveries of gas under the contracts. In this way, it could be known with certainty that the prepaid gas would be taken because it would be the first to be delivered. The producers would have the use of Michigan Wisconsin's prepayment money for a period of one to two years, at least and probably more, and such use should more than compensate them for the reservation and commitment of this gas to Michigan Wisconsin. This proposal, however, would require a virtual rewriting of this aspect of the contract. This is suggested only as a possible avenue of solution for the problem of indefiniteness which this prepayment arrangement has posed.

In order that there will be no question raised as to the basis for the disapproval or rejection of this prepayment arrangement herein, it may be stated once more that it is believed that the prepayment arrangements as proposed herein would have the practical effect of enhancing the initial price of the gas to a price per Mcf in excess of the amount stated in the contracts. Michigan Wisconsin has agreed in its briefs that the advancement of these funds to the producers can be translated into additional cost of the gas on an Mcf basis. It has argued persuasively that this additional cost will be sure to be *de minimis*. However, the public interest requires that this agency in considering

---

[11] Unless, of course, the rate is designed as a cost-of-service rate, subject to revision at a later date based upon actual historical data. This type of rate, utilized by the Commission in a few instances, has been avoided like the plague, whenever it has been proposed.

[12] There is constant reference to the claim that this transaction or the prepayment aspect will have no effect on Michigan Wisconsin's rates. It is evident, however, that if this company can toss out in excess of four million dollars, which will be non-revenue producing for some period up to twenty years, and, conceivably might not ever be retrieved, that some rate adjustments might be in order eventually.

a proposal such as this is to consider the potential effect on the consumer of the worst possible eventuality. Under the facts of this case, such an eventuality would be that the prepaid gas would not be taken at all, or if taken, might be taken so near to the end of the twenty-year contract period, that the true cost per Mcf would be exorbitant.

The certificate approval in this matter shall therefore be conditioned upon the submission to the Commission of contracts without such prepayment features or with prepayment features modified in such a way as to eliminate the dangers which have been suggested herein and by the Staff.

The Producer Applications

While the pipeline company in this proceeding is primarily interested in obtaining certificate approval for its own proposed facilities, it is just as vitally interested in the success of the twelve producer applicants with which it has contracted and upon which its proposal depends. The twelve independent producer applicants must each have certificate authorization to sell gas under Michigan Wisconsin under the terms and under the conditions as set forth in their contracts.

Primarily, it must be remembered that a pipeline company, such as Michigan Wisconsin when faced with a shortage in its gas supply, either present or anticipated, is so intent upon obtaining additional gas that it does not wish to be put in the role of a hard bargainer for fear it will jeopardize its economic future.

As has been remarked before by this Examiner,[13] these pipeline-producer transactions do not have the usual elements of bargain and sale. Because there usually is competition among the pipeline companies for particular reserves of gas, there must be some sweetening added to an offer in order to induce the commitment of gas supplies as competing purchasers frequently offer the same cents per Mcf. In such circumstances a pipeline company does not think in terms of saving cents or fractional cents, but rather, thinks of what the offer should be that will sew up the deal. This kind of thinking sometimes leads to overshooting, for safety. Yet a fraction of a cent multiplied by millions of cubic feet of gas can have a cost of service impact of staggering proportions. It is therefore incumbent upon the regulatory agency which has been given the duty and responsibility of reviewing these matters prior to approval to give consideration to the over-all picture, not to the deficiencies of a particular pipeline company, no matter how serious those deficiencies may seem to be.[14] Nor can the agency, in the public interest, be affected in its consideration by feelings of generosity.

This is an area which is fraught with problems. There is always the threat which hangs over all gas purchase transactions subject to regulation that if this Commission is unduly restrictive in the conditions it seeks to impose, the producer applicants will decline to sell their gas in interstate commerce. Whether the threat of such withdrawal of gas is real or imaginary in a particular situation cannot be told in advance. In this matter Michigan Wisconsin paints a picture of itself with its back to the wall, and urges that if the Commission tampers with this porposal in any considerable degree the chances that it has to operate its pipeline at a similarly low cost will be lost, possibly forever. Whether

[13] E.g., Intermediate Decision 6/24/55, *Cities Service*—Signal, G–2569–70 at p. 11 (mimeo) (apocryphal); Intermediate Decision 6/17/58, *Seaboard Oil Company et al*, G–13169, 20 FPC 330, 332 fn 4; Intermediate Decision 1/29/60, *Humble Oil*, G–15227, at p. 4 (mimeo).

[14] As stated by the Examiner in the *Humble Case*, G–13679 *et al.* 24 FPC 191, 195, at p. 201 (which has become effective as the Commission's opinion) "The willingness (of the pipeline) to pay more for gas, even though such higher payments will result in advantages or savings to it, is not a basis on which rates to be charged by producers can be justified."

or not such rejection will occur in this case if a condition, or conditions, are imposed is something which cannot be known at this time.

The 19.5 cents proposal in this proceeding is the crucial matter for Commission determination. The methods of analysis of initial certificate prices are still evolving, and may continue to be in a state of flux for some time to come. The Commission has issued several policy statements with respect to its intentions in the matter of gas pricing, among which are plans to establish area prices which will provide a base line for the consideration of gas sales proposals in the respective areas. Whether this approach by the Commission will prove to be workable or unworkable, only time and experience will tell. Thus it is difficult at this stage of the evolution of gas pricing by the Commission to make a thorough and informed analysis of the proposal herein.

The 19.5 cents per Mcf exceeds the initial prices promulgated by the Commission in its Statement of General Policy 61–1 by as much as 4.5 cents per Mcf for those sales originating in Dewey, Woods, Major and Alfalfa Counties in Oklahoma, and by 2.5 cents for those sales proposed to be sold from Woodward County in Oklahoma.

The Staff has recommended the approval in this case of a 17 cent price for Woodward County gas and a 15 cent price for gas originating in the "other" Oklahoma counties involved herein. The effect of the Staff's recommendation is to reject the arguments by Michigan Wisconsin and the producer applicants to the effect that the price line set up by the Commission in its policy statement is unrealistic, unreasonably low, and that scant attention, if any, should be paid to it in the resolution of this matter.

As has been observed before, the 19.5 cents involved here seems to have arisen from the fact that this is the second step in the periodic price schedules in the Laverne Field gas purchase contracts. The Laverne contracts, therefore, provide the only point of reference used by Michigan Wisconsin and the producers in arriving at the gas price above the 17 cent base figure, rather than 18.5, 19.0, or some other intermediate point in excess of the 17 cent figure. The foregoing illustrates the imprecision which characterizes these gas sales transactions. Presumably, if the second step in the Laverne contracts had been 21.5 cents, or some other figure, it would have been *that* figure which would have been used for the initial contracts herein. Having developed an acceptable initial price, Michigan Wisconsin and the independent producers here involved must attempt to work backwards and to justify this override on the initial Laverne contract price by showing the principal differences in the cost considerations affecting the Woodward Field. However, these justifications, impressive though they are, have no mathematical significance in that one or two cents either way could have been justified as easily as the 19.5 cents has been.

The geologic testimony contained in the record seems to support the producers in their contentions that they are entitled to a higher price per Mcf for Woodward gas in the initial contract than for the Laverne gas.

Michigan Wisconsin and the producers together argue that all consideration of the 19.5 cent price proposed herein must begin with a premise that the Laverne Field 17 cent price is a base or floor from which all consideration must spring. The Woodward area adjoins the Laverne area of Harper and Beaver Counties in Oklahoma, and as Michigan Wisconsin points out, the evidence in this case is undisputed that the Laverne area of Harper and Beaver Counties and the Woodward area of Woodward and Ellis Counties for which 17 cent prices have been certificated by this Commission are closely related both geologically and as pipeline market areas.

The Woodward area, like the Laverne area, is located on the north flank of the Anadarko Basin and involves production from the same formations. The record shows that the northern part of the Woodward area (Woods County) is structurally similar to the Laverne area and that in the remaining part of the Woodward area (Woodward, Major and Dewey Counties) the same producing zones exist, but become increasingly deeper to the south.

The burden of testimony also demonstrates that the Laverne and Woodward areas represent common marketing areas for natural gas. A number of the expert witnesses for the producers testified convincingly as to the lack of difference in marketing areas between the Laverne and Woodward areas. There is persuasive evidence in the record in the form of expert opinion that the Oklahoma Panhandle and the Woodward area are a part of a single gas marketing area. If this indeed be so, the price line as established by the Commission in the Oklahoma Panhandle area as being 17.0 cents per Mcf would be applicable to the sales involved here. As mentioned before, it is the general contention by the producers that the market areas or price areas set up by the Commission in its policy statement are not realistic and that therefore they have limited value in judging the proposed transactions reflected herein. For the purposes of this case, at least, it is contended the division lines set forth in the Commission's policy pronouncement should be ignored.

It is possible in a matter of this kind by shifting boundary lines around, by drawing comparisons between one county which is within one boudary and another county which is outside of the boundary line, and by including information with respect to the geological areas, to make a shambles of the reasonableness of the boundary lines of any particular price area. The evidence in this case, as well as others, clearly suggests that no matter what basis might be used for the delineation of a price area, it would be quite possible to marshall facts and persuasive arguments to illustrate the arbitrary aspects of the area selected. One of the problems with which the Commission may always be faced in fixing boundaries for area prices will be that no matter where the lines are fixed, there will be producers on the other side of the line, perhaps only a short distance away, who will allege that the line is arbitrary, unreasonable, and should be disregarded in analyzing the fairness of *their* contracts.[15]

Despite the discrepancies between the Commission's area price boundaries and the boundaries of the market or pricing areas urged herein, it would appear that the contention that the "price line" in the Oklahoma Panhandle area of 17.0 cents per Mcf should apply to the entire Woodward area is well founded. The base price which has been utilized by the Commission for Woodward County is 17 cents. There are a large number of sales being made from the Laverne Field at an initial base price of 17 cents per Mcf under permanent certificates which are not in the process of review. The Commission has relied upon the Laverne area price of 17 cents as establishing the appropriate level in the area in Opinion #328, (*Transwestern Pipeline Company et al.*, 22 FPC 391). The Commission issued permanent certificates conditioned to a base price of 17 cents per Mcf to producers proposing to sell gas to Transwestern in an area which includes Woodward, Herbert, Ellis and Beaver Counties, Oklahoma, relying specifically on the 17 cents sales to Michigan Wisconsin in the Laverne Field area. In the matter of *Gulf Oil Corporation et al.*, 23 FPC 664, 926, certain producer applications were submitted to the Commission which resulted in a reduction of the proposed price to 17 cents per Mcf for sales in the Glick Field located in

[15] cf. *Natural Gas Pipeline Company of America*, 24 FPC 244, fn. 7.

south central Kansas immediately north of the Woodward area. The certificates were refused and the gas is being sold in intrastate commerce.

While it would appear that the Woodward County price has been established as being 17 cents, and the Woodward area other than Woodward County has a lower price, if sales are considered on a purely statistical basis (the Staff witness in this case differentiated between the Oklahoma Panhandle area as set forth in the Commission's Statement of General Policy 61–1 and the Oklahoma [Other] area in which he placed the Woods, Major and Dewey Counties' sales) the contention of the applicants that this is a mechanical approach which cannot be justified, and the evidence in this matter which is to the effect that the entire Woodward area is the same or closely analogous geographically, geologically, and as a marketing area to Harper, Beaver and Ellis Counties is very persuasive.

Michigan Wisconsin treats the Woodward area as a single unit and believes that while there may be some historical differences with respect to pricing, that the entire area should be considered as a single unit for pricing purposes in this case. Michigan Wisconsin would like to consider the whole Woodward area as being included within its future, not just the initial proved reserves which are located in scattered fields adjacent to its pipeline. The contracts in this case contain large acreage dedications and the producers have submitted testimony to the effect that they intend to fully explore and to develop the acreage. It is Michigan Wisconsin's belief that a somewhat different treatment should be accorded such a major program than that given to relatively small sales from existing fields to nearby pipelines. The contracts relied upon by the Staff in its historical summary are, according to Michigan Wisconsin largely small scattered sales from individual wells or fields, some of which could be classified as "distress" sales. Michigan Wisconsin emphasizes the point that its proposal herein represents a large acreage dedication contemplating extensive future development for the benefit of a single pipeline. The five largest acreage dedications involved in this case range from 97,500 acres by Pan American to 23,000 acres by Sunray. This has been compared by Michigan Wisconsin to five of the largest acreage dedications involved in the Staff analysis which range from 3,137 acres to 1,995 acres.

The evidence in this matter justifies the conclusion that all of the contracts involved in Michigan Wisconsin's proposal should be treated on the same price level despite the historical differences shown by the Staff's exhibit for the areas involved here other than Woodward County. Woods, Major and Dewey Counties shall be considered to be in the "Oklahoma Panhandle" area for the purposes of this case.

Turning now to the matter of whether or not there has been a showing which would justify 19.5 cents as the initial price in this transaction, Michigan Wisconsin urges that there are three principal reasons why costs of production are higher in the Woodward area than in Laverne, and that therefore some additional price consideration should be paid for the Woodward area gas. These reasons are: (1) the producing formations are deeper; (2) the producing sands in the Woodward area are scattered and lenticular rather than blanket sands and do not lend themselves to multiple completions; (3) the general trend of costs of production (everywhere) continues to rise.

There is no question but that the record contains persuasive evidence to the effect that to obtain production, well depths must be greater in the Woodward area than in the Laverne Field. Presumably, with potential producing formations at greater depths, costs of production are increased. The Witness Peterson testified that in the Laverne area about 67 percent of all production

is at less than 6,000 feet, whereas in the Woodward area there is no production less than 6,000 feet, and 55 percent of all production is below 8,000 feet. It would appear that depth of wells could be an important consideration in justifying an increase over the 17 cent Laverne Field price if there were any logical way that this additional cost could be related precisely to the increase in price. However, merely to say that because the wells have to be deeper there should be a greater price charged for the gas from those wells is not enough. There must be some rational formula used to relate the depth of wells to the price to be charged, otherwise the sky would be the only limit.[16]

There were various witnesses who testified that the success ratio in the Woodward area is notably lower than in the Laverne area. Multiple sands are found much less frequently in the Woodward area than in Laverne. The absence of such multiple sands cuts down the number of dual and triple completions which are possible to be made. This also lowers the amount of average reserves per productive well. The record contains cost information with respect to the average cost of drilling and completing a productive well in the Woodward area as compared to the Laverne area. This testimony in evidence establishes without much question that operations in the Woodward area thus far, at least, are more costly than similar operations in the Laverne area. All of this information points inescapably to higher costs in the Woodward area and would seemingly justify a higher initial price than for the Laverne area *if there were any logical way of tying this information into the price proposed herein as an initial contract price.* However, the evidence presented would justify, perhaps, 17.5 cents per Mcf, 18.5 cents, or 21.5 cents just as well as 19.5. The producers thus are not able to relate their needs for additional revenues to the particular amount which they maintain they must have, and which they say the public convenience and necessity requires herein, *i.e.* an initial price of 19.5 cents per Mcf.

The foregoing discussion might be construed as being critical of the producers herein for not having provided a more dependable and precise method for analyzing their proposed 19.5 cents contract price. It is not so intended, for the producers herein have been candid and forthright in their respective presentations, and have utilized considerable ingenuity in attempting to justify the extra 2.5 cents over the Laverne Field price.[17] If cost has any important bearing in the assaying of a proposal of this kind, the only cost worthy of real consideration would be a unit cost of a particular gas supply. It has been recognized by all concerned in this matter that the development of a reliable unit cost for this Woodward area gas would be impossible at this time, inasmuch as the quantity of gas covered by the contracts is uncertain, few development wells have been drilled, much undeveloped acreage is involved, and there has been no producing experience. As pointed out by counsel for Amerada in their brief, even if sufficient information were available to develop a direct unit gas cost, the difficult and uncertain problems of allocation which must be resolved to determine a reliable unit gas cost would remain. A unit cost presentation, if prepared properly, and with the care necessary to eliminate error to the greatest degree possible, would turn a certificate case into a rate case. The possibility of such a transformation has been the subject of much

[16] Cf. 24 FPC 245 (fn 10).

[17] The whole difficulty lies in the lack of known standards and the absence of a prescription of the proof a producer applicant is expected to present. The Sinclair type of proof perhaps comes closest to what eventually may be required of all producers seeking certificates. But the Sinclair proof also comes very close to the same kind of presentation which would be appropriate in a producer rate case.

thought and consideration since the beginning days of producer regulation.[18] It is not one which may be looked forward to with relish. For if this cumbersome, time consuming method of producer rate analysis ever becomes necessary, it is very doubtful that the industry will be able to maintain its present vigor and growth pattern.

It is well recognized by all of the courts which have wrestled with this problem that while there are many aspects of the initial price or rate study by the Commission in a certificate proceeding which may partake of some of the same aspects involved in a determination of what constitutes a "just and reasonable" rate in a Section 4 rate proceeding, there are important differences which make it extremely doubtful that there will ever be a feasible means developed to ascertain whether or not an initial rate will eventually become a "just and reasonable" rate.

In the absence of a reliable unit cost for gas, the regulatory agency is thrown back into a morass of highly uncertain and speculative factors[19] which it is expected to apply to a proposed contract price, and to arrive at a determination of an initial rate which will be both consistent with the public interest from the consumers' standpoint, and which at the same time will preserve the vitality of one of the nation's most important extractive industries.

It is not appropriate or feasible to suggest herein an easy solution for this basic problem which has changed very little in the days and years since the Supreme Court's Phillips decision. It is quite apparent that as of this time very little headway has been made in the solution of this difficult problem. There could be no possible disagreement by any of the lawyers, accountants, engineers, economists, and members of regulatory agencies which have wrestled with this problem over the years, with the observation that there is no easy solution, if in fact there is any solution at all.

For the time being, therefore, until more sophisticated methods are evolved to analyze proposed initial producer rates, we shall have to utilize the admittedly make-shift area price ceiling approach. This is not a happy solution to the matter, nor in any sense can it be a permanent one. The area price approach as it is now evolving appears to have some regard for the income requirements of the producing element of the natural gas industry in general. Yet to be developed are ways in which this industry-wide information, even limited to a particular area, can have any rational significance or usefulness in a particular case due to the wide differences among various producers with respect to the skills, techniques and internal management philosophy.

This decision will provide for the issuance of certificates to producers herein for sales of gas from the Woodward area at a price not to exceed 17 cents per

---

[18] Section 4(a) declares that all rates for the sale of natural gas subject to the jurisdiction of the Commission which are not just and reasonable are unlawful.

[19] Some of the intangibles which Michigan Wisconsin and producers urge as being factors which illustrate the beneficence of the proposed arrangement are reminiscent of the "value of service" concepts of rate making. "This phrase" says the Commission in its order of April 7, 1961, in E–6816, "is sometimes used in referring to the discredited theory occasionally advanced to justify rates above the seller's cost-of-service." Regulation, says the Commission, in *South Carolina Generating Company,* 16 FPC 52, 58, based upon cost to the buyer of supplying substitute power, *i.e.,* "value of service, would in fact be no regulation at all and would completely disregard the public interest and the ultimate consumer which the Act is designed to protect."

Would it not be fair to say that approval of the 19.5 cent rate proposed herein if based, in part, upon the desirable delivery and prepayment arrangement, as well as the higher cost of gas which Michigan Wisconsin might have to pay its other suppliers if the Phillips drop-off is awaited, rather than on the unit cost of gas of the producer, would likewise be subject to the same criticism?

Mcf with appropriate tax reimbursement. The 17 cents is the same as the Laverne figure and this has been acknowledged by all concerned to be the lowest price for this gas that can be realistically used in this matter as a point of departure.[20] It should be repeated parenthetically that this 17 cent price is higher than that which is called for by the Commission's Policy Statement 61–1 for "Oklahoma (Other)." However, the Woodward area appears to be a single pricing area from a geological and marketing standpoint and there has been no reason shown for distinguishing between portions of this area on the basis of pure geography and historical sales of relatively small quantities of gas at 15 cents.

With periodic increases in these contracts, just as in the Laverne contracts, there is no reason to believe that when and if the periodic step increases become due, a filing for the increased rates, based upon unit cost data and experience in this field, which will be available by that time, will receive careful consideration by the Commission. The facts and figures developed from actual operating experience will provide a basis for judgment of the rates which will be equitable to both consumer and to the producers. Only actual cost experience data will provide a logical, rational and defensible way of arriving at the determination of rates which are equitable from the standpoint of seller and buyer as well as that of the ultimate consumer.

The Btu Adjustment and Processing Agreement

The final matter requiring consideration herein is the question of whether or not the public convenience and necessity will permit the inclusion of Btu adjustment feature in the contracts which Michigan Wisconsin has entered with the producer. This Btu adjustment is actually an adjustment outside of the 19.5 cents proposed in the contract and is based upon the price of 1/100 cent per Mcf for each additional Btu over 1000.

The Staff, along with its other recommendations in this matter recommends that any certificate proposed herein be conditioned upon the revision of the contract to eliminate the Btu adjustment provisions.

There is a great deal to be said for the Staff's position. Logically, it would seem that a Btu adjustment provision is another indefinite enhancement on the basic price which is not reflected in the basic price but is as much of a charge upon the consumer of the gas as the basic rate would be. In principle, therefore, the elimination of the Btu adjustment provision would be a very desirable thing. A basic *desideratum* of a filed rate schedule, is it be in such form that anyone examining it should be able to ascertain exactly what the rate is without reference to anything outside of the rate schedule. Obviously, a Btu adjustment feature of a rate causes the rate to rise and fall and therefore the actual effective rate as of any one point of time is impossible to ascertain from an examination of the schedule.

There is some discussion in the briefs of the parties and of the Staff with respect to what effect Btu content higher than 1,000 would have upon the operation by Michigan Wisconsin. It is apparent that in some cases, at least, excessive Btu's may be an undesirable quality of the gas, and instead of enhancing the value or usefulness of the gas in the pipeline it can actually cause some oper-

[20] Laverne would be a better point of departure if the rates therein had been tested in a conventional rate case, and a finding made that they are "just and reasonable." While Laverne rates are not "suspect" in the sense that word is generally used, they are subject to revision downward. At the very least, the 2.5 cents periodic increase may not receive approval in whole or in part when this is filed for as a rate change.

ating difficulties which would be avoided if the gas were delivered on a uniform Btu basis by the seller.

We need not get into the pros and cons of this aspect of the matter inasmuch as this decision shall approve the Btu adjustment feature of these contracts in view of the fact that the sale here is being made to conform as nearly as possible to the terms and conditions of the Laverne Field sale, including price. The Laverne Field sales of gas to Michigan Wisconsin were certificated with inclusion of the Btu provision. It would seem that the Btu adjustment feature would be as appropriate here as it is in the Laverne situation, and the evidence seems to indicate that Btu adjustments are customary for sales made in this general market area of Oklahoma.

Another factor which is influential in the matter of allowing the Btu adjustment feature to subsist is the fact that there is a processing agreement between the producers and Michigan Wisconsin which will permit the producers to construct a stripping plant at a central point in the Woodward area to which Michigan Wisconsin will deliver the raw gas to the operators for stripping. The agreement between the pipeline company and the producers provides a method by which Michigan Wisconsin will be compensated for shrinkage, fuel and loss of Btu. The payment to Michigan Wisconsin for the loss of Btu is the same as that which is provided in the basic sales contract for payment to the producers.

It is the opinion of Michigan Wisconsin's officials that in practice the operation of the processing agreement will serve to "wash" any difference between the basic price and the price Michigan Wisconsin would pay as a result of additional Btu's. It is believed that the gas which will be derived from these producers' wells will be of a quality that will make it quite profitable to conduct stripping operations and that if the producers do not elect to erect a stripping plant, Michigan Wisconsin will probably do so and thus will derive the profits from such stripping operations which may be applied as a credit against the cost of the gas.

In the circumstances, therefore, the Btu adjustment provisions of these contracts do not seem to produce a result which would be contrary to the public interest, and therefore the certificate authorizations provided for in this decision will not contain any condition eliminating the Btu adjustment feature.

Conclusion

Simply restated, it is the conclusion herein that the arrangements proposed by Michigan Wisconsin should be approved by the Commission if certain modifications are made in the contracts which form the basis of these applications. In general, while it has been shown that the proposal by Michigan Wisconsin to purchase the Woodward area gas is highly desirable and should be undertaken in order to alleviate the anticipated drop-off in Phillips deliveries, the prepayment provision of the arrangement has not been shown to be in the public interest inasmuch as it injects into the basic price an additional cost, of an undetermined amount, which will be ultimately borne by the consumers of the gas. This provision, therefore, must be eliminated and prepayment moneys refunded to Michigan Wisconsin, or the agreement must be modified so as to provide that the prepayments constitute a simple credit against the first deliveries of gas under the contracts. In this way the prepayments would not be an indefinite liability to the customers of Michigan Wisconsin.

The 19.5 cent price proposed by Michigan Wisconsin and the producers does not have any definite or ascertainable relationship to the cost of producing the gas. While there has been shown a reasonable basis for belief that the unit cost

of production of gas from the woodward area fields will ultimately be higher in some indefinite amount due to particular geological differences between the Woodward area and the Laverne Field, and there must be an acknowledgement of a general upward trend of costs for the production of gas throughout the United States brought about by the fact known to all that as readily obtainable gas supplies become scarce, deeper drilling and more difficult operations are required to get gas supplies, it has not been shown that a basic price of 17.0 cents per Mcf plus the step-increases provided in the contracts every five years will not fully compensate the producers for the gas they expect to get from the Woodward area wells.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission as provided for in its Rules of Practice and Procedure, that:

(A) A certificate of public convenience and necessity be, and the same is hereby issued, authorizing Michigan Wisconsin Pipe Line Company to construct and operate the facilities desired in its application filed on September 30, 1960, subject to the jurisdiction of the Commission for the transportation of natural gas as therein set forth upon the terms and conditions of this order.

(B) Certificates of public convenience and necessity be, and the same hereby are issued upon the terms and conditions of this order to: Pan American Petroleum Corporation, Shell Oil Company, Sinclair Oil & Gas Company, Wilcox Oil Company, The Atlantic Refining Company, Kerr-McGee Oil Industries, Inc., Skelly Oil Company, Woodson Oil Company, Amerada Petroleum Corporation, Sun Oil Company (Mid-Continent Division), J. M. Huber Corporation and Sunray Mid-Continent Oil Company authorizing the sale by each of them of natural gas to Michigan Wisconsin Pipe Line Company from the sources set forth in their applications filed herein, in interstate commerce for resale, together with the operation of any facilities used in making such sale and performing such transportation which are subject to the jurisdiction of the Commission.

(C) The certificate granted in paragraph (A) hereof shall be accepted in writing and under oath by a responsible official of Michigan Wisconsin. The general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificate granted in paragraph (A) hereof, and in the exercise of the rights granted thereunder.

(D) The certificates granted in paragraph (B) hereof shall be granted upon the express condition and requirement that each of the independent producers named in paragraph (B) shall file rate schedules with the Commission within 30 days from the issuance of this order providing for a rate not exceeding 17.0 cents per Mcf plus appropriate tax reimbursements for natural gas delivered and sold to Michigan Wisconsin from the Northeast Cederdale Field of Major and Woodward Counties, the Northeast Seiling Field of Major County, the Northwest Chester Field of Woodward County, the West Campbell Field of Major County, and Lenora Field of Dewey County, all in Oklahoma, otherwise the order in this proceeding shall be null and void in its entirety and shall have no effect.

(E) The certificates granted in paragraph (B) hereof shall be granted upon the express condition and requirement that the independent producers named therein and Michigan Wisconsin Pipe Line Company shall mutually rescind their agreement to pay and to receive certain moneys for quantities of natural gas before such gas is delivered, as set forth in the so-called "Supplemental Agreement" or shall modify such supplemental agreement so that any

prepayments made pursuant thereto shall be credited against the first deliveries of gas under the various contracts.

(F) The certificates granted in paragraph (B) hereof shall be accepted in writing and under oath by a responsible official of each of the producer applicants named therein, within 30 days from the date of issuance of this order, and shall be subject to the general terms and conditions set forth in subparagraphs (a) and (e), Section 157.20, of the Commission's Regulations under the Natural Gas Act.

WILLIAM J. COSTELLO,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

ORDER DENYING REHEARING SEVERING AND CONSOLIDATING PROCEEDINGS AND PROVIDING FURTHER PROCEDURES

(Issued March 7, 1962)

Our order of January 10, 1962, 27 FPC 10, in three groups of proceedings (Docket Nos. G–13169 *et al.*, G–17336 *et al.*, G–16540 *et al.;* see Appendices I, II, and III hereto) declared, *inter alia* an obligation to make refunds on the part of the producer-applicants in those proceedings. Numerous parties have filed applications for rehearing.[2] Our order of February 14, 1962, granted rehearing upon the applications filed by Pan American and the New York Public Service Commission so that we might consider all objections to our order of January 10 at one time. The various applications for rehearing persuade us to prescribe further procedures designed to abbreviate the duration of applicants' refund uncertainties. Otherwise, the applications contain no facts or arguments which call for modification of our January 10 order and should be

---

[1] See Appendices I, II, and III for a complete listing of applicants and docket numbers.

[2] Pan American Petroleum Corporation; Public Service Commission of the State of New York; Phillips Petroleum Company; Kerr-McGee Oil Industries, Inc.; Cities Service Production Company; Long Island Lighting Company, Philadelphia Electric Company, and The United Gas Improvement Company ("The Eastern Seaboard Companies", jointly); Humble Oil & Refining Company; Austral Oil Company; Hassie Hunt Trust, Operator, *et al.;* Placid Oil Company; Continental Oil Company and Newmont Oil Company (jointly); J. R. Frankel *et al.*, now Berkshire Oil Company; Socony Mobile Oil Company, Inc.; Shell Oil Company; Amerada Petroleum Corporation; Tidewater Oil Company; Sohio Petroleum Company; Phillips Petroleum Company and Southern Natural Gas Company (joint venture); Sun Oil Company; Union Oil Company of California; Caroline Hunt Sands and Loyd B. Sands; Beck Oil Company *et al.;* J. denied. See *Socony Mobil Oil Company, Inc.*, order issued September 25, 1961, in Docket No. G–13780.

Applicants misapprehend the powers asserted by us in our January 10 order. Thus Austral Oil Company complains of our so-called "entrapment" here:

> * * * If such a procedure were valid, the Commission could simply issue unconditional certificates, as it has done in this case, and then after the producer has commenced deliveries, summarily issue h'm a new temporary or permanent certificate subject to the condition that he refund all amounts in excess of the initial rate ultimately determined to be proper in some later proceeding. Thus, the producer would be effectively denied a free choice to accept or reject such conditioned certificate and would be given no opportunity to present evidence to support his initial contract price prior to the imposition of the refund condition. * * *

Our January 10 order asserts no such general power to modify final orders, properly issued after hearing pursuant to Section 7(c) of the Natural Gas Act. The special history of these three groups of proceedings defines the limited power of modification involved here. In every case the statutory hearing has already been held and the producers afforded an opportunity to adduce evidence supporting their price proposals. Our unconditional certificate orders under Section 7 were erroneously issued in the first place and as a result of the invocation of Section 19 have never assumed finality. (The provisions of Section 19 sharply distinguish this Act from the statute construed in *C.A.B.* v. *Delta Air Lines*, 367 U.S. 316.) Obviously the substantive errors were ours in accepting the arguments propounded by the producer applicants; equally obvious, the New York Public Service Commission and the Eastern Seaboard Companies[3] have consistently, publicly, and in the final analysis successfully urged the error of these arguments. The courts having lain bare the errors, it remains our task equitably to correct them. See *Ford Motor Company* v. *N.L.R.B.*, 305 U.S. 364. Where we grant rehearing under Section 19(a) we may modify our order without further hearing; a judicial remand after we deny rehearing puts the case in the same posture as if we had initially granted rehearing, subject to any special instructions in the mandate. The remedial action to be taken by us in either event will turn on the equities presented.

Taking such remedial action differs from the ordinary processing of certificate applications. The typical Section 7(c) case involves ultimately the broad question whether the applicant should be permitted to enter the field; review of proposed initial rates is but one facet of our certificate powers. When an applicant first proposes interstate service (and prior to dedication under Section 7(b) of the Act) he is not only entitled to the statutory processes, fairly administered; but he is also privileged to reject, for whatever reasons he wishes, any tendered certificate, no matter how reasonable the terms offered. In these remedial proceedings, we are called upon to exercise only our rate review powers under Section 7; no question arises as to the propriety of allowing the producers to introduce their gas into jurisdictional commerce. Thus nothing imperils the producers' "security of certificate." By the same token, there can be no private option here to accept or reject the results of our initial rate review at the regulated company's whim, any more than a company is free to accept or reject the results of a rate review proceeding under Section 4 or 5 of the Act. Consideration of the three groups of proceedings at issue brings these matters into focus.

---

[3] See note 2, on p. 482.

Docket Nos. G–13169 *et al.* were heard and originally decided by us in 1958, prior to the Supreme Court's 1959 decision in *Catco* (360 U.S. 378). The producers accepted the unconditional certificates prior to the expiration of the 30-day period prescribed by Section 19(a) of the Act for seeking rehearing, and commenced deliveries. No producer sought an extension of time in which to accept the certificates. But the record and the briefs show that the producers' price proposals were opposed throughout the 1958 proceedings. Thus the producers have not been "entrapped"; rather, in presenting their cases and commencing deliveries, they took a calculated risk as to the outcome of any review proceedings which might be brought. Such proceeding in fact resulted in the remand. *P.S.C. of New York* v. *F.P.C.*, 361 U.S. 195.

Upon reconsidering the record as a whole (including the record in G–13143 *et al.*, which originally accompanied that in G–13169 *et al.*), we have concluded that our 1958 order was erroneous, that the record does not show the price proposals of the producers to be in the public interest, and that the record shows, rather, that the proposed prices are out of line. Indeed even the lowest prices here proposed (21.4 cents per Mcf) exceed all of the effective rates shown in Exhibit 13 in the original record, save only some of the Duck Lake and Erath Field sales to United Gas Pipe Line Company and United Fuel Gas Company.[4] The examiner believed that our precedents as of that time barred the use of existing prices to test new price proposals. It is notable, however, that he found only four instances in which the Commission "has heretofore issued or had recommended to it the issuance of unconditioned certificates for sales in the southern Louisiana area at prices as high or higher than those involved herein." 20 FPC at 336, note 14. One of these was the proposed *Catco* price which may not, of course, be relied upon. Another involved proposed contractual sales to Texas Eastern Transmission Corporation, which were abrogated before deliveries had commenced (see 21 FPC 860). Thus only two of the instances cited by the examiner may be considered: Three contracts at 21.5 cents per Mcf (including tax; see 19 FPC 618), and eleven contracts at 22.8 cents per Mcf (including tax; see 19 FPC 558). Moreover, the examiner found it beyond dispute that Transco's purchase of gas at the proposed levels would "trigger" favored nations clauses in many existing contracts, and that this "triggering" could result in a $5,000,000 annual increase in cost to the consumer. Our power eventually to test such increases under Section 4 of the Act is not enough, standing alone, to justify the immediate impact of such "triggering" on the price structure.

Docket Nos. G–17336 *et al.* were in hearing at the time of the Supreme Court's *Catco* decision. We issued unconditional certificates on August 10, 1959, largely in reliance upon the Court of Appeals' affirmance of our order in Docket Nos. G–13169 *et al.*, 269 F. 2d 865 (CA3, August 4, 1959), reversed 361 U.S. 195. The P.S.C. of New York actively contested the producer price proposals. The Court of Appeals held the record inadequate to support the initial prices proposed and remanded for further proceedings in which the producers might either augment the record or seek an appropriate price condition. Exhibit No. 32 shows that these proposed prices, too, are out of line.

Docket Nos. G–16540 *et al.* were also in hearing at the time of the Supreme Court's *Catco* decision. In issuing unconditional certificates, on November 17, 1959, we relied heavily on the Court of Appeals' affirmance of our order in Docket Nos. G–13169 *et al.* as reflecting a correct interpretation of *Catco*. 22 FPC 836.

---

[4] Even those high rates are shown, with but one exception, as being effective subject to refund under Section 4 of the Act.

When the Supreme Court reversed the Court of Appeals in that proceeding (361 U.S. 195, December 14, 1959), however, we promptly granted the applications for rehearing which had been duly filed under Section 19(a). We granted a number of extensions of time in which to accept the certificates; but deliveries have ultimately commenced. As Exhibits 52 and 53 reveal, these prices too were out of line. Of the orders authorizing other south Louisiana sales, at comparable prices, cited by the examiner (22 FPC at 855, note 21) all have been remanded by the courts (save only one which was not appealed). Patently, our unconditional certificate order was erroneous in law and could not have been sustained on judicial review had we failed to grant rehearing. Having granted rehearing we should voluntarily correct the error just as if the courts had compelled us to do so. See *Ford Motor Co.* v. *N.L.R.B.*, 305 U.S. 364, 375.

The Eastern Seaboard Companies contend we should forthwith redetermine the proceedings in Docket Nos. G–13169 *et al.*[5] on the basis of our recent determinations in the remanded *Catco* case (Opinion No. 351, issued January 22, 1962). Assuming that we have the power to do so, we nonetheless conclude that we should afford the producers further opportunity to be heard. The mandate of the Court of Appeals in Docket Nos. G–17336 *et al.* requires us to afford such opportunity and also, in effect, to receive and allow consideration of such settlement proposals as the producers may now see fit to offer. We think similar opportunities should be afforded the producers in the other proceedings.

On the other hand, many parties argue against leaving the initial price question in these cases to abide the outcome of the Area Rate proceeding. We are anxious to expedite final resolution of proceedings which have already been heard and decided once, but which remain on our docket by virtue of Section 19 of the Act. We are also impressed by representations as to the practical problems posed by the continuing pendency of these proceedings. As several producers observe, the uncertainties as to these initial prices complicate settlements with royalty owners and interfere with prudent budgeting and other financial matters. We are convinced that such uncertainties can quickly be dispelled in these proceedings as a result of the "ground rules," established by our recent *Catco* opinion, for certificate cases originally heard prior to issuance of our General Policy Statement. We shall, therefore, sever these proceedings from Docket No. AR61–2 and prescribe further procedures to achieve that result. These procedures will also be applicable to five additional south Louisiana certificate dockets remanded by the courts (Docket Nos. G–16108, G–16388, G–14753, G–15122 and G–16380).

In Opinion No. 351 (*Continental Oil Co.*, 27 FPC 96, issued January 22, 1962) we determined the proper initial price by considering old and new field prices in the south Louisiana area, as of the year of the sales contract, and excluding the prices which the courts have called into question. We held the proper price line to fall between the highest group of prices and the median price and concluded, on the basis of a comprehensive record, that the "in line" price for 1956 contracts would be not in excess of 18.5 cents per Mcf, where State severance tax did not apply, and 20 cents per Mcf, where such tax applies. It is our present opinion that the "in line" price is also the "public interest" price in these proceedings. The instant proceedings, however, involve contracts executed after 1956; and we recognize that some parties may wish an opportunity to show that the appropriate price line in these proceedings differs from that we determined in *Catco*. Furthermore, we shall not foreclose any party from presenting evidence which he believes would compel the conclusion that a higher price

[5] The Eastern Seaboard Companies are not participants in Docket Nos. G–17336 *et al.*

would be in the public interest. As in *Socony Mobil Oil Company, Inc.*, Docket No. G–13780, we shall require that any such evidence, as well as accompanying argument, be submitted in writing. In view of the large number of proceedings and parties here, however, it is suggested that a pre-hearing conference be convened by a presiding officer of the Commission.

The Commission further finds:

(1) It is reasonable and appropriate to sever and consolidate the above-captioned proceedings, to grant prompt opportunity for further hearing by providing for the submission of written evidence and argument, and to provide supplementary procedures, all as hereinafter prescribed.

(2) The assignments of error and grounds for rehearing set forth in the applications for rehearing cited in note 2, above, set forth no new facts or principles of law which were not fully considered by the Commission in adopting its order of January 10, 1962, in Docket Nos. G–13169 *et al.*, G–17336 *et al.*, and G–16540 *et al.*, or which having now been considered warrant any change or modification except as prescribed below.

The Commission orders:

(A) The proceedings in Docket Nos. G–13169 *et al.*, G–17336 *et al.*, G–16540 *et al.*, G–16108, G–16388 and G–14753 are severed from those in Docket Nos. AR61–2 *et al.*

(B) The proceedings listed in paragraph (A) above, as well as those in Docket Nos. G–15122 and G–16380, are consolidated for the limited purpose of determining the public interest initial price or prices applicable to these proceedings.

(C) On or before April 4, 1962, the participants to these proceedings shall serve and file with the Commission such written testimony, exhibits, and arguments, subscribed and verified by the witness or other person responsible for the preparation of such material, as they deem material to determination of the public interest initial price or prices in these proceeding.

(D) A hearing will be held in these proceedings at 10:00 a.m. (e.s.t.), on April 26, 1962, in a hearing room of the Federal Power Commission, 441 G St. NW., Washington, D.C.

(E) Except as hereinabove granted the applications for rehearing of our order of January 10, 1962, are denied.

HOUSTON TEXAS GAS AND OIL CORPORATION, DOCKET NOS. CP62–106 AND G–18615

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 8, 1962)

On October 23, 1961, Houston Texas Gas and Oil Corporation (Applicant) filed in Docket No. CP62–106 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities to enable Applicant to provide interruptible natural gas service to two direct industrial customers, Swift and Company (Swift), near Agricola, Florida, and Armour and Company (Armour), near the City of Fort Meade, Florida.

Applicant has entered into contracts with Armour and Swift, dated September 15, 1961, and April 21, 1961, respectively, providing for the direct sale of maximum annual estimated natural gas volumes of 1,225,000 Mcf per year to Armour and 208,000 Mcf per year to Swift, both on an intermediate interruptible basis. Gas will be sold to both customers at a rate of 35 cents per Mcf.

Applicant also requests that the Commission amend its order issued August 9, 1961, in Docket No. G–18615, as amended, wherein Applicant was authorized, among other things, to construct and operate 12.0 miles of 2-inch lateral transmission pipeline extending from its existing 3-inch line at Agricola, Florida, to Ft. Meade and to sell and deliver natural gas for resale in and around Ft. Meade. Applicant requests authorization to construct and operate 8.78 miles of 2- and 6-inch pipeline betwen Ft. Meade and Agricola in lieu of the 12.0 miles of 2-inch line authorized in the order of August 9, 1961. The proposed amendment requires a relocation of the previously authorized lateral in order to enable Applicant to render the proposed service to the two industrial customers in Docket No. CP62–106.

Armour and Swift will use the natural gas in the production of fertilizer materials.

The total estimated cost of the proposed facilities in both dockets is $220,000 which is $37,200 greater than the estimated cost of the similar facilities authorized in Docket No. G–18615. The increased cost of construction will be financed from a contingency fund.

The additional sales will have no appreciable effect upon Applicant's gas supply.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 26, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application or the motion to amend has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Houston Texas Gas and Oil Corporation, a Delaware corporation having its principal place of business in St. Petersburg, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G–9262, *et al.* (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the order of the Commission issued August 9, 1961, as amended, in Docket No. G–18615, be further amended so as to authorize Applicant to construct and operate 8.78 miles of 2- and 6-inch pipeline between Ft. Meade and Agricola, Florida, in lieu of the 12.0 miles of 2-inch line previously authorized in said order of August 9, 1961.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure in Docket No. CP62–106 was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Houston Texas Gas and Oil Corporation,

to construct and operate the proposed facilities and to transport and deliver to Armour and Company and to Swift and Company up to 1,225,000 Mcf and 208,000 Mcf, respectively, of natural gas per year, both on an interruptible basis, as hereinbefore described, all as more fully described in the application in Docket No. CP62–106, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 12 months from the date on which this order issues.

(D) The order issued August 9, 1961, as amended, in Docket No. G–18615, be and the same is hereby further amended so as to authorize Applicant to construct and operate 8.78 miles of 2- and 6-inch pipeline between Ft. Meade and Agricola, Florida, in lieu of the 12.0 miles of 2-inch line previously authorized in the order of August 9, 1961. In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

ORDER ESTABLISHING THE NATIONAL POWER SURVEY EXECUTIVE ADVISORY COMMITTEE

(Issued March 8, 1962)*

The Federal Power Commission is directed by Section 202(a) of the Federal Power Act (16 U.S.C. 792–825r) to promote and encourage voluntary interconnection and coordination of the nation's electric power facilities in the interest of economy and conservation, and is authorized by Section 311 of the Act to conduct broad investigations covering all aspects of the entire power industry. In order to accomplish these objectives more effectively, we have concluded that it is in the public interest that a National Power Survey Executive Advisory Committee be, and it hereby is, established.

1. *Purpose.* The Committee shall advise the Commission in planning and carrying out the Commission's proposed national power survey.

2. *Membership of the Committee.* The Committee shall consist of a representative group of members from all segments of the electric power industry to be selected by the Chairman of the Commission.

3. *Organization.* The detailed functions of the National Power Survey Executive Advisory Committee and any other representative committees established to advise the Commission on the survey will be in accordance with Executive Order No. 11007 of February 26, 1962 (27 FR 1875) relating to the Formation and Use of Advisory Committees.

---

*Commission determination issued February 26, 1964 continued Committee for additional two years.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP60-103; SHELL OIL COMPANY, DOCKET NO. CI60-660; PIONEER PRODUCTION CORPORATION, DOCKET NO. CI60-689; CALVERT PETROLEUM COMPANY, DOCKET NO. CI60-691; ASHLAND OIL & REFINING COMPANY, DOCKET NO. CI60-738; UNION OIL COMPANY OF CALIFORNIA, DOCKET NO. CI60-802; KING-STEVENSON OIL COMPANY, INC., DOCKET NO. CI60-813.

ORDER DENYING APPLICATIONS FOR REHEARING

(Issued March 9, 1962)

Continental Oil Company, successor in interest to Calvert Petroleum Company, and King-Stevenson Oil Company, Inc. have filed applications for rehearing of our Opinion No. 350 issued in these proceedings on January 15, 1962, 27 FPC 35. The applicants, who are independent producers, were issued conditioned certificates by Opinion No. 350 for the sale of natural gas to Panhandle Eastern Pipe Line Company from fields located in Dewey, Major, Woods and Alfalfa Counties, Oklahoma. In their applications for rehearing, they contend that the Commission erred in conditioning the initial contract price of 17 cents per Mcf to the area ceiling level of 15 cents per Mcf, and in conditioning allowance of the take-or-pay and Btu adjustment provisions of the contracts so as to make these provisions subject to the Commission's determinations in the Docket Nos. R-199 and R-200 rule-making proceedings.

The evidence in the record before us does not compel a finding that these producers should be allowed an initial price in excess of the area ceiling of 15 cents per Mcf. Nor is there sufficient evidence to justify a finding that the area boundary should be adjusted to include these fields in the adjoining 17-cent area. On the other hand the evidence supports the established area price ceiling of 15 cents per Mcf as the "in-line" price for the applicants' proposed sales. In these circumstances, the public convenience and necessity clearly require the price condition which we have attached to the certificates issued to these applicants.

However, in an effort to give recognition to the equities of this case, we have permitted the applicants to take advantage of any increase in the area ceiling level which may result from the review of area boundaries now being made by the Commission. As we noted in Opinion No. 350, a change of area boundaries properly calls for consideration of information and data beyond what these producers have been able to adduce, and is best made upon a general review of all relevant factors. Inasmuch as such a review is presently being made, we here decided that these applicants should be permitted to file substitute increased rates if and when, as a result of our study, the area boundary here in question should be changed so as to increase the ceiling price applicable to the fields from which the proposed sales are to be made. We can go no farther than this in giving consideration to the applicants' request for certification of their sales at an initial price in excess of the existing area ceiling of 15 cents per Mcf.

With respect to the conditions which we have attached to allowance of the proposed take-or-pay and Btu adjustment provisions, making these provisions

736-330—64——34

subject to the policy determinations in Docket Nos. R–199 and R–200, we would note that there are basic policy considerations involved in the treatment of these issues which affect the broad public interest and go beyond the question of the impact of the proposed take-or-pay and Btu adjustment provisions on Panhandle's customers in this particular case. These considerations are now before us in the rule-making proceedings referred to. In our opinion, the determination of adjustments in price to be required or allowed for deviations from established standards of pipeline quality gas, including Btu heating content, and the determination of what percentage of a pipeline's contracted gas supply must be paid for in the event the pipeline is unable to take all of its contracted supply, are appropriately within the scope of our rule-making procedure; and in the interest of sound regulation, these determinations should be made and promulgated through regulations or policy statements having general applicability. It is not our intention, in passing upon the proposed provisions in the present case, to either prejudge or to grant what may be exceptions to the determinations in the rule-making proceedings; hence, the necessity of either modifying or eliminating these provisions, or of making our allowance of them subject to the determinations in Docket Nos. R–199 and R–200. So as not to deprive the producers of the revenues which they might derive from these provisions pending final decision in Docket Nos. R–199 and R–200, we have chosen to allow the provisions subject to our disposition of the issues in the rule-making proceedings.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 350, or which having now been considered warrant any change or modification of the said opinion.

The Commission orders:

The applications for rehearing filed in the above-entitled proceedings are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP62–81; SHELL OIL COMPANY, DOCKET NO. CI62–255; SINCLAIR OIL & GAS COMPANY, DOCKET NOS. CI62–296 AND CI62–297

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 9, 1962)

On September 27, 1961, Texas Eastern Transmission Corporation (Texas Eastern) filed in Docket No. CP62–81 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 23 miles of 14-inch pipeline, and facilities appurtenant thereto, extending from the Sligo Field, Bossier Parish, Louisiana, to a point of connection with Texas Eastern's existing 24-inch Provident City-Castor pipeline, Red River Parish, Louisiana, to enable Texas Eastern to purchase and receive natural gas produced by Shell Oil Company (Shell) and Sinclair Oil & Gas Company (Sinclair) from the Sligo Field.

On September 5, 1961, in Docket No. CI62–255, and on September 14, 1961, in Docket Nos. CI62–296 and CI62–297, Shell and Sinclair, respectively, filed applications pursuant to Section 7(c) of the Natural Gas Act for certificates of

public convenience and necessity authorizing the sale of natural gas from the Sligo Field to Texas Eastern.

Shell and Sinclair will make the proposed sales pursuant to separate gas contracts with Texas Eastern, each dated July 1, 1961. Shell and Sinclair also propose to sell excess gas from the Sligo Field to Texas Eastern pursuant to separate letter agreements, each dated July 1, 1961; the excess sales are for terms of three years from the date of initial delivery. Shell has applied for authorization for both sales in Docket No. CI62–255; Sinclair has applied in Docket No. CI62–296 for authorization to make the sales under the basic contract, and in Docket No. CI62–297 for authorization to make the excess sales.

Texas Eastern will pay 14.75 cents per Mcf at 15.025 psia for excess gas and 16.4161 cents per Mcf at 15.025 psia for gas purchased under the basic contracts.

The cost of Texas Eastern's project is estimated to be $1,291,000, which cost will be financed from cash on hand or revolving credit with banks.

Texas Eastern in Docket No. CP62–81, Sinclair in Docket Nos. CI62–297 and CI62–296, and Shell in Docket No. CI62–255 were each granted temporary authorization by separate letters, dated November 9, 1961.

Pursuant to due notice a public hearing was held in Washington, D.C., on February 27, 1962, respecting the matters involved in and the issues presented by the applications herein. On February 7, 1962, the Pennsylvania Public Utility Commission filed a notice of intervention in the subject dockets. By letter filed February 23, 1962, the Pennsylvania Commission advised that its intervention was in support of the subject applications. No other petition to intervene or protest to the granting of the applications has been received. No appearances, other than that of staff counsel, were entered at the hearing. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G–880 (6 FPC 148).

(2) Applicants, Shell Oil Company and Sinclair Oil & Gas Company, independent producers of natural gas, are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission, and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities to be constructed by Texas Eastern, as hereinbefore described and as more fully described in the application in Docket No. CP62–81, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and construction and operation thereof by Texas Eastern are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sales of natural gas by Shell and Sinclair hereinbefore described, as more fully described in Shell's application in Docket No. CI62–255 and in Sinclair's applications in Docket Nos. CI62–296 and CI62–297, will be made in interstate commerce, subject to the jurisdiction of the Commission and such sales by Shell and Sinclair, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The sales of natural gas by Shell and Sinclair, together with the construction and operation of any facilities, subject to the jurisdiction of the Commission, necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) The construction and operation of the facilities proposed by Texas Eastern in Docket No. CP62–81 are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) The respective Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificate issued hereinafter to Texas Eastern and the rights granted thereunder be conditioned upon Texas Eastern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Eastern Transmission Corporation, to construct and operate the facilities as hereinbefore described, all as more fully described in the application in Docket No. CP62–81, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued upon the terms and conditions of this order, authorizing the sale by Shell Oil Company of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission used for the sale of natural gas in interstate commerce, to Texas Eastern, as hereinbefore described and as more fully described in the application in Docket No. CI62–255.

(C) Certificates of public convenience and necessity be and the same are hereby issued upon the terms and conditions of this order, authorizing the sales by Sinclair Oil and Gas Company of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission used for the sales of natural gas in interstate commerce, to Texas Eastern, as hereinbefore described and as more fully described in the applications in Docket Nos. CI62–296 and CI62–297.

(D) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Texas Eastern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(E) The time within which the facilities authorized in paragraph (A) above shall be completed and placed in actual operation is hereby fixed at six months from the date on which this order issues.

(F) The certificates hereby issued to Shell in paragraph (B) above and to Sinclair in paragraph (C) above are not transferable and shall be effective only so long as Shell and Sinclair continue the acts or operations hereby authorized

in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(G) The grant of the certificates herein to Shell and Sinclair shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Section 154 of the Commission's rules and regulations thereunder requiring the filing of rate schedules for the services herein authorized and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceedings now pending or hereafter instituted by, or against, Shell or Sinclair. Further, our action in these proceedings shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. CP62-141

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 12, 1962)

On December 7, 1961, American Louisiana Pipe Line Company (Applicant) filed in Docket No. CP62-141 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation during the 12-month period commencing March 1, 1962, of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which may be purchased from producers thereof in the general area of its existing transmission system at a total cost not to exceed $3,000,000, with no single project to exceed a cost of $500,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 27, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 1, 1954, in Docket No. G-2306, *et al.*, (13 FPC 380).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system, and the con-

struction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the facilities to take natural gas purchased from producers thereof during the 12-month period commencing March 1, 1962, as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit on or before May 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(6) The authorization hereinafter granted should be limited to construction during the 12-month period commencing March 1, 1962, and the total expenditures for facilities to be constructed thereunder should be limited to $3,000,000, with no single project to exceed a cost of $500,000.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing American Louisiana Pipe Line Company to construct during the 12-month period commencing March 1, 1962, the proposed facilities hereinbefore described (more fully described in the application filed in this proceeding) and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to American Louisiana Pipe Line Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit, on or before May 1, 1963, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached, (c) a description of the project or projects that have been constructed pursuant to authorization granted in paragraph (A) above, (d) the location of said project or projects, (e) the costs of the facilities so constructed, and (f) the names of the independent producers involved, together with the

respective dates of the gas sales contracts, and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing March 1, 1962, and the total expenditures for facilities to be constructed hereunder are hereby limited to $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NO. G-2214

ORDER AMENDING ORDER ISSUING A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 12, 1962)

On October 10, 1961, Cities Service Gas Company (Applicant) filed an application to amend the Commission's order of September 25, 1953, in Docket No. G-2214, issuing a certificate of public convenience and necessity authorizing Applicant to construct and operate certain facilities in Cherokee County, Kansas, and in Jasper County, Missouri, in order to sell and deliver natural gas, on an interruptible basis, to the Missouri Farmers' Association, Inc., now Farmers Chemical Company (Farmers), to be utilized by Farmers at its fertilizer plant near Empire City, Kansas. The subject order limited deliveries of natural gas to 182,077 Mcf* annually.

Applicant states that it has been advised by Farmers that the latter intends to expand its Empire City plant and will require 338,154 Mcf* of natural gas annually. Therefore, Applicant requests in the subject application that the order of September 25, 1953, be amended to allow Applicant to deliver the required increased volumes of gas.

No additional facilities will be required to make the increased deliveries.

Due notice of the filing of the subject application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 31, 1962 (27 FR 908). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order of September 25, 1953, in Docket No. G-2214 be amended as hereinafter ordered.

The Commission orders:

(A) Paragraph (C)(2) of the Commission's order issued September 25, 1953, in Docket No. G-2214, is hereby amended to read as follows:

(2) The facilities authorized by (A) above shall not be utilized for the delivery of volumes of natural gas on an interruptible basis in excess of 338,154 Mcf annually.

(B) In all other respects, said order shall remain unchanged and in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

CONTINENTAL OIL COMPANY, DOCKET NO. G-11024; THE ATLANTIC REFINING COMPANY, DOCKET NO. G-11034; CITIES SERVICE PRODUCTION COMPANY, DOCKET NOS. G-11046, AND G-15330; TIDEWATER OIL COMPANY, DOCKET NO. G-11049

ORDER GRANTING MOTION FOR STAY

(Issued March 12, 1962)

On January 22, 1962, this Commission issued its Opinion No. 351 and order, 27 FPC 96, issuing permanent certificates of public convenience and necessity to the above named natural gas company applicants upon certain conditions, among which were that the base price for natural gas effective under each of the gas sales contracts involved, from the date of initial service thereunder, shall be, until lawfully changed in the manner provided by the Natural Gas Act, 18.5 cents per Mcf at 15.025 psia, subject to certain conditions; that within 60 days of the date upon which the said order becomes effective, the applicants should refund to Tennessee Gas Transmission Company (Tennessee) the purchaser involved herein, with 6 percent interest, a sum equal to the difference in the price charged to and collected from Tennessee and the base price aforementioned, applied to all volumes delivered to Tennessee under said gas sales contracts, from the date of initial delivery to Tennessee until the effective date of said order; and that within 10 days of such refund each of the applicants shall file with the Commission an officially certified statement showing the amount of such refund, its manner of computation, the interest payments related thereto, and a statement from Tennessee acknowledging the receipt of such refund.

On February 12, 1962, the applicants filed a joint and several motion requesting this Commission to stay the requirements of the aforesaid conditions to the certificates granted them until 60 days after final action by the Commission upon their joint application for rehearing of said opinion and order (which application was filed on February 21, 1962) and until after final disposition of any petition for judicial review, if any, of Opinion No. 351 issued January 22, 1962.

Applicants aver that if they should make the refunds to Tennessee required of them by our order, aforementioned, and subsequent thereto said order should be reversed upon judicial review thereof, if any, "considerable injury would be" inflicted upon them, because, Aplicants aver "there is no provision in law by which they could make themselves whole."

On February 20, 1962, Long Island Lighting Company, an intervener herein, filed an answer in opposition to the motion for stay filed by Applicants. Additionally, on February 23, 1962, the Public Service Commission of the State of New York, a party to these proceedings, filed an answer in which it stated that it would have no objection to the granting of a stay pending this Commission's consideration of any timely filed application for rehearing of the aforementioned opinion and order. However, the New York commission does object to any further stay.

We have considered the Applicants' motion for stay, and the answers filed thereto, and find that said motion should be granted in part. We do not believe that the public interest will be adversely affected by deferring the payment of refunds, with interest, we have found to be proper in the order accompanying

Opinion No. 351, for a period of 60 days after our final action upon any application for rehearing or reconsideration of said Opinion and order which may be filed.

The Commission finds:

Good cause exists for granting the joint and several motion for stay of ordering paragraphs (B), (C) and (D) of the order accompanying Opinion No. 351, issued January 22, 1962, herein, for a period of 60 days following the Commission's final action upon any application for rehearing or reconsideration filed herein.

The Commission orders:

The conditions and requirements set forth in ordering paragraphs (B), (C), and (D) of the order accompanying Opinion No. 351, issued January 22, 1962, to and as a part of the permanent certificates of public convenience and necessity issued thereby, and the compliance of each of the Applicants herein, are hereby stayed until 60 days after final action by the Commission upon any application for rehearing filed in these proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and Charles R. Ross.

EAST BAY MUNICIPAL UTILITY DISTRICT, PROJECT NO. 2128

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR LICENSE (MAJOR)

(Issued March 12, 1962)

On August 28, 1957, East Bay Municipal Utility District, (Applicant) of Oakland, California, filed an application for license for proposed major Project No. 2128 to be located on Mokelumne River and South Fork of Mokelumne River, California.

The application proposed construction of three new developments, known as Middle Bar Development with 18,000 kw of capacity, Camanche Development with 6,000 kw, and Railroad Flat Development (no power planned), and redevelopment of applicant's existing Pardee Development which was constructed and operates under Congressional authorization, viz., Act of April 12, 1934 (48 Stat. 642) to include 7,500 kw in new capacity.

Since the application was filed extensive studies by engineers retained by Applicant indicated that Middle Bar and Railroad Flat developments and redevelopment of the Pardee development should be abandoned in favor of an enlarged Camanche development for flood control and water supply for irrigation and domestic uses, but with no provision for power generation. A commissioned staff study of the feasibility of power installation at the enlarged Camanche development supports the conclusion that provision for power generation is not economically justified.

The enlarged Camanche dam and reservoir is to be constructed by Applicant without power facilities but with monetary contribution by the Federal government for flood control pursuant to Section 205 of Public Law 86-645 approved July 14, 1960 (74 Stat. 499). Construction at a later date of the Middle Bar and Railroad Flat developments will not be precluded by the construction of the enlarged Camanche dam and reservoir.

In view of these facts, Applicant, by letter dated December 15, 1961, requested our permission to withdraw its application for license.

The Commission finds:

In the circumstances recited above, it is appropriate to permit the withdrawal of the afore-mentioned application for license.

The Commission orders:

Permission to withdraw the afore-mentioned aplication for license for Project No. 2128 is granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

GLACIER ELECTRIC COOPERATIVE, INC., DOCKET NO. E-6446

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO CANADA AND SUPERSEDING PREVIOUS AUTHORIZATION

(Issued March 12, 1962)

Glacier Electric Cooperative, Inc. (Applicant), a corporation organized under the laws of the State of Montana and doing business in that State, with its principal place of business at Cut Bank, Montana, filed an application, on January 2, 1962, for a supplemental order, pursuant to Section 202(e) of the Federal Power Act, authorizing an increase in the amounts of electric energy which Applicant is presently authorized to transmit from the United States to Canada.

By Commission order issued January 29, 1953, as amended December 2, 1959, in the above-named docket, Applicant was authorized to transmit electric energy from the United States to Canada, as follows:

At Carway, Alberta, Canada, an amount not to exceed 84,000 kilowatt-hours per annum at a maximum transmission rate of 25 kilowatts;

At Del Bonita, Alberta, Canada, an amount not to exceed 36,000 kilowatt-hours per annum at a maximum transmission rate of 15 kilowatts.

Applicant now seeks authorization to transmit electric energy from the United States to Canada in the following amounts and at the following rates of transmission:

At Carway, Alberta, Canada, an amount not to exceed 500,000 kilowatt-hours per annum at a maximum transmission rate of 150 kilowatts;

At Del Bonita, Alberta, Canada, an amount not to exceed 150,000 kilowatt-hours per annum at a maximum transmission rate of 75 kilowatts.

The amounts of electric energy which Applicant proposes to export, like those amounts presently exported pursuant to the afore-mentioned authorization, are to be transmitted to Canada from points within the State of Montana over two single-phase, three-wire electric lines, operating nominally at 120/240 volts, 60 cycles, which are covered by a Presidential Permit signed by the President of the United States on December 12, 1952 and released to Applicant concurrently with the issuance of Commission order issued January 29, 1953 (12 FPC 823), in the above docket.

According to the application, the increased amounts of power and energy will be used by Applicant to meet the expanding electric requirements of its retail customers in Canada.

Written notice of the application has been given to the Board of Railroad Commissioners of the State of Montana and to the Governor of that State. Notice of the application was also published in the Federal Register on February 15, 1962 (27 F.R. 1436), stating that any person desiring to be heard or to make any protest with reference to the application should on or before February 28, 1962 file with the Federal Power Commission, Washington 25, D.C., a petition or protest. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

The transmission of electric energy from the United States to Canada, as limited herein and as herein after authorized, will not impair the sufficiency of electric supply within the United States and will not impede or tend to impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

The Commission orders:

(A) Applicant is hereby authorized to transmit electric energy from the United States to Canada in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The electric energy which Applicant is hereby authorized to transmit from the United States to Canada shall not exceed 500,000 kilowatt-hours per annum at a maximum transmission rate of 150 kilowatts at Carway, Alberta, Canada, and 150,000 kilowatt-hours per annum at a maximum transmission rate of 75 kilowatts at Del Bonita, Alberta, Canada. The energy which Applicant is hereby authorized to export shall be transmitted over the facilities specified in the Presidential Permit signed by the President of the United States on December 12, 1952 and released to Applicant on January 29, 1953, as referred to above.

(C) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of termination or expiration of the Presidential Permit referred to in paragraph (B) above.

(D) Applicant shall conduct all operations pursuant to the authorization herein granted in accordance with the provisions of the Federal Power Act and pertinent rules, regulations or orders issued by the Commission.

(E) Applicant shall install and maintain adequate metering equipment to measure the flow of all electric energy transmitted from the United States to Canada pursuant to the authority herein granted; shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish to the Commission with respect to such transmission of energy, on or before February 15 of each year, reports in triplicate showing the kilowatt-hours delivered at each of the points herein authorized, the maximum kilowatts of transmission, and the consideration received therefor during each month of the preceding calendar year.

(F) This authorization to transmit electric energy from the United States to Canada shall not be transferable or assignable, but in the event of the involuntary transfer of facilities used for such transmission by operation of law (including such transfers to receivers, trustees, or purchasers under foreclosure or judicial sale), shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(G) This authorization shall be without prejudice to the authority of any State, State regulatory commission, or the Dominion of Canada for the exercise of any lawful authority vested in such State, State regulatory commission, or the Dominion of Canada over Applicant.

(H) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission, or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

(I) The authorization herein granted shall supersede that heretofore granted by Commission order issued January 29, 1953, as amended December 2, 1959, referred to above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP61–106; PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI62–1034

ORDER TO SHOW CAUSE, DELINEATING ISSUES AND CONSOLIDATING PROCEEDINGS

(Issued March 12, 1962)

By order of April 6, 1961, we reopened the proceeding in Docket No. CP61–106 for the purpose of determining (1) whether the "budget-type" certificate issued to Tennessee Gas Transmission Company by our order of January 6, 1961, in that proceeding covered the construction and operation of certain facilities necessary to connect the so-called Bastian Bay Field reserves to Tennessee's system and (2) the cost of making such reserves available to the Tennessee system. It appears from filings made and evidence adduced by Tennessee that Tennessee acquired control of certain natural gas reserves in the Bastian Bay Field from Pan American Petroleum Corporation. By order of August 25, 1961, we directed Pan American to file with us certain data with respect to its interests in the Bastian Bay Field. Pan American furnished such data on September 12, 1961.

Hearings have commenced in Docket No. CP61–106. Tennessee has adduced its direct evidence regarding the issues posed by our order of April 6, 1961. That testimony awaits cross-examination.

On October 24, 1961, the Consolidated Natural Gas System Companies,[1] interveners, filed a pleading in *Tennessee Gas Transmission Company*, Docket Nos. G–16842 and CP60–94, requesting, in effect, that those proceedings be consolidated for hearing with Docket No. CP61–106. No formal motion for consolidation has actually been filed. Thereafter, the Examiner by notice of October 27, 1961, granted a motion for continuance filed by the Consolidated System companies and recessed the hearing subject to further order of the Commission.

Docket Nos. G–16842 and CP60–94, among others, were consolidated for hearing by notice of January 15, 1962. Those proceedings concern Tennessee applications for certificates authorizing general expansion of Tennessee's facilities and services. We did not consolidate the proceedings in Docket No. CP61–106 with the expansion proceedings because we do not consider such action to be

---

[1] East Ohio Gas Company, Hope Natural Gas Company, Lake Shore Pipe Line Co., New York State Natural Gas Corporation, and The Peoples Natural Gas Company.

appropriate in the public interest. Undoubtedly transportation of Bastian Bay gas may be one issue bearing on Tennessee's expansion plans. But the issues posed in Docket No. CP61–106 differ in the main from those in the expansion case and should be separately and expeditiously decided. We shall, however, further clarify the issues so as to minimize overlapping of evidence in the two cases.

The basic purpose of these proceedings in Docket No. CP61–106 is to determine whether Tennessee has and is engaged in acts subject to our jurisdiction, in connection with the Bastian Bay Field, without having obtained such authorization as the Natural Gas Act requires. The record should also show the estimated cost of service for producing Bastian Bay gas and bringing it to Tennessee's main pipeline facilities (i.e., to the so-called "Muskrat" line) so that we may assess the direct impact of the Bastian Bay transaction on Tennessee's subsequent rate proposals. Finally, we wish the record to show, as a basis for comparison, Pan American's investment in the Bastian Bay Field prior to Tennessee's acquisition.

In view of the issues posed in Docket No. CP61–106, the factual background of the proceedings, and the recent examiner's decision on related questions in *Tennessee Gas Transmission Company, et al.*, Docket Nos. G–14562 *et al.* (issued January 8, 1962), it is necessary and appropriate in the public interest and to carry out the provisions of the Natural Gas Act that we promptly determine the extent, if any, of our specific jurisdiction over Pan American in connection with the Bastian Bay Field. To that end it is reasonable that we issue an order to show cause, directed to Pan American in Docket No. CI62–1034 and consolidate such proceeding with Docket No. CP61–106.

The Commission further finds:

(1) Pan American has, pursuant to a lease sale agreement dated July 15, 1960, executed an assignment and conveyance dated as of December 1, 1960, to Tennessee Gas Transmission Company, of certain leasehold interests and facilities in the Bastian Bay Field, Plaquemines Parish, Louisiana.

(2) At the time of said assignment and conveyance Pan American had partially developed its Bastian Bay leaseholds.

(3) Pan American has carved out and retained certain of its original interests in the Bastian Bay Field.

(4) Pursuant to these instruments Tennessee has agreed to pay Pan American, for the interests assigned and conveyed, a price which is directly proportional to, and subject to redetermination based upon, an estimate of the recoverable underground natural gas reserves underlying the leaseholds assigned and conveyed.

(5) Tennessee has paid to Pan American cash and promissory notes totalling $159,463,500 but subject to redetermination and revision, upward or downward, upon the basis of subsequently estimated natural gas reserves.

(6) Pan American has agreed to cover certain costs of operating and further developing the Bastian Bay leaseholds conveyed to Tennessee out of the revenues from interests in petroleum liquids carved out and retained by Pan American.

(7) Tennessee is taking natural gas produced from the conveyed Bastian Bay leaseholds into its pipeline system, transporting such gas in interstate commerce, and selling such gas in interstate commerce for resale; and it appears that Pan American knew or had reason to know before it committed itself to assigning and conveying the leaseholds that Tennessee would so dispose of Bastian Bay gas.

(8) Notwithstanding the nature of these transactions under State contract and property law, Pan American may be engaged in the "sale" of natural gas

produced at the Bastian Bay Field in interstate commerce for resale and subject to the jurisdiction of the Commission, within the meaning of Sections 1, 4 and 7 of the Natural Gas Act, to Tennessee.

(9) It is necessary and appropriate in the public interest that Pan American be ordered to show cause, if any there be, in Docket No. CI62–1034 why it should not be found to be engaged in the sale of natural gas produced at the Bastian Bay Field subject to the jurisdiction of the Commission without having secured authorization or having filed schedules therefor as required by sub-sections 7(c) and 4(c) of the Natural Gas Act.

(10) The proceedings in Docket No. CI62–1034, should be heard on a consolidated record with those in Docket No. CP61–106.

The Commission orders:

(A) Pan American Petroleum Corporation is hereby directed to show cause, if any there be, in Docket No. CI62–1034, why it should not be found to be engaged in the sale of natural gas produced at the Bastian Bay Field, Plaquemines Parish, Louisiana, subject to the jurisdiction of the Commission to Tennessee Gas Transmission without having secured the authorization or having filed the schedules therefor required by sub-section 7(c) and 4(c) of the Natural Gas Act.

(B) Petitions to intervene in Docket No. CI62–1034 may be filed on or before March 26, 1962, *provided, however*, that any party to Docket No. CP61–106 will be deemed an intervenor in Docket No. CI62–1034 without further filing.

(C) The proceedings in Docket No. CI62–1034 are hereby consolidated with those in Docket No. CP61–106.

(D) The Presiding Examiner is hereby authorized and directed to issue notice of the time and place of resumption of hearings.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UNITED GAS PIPE LINE COMPANY, DOCKET NOS. G–9547, G–10592, G–12801, G–15360, G–18406, RP60–2, AND RP61–18

ORDER APPROVING SETTLEMENT AGREEMENT, PRESCRIBING REFUNDS, AND TERMINATING PROCEEDINGS IN PART

(Issued March 12, 1962)

The above dockets relate to consolidated rate proceedings arising from proposed increases in rates and charges tendered for filing by United Gas Pipe Line Company (United), pursuant to Section 4 of the Natural Gas Act. The period during which the proposed increase in the respective docket has been collected by United, subject to refund of excess charges, if any, is as follows:

Docket No.	Filing date	Effective date of suspended rates	Periods covered
G–9547	Sept. 30, 1955	Apr. 1, 1956	Apr. 1, 1956 through Nov. 15, 1956.
G–10592	May 15, 1956	Nov. 16, 1956	Nov. 16, 1956 through Nov. 30, 1957.
G–12801	May 29, 1957	Dec. 1, 1957	Dec. 1, 1957 through Nov. 30, 1958.
G–15360	May 29, 1958	Dec. 1, 1958	Dec. 1, 1958 through Sept. 30, 1959.
G–18406	Mar. 30, 1959	Oct. 1, 1959	Oct. 1, 1959 through Aug. 12, 1960.
RP60–2	Feb. 11, 1960	Aug. 13, 1960	Aug. 13, 1960 through June 14, 1961.
RP61–18	Jan. 18, 1961	June 15, 1961	June 15, 1961.

The proceedings in the first five of the above-captioned dockets were consolidated for purposes of hearing and decision [1] by order issued June 22, 1961, and pursuant to that order the hearing was convened on July 17, 1961. Those proceedings were further consolidated to include Docket Nos. RP60–2 and RP61–18 by order issued September 12, 1961. Following various hearing sessions and preliminary discussions looking toward settlement, United completed the presentation of its direct case in all dockets on November 28, 1961. Settlement conferences were thereafter held periodically and concluded on February 19, 1962.

The consolidated proceedings were reconvened on February 19, 1962, at which time there was identified and received in evidence as Exhibit No. 33 a document entitled "Stipulation and Agreement dated February 16, 1962" which in addition to the text of the agreement also includes six appendices designated Appendix A, A–1 and B through E. The parties then stated their position respecting the proposed stipulation and agreement on the record.

In accordance with the request of the parties, the presiding examiner on February 20, 1962, certified the entire record in these proceedings to the Commission for its consideration and disposition. That record shows that all the parties present, except Willmut Oil and Gas Company and Laclede Gas Company, expressed unqualified acceptance of the proposed stipulation and agreement. No party to the proceeding objected to the settlement.

Willmut's acceptance was conditioned on the action of the Supreme Court on Willmut's petition for rehearing on denial of certiorari in its proceeding Sup. Ct. No. 506, Oct. Term, 1961. We take note that the Supreme Court on March 5, 1962 denied Willmut's petition for rehearing thereby eliminating the condition to its acceptance of the settlement.

Laclede's qualified acceptance is based on its position as set forth in the record, that the design of United's PL–C rate in Docket No. RP61–18 represents an extremely high and unwarranted "tilt" in the demand charge. Laclede therefore urges that we modify the proposed agreement as follows: "In RP61–18, United's PL–C rate schedule for the Central Zone shall be redesigned to provide a demand charge not more than 50 percent in excess of that resulting from strict application of the Atlantic Seaboard formula or 75 cents per Mcf per month, whichever is greater, for the period from June 15, 1961, forward" (Tr. 611). Laclede also indicates (Tr. 616) that it is not its purpose to "prevent the accomplishment of the overall objective of settling these seven pending cases" and then concludes:

> Accordingly, if the Commission in its wisdom and discretion does not adopt this modification, Laclede will accept the proposed Stipulation and Agreement with the intent of being given an opportunity to raise the question of rate design in a conference following the post-audit provided in the Agreement or in any hearing which may be thereafter scheduled on disputed issues under Docket No. RP61–18.

We have reviewed and considered Laclede's statement and the comments thereon by Mississippi River Fuel Corporation and United in the context of the terms of the proposed settlement. Among other things, that settlement provides for determination on a post-audit basis of the costs of service for the period during which the RP61–18 rates are in effect. The settlement also sets out (Appendices B and C) the manner in which such costs of service will be prepared and specifically states (Article IV, Section 8) that disputed

[1] Prior hearings in Docket Nos. G–9547 and G–10592 resulted in a Commission decision issued January 4, 1961 (25 FPC 26). Upon appeal, that decision was remanded to the Commission. *Willmut Gas and Oil Co.* v. *FPC*, CADC No. 16245, *et al.*, decided January 4, 1962.

issues of the post-audit "including but not limited to the question of rate design if raised by any party" will be resolved either by conference or by formal hearing and decision thereon after such post-audit costs of service have been served upon all the parties.

It is not our purpose at the present time to prejudge the rate design that may be appropriate in Docket No. RP61–18. The degree of "tilt" in United's PL–C and PL–J rates indicated in Laclede's statement is a matter of concern to us. However, the costs relating to that docket are yet to be determined. Under the circumstances, it appears that consideration and ultimate disposition of this issue can, more appropriately, be accomplished at such time that the costs and all other facts relating to this docket are before us. At such time we shall also consider whether it is proper and feasible that the rate design therein determined be applicable from June 15, 1961 or prospectively only. It is our intention that not only shall Laclede have the opportunity to raise the question of rate design in RP61–18 at the appropriate time, but that in accordance with the provisions of the Natural Gas Act the burden of proof shall continue to rest on United with respect to this issue and all other issues raised by any party with respect to the post-audit costs of service.

The proposed stipulation and agreement and appendices thereto in evidence as Exhibit No. 33, is attached hereto as so marked and made a part of this order. In addition to setting out the procedures referred to above, relating to Docket No. RP61–18, which would limit the issues but not, at this time, fully settle that docket, the agreement also provides for complete settlement of the other six dockets captioned above. In settlement of those dockets, United will refund to its customers the principal amount of $29,778,219, plus interest at the rates prescribed by the Commission in each docket, and computed in the manner provided in Article III of the stipulation. The principal amount to be refunded to each customer is set forth in Appendix A and by rate schedules in Appendix A–1 to the agreement. United will also refund to its customers any amounts it receives from its suppliers, listed in Appendix D to the agreement, as a result of Commission action in pending proceedings relating to such suppliers under Sections 4 or 7 of the Natural Gas Act.

Our review of the record and the terms of the agreement indicates that settlement of these proceedings as proposed and set forth in Exhibit No. 33, and subject to the conditions of this order, is appropriate and in the public interest.

The Commission finds:

The settlement of these proceedings upon the basis of the Stipulation and Agreement attached hereto as Exhibit No. 33* and made a part hereof, is reasonable, and proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be approved and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The settlement of these proceedings upon the basis set forth in the Stipulation and Agreement, attached hereto as Exhibit No. 33 and made a part hereof, is hereby approved and made effective as proposed therein, subject to the terms and conditions hereinafter ordered.

(B) United, within 15 days from the date of issuance of this order, shall refund the sum of $29,778,219 to its customers in the proportionate share shown opposite such customer's name in Appendix A or A–1 to the agreement plus

* Omitted in printing.

applicable interest, computed in accordance with Article III of the agreement.

(C) United shall pass on to its jurisdictional customers in the above-captioned proceedings such refunds including interest as it may receive from its suppliers under Sections 4 and 7 proceedings under the Natural Gas Act in accordance with Article V of Exhibit No. 33 and Appendices D and E thereto attached.

(D) Within twenty (20) days of making a refund in accordance with paragraphs (B) and (C) above, United shall report to the Commission, in writing and under oath, the amount of the refund made to each of the customers, showing separately the amount of principal and interest so paid together with a computation showing the manner in which such refund was determined, and shall serve a copy of the report upon each of the customers receiving a refund. Concurrently therewith, United shall file with respect to such refunds releases from its jurisdictional customers showing receipt of the principal amount and interest in conformity with the settlement agreement and the provisions of this order.

(E) Upon payment of the amounts provided in Article III of the agreement and upon compliance with the terms and conditions of paragraphs (B) and (D) of this order, the proceedings in Docket Nos. G–9547, G–10592, G–12801, G–15360, G–18406, and RP60–2 shall be deemed terminated, subject only to United's obligations under Article V of the agreement and the applicable provisions of this order.

(F) United shall, as soon as practicable, prepare the post-audit costs of service provided for by Article IV of the agreement and in the manner set forth in Appendices B and C. United shall continue to bear the burden of proof on any issue raised by a party in accordance with the terms of the settlement agreement relating to the post-audit determination of just and reasonable rates in Docket No. RP61–18.

(G) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, United or any other affected party hereto, in any other proceeding or proceedings now pending or hereafter instituted by or against United or any other party hereto.

COMMUNICATIONS WITH THE COMMISSION, INDIVIDUAL COMMISSIONERS, AND PRESIDING OFFICERS, DOCKET NO. R-175

ORDER TERMINATING PROCEEDING

(Issued March 13, 1962)

On May 22, 1959, the Commission instituted a proceeding on the above subject by the issuance of a notice of proposed rulemaking which was published in the Federal Register on June 3, 1959 (24 F.R. 4523).

In view of our Order No. 244 issued this day in *Ex Parte Communications*, Docket No. R-210, further proceedings herein are unnecessary.

The Commission *orders:*

The proceeding in Docket No. R-175 is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

EX PARTE COMMUNICATIONS, DOCKET NO. R-210

ORDER NO. 244

AMENDING § 1.4 OF THE RULES OF PRACTICE AND PROCEDURE

(Issued March 13, 1962)*

The Commission desires to take all appropriate measures to assure the public and all interested parties that its proceedings will be conducted in a scrupulously fair and impartial manner. We believe that the rule herein adopted, together with existing provisions of our rules, will serve to make it plain that any instance of possible departure from high standards of ethical conduct will be promptly and carefully examined by the entire Commission.

It appears that the amendment adopted herein pertains to Commission practice and procedure and hence that section 4 of the Administrative Procedure Act is not applicable.

The Commission finds:

(1) The amendment adopted herein is necessary and appropriate for the purposes of administration of the Federal Power and Natural Gas Acts.

(2) Good cause exists that the amendment herein adopted becomes effective forthwith.

The Commission, acting pursuant to the authority granted by the Federal Power Act, as amended, particularly sections 308 and 309 thereof (49 Stat. 858; 16 U.S.C. 825g, 825h) and the Natural Gas Act, as amended, particularly sections 15 and 16 thereof (52 Stat. 829, 830; 15 U.S.C. 717n, 717o) *orders:*

---

* Published in Federal Register on March 17, 1962 (27 F.R. 2573).

(A) Section 1.4, Rules of Practice and Procedure, Subchapter A, Chapter I of Title 18 of the Code of Federal Regulations, is amended by adding a new subsection (d) to read as follows:

(d) In order to avoid all possibilities of prejudice, real or apparent, to the public interest and persons involved in administrative proceedings pending before this Commission, it is hereby provided: In a contested proceeding, no party thereto, or his counsel, agent, or other person acting on his behalf, shall communicate, *ex parte*, with any member of the Commission or of his personal staff, with the hearing examiner, or with any employee responsible for aiding the Commission in the preparation of a decision in such proceeding, with respect to the merits of that or a factually related proceeding. If a communication of this kind is received, the person (or persons) to whom the representations have been made shall promptly and fully inform the Commission of the substance of the communication and the circumstances thereof, so that the Commission will be enabled to take appropriate action.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

GEORGIA POWER COMPANY, PROJECT NO. 1218

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued March 13, 1962)

Application was filed on December 22, 1961, by Georgia Power Company, licensee for major Project No. 1218, for Commission approval of revised Exhibit K to show proposed modification of the project boundary by the removal therefrom of three parcels of land containing 10.83 acres, 20.07 acres, and 14.58 acres, respectively.

The licensee desires to utilize a portion of the three parcels in the general operation of its utility business. The parcels will not be used for project purposes. The three parcels are privately-owned land.

The Commission finds:

The following described revised Exhibit K conforms to the Commission's rules and regulations and should be approved as part of the license for the project and Exhibit K (FPC No. 1218–1) which is superseded and which is now part of the license should be eliminated therefrom—all as hereinafter provided:

Revised Exhibit K (FPC No. 1218–9) entitled "Flint River Development Near Albany, Ga., Project Area Map" signed Georgia Power Company, F. E. Shumate, Vice President, July 15, 1932, with revisions as of September 25, 1935, and December 14, 1961.

The Commission orders:

The revised Exhibit K described in the above filing as conforming to the Commission's rules and regulations is approved as part of the license for Project No. 1218, and the exhibit described in the same finding as being superseded is eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NONACCEPTABILITY OF RATE FILINGS BASED ON STATE-PRESCRIBED MINIMUM PRICES, DOCKET NO. R-168

ORDER AMENDING ORDER TERMINATING PROCEEDING

(Issued March 14, 1962)*

In our order of February 7, 1962, 27 FPC 326, terminating the above proceeding, the following sentence appears:

> We recognize, moreover, that a buyer of natural gas who has paid seller on the basis of a state minimum price law has an adequate remedy in an appropriate court in the event that his contract entitles him to a refund as a result of the invalidity of the state minimum price laws.[1]

That sentence was not intended to express or imply any view as to whether contract actions in appropriate state or federal courts might be subject to defenses other than defenses based on the Kansas minimum-rate order itself. To avoid doubt on that score, we hereby amend the above-quoted sentence to read as follows:

> We recognize, moreover, that a buyer of natural gas who has paid seller on the basis of a state minimum price law can invoke the jurisdiction of an appropriate court in the event that his contract provides for a refund if the state minimum price laws are held invalid.[2]

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP62-43

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 19, 1962)

On August 22, 1961, as supplemented on October 17, 1961, Atlantic Seaboard Corporation (Applicant) filed in Docket No. CP62-43 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction and operation of approximately 40.3 miles of 30-inch gas transmission pipeline extending in a northeasterly direction from Applicant's 26-inch pipelines at Leesburg Gate, Loudon County, Virginia, to a point of interconnection with Applicant's 20-inch and 26-inch pipelines at Linden Church, Howard County, Maryland, and (2) the installation and operation

---

* Published in Federal Register on March 21, 1962 (27 F.R. 2657).

[1] *Pan American Petroleum Corp.* v. *Superior Court of Delaware for New Castle County et al.*, 366 U.S. 656 (1961).

[2] *Pan American Petroleum Corp.* v. *Superior Court of Delaware for New Castle County et al.*, 366 U.S. 656 (1961).

of 1320 additional compressor horsepower at Applicant's Lost River Compressor Station, Hardy County, West Virginia, by turbocharging of six existing compressor units from 1100 h.p. to 1320 h.p. each, all as more fully set forth in the application, as supplemented.

The estimated peak day gas requirements of Applicant's customers for the 1962-1963 winter season will increase approximately 45,800 Mcf over and above the estimated peak day gas requirements for the 1961–1962 winter season. Applicant's existing transmission system does not have sufficient capacity to meet such increased gas requirements. Applicant estimates its customer requirements for the next three years as follows:

	1962–63	*1963–64*	*1964–65*
Peak Day (MMcf)	1,001	1,020	1,068
Annual (MMcf)	192,138	200,818	210,251

The proposed pipeline is also necessary to permit Applicant to obviate additional pipeline operations in the heavily populated urban areas surrounding Washington, D.C., by routing it to avoid such areas. Applicant anticipates that the construction of the proposed pipeline will make unnecessary further pipeline construction in these areas for several years.

The estimated costs of the proposed projects are $5,111,000 for the pipeline and $365,000 for turbocharging compressors. The total cost of $5,476,000 will be financed by the Columbia Gas System, Inc., Applicant's parent.

Applicant does not propose to increase its present contract demand from United Fuel Gas Company, its principal source of supply.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 12, 1962, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No protest to the granting of the application has been received. A petition to intervene was filed on January 22, 1962, by Harold A. Knapp, Jr., of Germantown, Maryland,[1] and was denied by the Commission in its order issued February 19, 1962. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Atlantic Seaboard Corporation, a Delaware Corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 29, 1955, in Docket No. G–6500 (14 FPC 692).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

---

[1] Applicant filed its Answer and Objection to the Petition to Intervene on January 30, 1962.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The time within which the construction of the facilities hereinafter authorized should be completed and said facilities placed in actual operation should be fixed at 12 months from the date of which this order issues.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Atlantic Seaboard Corporation, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY, DOCKET NO. CP62-105

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 19, 1962)

On October 23, 1961, Central Illinois Public Service Company (Applicant) filed in Docket No. CP62-105 an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Natural Gas Pipeline Company of America (Natural) to establish physical connection of its facilities with those which Applicant proposes to construct, and to sell and deliver natural gas to Applicant for resale and distribution in the City of Windsor, Shelby County, Illinois, and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 4 miles of 4-inch lateral pipeline extending from Natural's existing transmission line to the City of Windsor, and the necessary distribution facilities in the area to be served.

Applicant's estimated gas requirements under this application are as follows:

Year	Requirements in Mcf	
	Peak Day	Annual
1	512	53, 300
2	656	67, 700
3	720	74, 100

The gas will be used for residential and commercial purposes.

On November 3, 1961 Natural advised the Commission that it has no objection to rendering proposed service to the Applicant and that it has the capacity and pipeline facilities to do so. In view of the relatively small volumes of gas involved, there should be no adverse effect on Natural's existing customers.

The estimated cost of Applicant's facilities to receive natural gas and to render the proposed service is $160,200 which will be defrayed from internal funds.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 22, 1961 (26 FR 12262). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) Applicant, Central Illinois Public Service Company, an Illinois corporation having its principal place of business in Quincy, Illinois, is duly authorized to sell and distribute natural gas in the State of Illinois, and holds a certificate from the Illinois Commerce Commission and a franchise from the City of Windsor authorizing the service proposed.

(3) It is necessary and desirable in the public interest to direct Natural Gas Pipeline Company of America to establish physical connection of its transmission system with the facilities proposed to be constructed and operated by the Applicant and to sell and deliver up to 720 Mcf per day of natural gas to Applicant for resale and distribution in the City of Windsor, Illinois, and environs, under Natural's appropriate rate schedules on file with the Commission.

(4) The requirement that Natural serve Applicant as proposed will not place an undue burden upon Natural nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Natural Gas Pipeline Company of America be and it is hereby directed to establish physical connection of its transmission facilities with the facilities of Applicant proposed under this application, together with such metering, regulating and appurtenant facilities as may be required therefor, and to deliver and sell up to 720 Mcf per day of natural gas to Applicant for resale and distribution in the City of Windsor, Illinois, and environs, under Natural's appropriate rate schedules on file with the Commission, providing Applicant commences the purchase of such natural gas within one year from the date of issuance of this order.

(B) Natural shall report to the Commission in writing and under oath the date of commencement of service to Applicant under this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-63; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-66

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 19, 1962)

On September 14, 1961, as supplemented on October 26, 1961, El Paso Natural Gas Company (El Paso) filed in Docket No. CP62-63, and on September 14, 1961, as supplemented on October 30, 1961, Northern Natural Gas Company (Northern) filed in Docket No. CP62-66, applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the exchange, on a best efforts basis, of 30,000 Mcf of natural gas per day during the period from November 1, 1961, through December 31, 1962.

The applications show that the proposed exchange will be accomplished by use of existing facilities and without charge or payment by either applicant.

Northern and El Paso presently are authorized to exchange up to 475,000 Mcf of natural gas per day at certain interconnections in Oklahoma and Texas and at certain delivery points along El Paso's Plains-Dumas transmission pipeline whereby El Paso makes certain deliveries for the account of Northern. Under the subject proposed exchange, Northern will deliver additional exchange gas to El Paso at the latter's Plains Compressor Station, Yoakum County, Texas, and El Paso will deliver equivalent volumes of additional exchange gas to Northern at El Paso's Dumas Station, Moore County, Texas.

Northern states that in the past it has had approximately 15 billion cubic feet of allowables cancelled by the New Mexico Oil Conservation Commission in Lea County, New Mexico. Northern states further that it is currently in an underproduced position in Lea County and is faced with further cancellation, and that cancellation of allowables will be reduced to the extent that volumes of gas are delivered to El Paso under the subject proposed exchange arrangement.

The proposed exchange will be made pursuant to an agreement between the two Applicants, dated October 20, 1961.

El Paso and Northern were each granted temporary authorization in the subject dockets by separate letters dated December 5, 1961.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 12, 1962, respecting the matters involved in and the issues presented by the applications, as supplemented, herein. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas

company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(3) The proposed exchange and delivery of natural gas hereinbefore described, as more fully described in the applications, as supplemented, in these proceedings, are to be made in interstate commerce subject to the jurisdiction of the Commission and are, therefore, subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The proposed exchange and delivery of natural gas by Applicants are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3) and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicants, El Paso Natural Gas Company and Northern Natural Gas Company, to exchange and deliver up to 30,000 Mcf of natural gas per day for the period ending December 31, 1962, as hereinbefore described, all as more fully described in the respective applications, as supplemented, in Docket Nos. CP62–63 and CP62–66, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

NORTH CENTRAL GAS COMPANY, DOCKET NO. CP62–38; KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP62–39; TOWER OIL AND GAS COMPANY OF TEXAS, DOCKET NO. CI62–193

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 19, 1962)

On August 17, 1961, as supplemented on October 25, 1961, North Central Gas Company (North Central) filed in Docket No. CP62–38 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a meter station on its 12-inch pipeline near Orin, Platte County, Wyoming, in order to enable North Central to receive natural gas from Tower Oil and Gas Company of Texas

(Tower), and authorizing the exchange of natural gas with Kansas-Nebraska Natural Gas Company (Kansas-Nebraska) at an existing point of interconnection [1] near the Huntsman Field, Cheyenne County, Nebraska.

On August 17, 1961, Kansas-Nebraska filed in Docket No. CP62–39 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the aforementioned exchange of natural gas near the Huntsman Field, Cheyenne County, Nebraska.

North Central and Kansas-Nebraska have entered into a contract, dated June 20, 1961, with Tower under which each would purchase from Tower in the ratio of 50 percent of available gas produced by Tower in the Shawnee area, Converse County, Wyoming. Since Kansas-Nebraska has no transmission facilities in the Shawnee area, and in order to eliminate the necessity of Kansas-Nebraska constructing duplicate facilities, North Central proposes to receive and transport all gas purchased by both companies from Tower with equivalent volumes due Kansas-Nebraska being delivered to it by North Central from the latter's Huntsman reserves in Nebraska. The subject exchange will be made pursuant to an agreement, dated June 20, 1961, between North Central and Kansas-Nebraska.

The subject sale of gas will be made at a rate of 12 cents Mcf at 15.025 psia.

On August 15, 1961, Tower filed in Docket No. CI62–193 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the above described sale of natural gas to North Central and Kansas-Nebraska.

The Applicants in these proceedings indicate that the proposed sale and the proposed exchange of natural gas may be an interim arrangement and that in the event Tower has under control in the Shawnee area prior to April 1, 1964, reserves of 146 billion cubic feet of gas and sufficient capacity to deliver a maximum of 30,000 Mcf per day, then the gas sales contract between the three Applicants and the exchange agreement between North Central and Kansas-Nebraska will terminate. In the event the foregoing contracts are terminated, the Applicants indicate further that Intermountain Gas Company (Intermountain) has agreed to construct and operate a pipeline from the Shawnee area to Mitchell, Nebraska, and sell gas purchased from Tower to Kansas-Nebraska and North Central; North Central would deliver Kansas-Nebraska's share of this gas at a point near Scottsbluff, Nebraska. However, none of the Applicants in these proceedings is seeking authorization, herein, with respect to the alternate arrangements or proposals. Such information has been included in order to demonstrate the possibilities of the development of the Shawnee area. Therefore, any authorizations hereinafter granted to North Central, Kansas-Nebraska or Tower do not imply approval of any alternate arrangements or proposals, including any contemplated project of Intermountain or any exchange of gas related to that project. Furthermore, any authorization hereinafter granted to Tower does not imply approval of any limited term sales of natural gas in these proceedings by Tower to North Central and Kansas-Nebraska in contemplation of the above-stated alternate project.

The estimated cost of North Central's proposed facilities in Docket No. CP62–38 is $2,112, which cost will be financed out of current working funds.

North Central, Kansas-Nebraska and Tower were each granted temporary authorization by separate letters, dated November 14, 1961.

---

[1] Said facilities were modified under temporary authorization granted to Kansas-Nebraska on November 30, 1959, in Docket No. G–17303.

Pursuant to due notice, a public hearing was held in Washington, D. C., on March 8, 1962, respecting the matters involved in and the issues presented by the applications herein. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, North Central Gas Company, a Wyoming corporation having its principal place of business in Casper, Wyoming, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of February 23, 1943, in Docket No. G–380 (3 FPC 925).

(2) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Phillips County, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–259 (3 FPC 966).

(3) Applicant, Tower Oil and Gas Company of Texas, an independent producer of natural gas, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission, and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(4) The facilities to be constructed by North Central, as hereinbefore described and as more fully described in the application in Docket No. CP62–38, are proposed to be used in the transportation of natural gas in interstate commerce, and the proposed exchange and delivery of natural gas by North Central and Kansas-Nebraska, as hereinbefore described and as more fully described in the applications in Docket Nos. CP62–38 and CP62–39, are to be made in interstate commerce, all subject to the jurisdiction of the Commission, and the construction and operation of the subject facilities by North Central and the proposed exchange and delivery of natural gas by North Central and Kansas-Nebraska are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The sales of natural gas by Tower hereinbefore described, as more fully described in Tower's application in Docket No. CI62–193, will be made in interstate commerce, subject to the jurisdiction of the Commission and such sales by Tower, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therfor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) The sales of natural gas by Tower, together with the construction and operation of any facilities, subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) The construction and operation of the facilities proposed by North Central in Docket No. CP62–38, and the exchange and delivery of natural gas proposed by North Central and Kansas-Nebraska in Docket Nos. CP62–38 and CP62–39, respectively, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(8) The respective Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) Public convenience and necessity require that the certificate issued hereinafter to North Central in Docket No. CP62–38 and the rights granted thereunder be conditioned upon North Central's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(10) Public convenience and necessity require that the certificate issued hereinafter to Kansas-Nebraska in Docket No. CP62–39 and the rights granted thereunder be conditioned upon Kansas-Nebraska's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b) and (e) of Section 157.20 of such Regulations.

(11) The certificates hereinafter issued to North Central, Kansas-Nebraska and Tower should be conditioned upon final approval of the temporarily authorized exchange facilities involved in pending Docket No. G–17303.

(12) The certificate hereinafter issued to Tower should not imply approval of any limited term sales of natural gas in these proceedings by Tower to North Central and Kansas-Nebraska.

(13) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, North Central Gas Company, to construct and operate facilities and to exchange and deliver natural gas all as hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP62–38, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Kansas-Nebraska Natural Gas Company, Inc., to exchange and deliver natural gas as hereinbefore described, all as more fully described in the application in Docket No. CP62–39, upon the terms and conditions of this order.

(C) A certificate of public convenience and necessity be and the same is hereby issued upon the terms and conditions of this order, authorizing the sale by Tower Oil and Gas Company of Texas of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission used for the sale of natural gas in interstate commerce, to North Central and Kansas-Nebraska, as hereinbefore described and as more fully described in the application in Docket No. CI62–193.

(D) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon North Central's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(E) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Kansas-Nebraska's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b) and (e) of Section 157.20 of such Regulations.

(F) The exchange and delivery of natural gas authorized in paragraphs (A) and (B) above shall commence within three months from the date on which this order issues.

(G) The certificates issued in paragraphs (A), (B), and (C) above to North Central, Kansas-Nebraska and Tower, respectively, are hereby conditioned upon final approval of the temporarily authorized exchange facilities involved in pending Docket No. G–17303.

(H) The certificate issued in paragraph (C) above to Tower does not imply approval of any limited term sales of natural gas in these proceedings by Tower to North Central and Kansas-Nebraska.

(I) The certificate hereby issued to Tower in paragraph (C) above is not transferable and shall be effective only so long as Tower continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificate herein to Tower shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Section 154 of the Commission's rules and regulations thereunder requiring the filing of rate schedules for the services herein authorized and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by, or against, Tower. Further, our action in these proceedings shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP62–2; TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP62–3

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 19, 1962)

The Ohio Fuel Gas Company (Ohio Fuel), an Ohio Corporation having its principal place of business in Columbus, Ohio, filed on July 6, 1961, an application in Docket No. CP62–2, and on August 3, 1961, a supplement thereto, pursuant to Section 7 of the Natural Gas Act, for a certificate of public convenience and necessity authorizing the establishment of an additional point of delivery and sale to The Dayton Power and Light Company (Dayton) in Madison Township, Fayette County, Ohio, to deliver natural gas to Dayton for resale in Dayton's prospective new market area of New Holland and Waterloo, Ohio, and vicinity. Said additional point of delivery and sale is identical with the point of delivery to Ohio Fuel proposed by Texas Eastern Transmission Corporation (Texas Eastern) in its companion application in Docket No. CP62–3 hereinafter described.

Additional facilities required will include a tap on Texas Eastern's main line facilities, together with necessary measuring and regulating equipment and other appurtenances required for practical operation. The cost is estimated at $26,300. Construction of required facilities will be undertaken by Texas Eastern and, excluding the estimated cost of the main line tap of $800, Ohio Fuel will reimburse Texas Eastern for the cost of the measuring and regulating facilities and assume ownership thereof.

Ohio Fuel estimates, from information received from Dayton, that the combined total natural gas requirements of New Holland and Waterloo will be as follows:

Year	Mcf at 14.73 psia	
	Peak day	Annual
1	325	34,649
2	509	56,221
3	666	77,123

Texas Eastern Transmission Corporation, a Delaware corporation with its principal office in Shreveport, Louisiana, filed on July 6, 1961, an application in Docket No. CP62–3, pursuant to Section 7 of the Natural Gas Act, for a certificate of public convenience and necessity authorizing it to construct and operate a metering and regulating station together with the appurtenant facilities at a point on its main transmission line in Fayette County, Ohio, approximately 5 miles west of Texas Eastern's Compressor Station No. 17. The establishment of this additional delivery point, Texas Eastern shows, is for the purpose of making deliveries of natural gas to The Dayton Power and Light Company for the account of Ohio Fuel in order to permit Dayton to provide service to New Holland and Waterloo, Ohio.

Texas Eastern shows that it is presently authorized to sell and deliver to The Ohio Fuel Gas Company and The Manufacturers Light and Heat Company, jointly, up to 385,400 Mcf (at 15.025 psia) of natural gas per day on a long term basis under Texas Eastern's rate schedules DCQ–C and DCQ–D. Ohio Fuel is scheduled to receive from Texas Eastern a total firm quantity of 215,400 Mcf per day. Such gas is delivered by Texas Eastern at six delivery points in western and central Ohio.

Texas Eastern states that it is informed that Ohio Fuel's customer, Dayton, desires to extend its service to New Holland, Ohio, and vicinity, which are located in the general area in which Dayton distributes gas at retail, but which do not have natural gas service.

Texas Eastern says it is informed that the service proposed by Dayton can best be rendered by Dayton receiving deliveries of natural gas from Texas Eastern's main line, since it will permit construction of the minimum amount of lateral line to New Holland and at the same time permit Dayton to provide service in the community of Waterloo enroute to New Holland.

Applicants show that they can furnish the proposed service under their existing supply contracts. Applicants' supplies are adequate for the minor service proposed, and the proposed deliveries will not adversely affect Applicants' ability to serve other customers.

Dayton will construct and operate the necessary gas supply line from Texas Eastern's pipeline and all other gas distribution facilities required to render said service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 7, 1962, respecting the matters involved in and the issues presented by the applications. No petition to intervene or protest to the granting of the application except a petition to intervene filed by The Dayton Power and Light Company, in Docket No. CP62–3 in support of the applications and requesting that the intermediate decision procedure be waived and omitted. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) The Ohio Fuel Gas Company (Applicant) an Ohio corporation and a subsidiary of The Columbia Gas System, Inc., having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(2) Texas Eastern Transmission Corporation, a Delaware corporation, having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G–880 (6 FPC 148).

(3) The proposed sale and delivery of natural gas by The Ohio Fuel Gas Company at an additional delivery point to the Dayton Power and Light Company will be made for resale in interstate commerce, subject to the jurisdiction of the Commission and such sale is subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(4) The facilities proposed to be constructed and operated by Texas Eastern as hereinbefore described and as more fully described in the application herein, are to be used in the transportation and sale for resale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Texas Eastern are subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(5) The construction and operation of the facilities as proposed by Texas Eastern and the sale of natural gas at an additional delivery point as proposed by Ohio Fuel are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of said regulations and the terms and conditions of paragraphs (c)(1), (c)(3) and (c)(4) of said section shall attach to the certificate issued to Texas Eastern Transmission Corporation.

(8) A request during the public hearing having been made by staff counsel for omission of the intermediate decision procedure, and all requirements of Section 1.30(c)(1) [18 CFR 1.30(c)(1)] of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission to render its final decision in the instant proceeding.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to The Ohio Fuel Gas Company authorizing the establishment of an additional point of delivery and sale to The Dayton Power and Light Company in Madison Township, Fayette County, Ohio, and to deliver and sell natural gas to Dayton at said additional delivery point for resale in the market area of New Holland and Waterloo, Ohio, and vicinity, as described in the application in Docket No. CP62–2, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued to Texas Eastern Transmission Corporation authorizing it to construct and operate the proposed facilities, as described in the application in Docket No. CP62–3, upon the terms and conditions of this order.

(C) The certificates issued by paragraphs (A) and (B) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of said regulations and the terms and conditions set forth in paragraphs (c)(1), (c)(3) and (c)(4) of said section shall attach to the certificate issued by paragraph (B) and to the exercise of the rights granted thereunder. In addition, Texas Eastern be and hereby is permitted to waive the provisions of Section 6.1 of the general terms and conditions of its tariff for the limited purpose of permitting Ohio Fuel to own the meter station to be built by Texas Eastern.

(D) The time within which the facilities hereby authorized shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act is hereby fixed at 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

TAYLORSTOWN NATURAL GAS COMPANY, DOCKET NO. CP62-98

FINDINGS AND ORDER DIRECTING THE PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 19, 1962)

On October 16, 1961, as supplemented on January 2, 1962, Taylorstown Natural Gas Company (Applicant) filed in Docket No. CP62-98 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing The Manufacturers Light and Heat Company (Manufacturers) to establish physical connection of its facilities with those which Applicant operates, and to sell and deliver to Applicant natural gas for resale and distribution in Blaine, Buffalo, Donegal, and East Finley Townships and Claysville Borough, all in Washington County, Pennsylvania, all as more fully set forth in the application, as supplemented.

Applicant, which is regulated by the Pennsylvania Public Utility Commission, states that it serves about 1,000 customers at retail in the above-named communities. For more than 60 years Applicant's source of natural gas supply has been from local wells in the Taylorstown Field. Applicant both produces and purchases gas in this area. This field is now approaching depletion, and since no further development is anticipated, Applicant finds it necessary to augment its gas supply by purchase of gas from Manufacturers, an interstate pipeline whose facilities are located in this area.

To serve Applicant as requested Manufacturers will have to build two separate connections with Applicant's system and install meters in the vicinity of Taylorstown, Pennsylvania. Applicant proposes to construct the necessary pipeline between the taps on Manufacturers' system and its own system at a cost of about $200.

Applicant considers the 1960 requirements of 190,186 Mcf of gas at 14.73 psia and the peak and average days, respectively, of 2,184 and 522 Mcf of gas to be typical of the area's future requirements. Applicant estimates the remaining

reserve in the Taylorstown field to be 1,000,000 Mcf of gas and the decline in production to be about 10 percent annually. To meet this decline in production Applicant will require from Manufacturers annual volumes of about 40,000 Mcf of gas and up to 1,000 Mcf of gas per day on peak days. Applicant will purchase gas under Manufacturers' CDS–1 Rate Schedule.

Manufacturers filed its answer to the subject application on November 17, 1961, as supplemented on December 18, 1961, stating that it is able and willing to render the proposed service.

Notice of the application was published in the Federal Register on February 16, 1962 (27 FR 1469). No petition to intervene or protest to the granting of the application has been received.

The Commission finds:

(1) Applicant, Taylorstown Natural Gas Company, a Pennsylvania corporation having its principal place of business in Taylorstown, Pennsylvania, is a public utility subject to the jurisdiction of the Pennsylvania Public Utility Commission and is duly authorized to engage in the business of distributing and selling natural gas in Pennsylvania.

(2) The Manufacturers Light and Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G–593, *et al.* (4 FPC 821)

(3) It is necessary and desirable in the public interest to direct The Manufacturers Light and Heat Company to establish physical connection of its transmission facilities with those of the Taylorstown Natural Gas Company in Blaine, Buffalo, Donegal, and East Finley Townships and Claysville Borough, Washington County, Pennsylvania, and to sell and deliver natural gas to Taylorstown Natural Gas Company under Manufacturers' appropriate rate schedule on file with the Commission, for resale and distribution in the aforesaid communities.

(4) Manufacturers should not be required to furnish gas in excess of 1,000 Mcf per day for the service herein directed.

(5) Applicant should commence taking gas from Manufacturers as directed hereinafter within one year from the date on which this order issues.

The Commission orders:

(A) The Manufacturers Light and Heat Company be and it is hereby directed to establish physical connection of its transmission facilities with those of the Taylorstown Natural Gas Company in Washington County, Pennsylvania, and to sell and deliver natural gas to Applicant under Manufacturers' appropriate rate schedule on file with the Commission, for distribution and resale in the communities of Blaine, Buffalo, Donegal and East Finley Townships and Claysville Borough, as hereinbefore described and as more fully described in the application and supplement in this proceeding.

(B) Manufacturers shall not be required to furnish gas in excess of 1000 Mcf per day for the service herein directed.

(C) Applicant shall commence taking gas from Manufacturers as hereinbefore directed within one year from the date on which this order issues.

(D) Manufacturers shall report to the Commission in writing and under oath the date of commencement of service to Applicant within 10 days after such service has begun.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. G–12569

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 19, 1962)

On November 8, 1961, United Gas Pipe Line Company (Movant) filed in Docket No. G–12569 a motion to further amend the order in said docket issued on August 23, 1957, all as more fully set forth in the motion.

Movant seeks authorization to increase deliveries of natural gas to Coastal Chemical Corporation, Pascagoula, Mississippi, from 8,500 Mcf per day to 20,000 Mcf per day on an interruptible basis. There is sufficient capacity in the existing authorized facilities to render the increased service which is required due to an expansion of the Coastal Chemical Corporation plant.

Notice of the motion was published in the Federal Register on February 20, 1962 (27 FR 1584). No protest to the granting of the motion or petition to intervene has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the certificate heretofore issued in Docket No. G–12569, issued August 23, 1957, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity heretofore issued in Docket No. G–12569 on August 23, 1957, as amended, be and the same is hereby further amended to authorize United Gas Pipe Line Company to deliver up to 20,000 Mcf of gas on an interruptible basis to the Coastal Chemical Corporation plant at Pascagoula, Mississippi.

(B) In all other respects said certificate shall remain unchanged and in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP62–150

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 19, 1962)

On December 26, 1961, United Gas Pipe Line Company (Applicant) filed in Docket No. CP62–150 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon natural gas facilities as hereinafter described and as more fully described in the application.

Applicant seeks authorization to abandon and remove 0.004 mile of 8⅝" O.D. pipeline and a dual 6" orifice meter station and appurtenant facilities in Jefferson County, Texas. The facilities proposed for abandonment were installed in 1952 for the purpose of delivering gas to Magnolia Petroleum Company [1] for use in its operation of an oil refinery located at Beaumont, Texas. Socony has

[1] Predecessor in interest to Socony Mobil Oil Company (Socony).

advised Applicant that it sees no immediate use for the facilities and has requested cancellation of the gas sales contract to which Applicant has agreed.

The subject facilities have been utilized directly in connection with service to Socony and are not required following the termination of the gas sales contract with Socony. The original cost of the subject facilities was $3,826.43.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 13, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant is permitted by the public convenience and necessity, and an order permitting and approving same should be issued as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for an approval of the abandonment by the United Gas Pipe Line Company of the facilities hereinbefore described, and as more fully described in the application in this proceeding, be and the same is hereby granted.

(B) Applicant shall advise the Commission of the date of the removal of the equipment within ten days after the completion thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UNITED FUEL GAS COMPANY, DOCKET NO. G-20270

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT AND PROVIDING FOR LIMITED HEARING

(Issued March 20, 1962)

On November 17, 1961, United Fuel Gas Company (United Fuel), an affiliate in the Columbia Gas System, Inc., filed a motion requesting that the Commission issue an order approving a proposed rate settlement based upon a Stipulation and Agreement and a Supplement thereto submitted with such

motion. The Stipulation and Agreement dated June 1, 1961 (attached hereto as Exhibit I*) was executed by United Fuel, all of its customers, and certain non-customer intervenors following a field investigation by the Commission staff of United Fuel's books, records, and operations and following conferences (concluded May 11, 1961) between United Fuel, its customers, non-customer intervenors, and members of the Commission staff. Simultaneously, United Fuel also filed a supplemental agreement dated October 16, 1961 (attached hereto as Exhibit II*) executed by the signatories to the settlement agreement other than City of Pittsburgh, Pennsylvania.

The Stipulation and Agreement provides for two costs of service[1] which are to be used as bases for determination of rate design after hearing. The first cost of service is for the test year ended March 31, 1960, and will be used as the basis for determining rates from April 5, 1960, the date increased rates originally proposed herein became effective subject to refund, until May 1, 1961; it reflects a reduction in jurisdictional revenues of about $8,949,300 on an annual basis. The second cost of service is based on the same test year but with adjustments to reflect increased purchased gas costs[2]; it will be used as the basis for determining rates from and after May 1, 1961, and reflects a reduction in jurisdictional revenues of about $8,325,000 on an annual basis.

Under that Stipulation and Agreement, two issues are reserved for hearing and determination by the Commission in this proceeding: (1) the level of the demand and commodity components of the rate in United Fuel's contract demand service rate schedule and the rate levels in its other rate schedules; and (2) the depreciation rates of United Fuel to be applied to its underground storage and transmission properties and to its Kenova Extraction Plant. After hearing and determination of the above issues, United Fuel will appropriately revise its present rates, effective subject to refund in this proceeding, and will make refunds, plus interest, reflecting the revisions in rates.

The Stipulation and Agreement also provides that United Fuel will not file increased rates and charges with the Commission prior to April 1, 1962, except in the event and to the extent that Tennessee Gas Transmission Company (Tennessee Gas) files for increased rates and charges to United Fuel. In addition, United Fuel shall further reduce its rates and make appropriate refunds if (1) Boldman Compressor Station, reflected in the costs of service (see Exhibit I, Appendix C), is not transferred to United Fuel by Atlantic Seaboard Corporation[3]; and (2) if the State of Texas refunds to United Fuel severance beneficiary taxes reflected in the costs of service. Finally, United Fuel will further reduce its rates to the extent suppliers reduce rates to United Fuel which are reflected in the settlement costs of service; and United Fuel will make refunds to the extent and in the manner that suppliers make refunds to United of charges reflected in the costs of service.

The Supplement to the Agreement purports to revise a provision in the Agreement concerning the treatment of Tennessee Gas' present rates and charges to United Fuel. Prior to settlement negotiations, Tennessee Gas had filed increased

* Omitted in printing.

[1] See Exhibit I, Appendix A. The total costs there stated should be reduced by the elimination of adjustment (5), as provided in the settlement agreement, in accord with the recently final decision in *City of Lexington, et al.* v. *FPC*, 295 F. 2d 109 (CA4, 1961). This reduction renders moot certain objections filed by City of Pittsburgh, the Pennsylvania Public Utility Commission, and the Kentucky Cities group.

[2] These adjustments reflect increases by Columbian Fuel Corporation and increases which are effective subject to refund in certain Louisiana independent producer proceedings and in *United Carbon Company*, Docket No. RI61-269.

[3] Approval for the transfer of this and other facilities is being sought in the proceeding in Docket No. CP61-107.

rates and charges which become effective subject to refund on April 5, 1960, in the proceeding in Docket No. G–19983. The Commission determined that the rate of return reflected in Tennessee Gas' increased rates was excessive and by order of August 9, 1960, accordingly required Tennessee Gas to make refunds and to file interim revised rates subject to further determinations in Docket G–19983. It was provided in the United Fuel settlement Agreement, among other things, that Tennessee Gas' interim rates are to be reflected in the settlement costs of service. Subsequent to the execution of the settlement Stipulation and Agreement, the United States Court of Appeals for the Fifth Circuit affirmed on appeal the Commission's determination of Tennessee Gas' rate of return but disapproved the requirement that Tennessee Gas file interim rates.[4] Thereafter the signatories to the Stipulation and Agreement, other than City of Pittsburgh, executed a supplementary agreement providing in effect that the settlement costs of service be increased to reflect rates and charges to United Fuel at levels originally filed by Tennessee Gas in Docket No. G–19983. The Kentucky Cities and Pennsylvania Public Utility Commission, non-signatories to the Stipulation and Agreement, and City of Pittsburgh have filed objections to the Supplement.

Upon review of the Stipulation and Agreement (Exhibit I), the studies in support thereof, and the Supplement thereto, we deem the proposed rate settlement as based on said Stipulation and Agreement and the studies in support thereof to be in the public interest, if modified as hereinafter indicated. However as to the Supplement, there appears to be no imminent prospect that the rates originally filed by Tennessee in Docket No. G–19983 will be reinstituted. The Supplement therefore appears unwarranted and should be disapproved. If changed conditions after hearing on the reserved issues warrant our reconsidering the proposal in the Supplement, United may then seek such relief as it deems necessary.

On our own motion, we deem it appropriate to add two conditions to our approval of the proposed rate settlement. The Agreement provides for flow-through by United Fuel of refunds from suppliers to the extent and in the same manner that the suppliers make refunds of charges reflected in the settlement costs of service. Since there will be a hearing on rate design it appears more appropriate to leave for determination in such hearing the manner in which refunds and rate reductions shall be made by United Fuel. We shall, therefore, condition our approval of the settlement agreement by providing for hearing on the manner of reducing rates and making refunds.

Another condition is appropriate with regard to the proceeding in Docket No. CP61–107. United Fuel and certain affiliates are seeking approval in that proceeding for the transfer of certain facilities to United Fuel. The settlement costs of service now reflect the costs of one of those facilities, Boldman Compressor Station[5], but not other facilities which may be transferred to United Fuel. We believe that United Fuel should be permitted to file revised costs of service and associated revised rates, subject to our approval, which it may deem necessary and appropriate to transfer of facilities approved in the proceeding in Docket N o. CP61–107.[6]

---

[4] *Tennessee Gas Transmission Company* v. *F.P.C.*, 293 F. 2d 761 (CA5, 1961), cert. granted, sub. nom. *F.P.C.* v. *Tennessee Gas Transmission Company*. Fifth Circuit reversed insofar as it set aside interim order, 371 U.S. 145 (1962).

[5] These costs will be refunded if the station is not transferred to United Fuel.

[6] Similarly, in *Atlantic Seaboard Corporation*, Docket No. G–20272 (orders issued December 29, 1961, and February 19, 1962, 26 FPC 945 and 27 FPC 369, respectively) we required Atlantic Seaboard to reduce its rates if it transferred subject facilities to United Fuel.

The Commission finds:

(1) The settlement of the proceeding in Docket No. G–20270 on the basis of the Stipulation and Agreement (Exhibit I), as hereinafter modified, is reasonable, proper, and in the public interest in carrying out the provisions of the Natural Gas Act and the proposed rate settlement based thereon should be approved and made effective subject to the terms and conditions hereinafter ordered, but the Supplement (Exhibit II) should be disapproved and rejected.

(2) The rates and charges in United Fuel's revised tariff sheets comprising Rate Schedules CDS–1, AOS–1, SGS–1, and ES–1, tendered for filing in this proceeding, have not been shown to be just, reasonable, or otherwise lawful under the terms and provisions of the Natural Gas Act, and should be disallowed and denied as hereinafter ordered.

(3) A hearing should be held in this proceeding as hereinafter provided.

The Commission orders:

(A) The increased rates and charges tendered for filing in this proceeding hereby are disallowed and denied.

(B) The settlement of this proceeding as proposed in the Stipulation and Agreement discussed above (Exhibit I hereto), is approved and made effective.

(C) The Supplement to the Stipulation and Agreement filed by United Fuel in this proceeding is disapproved and rejected.

(D) Notwithstanding the provision in the Agreement for a moratorium on increased rate filings by United Fuel, in the event and to the extent that transfers of facilities to United Fuel are approved in the proceeding in Docket No. CP61–107, United Fuel may tender for filing, subject to approval by the Commission, revisions to the settlement costs of service for the period from and after the date of transfer as may be permitted by, or otherwise appropriate to the transfer of facilities in the proceeding in Docket No. CP61–107; if all the issues to be heard in the proceeding in Docket No. G–20270 have been determined prior to said approval of the transfer of facilities, United Fuel may also tender for filing, subject to approval of the Commission, revisions in rates appropriate to the revised costs of service tendered for filing as hereby permitted.

(E) A hearing shall be held in this proceeding to commence on a date to be fixed by notice of the Secretary or order of the Commission, concerning the following issues:

1. The level of the demand and commodity components of the rate in Rate Schedule CDS–1 and the rate levels in Rate Schedules AOS–1, SGS–1, and ES–1, included in United Fuel's FPC Gas Tariff, Fifth Revised Volume No. 1 applicable (i) to the period April 5, 1960, through April 30, 1961, and (ii) to be effective on and after May 1, 1961, until superseded.

2. The manner in which United Fuel shall make refunds or further revise its rates pursuant to the settlement agreement or the provisions of Paragraph D above.

3. The depreciation rates of United Fuel to be applied to its underground storage and transmission properties and to its Kenova Extraction Plant.

(F) United Fuel shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of issuance of this order, in writing and under oath, an original and one copy of its acceptance or rejection of the terms and conditions of this order.

(G) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by the Commission, United Fuel, the Commission staff, or any affected party herein, in any proceeding now pending or hereafter instituted by or against United Fuel or any other companies, persons, or parties affected by this order.

APPENDIX A

Development of stipulated cost of service for 12 months ended March 31, 1960 (based on staff study II and adjustments agreed to at settlement conferences) and comparison of such cost of service with revenue at filed rates effective April 5, 1960

Line number	Adjustment number		Applicable to production and transmission operations			Applicable to jurisdictional wholesale sales		
			Total	Demand	Commodity	Total	Demand	Commodity
1, 2		Total allocated cost of service to jurisdictional wholesale sales per staff study II, Table I (see Sheet 2 herein)				$170,104,759	$42,797,606	$127,307,153
3, 4		Agreed-to adjustments to staff cost of service to determine basis for rates effective April 5, 1960, to May 1, 1961						
5		Restore booked depreciation rates						
6	1	Kenova extraction plant:						
7		Depreciation expense	$237,012		$237,012	214,316		214,316

15	Amount	$174,216,028	$42,466,097	$131,749,931
16	Regulatory commission expenses	22,938	11,469	11,469
17, 18	Total allocated cost of service to jurisdictional wholesale sales	$174,238,966	$42,477,566	$131,761,400
19	Effect of boldman compressor station:			
20, 21, 22	Effect on allocated cost of service to jurisdictional wholesale sales (line 9–line 18)	$564,458		
23, 24, 25, 26, 27	Additional revenue to be derived by United Fuel Gas Co. from Atlantic Seaboard Corp., due to proposed transfer of boldman compressor station	[b] 470,689		
28	Net effect	$93,769		

[a] Per Appendix A, sheet 1 of 3, line 35 to settlement agreement.
[b] At filed rates effective April 5, 1960, and is subject to adjustment upon final rate determination.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UNITED STATES DEPARTMENT OF THE INTERIOR, BONNEVILLE POWER ADMINISTRATION, DOCKET NO. E–6905

ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued March 20, 1962)

The Secretary of the Interior, on behalf of the Bonneville Power Administration (Bonneville), on January 24, 1962, filed with the Federal Power Commission for confirmation and approval, pursuant to the Bonneville Act (50 Stat. 731), as amended, proposed wholesale rates and charges for electric energy supplied under Bonneville's approved Wholesale Power Rate Schedule E–4 and General Rate Schedule Provisions, subject to modifications, in accordance with a power sales contract executed November 15, 1961, by Bonneville and the City of Grand Coulee, Washington.

The Coulee Dam Community Act of 1957, approved August 30, 1957 (71 Stat. 524), recites that its purpose, in connection with the Columbia Basin project is, in part, to authorize the disposal of certain Federal property in the immediate vicinity of the City of Grand Coulee to reduce restrictions on the growth thereof.

In furtherance of its purpose, the Act authorizes, among other things, the sale of lands and improvements in the Grand Coulee area acquired or built by the United States for the construction and operation of Grand Coulee Dam and not needed for Federal purposes, except that ownership of any Federally owned municipal-type property, including street-lighting, electric feeder lines, and power distribution systems situated in and serving the town of Coulee Dam, Washington, and Grand Coulee areas is to be transferred without cost to the municipal corporation embracing such area or Grand Coulee. Furthermore, under Section 7(c) of the Act, the Secretary of the Interior is authorized to make available, as power and energy reserved for the operation and maintenance of the Columbia Basin project, for users in communities within three and one-half miles of Grand Coulee Dam served by municipally-owned distribution systems, such amount of power and energy as, in his judgment, is needed to meet load requirements for space-heating purposes existing at the time of incorporation of the municipality. It is also provided in Section 7(c) that such power and energy may be made available directly to the users or indirectly through distributing agencies for a period of 10 years from the date of the Act and may be at such special rates as the Secretary of the Interior finds to be proper but at not less than cost. The Secretary states that the City of Grand Coulee's municipal electric system, which was founded in 1940, is located within three and one-half miles of the Grand Coulee Dam and may purchase its electric space-heating requirements at the special rates provided by the Act. The Act makes no provision for confirmation and approval by the Commission of the special rates for electric space-heating, which is supplied from power and energy reserved for the operation and maintenance of the Columbia Basin project.

Subsequent to the enactment of, and as contemplated by, the Coulee Dam Community Act, the Secretary of the Interior estimated the monthly amounts of power and energy needed by the City for space-heating purposes, established one mill per kilowatt-hour as the rate therefor, and agreed with the City to furnish its space-heating requirements at the rate of one mill per kilowatt-hour, all as more fully appears in the above-mentioned power sales contract (contract).

In addition to providing for the supplying of the City's electric space-heating requirements, the contract also provides that the City's remaining electric requirements for resale and municipal purposes not provided for under the Coulee Dam Community Act will be supplied by Bonneville under its aforementioned Rate Schedule E–4 and rate schedule provisions, subject to modifications set forth in the contract. The modifications propose that Section 4 of Rate Schedule E–4, wherein it is provided that a customer receiving electric energy under such schedule must take or pay thereunder for not less than 90% of his total electric requirements, shall not be applicable to the contract, and that the definition of measured demand in section 2.2 of the rate schedule provisions shall be amended so that measured demand shall be the remainder obtained by subcontracting from the largest of the thirty-minute integrated demands for each billing month at which electric energy is delivered under the contract the number of kilowatts estimated for such month to meet space-heating requirements, provided, however, that such remainder shall not be greater than the number of kilowatts resulting from a 50% load factor usage, nor less than the number of kilowatts resulting from a 70% load factor usage, based on the remaining energy obtained by subtracting from the total number of kilowatt-hours delivered during each billing month the number of kilowatt-hours estimated for such month to meet space-heating requirements.

It is also specified in the contract that the electric energy to be used for billing purposes during any month under Rate Schedule E–4 shall be the remainder obtained by subtracting from the total number of kilowatt-hours delivered during each billing month the number of kilowatt-hours estimated for such month to meet space-heating requirements. The contract is effective for the period commencing October 20, 1961, and ending August 30, 1967.

In support of the proposed modifications of Rate Schedule E–4 and the rate schedule provisions, the Secretary of the Interior represents that studies made by Bonneville indicate that this rate schedule, assuming the modifications be come effective, will result in a lower cost of power than under any other available alternate firm power rate schedule of Bonneville and for this reason the City has elected to purchase power under Rate Schedule E–4 as modified by the contract of November 15, 1961. He also states that these modifications are necessary to carry out the advantages intended under the Coulee Dam Community Act.

By order issued December 16, 1959, Docket No. E–6887, the Commission approved Bonneville's Wholesale Power Rate Schedule E–4, among others, and General Rate Schedule Provisions applicable thereto, for a period beginning December 20, 1959, and terminating December 19, 1964.

The Commission finds:

It is appropriate for the purposes of the Bonneville Act that the proposed rates and charges for electric power, in addition to space-heating requirements, supplied in accordance with the contract between Bonneville and the City of Grand Coulee, Washington, referred to above, be confirmed and approved for a period beginning with the date of issuance of this order and ending December 19, 1964, as hereinafter provided.

The Commission orders:

The rates and charges for electric power, in addition to space-heating requirements, supplied in accordance with the contract between Bonneville and the City of Grand Coulee, Washington, referred to above, are hereby confirmed and approved for a period beginning with the date of issuance of this order and ending December 19, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

CHRISTIE, MITCHELL AND MITCHELL COMPANY, ET AL., DOCKET NO. G–15033

ORDER DENYING MOTION TO TERMINATE PROCEEDING

(Issued March 21, 1962)

Christie, Mitchell and Mitchell Company, *et al.* (Respondent), has heretofore tendered for filing a proposed increased rate which was suspended and subsequently placed in effect subject to refund. The proposed increased rate is designated Supplement No. 10 to Respondent's FPC Gas Rate Schedule No. 11.

On February 5, 1962, Respondent filed a motion to terminate this proceeding.[1] In support of its motion, Respondent recites that the increased rate does not

---

[1] The document was styled "Motion to Delete Refund Provision." Inasmuch as the effect of such action would be to terminate the proceeding, the document is herein considered as a motion to terminate.

exceed the applicable area price level established by the Commission's Statement of General Policy No. 61–1, as amended.

In its Statement of General Policy No. 61–1, 24 FPC 818, the Commission said that the price standards thereby established apply to pipeline quality gas as that term is generally understood in each area. The gas sold under Respondent's rate schedule involved herein is not of pipeline quality. When an adjustment is made for the processing charge to bring the gas up to pipeline quality, the rate exceeds the applicable area price level. Accordingly, Respondent's motion should be denied.

The Commission finds:

For the reasons hereinabove stated, Respondent's motion to terminate the proceeding in Docket No. G–15033 should be denied.

The Commission orders:

Respondent's motion to terminate the proceeding in Docket No. G–15033 is hereby denied.

THE OHIO OIL COMPANY, OPERATOR, ET AL., DOCKET NO. G–15385; SOUTHWEST NATURAL PRODUCTION COMPANY, G–15460, G–19112; JAMES R. NOWERY AND B. M. NOWERY, JR., G–16190; NORMAN V. KINSEY, JR., ET AL., G–16278; L. L. ROBINSON, ET AL., G–16457; HUNT OIL COMPANY, G–16737; HASSIE HUNT TRUST, G–16763; PAN AMERICAN PETROLEUM CORPORATION, G–17028; MONSANTO CHEMICAL COMPANY, G–17519; THE ATLANTIC REFINING COMPANY, G–18572; T. L. JAMES & COMPANY, INC., G–19408; JACK W. GRIGSBY, OPERATOR, ET AL., G–19705; ROBERT F. ROBERTS, G–19810

ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 21, 1962)

*Syllabus**

1. In determining "in line" price for producer contracts herein, Commission considers contract prices prevailing during period such contracts were signed; *finding* "in line" price in North Louisiana was 16.5 cents until May, 1959 and 17 cents thereafter. P. 553.
2. Concluding proposed sales are required by public convenience and necessity at prices not in excess of 16.5 and 17.0 cents, Commission notes such price levels will not result in triggering of general price rises or an increase in United's existing rates by reason of "favored nation" clauses or otherwise. P. 553.
3. Commission requires refunds of amounts above permanently certificated rate with respect to the two producers whose temporary authorizations contained rate conditions. P. 554.
4. Commission *issues* certificates of public convenience and necessity under Section 7 of the Natural Gas Act. P. 554.

Robert M. Vaughan, Riley B. Fell, James D. Parriott, and *Harold L. Kennedy* for The Ohio Oil Company, Operator, et al.

William C. Blind and *Fred Simon* for Southwest Natural Production Company.

---

*Initial decision appears on page 555. Rehearing and stay denied by order issued May 17, 1962, 27 FPC 991. Affirmed, 316 F. 2d 677 (CADC—1963).

Fred Simon and *William C. Blind* for James R. Nowery and B. M. Nowery, Jr.

Justin R. Wolf and *Charles A. Case, Jr.* for N. V. Kinsey and Norman V. Kinsey, Jr.

John M. Shuey for L. L. Robinson, et al.

Thomas G. Crouch and *Robert E. May* for Hunt Oil Company.

Thomas G. Crouch, Robert E. May, and *Richard F. Generelly* for Hassie Hunt Trust.

Norton Standeven, William J. Grove, John F. Jones, J. P. Hammond, and *C. O. Stone, Jr.* for Pan American Petroleum Corporation.

J. E. Howell and *Sam Pickard* for Monsanto Chemical Company.

Bernard A. Foster, Jr., Sherman S. Poland, and *Stuart J. Scott* for The Atlantic Refining Company.

William C. Blind for T. L. James & Company, Inc.

Thomas E. Stagg, Jr. for Jack W. Grigsby, Operator, et al.

William Greene and *Thomas E. Stagg, Jr.* for Robert F. Roberts.

C. Huffman Lewis, Vernon W. Woods, and *W. O. Crain* for United Gas Pipe Line Company.

Vincent P. McDevitt, Samuel G. Miller, and *Henry P. Sullivan* for Philadelphia Electric Company.

H. D. McHenry, William S. Tarver, and *Peter G. Smith* for Southern Natural Gas Company.

Bernard A. Foster, Jr. and *Robert Roberts, Jr.* for Arkansas Louisiana Gas Company.

William L. Brunner for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

The applicants listed in the caption are independent producers seeking permanent certificates for sales in North Louisiana to United Gas Pipeline Company which are now being made under temporary authorization. It appears that Pan American has already depleted the gas involved in Docket No. G–17028, and this docket will be severed from the present proceedings for such separate disposition as may be appropriate. The remaining applicants contend that certificates should be issued authorizing the 18.5 cent initial prices[1] in their respective contracts. In his initial decision, issued November 8, 1961, the examiner found, and we concur, that all questions relevant to the public convenience and necessity, except price, should be resolved in favor of granting the applications as filed. The applicants have excepted to the examiner's conclusion that the initial prices should be limited to 16.5 cents.

There is no evidence in the record to justify the 18.5 cent prices on the basis of costs. No conclusion whatever can be drawn from Hunt Oil Company's fragmentary "economic study" of its two production units involved herein, which purports to show costs of about 7 cents per Mcf for one unit and about $5.80 per Mcf for the other (now abandoned). The inferences made by Hunt from the proceedings in Docket No. G–9554, *et al.* and Docket No. G–9065, *et al.* are unwarranted since neither case considered the costs of the sales herein. The applicants' evidence as to increasing risks in North Louisiana was general in nature and cannot be translated into a specific level or range of costs for these sales.

---

[1] All prices herein @ 15.025 psia, and exclusive of tax.

As a guide in determining whether each applicant's 18.5 cent price is "out of line," as that phrase is used in the CATCO decision,[2] the staff exhibit shows that during the period from June 1958 to October 1959, in which the 14 contracts involved herein were signed, 44 other contracts[3] were made for jurisdictional sales in North Louisiana at prices ranging from 12.5 cents to 18.5 cents per Mcf. Of the 29 sales made during the first eleven months of this period, 21 were priced at 16.5 cents, and 12 of these have been permanently certificated. Of the 15 sales made during the last six months, 8 were priced at 17.0 cents, and 2 of these have been permanently certificated. In 1958 three nonjurisdictional sales from the area were negotiated at prices from 18 to 19.5 cents; but from 1957 through 1960 only one jurisdictional sale has been permanently certificated at 18.5 cents. Assuming that the objections to considering this last sale are without merit, it is nevertheless apparent that the "in line" price in North Louisiana was 16.5 cents until May, 1959; and thereafter, it was 17.0 cents.[4]

The data found in the staff exhibit and elsewhere in the record indicates that the detailed provisions of the contracts referred to above are sufficiently comparable, without adjustments, for purposes of an initial price determination in a certificate case. Several of the applicants have suggested that the 16.5 and 17.0 cent prices, in contracts which provide 700 to 900 psig maximum delivery pressures, should be adjusted upwards for purposes of comparison with the 18.5 cent prices in United's contracts, which provide for 1,000 psig maximum delivery pressure. However, pressures of 700 to 1,000 psig are within the normal range of operation of high pressure pipelines: in the absence of a detailed study of the operating pressures of each of the various purchaser's pipelines, this adjustment is unsupported.

Considering the evidence of record in terms of the requirements of Section 7 of the Natural Gas Act, as defined by Court and Commission precedent, we conclude that the proposed sales are required by the public convenience and necessity at prices not in excess of 16.5 and 17.0 cents, as hereafter ordered. The approval of these price levels will not result in a triggering of general price rises or an increase in United's existing rates by reason of "favored nation" clauses or otherwise.[5]

The Commission finds:

(1) The proceedings in Docket No. G–17028 should be severed herefrom: the following findings do not apply to that docket.

(2) The applicants, independent producers of natural gas, are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The sales of natural gas hereinbefore described, as more fully described in the applications, are made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

---

[2] *Atlantic Refining Company* v. *F.P.C.*, 360 U.S. 378, 391 (1959); cf. *United Gas Improvement Company* v. *F.P.C.*, 283 F. 2d 817 (CA9 1960).

[3] This number does not include the California Company's 21.5-cent contract, dated October 10, 1958, which provides for a six-year deferral of the initial delivery.

[4] The price announced in the Commission's *Statement of General Policy No. 61–1* (issued September 28, 1960) for initial service in North Louisiana was 17.0 cents.

[5] See *Atlantic Refining Company* v. *F.P.C.*, *supra*, note 2.

(4) The applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) The subject sales of natural gas, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered.

(6) It is necessary and appropriate in the administration of the Natural Gas Act that the initial prices for the subject sales of gas be prescribed as hereinafter ordered.

The Commission orders:

(A) The proceedings in Docket No. G–17028 are hereby severed from this proceeding.

(B) Permanent certificates of public convenience and necessity are hereby issued authorizing the services and sales respectively proposed by each of the remaining applicants, and the operations and construction necessary thereto, upon the conditions of the order.

(C) The certificates are issued herein with directions to the respective applicants to file within 30 days from the issuance of this order rate schedules providing the following initial base prices per Mcf at 15.025, psia plus 1.75 cents tax reimbursement, for natural gas sold and delivered to United Gas Pipe Line Company pursuant to the contracts here involved:

Applicant	*Docket No.*	*Base price*
The Ohio Oil Co., Operator, *et al*	G–15385	16.5 cents
Southwest Natural Production Co	G–15460	16.5 cents
James R. Nowery and B. M. Nowery, Jr	G–16190	16.5 cents
Norman V. Kinsey, Jr., *et al*	G–16278	16.5 cents
L. L. Robinson, *et al*	G–16457	16.5 cents
Hunt Oil Company	G–16737	16.5 cents
Hassie Hunt Trust	G–16763	16.5 cents
Monsanto Chemical Company	G–17519	16.5 cents
Atlantic Refining Company	G–18572	16.5 cents
Southwest Natural Production Co	G–19112	17.0 cents
T. L. James & Company, Inc	G–19408	17.0 cents
Jack W. Grigsby, Operator, *et al*	G–19705	17.0 cents
Robert F. Roberts	G–19810	17.0 cents

(D) Applicants L. L. Robinson, *et al.*, and The Atlantic Refining Company shall, within 60 days of the date on which this order shall become effective, refund to United with 6 percent interest the respective amounts collected from United in excess of 16.5 cents per Mcf at 15.025 psia plus tax reimbursement for volumes delivered to United under the subject contracts from the date of initial delivery to United until the effective date of this order.

(E) Within 10 days of the date of refund provided in Paragraph (D), above, L. L. Robinson, *et al.* and The Atlantic Refining Company shall each file with the Commission an officially certified statement showing the amount of the refund, its manner of computation, and the interest payments related thereto, and a statement from United acknowledging the receipt.

(F) The certificate issued to each applicant is not transferable and shall be effective only so long as the applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations, and orders of the Commission.

(G) The grant of the certificate to each applicant herein is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against such applicant.

DECISION

UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AUTHORIZING SALES OF NATURAL GAS

(Issued November 8, 1961)
